v.65

LIBRARY UNIVERSITY OF ILLINOIS URBANA

A

Accident liability, principles involved in determining, 11/20, p. 1384.
Accidents, court decisions as to employers' liability in, 7/17, p. 168.
Accidents, how safety work reduced, in Ohio plant, 12/18, p. 1646.
Accidents, in steel plants, how to reduce, 10/23, p. 1110.
Accident prevention, education as an aid to, 12/25, p. 1716.
Accounting, (see cost accounting).
Acme Fishing Tool Co., blowpipe used by, for cutting slots, 8/7, p. 365.
Admiralty gun metal, how impurities affect, 7/10, p. 95.
Aetna Iron & Steel Co., plans of, for building sheet plant, 11/6, p. 1282.
Agitators:
- Alien bills plans for passage of for exclusion from America of, 10/23, p. 1132.
- Arrest of Pennsylvanian, 12/18, p.1659.
- Grilling of, by senators, 10/16, p. 1071.
- Vicious doctrines sowed by, at strike meetings, 10/2, p. 911.

Air, how compressed, opens crane doors, 10/16, p. 1056.
Air Reduction Sales Co. description of welding torch developed by, 10/16, p. 1057.
Airplane motors, how, Baltimore plant makes steel for English, 10/30, p. 1173.
Alabama furnaces, how, prepared for coal strike, 10/30, p. 1171.
Alaska, 1918 mineral output of, small, 7/17, p. 159.
Alaskan tin production, data on, 12/25, p. 1715.
Albert, King, attendance of, at banquet of American Iron & Steel institute, 10/30, p. 1194.
Alexander, Joshua W., nomination of, as secretary of commerce, 12/11, p. 1597.
Aliens:
- How, can be curbed, 11/6, p.1269.
- Plans of congress to educate, 10/23, p. 1131.
- What the exodus of, means to industry, 9/18, p. 762.

Allis-Chalmers Mfg. Co.:
- Annual report of, for first half 1919, 8/7, p. 383.
- As a tractor manufacturer, 11/13, p. 1344.
- Description of direct-current motor and generator developed by, 9/18, p. 765.
- Description of heavy forgings plant of, 10/16, p. 1048.
- Earnings for third quarter of 1919 of, 11/6, p. 1281.

Allocations of American Iron and Steel institute, why are not binding, 11/6, p. 1265.
Alloy steel, new process for making, 8/14, p. 431.
Allyne-Ryan Foundry Co., description of labor-saving pouring device used by, 9/4, p. 637.
Alsace and Lorraine, industrial questions involved in French control of, 7/17, p. 158.
Aluminum, recovery of, from a Norway substitute, 7/31, p. 290.
Aluminum, recovery of, from secondary sources in 1918, 10/9, p. 973.
Amalgamated Association of Iron, Steel and Tin Workers:
- Withdrawal of, from steel strike, 11/6, p. 1242.

Amalgamated Association of Iron, Steel and Tin Workers, wage scale of (see wages).
American Bar association, address of Judge Gary at annual meeting of, 9/11, p. 718.
American Boiler Manufacturers' association, plans of, to hold special convention, 9/78, p.779.
American Brake Shoe & Foundry Co., plant of, sold to government, 8/21, p. 513.
American Electrochemical society, report of annual meeting of, 10/2, p. 900.
American equipment negotiations of Belgium for surplus, 11/13, p. 1338.
American Federation of Labor:
- Conference held by, on steel strike, 9/11, p. 689.
- How, made serious mistake in steel strike, 11/13, p. 1336.
- Steel strike not sanctioned by executive council of, 9/4, p. 643.

American Forge & Machine Co., extension plans of, 12/25, p. 1729.
American Foundry Equipment Co. formed by consolidation, 8/7, p.378.
American Foundrymen's Association:
- Detailed program for annual meeting of, 9/25, p.821.
- Discussion of vocational training, personnel and industrial relations at meeting of, 10/9, p.994.
- History of the Philadelphia meetings of, 9/25, p.100, Supplement.
- How Philadelphia will welcome, 9/25, p.821.
- List of exhibitors at Philadelphia foundry equipment exhibition, 9/25, p.825.
- Local committees for Philadelphia convention, 8/14, p.435.
- Philadelphia as birthplace of, 9/25, p.100, Supplement.
- Philadelphia greets, 9/25, p.99, Supplement.
- Plans for convention of, 7/24, p.249.
- Report of annual exhibition of foundry equipment, 10/2, p.905.
- Report of annual meeting of, 10/9, p.989.
- Report of annual meeting of malleable session of, 10/9, p.992.
- Report of opening session of annual meeting of, 10/2, p.888.
- Steel ship named in honor of, launched by Hog Island yard, 10/9, p.992.

American Gear Manufacturers' association, report of convention of 10/23, p.1121.
American Hardware Manufacturers' association, report of convention of, 10/23, p.1127.
American ideas, how, are copied by Germany, 10/30, p.1177.
American Institute of Chemical Engineers, plans for annual meeting of, 11/20, p.1387, p.1395.
American Institute of Mining and Metallurgical Engineers:
- Program for annual meeting of, 8/21, p.517.
- Program for annual meeting of Institute of Metals Division of, 9/25, p.823.
- Report of annual meeting of, 9/25, p.816; 10/2, p.900.
- Report of annual meeting of Institute of Metals division of, 10/9, p.994.

American Iron & Steel Co. may build steel plant in Texas, 8/7, p.369.
American Iron and Steel institute:
- Allocation notices, why, are not binding, 11/6, p.1265.
- Date of sixteenth general meeting, 9/18, p.756.
- Ovation given Judge Gary for his stand against radical unionism by, 10/30, p.1194.
- Program for sixteenth general meeting of, 10/16, p.1058.
- Report of general meeting held by, 10/30, p.1194.
- Report of, on steel ingot and finished material production for 1918, 7/31, p.310.
- Statistics compiled by, on pig iron production for the first half of 1919, 9/4, p.646.

American Iron Products Co. opens warehouse, 11/27, p.1461.
American Locomotive Co.:
- Annual report of, 9/11, p.723.
- Locomotive built by, requires much steel, 7/31, p.287.
- Taxation on locomotives built by, 12/18, p.1662.

American Malleable Castings association, booklet on malleable iron and its production, issued by, 9/4, p.646.
American Manufacturers' Export association, report of convention of, 10/23, p.1123.
American Metal Co., Ltd., sale of stock of, 12/11, p.1607.
American Mining congress, plans for annual convention of, 11/6, p.1282.

455194

American Multigraph Co.:
Employes representation plan, details of, at plant of, 7/24, p.221.
Selling contract of, with Cleveland-Duplex Machinery Co., 11/13, p.1316.
American Radiator Co., extension plans of, 11/27, p.1461.
American Rolling Mill Co.:
Extension plans of, 10/2, p.925.
How safety work reduced accidents in the, 12/18, p.1646.
Jobbing mills, plans of, to add sheet and, 7/17, p.152.
American Safety Razor Co., formation of, by merger, 10/30, p.1215.
American Shipbuilding Co., annual report of, 10/2, p.919.
American Society for Testing Materials:
New headquarters established by, 9/18, p.789.
Report of annual meeting held by, 7/3, p.42.
Specifications of, translated into Spanish by bureau of commerce, 8/28, p.562.
Sulphur concessions on various specifications of, recalled, 7/3, p.42.
American Society of Mechanical Engineers:
Cleveland section meets with Cleveland Engineering society, 9/18, p.763.
Industrial unrest, how, makes move to study and help adjust problems of, 12/11, p.1589.
New York section of, views of, on industrial relations, 12/11, p.1591.
Plans for joint meeting of midwest sections of, 10/23, p.1132.
Program of annual meeting of, 11/20, p.1378.
Report of annual meeting of, 12/11, p.1589.
Report of joint meeting of midwest sections of, 10/30, p.1200.
American Society of Refrigerating Engineers, report of joint session of, 12/11, p.1591.
American Steel & Wire Co., importance of decision granting, injunction against mayor and police chief, 12/25, p.1726.
American Steel Foundries:
Annual report of, 11/27, p.1475.
Income account of, for first half of 1919, 8/21, p.527.
American steel is needed in Europe, why little, 10/30, p.1197.
American Steel Treaters' Society:
Program for convention of, 8/21, p.493.
Report of first meeting of, 10/2, p.925.
American Tack Manufacturers' association, schedule on tacks and nails adopted by, 12/25, p.1725.
American Vanadium Co., mills and mines of, reported sold, 8/21, p.494.
American Welding society, plans for meeting of, 10/23, p.1130.
American workers not strikers, senate inquiry showing, 10/16, p.1071.
American Zinc Products Co., plans of, to make corrugated sheets, 11/27, p.1439.
Americanization bill, introduction of, by senators, 10/30, p.1202; 11/6, p.1269.
Americanization in industry, outline of, 11/6, p.1255.
Americanization legislation, senate plans for, 10/16, p.1040.
Americanization of foreigner, plans for, 10/23, p.1131.
Americanization, plans for, at Gary, Ind., 11/27, p.1439.
Americanization school in Bethlehem, report of graduation of first class in, 12/25, p.1727.
Americanization urged as cure by senate strike investigators, 10/9, p.965.
Ammonia, sulphate of, scarcity of, 10/30, p.1204.
Analyses, chemical, of tire and wheel steel, 10/30, p.1187.
Analyses of Lake Superior ores for past 17 years, 7/10, p.72, p.84.
Anarchists at Gary are members of A. F. of L., proof that, 10/30, p.1203.
Andrews Steel Co.:
Extension, plans of, to increase ingot capacity, 7/3, p.39.
Plan of, to resume operations, 10/30, p.1171.
Annealing, advantages of powdered coal for, 10/9, p.972.
Annealing tool steel, special packing method for, 7/17, p.166.
Antidumping bill, passage of, by the house, 12/18, p.1657.
Antigo Tractor Co., incorporation of, 12/18, p.1662.
Antimony, recovery of, from secondary sources in 1918, 10/9, p.973.
Antitonnage Tax Organization, Formation of, 10/23, p.1122.
Antitrust laws, why labor and farmers' organizations should be bound by, 11/6, p.1265.
Appleton Electric Co., plans of, for erection of new plant, 11/27, p.1472.
Applying Electric Drive to Steel Mills, method of, 11/27, p.1445.
Appraisal and valuation, Methods of, discussed at meeting of American Society of Refrigerating Engineers, 12/11, p.1591.
Arbitration as provided for in employe representation plan of International Harvester Co., 10/16, p.1043.
Arc welding:
How, is used in the foundry, 10/9, p.985.
Theory that metal is expelled from electrode in form of metallic vapor in, 12/4, p.1515.
Argentina and Uruguay, reduction in freight rates to, 9/25, p.841.
Armor, facts about the development of, in America, 9/11, p.695.
Armstrong, Sir W. G., Whitworth & Co., Ltd., extension plans of, 12/18, p.1670.
Army base, description of operatorless freight elevators installed at, 11/20, p.1392.
Arsenal, increase in tests by Watertown, 10/16, p.1049.
Arsenal, Rock Island, is not run by employes, 9/11, p.712.
Artillery, annual report of chief of field, 12/4, p.1525.
Assembling plants, detailed plans for modern automobile, 8/28, p.575.
Association of Iron and Steel Electrical Engineers:
Program for annual convention of, 9/11, p.707.
Report of annual meeting of, 9/25, p.816; 10/2, p.926.
Athens Foundry Machine Works on Pittsburgh as the only basing point, 9/25, p.851.
Audible signals in the foundry, advantages of, 10/2, p.894.
Australia:
Description of marine construction and engineering works in, 7/31, p.285.
News notes from, 7/24, p.246; 8/14, p.440.
Australian steel output, how, is retarded by seamen's strike, 11/13, p.1339.
Australian works, how seamen's strike has crippled, 10/9, p.986.
Autocratic power of either labor or capital, elimination of, as vital American problem, 11/27, p.1446.
Automobile builders, how, are protected in Germany, 10/23, p.1115.
Automobile production, English, how bad castings affect, 11/13, p.1322.
Automobiles, list of French producers of, 11/6, p.1257.
Automotive industry, suspension threatened because of steel strike, 10/2, p.887.
Automotive operations, how shellmaking tools have been rebuilt for, 10/9, p.974.

B

Bacharach Industrial Instrument Co., description of pressure and volume indicator designed by, 12/25, p.1715.
Backert, A. O., report of opening address of, at annual meeting of American Foundrymen's association, 10/2, p.888.
Bacon & Matheson Forge Co., installation of drop forge equipment in plant of, 11/6, p.1275.

Badger Tool Co., description of disc grinder designed by, 8/7, p.367.
Baffle plates, a comparison of for gas-washers 8/21 p.506.
Balancing machine made by Crawford Tool & Mfg. Co. description of 9/25, p.839.
Balancing of production, explanation of, 12/18, p.1647.
Baldwins Canadian Steel Co., construction plans of, 12/4, p.1534.
Baltimore plant, how steel for English airplane motors, is produced at, 10/30, p.1173.
Bar iron wage schedule, changes made in, 7/10, p.86.
Bar mill, description of new, of Lebanon Valley Iron & Steel Co., 10/2, p.929.
Barba, W. P., advises use of X-ray before etching steel, 7/3, p.44.
Barr, William H., views of, on labor unions, 11/20, p.1400.
Bars, cold finished steel, now sold on pound basis, 8/21, p.494.
Bars, production of iron and steel, in 1918, 7/31, p.311.
Baruch, Bernard M., plan of, for developing production of war minerals 12/25, p.1721.
Basic electric steel, data on refining of, 10/16, p.1052.
Basic electric steel, tensile tests of, 12/25, p.1709.
Basing Point:
- Alabama, opposition of, to single, 11/27, p.1470.
- Colver, William B., views of, on the, case, 11/20, p.1398.
- Companies opposing single basing point, list of, 11/13, p.1337.
- Date of hearing on Pittsburgh, controversy, 10/30, p.1172; 11/6, p.1266; 11/27, p.1460.
- Duluth files claim for recognition as, 9/18, p.780.
- Federal trade commission may investigate equity of, in iron and steel industry, 7/3, p.15; 7/10, p.109; 7/17, p.152.
- First week's report on, hearing, 12/11, p.1594.
- Illinois Steel Co., answer filed by, in, suit, 9/4, p.640.
- Many companies favor prese[illegible] tom, 9/11, p.690.
- Opinions of various producers [illegible] consumers on Pittsburgh as only [illegible] 9/25, p.848.
- Pittsburgh as only basing point, opinions of various consumers and producers on, 9/25, p.848.
- Pittsburgh chamber of commerce, why, asks that present system be retained, 9/4, p.642.
- Plans for investigation of, 7/31, p.283.
- Points brought out by Steel corporation in answering, suit, 9/18, p.780.
- Representatives of interested parties who are to be present at, hearing, 11/27, p.1460.
- Secretary Redfield's letter to Judge Gary on adjustment of, 8/7, p.369.
- Single, why, is best, 11/6, p.1266; p.1267.
- Suit filed to establish Chicago, 7/24, p.219.
- Views of W. A. Collings on changing the Pittsburgh, system, 9/4, p.641.
- Western Association of Rolled Steel Consumers file supplemental declaration in suit on, 9/18, p.780.

Bayonets, production of, in America, during the war, 9/11, p.695.
Beach, F. W., on Pittsburgh as the only basing point, 9/25, p.850.
Beardsley & Piper, description of sand-throwing molding machine designed by, 8/28, p.567.
Bearings, how to select lubricants for, 12/11, p.1583.
Belfont Iron Works Co., improvements at blast furnace of, 8/14, p.440.
Belgian industry, tracing the revival of, 10/9, p.969.
Belgians, attitude of, toward German trade offers, 11/6, p.1252.
Belgium:
- America, reconstruction needs of, from, 10/30, p.1198.
- How small foundries in, were operated clandestinely, 8/28, p.574.
- Imports of iron and steel of, during first seven months of 1919, 11/27, p.1461.
- Industrial situation in, 11/27, p.1448.
- Industrial tide rising in, 8/14, p.436.
- Iron and steel industry, reconstruction plans of, 11/6, p.1252.
- Negotiations for purchase of surplus American equipment, 11/13, p.1338.
- New trade alliance formed by, and France, 10/2, p.897.
- News notes on, 7/3, p.40.
- Rehabilitation of, sketch of, 10/30, p.1199.
- Status of iron and steel plants in, reviewed in British official commission report, 9/18, p.785.
- Steel situation in, summary of, 10/23, p.1124.
- Summary of industrial progress of, [illegible]1/6, p.1254.
- [illegible] metallurgical combinations [illegible] in, 8/14, p.436.
- [illegible]ing toward reconstruc[illegible]

Bell[illegible] against na[illegible]tio[illegible]al mines, 7/[illegible]
Belt [illegible]avy b[illegible]
Ben[illegible]
Berry, H. Seymour, purchase of John Lysaght, Ltd., by, 10/9, p.1007.
Bessemer, Sir Henry, bust of, to be placed in McKinley memorial, 7/10, p.119.
Bessemer Limestone Co., merger of 11/20, p.1405.
Bessemer Medal presented to Dr. Cav. Federico Giolitti, Turin, Italy, 10/16, p.1044.
Bessemer practice in early days, aid given to, by G. F. Goransson, 9/11, p.706.
Bessemer Process, why, is generally employed in foreign steelmaking, 12/4, p.1505.
Bessemer process, William Kelly real inventor of, 7/24, p.250.
Bessie Furnace Co., how, was relined in record time, 12/18, p.1654.
Bethlehem Americanization school, report of graduation of first class at, 12/25, p.1727.
Bethlehem-Chile iron mines, ore dock at Cruze Grande completed by 8/21, p.512.
Bethlehem machinists return to work. 10/16, p.1040.
Bethlehem Motors Corp. merged with North American Motors Co., 7/10, p.121.
Bethlehem Steel Co.:
- Booklet issued by, on election under representation plan, 7/24, p.241.
- Description of extensions to Maryland plant of, 7/3, p.17.
- Description of ingot mold foundry of, 8/21, p.495.
- Description of new blast furnace and plant at Steelton, 8/14, p.419.
- Sale of Titusville forging plant of 12/11, p.1607.
- Ten-hour shift, adoption of, at, 11/6, p.1242.
- View of president of, on single price base, 9/25, p.848.

Bethlehem Steel Corp.:
- Description of carriers for bringing iron ore from Chile and Cuba built by, 11/6, p.1258.
- How wages and earnings compare in, 10/2, p.918.
- Purchase of Elkins Coal & Coke Co. by, 10/30, p.1214.

Better Letters Association:
- Program for annual conference of, 11/20, p.1395.
- Report of annual convention of, 11/27, p.1458.

Billet-heating furnace, description of, built at United States navy yard, 7/17, p.167.
Billet, how, is changed to long strip in plant of Acme Steel Goods Co., 11/13, p.1317.
[illegible]ngs & Spencer Co., extension [illegible]ns of, 12/25, p.1729.

Birmingham exchange as convenient meeting place for British iron and steel men, 7/31, p.298.
Birmingham, how steel strike affects, 9/25, p.820; 10/2, p.886; 10/9, p.968; 10/9, p.1039.
Birmingham Steel Corp., description of fabricating shop of, 8/7, p.359.
Black & Decker Mfg. Co., description of, 10/23, p.1139.
Black Steel & Wire Co., plans of, to enlarge plant, 7/10, p.119.
Blair Engineering Co., description of combination valve, port and slag pocket designed by, 8/14, p.426.
Blast Furnace:
Charcoal, description of the Mid-Continent, 7/10, p.99.
Cleaning, gas by effective methods, 8/21, p.506.
Description of "A" stack of Bethlehem Steel Co., 8/14, p.419.
Description of Indian Iron & Steeel Co., plant, 12/25, p.1717.
Description of tapping machine for, 7/31, p.293.
Discussion of problem of smelting titanium-bearing ores in, 11/20, p.1388.
Lorraine, drawing showing typical, 10/23, p.1106.
Method of keeping, records, 8/14, p.433.
Pyrometry, importance of, in, 11/27, p.1452.
Slips, how to prevent, 10/23, p.1114.
Uptakes and downcomers of new, are arranged in pairs, 8/7, p.360.
Valves for gas mains of, are quick-acting, 7/3, p.26.
Volklingen Steel Works, cross section of, at, 10/23, p.1108.
Weirton Steel Co., description of new, of, 10/2, p.921.
Number of, lost by Germany under peace treaty, 7/17, p.158.
Blaw-Knox Co., report of convention held by, 12/11, p.1604.
Blockade, probable trade with Germany, due to lifting of, 7/17, p.179.
Board for settlement of labor disputes, plan of Secretary of Labor Wilson for, 10/16, p.1062.
Body and viscosity, relations of, 12/11, p.1584.
Boiler efficiency, facts about steam, 8/21, p.500.
Boilers, description of electric feed water control for, 8/21, p.500.
Boker, H., & Co., special steel furnished by, for forming tools by grinding, 7/3, p.27.
Bolshevism:
Bankruptcy of, on rock of underproduction, 9/25, p.856.
Gary, E. H., gives views on stamping out, 10/30, p.1192.
Motion pictures, how to fight, w... 12/25, p.1727.
Bonus System:
How, stimulates production, 10/23, p.1117; 12/25, p.1727.
Views of J. M. Schenk on, 7/24, p.250.
Book Review:
Abrasives and Abrasive Wheels, by Fred B. Jacobs, 9/4, p.636.
Applied Science for Metal Workers, by W. H. Dooley, 12/18, p.1646.
Coal Trade, The, by Sydney A. Hale, 10/23, p.1111.
Commercial Laboratory Notes, by C. L. Petty, 11/13, p.1320.
Development of Iron Ore into Iron and Steel, by S. C. Dickerhoff Jr., 12/4, p.1511.
Forge Practice and Heat Treatment of Steel, by John Lord Bacon, 11/13, p.1320.

Willis, Charles F., 8/7, p.356.

Control system, details of a production, 9/4, p.623.

Controller, drum, description of, developed by Cutler-Hammer Mfg. Co., 10/23, p.1120.

Converter and electric steel, comparison of costs of, 12/11, p.1582.

Conveyors, how portable, are used to handle freight, 8/7, p.351.

Cooper, C. & G., Co.:
Details of cost finding and production control system in use at plant of, 9/4, p.623.
Publishes booklet describing company's war work, 7/24, p.238.

Cooper, Representative, discusses foreign agitators, 10/23, p.1132.

Co-operative store, plan of employes of Westinghouse Electric & Mfg. Co. for, 11/27, p.1466.

Co-ordinate, how to, shop management, 12/18, p.1647.

Cope and Drag, how, are made simultaneously, 10/23, p.1118.

Copper, improved type of roll-scouring, 8/7, p.358.

Copper, recovery of, from secondary sources in 1918, 10/9, p.973.

Copper Queen mines, physical examination plan in use at, 8/7, p.356.

Cores, how to avoid trouble from cover, 10/2, p.893.

Cores, use of green sand, for making tractor transmission housings, 9/18, p.769.

Corlett & Co., J. F., plans of, to open Cincinnati office, 11/13, p.1343.

Corrosion of iron and steel sheets discussed by Testing society, 7/3, p.45.

Cost accounting methods as applied to steel works, 7/10, p.97; 7/24, p.232; 8/7, p.361; 8/21, p.508; 9/4, p.630.

Cost finding and control system for a jobbing shop, 9/11, p.623.

Cost keeping, bureau of mines booklet suggests, systems for mines, 7/31, p.290.

Cost keeping in a foundry, how to handle, 10/30, p.1179.

Cost of living is less than wage increases, 10/16, p.1039.

Costs, efficient method of finding manufacturing, 7/3, p.23.

Costs, increase in foundry production, 7/17, p.167.

Council of national defense:
Members of inter-departmental board to study defense problems named by, 11/13, p.1338.

Council of national defense:
Report issued by, on foreign reconstruction activities, 7/31, p.314.

Council of National Defense:
Will return to peacetime functions, 7/10, p.109.
Work of, during the war, 7/10, p.108.

Coupling box, how the problem of making a satisfactory, was solved, 9/11, p.701.

Cover cores, how to avoid trouble with, 10/2, p.893.

Crane and bull ladles, description of apparatus for drying, 10/23, p.1120.

Crane doors, how, are opened by compressed air, 10/16, p.1056.

Crane, how to get greatest efficiency by handling foundry jobs by, 10/2, p.889.

Crane movements, description of friction cones controlling, 10/16, p.1056.

Crane, the largest in world, description of, 12/18, p.1653.

Crane, W. R., report of, on high costs in manganese industry, 8/14, p.422.

Cranes, description of safety brake for traveling, 11/27, p.1456.

Cranes, use of, in handling freight, 8/7, p.351.

Crawford Tool & Mfg. Co., description of balancing machine developed by, 9/25, p.839.

Credit corporation, organization of, to help trade relations between United States and Italy, 11/20, p.1383.

Credit system, organization of, by economic and industrial groupment, 11/13, p.1321.

Credits, federal aid needed on foreign, 8/14, p.442.

Creed, business, of Treadwell Engineering Co., 8/7, p.379.

Crescent Refractories Co., organization of, through merger, 11/27, p.1471.

Creusot plant, description of, as an industrial pillar, 10/30, p.1178.

Cromwell, J. C., Steel Co., incorporated to take over Cromwell Steel Co. plant, 7/24, p.215.

Cromwell Steel Co., reorganization of, 10/9, p.968.

Crown Refining Co., merger of, with White Oil Corp., 10/23, p.1138.

Crucible Steel Co. of America:
How the stockholders will be informed of condition of, 11/13, p.1346.
Report of meeting of, 12/11, p.1607.
of meeting of, 12/11, p.1607.

Cupola, advantages of using the electric furnace as an adjunct to the, 10/2, p.891.

Cupolas, description of oil burner for lighting, 8/7, p.365.

Curtiss Aeroplane & Motor Corp., annual statement of, 10/30, p.1215.

Curves, how, help to solve production problems, 10/23, p.1116.

Cutler-Hammer Mfg. Co.:
Description of motor starters with protective devices designed by, 9/11, p.707.
Drum type controller description of, developed by, 10/23, p.1120.
Rectangular magnet, description of, developed by, 11/6, p.1261.
Switch operated by clapper type magnet, description of, developed by, 12/18, p.1652.

Cuyuna range, reduction in tax rate on manganiferous ore properties of, 11/20, p.1401.

Cylinder:
Data on welding high pressure, 12/25, p.1711.
Data on welding low pressure, 12/25, p.1711.

Cylinder, rolling, type, description of, electric furnaces installed in Seattle plants, 12/18, p.1652.

Cylinders, how to weld large mill engine, 12/25, p.1710.

Cylinders, producing sound steel castings for hydraulic, 8/21, p.504.

D

Damages, when employer must pay, for disease and accidents, 7/17, p.168.

Damages to employes, why, are based on depreciation of earning capacity, 11/20, p.1384.

Dangers that lurk around oil room, how to avoid, 12/4, p.1520.

Danielson Tool Co., incorporation of, 12/4, p.1536.

Davey Brothers, Ltd., description of modern rolling mill equipment made by, 8/28, p.559.

Davis-Bournonville Co., description of oxy-acetylene torch designed by, 10/16, p.1057.

Davis Furnace Co.:
Figures issued by, on the consumption of gas in case hardening, 9/11, p.694.
Recuperative furnace, how, designed by, reduces heat losses, 7/31, p.293.

Daylight illumination, intensities of, table showing, 12/18, p.1638.

Decimalizing the inch suggested for standard measurement system, 7/17, p.169.

Defective castings and forgings, protest against increased freight rates on returned, 10/2, p.936.

Defects are removed by grinding, how surface, 11/13, p.1333.

Defense problems, how, will be studied by board named by council of national defense, 11/13, p.1338.

Deficiency appropriation bill, proposed repeal of provision in, 11/13, p.1338.
Delta Equipment Co., organization of, 11/27, p.1458.
Denver Fire Clay Co., billet-heating furnace built by, for navy yard, 7/17, p.167.
Deportation of aliens, how, is sought in bills of senators, 11/6, p.1269.
Depreciation:
Average rates of, 12/4, p.1511.
Factors governing the determination of amount of, 12/4, p.1510.
Methods of applying, 12/4, p.1510.
Principle elements of, 12/4, p.1510.
Depreciation charges, outline of system for determining, 9/4, p.630.
Depreciation in value of patents, how to make proper provision for, 10/16, p.1045.
Detroit Reamer & Tool Co., merger of, 11/20, p.1406.
Detroit Seamless Steel Tubes Co., construction of new plant started by, 8/28, p.586.
Detroit Star Grinding Wheel Co., incorporation of, 10/23, p.1139.
Diamond Stamping Works, merger of, 11/20, p.1406.
Diesel engines, use of coal tar as fuel for, 8/28, p.570.
Differentials, table of, on tacks and nails, 12/25, p.1725.
Discount basis of selling cold finished steel bars abandoned, 8/21, p.494.
Disease and accident, when the employer is liable for, 7/17, p.168.
Dittmer Gear & Mfg. Co., extension plans of, 12/18, p.1664.
Division of functional departments, explanation of, 12/18, p.1647.
Doehler Die-Casting Co., industrial democracy adopted by, 8/7, p.384.
Dollar, premium on the, in foreign countries, 7/24, p.254.
Dominion Forge & Stamping Co., purchase of, by Ford Motor Co. of Canada, 11/13, p.1343.
Dominion Steel Corp.:
How, is extending plant, 10/30, p.1207.
Proposed sale of stock of, 11/27, p.1475.
Double punch attachment, description of, designed by Cleveland Punch & Shear Works Co., 11/20, p.1394.
Drafting room, factors which make the, efficient, 7/24, p.233.
Drag and cope, how, are made simultaneously, 10/23, p.1118.
Drill, radial, description of, having safety features, 10/23, p.1119.
Drilling machines, description of sliding head, 11/27, p.1457.
Drilling machine, semiautomatic, has improved method of lubrication, 7/10, p.103.
Drills, how portable electric, are used for drilling boiler plate, 8/28, p.575.
Drum controller, description of, developed by Cutler-Hammer Mfg. Co., 10/23, p.1120.
Drying crane and bull ladles, description of equipment for, 10/23, p.1120.
Duluth and Minnesota iron range districts, how steel strike affects, 10/23, p.1122.
Duquesne Light Co., power plant to be built by, 8/14, p.442.
Duluth, claim filed by, for recognition as basing point, 9/18, p.780.
Duluth, news notes from, 7/17, p.189; 8/21, p.518; 9/18, p.784.
Duluth, question of establishing basing point at, may be investigated, 7/10, p.109.
Du Puy, Herbert, resignation of, as chairman of the Crucible Steel Co. of America, 10/2, p.888.
Dutch India, iron ore fields discovered in, 7/31, p.301.
Dye imports, resolutions of congress extending government control of, 11/27, p.1459.

E

Earnings, how wages and, compare in big steel companies, 10/2, p.918.
Eastern Pennsylvania rich in the romance of iron, story of, 9/25, p.111, Supplement.
Eastern Steel & Wire Co., incorporation of, 10/30, p.1204.
Eaton Axle Co., plans for incorporation of, 12/18, p.1660.
Ebbw Vale Steel, Iron & Coal Co.:
Description of plant of, 11/27, p.1441.
Labor refuses directorship offered by, 8/28, p.573.
Eclipse Gas Stove Co. taken over by George D. Roper Co., 11/27, p.1473.
Economic and Industrial Groupment, of St. Etienne, plans of, to organize industrial credit system, 11/13, p.1321.
Economic situation, Judge Gary discusses worldwide, 9/11, p.718.
Economy in metallurgy urged by Isaac Lester, 7/10, p.98.
Edge law as a corrective and stabilizer of foreign exchange, 12/25, p.1730.
Edge, Senator, proposal of, to repeal provision in the deficiency appropriation act, 11/13, p.1338.
Edgar T. Ward's Sons Co.:
Plans of, for new warehouse, 11/27, p.1472.
Report of first annual sales convention of, 10/23, p.1133.
Editor, a word with the, 7/17, p.169; 7/24, p.250.
Editors, organization of National Conference of Business Papers Editors by, 11/20, p.1401.
Educating workmen, advantages of, 12/18, p.1643.
Education as an aid to safety, 12/25, p.1716.
Education as cure for industrial ills, 10/9, p.994.
Education of aliens, plans for, 10/23, p.1131.
Education, views of C. H. Benjamin on, 12/11, p.1582.
Efficiency Device Corp., description of lathe dog designed by, 9/4, p.638.
Efficiency, factors which promote drafting room, 7/24, p.233.
Efficient stores department, how to organize an, with few card forms, 12/11, p.1586.
Eight-Hour Day:
Canadian commission recommends establishment of, 7/17, p.177.
French industries adopt, 7/10, p.113; 7/17, p.187; 7/31, p.307.
Judge Gary's testimony on, before senate committee on steel strike, 10/9, p.1000.
Workmen in the United Kingdom help to pay for, 7/10, p.112.
Electric and converter steel, comparison of cost of, 12/11, p.1582.
Electric arc welding, how, is used in the foundry, 10/9, p.985.
Electric Controller & Mfg. Co., description of new starting switch developed by, 10/16, p.1057.
Electric drive to steel mills, how to apply, 11/27, p.1445.
Electric Furnace:
Advantages of producing castings from the, 12/25, p.1706.
Advantages of using the, as an adjunct to the cupola, 10/2, p891.
Description of plant making tool steel in, 7/17, p.153.
How to apply the, to the foundry, 12/11, p.1581.
Increasing the life of, electrodes, 7/3, p.31.
Electric Furnace association:
Plans for meeting of, 9/18, p.774.
Report of meeting of, 10/2, p.910.
Electric furnaces, description of, installed in Norway, 11/13, p.1325.
Electric furnaces rolling cylinder type, description of, installed in Seattle plants, 12/18, p.1652.
Electric Hoist Manufacturers association:
Plans for meeting of, 10/23, p.1130.
Report of meeting of, 11/13, p.1333.
Electric ingots, how, are made at Old Dominion Iron & Steel Corp., 12/18, p.1654.
Electric Rivet Heater, description of, invented by George A. Jones, 11/20, p.1393.
Electrical signal mechanism for the foundry, description of, 10/2, p.894.

Electric steel castings, how to produce, 12/25, p.1706.
Electric Steel Co., how molding and casting problems are solved by, 9/11, p.701.
Electric steel, data on refining of basic, 10/16, p.1052.
Electric Steel Forge Co., extension plans, 12/4, p.1539.
Electric steel plants, Germany loses 80, 8/28, p.564.
Electric steel production, increase of, in Germany, 11/13, p.1321.
Electric steel, tensile tests of basic, 12/25, p.1709.
Electric welding, how to produce tight joints by, 7/24, p.234.
Electrical engineers (see Association of Iron and Steel).
Electrical heaters for drying pattern plates, description of, 9/25, p.838.
Electric treatment, description of, of open-hearth furnace steel, 11/13, p.1332.
Electrically driven reversing rolling mills, advantages of, 10/30, p.1184.
Electrodes, how life of, may be increased, 7/3, p.31.
Elevators, description of operatorless freight, installed at Brooklyn army base, 11/20, p.1392.
Elkins Coal & Coke Co., purchase of, by Bethlehem Steel Corp., 10/30, p.1214.
Elliott Norton & Co., incorporation of, 12/18, p.1664.
Elongation, how resting test bars increases, in steel, 7/17, p.164.
Ely district, failure of ore miners' strike in, 10/23, p.1103.
Ely, Walter C., description of automatic puddling furnace invented by, 9/18, p.781.
Elyria Iron & Steel Co., machine developed by, for forming tank noses, 7/31, p.286.
Embargo placed on shipments from Boston, 10/23, p.1104.
Emergency Fleet corporation, sale of entire surplus of steel of the, 12/18, p.1636.
Empire Steel & Iron Co.:
Furnaces of, to be rebuilt, 7/24, p.220.
Tentative settlement in railroad rate case of, 9/11, p.711.
Employe (See also labor).
Employe and employer, important factors in securing proper relations between, 10/2, p.896.
Employe speaks out for American workmen, 10/2, p.887.
Employers' groups of national industrial conference, principles enunciated by, 10/16, p.1061.
Employes, importance of getting together with the, 12/4, p.1518.
Employers' Liability:
Court decisions in disease and accident cases, 7/17, p.168.
Extent of, for negligence of their workmen, 8/21, p.499.
Employers, pointers for, in selection of personnel, 7/3, p.25.
Employers' viewpoint, John W. O'Leary presents, at industrial conference, 10/23, p.1128.
Employes' acts, paying claims for, 8/21, p.499.
Employes:
Factors in obtaining confidence of, 8/7, p.362.
Government arsenals not run by, 9/11, p.712.
Saving plan for, which promotes thrift, 8/28, p.571.
Employes Representation:
Bethlehem issues booklet on first election under, plan, 7/24, p.241.
Details of plan of, at plant of American Multigraph Co., 7/24, p.221.
Importance of principle of, discussion on, 12/4, p.1509.
International Harvester Co., plan of, for, 10/16, p.1041.
Pension system adopted under Midvale, system, 7/17, p.176.
Report of meeting held under Midvale, plan of, 8/28, p.582.
Salaried employes of Colorado Fuel & Iron Co., to have, 8/28, p.578.
Taylor-Wharton company adopts, plan, 8/21, p.523.
Employment for technical men discharged from army, Col. Woods makes plea for, 9/25, p.841.
Employment, how, is increasing in Great Britain, 11/20, p.1400.
Employment Service:
Collection of unemployment statistics discontinued by, 7/17, p.176.
Cut in appropriation for, will reduce number of offices, 7/10, p.106.
Private aid given, to continue agencies, 7/24, p.240.
Private interests pay half the costs of federal, 9/4, p.642.
Report of work done by, 7/31, p.306.
England:
(See Great Britain.)
Engine cylinders, how to weld large mill, 12/25, p.1710.
Engine, work done by James Watt in developing the steam, 9/18, p.766.
Engineering works, description of an Australian, 7/31, p.285.
English airplane motors, how steel is made at Baltimore plant for, 10/30, p.1173.
English to foreigner, plans of congress for teaching, 10/23, p.1131.
Ennis & Co., ore firm of, retirement of, 8/14, p.440.
Equipment, how improved, will aid production in tin mills, 12/18, p.1642.
Equipment, reflecting, guide showing how to select proper, 12/18, p.1639.
Equipment trust will finance railroad administration purchases, 8/28, p.591.
Essex Foundry Co., acquisition of, by Iron Products Corp., 10/30, p.1172.
Etching of steel rails, discussion on deep, 7/3, p.43.
Europe, iron and steel industrial conditions in, British commission report on, 9/18, p.775.
European industries, news notes on, 7/3, p.40.
European reconstruction made known, requirements of, 10/30, p.1197.
Ever-Ready Safety Razor Co., merger of, 10/30, p.1215.
Examine steel, how to, by means of X-rays, 11/13, p.1329.
Examining workmen before hiring, advantages of, 8/7, p.356.
Exchange, comparison of, fluctuations with confusion at outbreak of war in 1914, 12/18, p.1670.
Exchange, metal, organization of, in Switzerland, 11/13, p.1321.
Executive, requisites of an able, 12/18, p.1650.
Exeter Machine Works, plant of, sold, 9/4, p.655.
Exhibit, railway supply manufacturers hold tool and machinery, 7/3, p.34.
Exhibition of British manufactures, report of, held in Athens, 11/20, p.1394.
Expenditures, system for dividing, into various accounts, 9/4, p.630.
Expenses, modern system for classifying indirect, 8/7, p.361.
Experiment station, plans for dedicating new laboratory at Pittsburgh, 9/18, p.774.
Explosive industry, how America developed a huge, 8/28, p.563.
Explosives, comparison of American, French and British production of, 8/28, p.563.
Export association formed by pipe fitting and valve manufacturers, 9/18, p.789.
Export combination in foundry equipment, organization of, 10/23, p.1104.
Export concern, organization of new, 12/30, p.1215.
Export Manufacturers of the United States, Inc., Export Register issued by, 7/31, p.303.
Export shipments in transit to be exempt from tax, 7/24, p.242.
Exports:
(See foreign commerce, also.)
Exports and imports, statistics on British, for first half of 1918, 7/31, p.305.
Exposition is opened in New York, machinery, 10/16, p.1063.
Extras on cold rolled finished steel and shafting, new card issued for, 8/28, p.584.

F

Fabricating shipbuilding material, description of southern plant for, 9/4, p.632.

Fabricating shop, description of large southern, 8/7, p.359.

Fabrication-in-transit, hearings on proposed revision of rules covering, 9/11, p.711.

Fabrication-in-transit privileges, extension of, requested by shipbuilders, 7/3, p.36; 11/6, p.1264.

Face grinding unit that is self contained, description of, 12/4, p.1520.

Fairbanks, Morse & Co., description of plant to be erected by, 12/18, p.1665.

Falcon Steel Co., sheet mill being erected by, 8/14, p.439.

Fan designed by Buffalo Forge Co., description of ventilating, 9/25, p.839.

Farmers and labor organizations, why, should be bound by antitrust laws, 11/6, p.1265.

Fastener for heavy belts, description of, 8/7, p.365.

Fastfeed Drill & Tool Corp., purchase of factory by, 9/25, p.857.

Federal Steel Co., description of machine tool center with replaceable point made by, 12/11, p.1592.

Federal Trade Commission:
Chicago basing point case to be heard by, 7/17, p.152; 7/31, p.283.

Federal Trade Commission:
Inland Steel Co. files answer in basing suit to be filed by, 9/4, p.640.
Personnel of, 12/25, p.1721.

Feed water control, description of electric, for boilers, 8/21, p.500.

Feiss, Paul L., criticism of miners by, 11/6, p.1272.

Ferguson Steel & Iron Co., sale of warehouse of, 10/16, p.1067.

Ferro Foundry & Machine Co., how tractor transmission housings are molded at, 9/18, p.769.

Ferroalloy, Shawinigan company produces new, 8/14, p.445.

Ferromanganese, table showing results of furnace making, 11/27, p.1456.

Filing patents is extended, time for, 10/16, p.1047.

Financing foreign purchases, federal aid needed for, 8/14, p.442.

Finished iron and steel, production statistics on, for 1918, 7/31, p.310.

Fire brick, preventable defects in, 8/14, p.423.

Fire brick, production of, for 1918 and 1917, 8/7, p.367.

Firmstone, H., description of flood damage to furnaces in 1862, by, 11/27, p.1461.

First-aid work, plan for fostering, in Philadelphia district, 12/25, p.1727.

Firth, Thomas, & Sons, Ltd., large tonnage of war materials furnished Great Britain by, 8/21, p.505.

Fisher Body Corp.:
Automobile body plant to be erected by, in Cleveland, 10/9, p.968.
Increase in shares of, 11/20, p.1409.
Officers of, 11/27, p.1475.

Fitzpatrick, Gompers, Tighe and Foster, why, are held most to blame in steel strike, 11/13, p.1334.

Fitzpatrick, John:
Strike testimony of, contradicted by employe of Inland Steel Co., 10/2, p.887.
Testimony of, before senate steel strike investigation committee, 10/2, p.916.

Flange, description of tool which faces and cuts threads on, at one setting, 8/21, p.511.

Flexible Steel Lacing Co., description of belt fastener designed by, 8/7, p.365.

Flood damage to furnaces in 1862, description of, 11/27, p.1461.

Fluorspar mines, company incorporated to operate Roseclaire, 7/10, p.110.

Foods, employers buy army, for sale to workers, 8/14, p.446.

Follansbee Bros. Co., plans of, for erecting new plant at Toronto, O., 11/6, p.1282.

Foote-Burt Co., designs drilling machine without oil cups, 7/10, p.103.

Ford, Henry, description of gasoline street car motor designed by, 11/6, p.1262.

Ford Motor Co. of Canada, purchase of plant of Dominion Forge & Stamping Co. by, 11/13, p.1343.

Fordney antidumping bill, how, would protect American manufacturers, 12/18, p.1657.

Foreign agitators at work in America, 10/16, p.1072.

Foreign-born element, inquiry showing that, are the strikers, 10/16, p.1071.

Foreign Commerce:
For May, 7/3, p.15; June, 8/7, p.371; July, 9/11, p.708; August, 10/16; p.1059; September, 10/30, p.1214; 11/20, p.1396; October, 12/11, p.1593.

Foreign commerce department, changes in personnel of, 7/17, p.180.

Foreign competition, discussion of, by president of Staffordshire Iron and Steel institute, 12/4, p.1529.

Foreign credits, why the United States will not aid, 12/11, p.1606.

Foreign machine tool industry, review of conditions in and future plans of, 8/14, p.443.

Foreign products, senate bill which aims to bar, 10/23, p.1127.

Foreign radical agitators, bill to be passed to bar, from America, 10/23, p.1132.

Foreign reconstruction, council of national defense issues report on, 7/31, p.314.

Foreign Trade America, how, has obtained supremacy in, 12/4, p.1529.
premacy in, 12/4, p.1529.

Foreigner, Americanization plans for, 10/23, p.1131.

Foremen, class for training, at Taylor-Wharton plant, 7/3, p.37.

Foremen, training, to lead enlightened labor, 10/2, p.895.

Forge, description of electric rivet heating, invented by George A. Jones, 11/20, p.1393.

Forge men entertained by Sizer company, 7/10, p.119.

Forgings plant, description of, of Allis Chalmers Mfg. Co., 10/16, p.1047.

Forms for coke oven, blast furnace and casting reports, 8/14, p.432.

Forms for daily open-hearth and ingot records, 8/14, p.434.

Forms for maintaining cost records, 7/3, p.23.

Forms for recording cost factors in the production department, 8/21, p.508.

Fortune Tool & Mfg. Co., F. R., incorporation of, 11/6, p.1275.

Foster, Gompers, Fitzpatrick and Tighe, why, are held most to blame in steel strike, 11/13, p.1334.

Foster Machine Co., description of screw machine with interchangeable units designed by the, 12/4, p.1521.

Foster, William Z.:
Accusation by Senator Pomerene that, is I. W. W., 10/2, p.917.
Prosecution of, demanded by Julius Kahn, 10/2, p.920.
Testimony of, before senate committee investigating steel strike, 10/9, p.996, p.1001.

Foundries, how small Belgian, were operated clandestinely, 8/28, p.574.

Foundries, number of, lost by Germany under peace treaty, 7/17, p.158.

Foundry, advantages of audible signals in the, 10/2, p.894.

Foundry center, Philadelphia as a, 9/25, p.121, Supplement.

Foundry cost keeping, how to handle, 10/30, p.1179.

Foundry costs increase, 7/17, p.167.

Foundry, description of a modern ingot mold, 8/21, p.494.

Foundry, description of a, rigged for making tractor transmission housings, 9/18, p.769.

Foundry equipment exhibition, list of exhibitors at Philadelphia, 9/25, p.825.

Foundry equipment exhibition, report of annual, 10/2, p.905.

Foundry Equipment Export Corp., organization of, 12/4, p.1540.
Foundry equipment, organization of export combination in, 10/23, p.1104.
Foundry, how a steel, solves problems before attempting production, 9/11, p.701.
Foundry, how to apply the electric furnace to the, 12/11, p.1581.
Foundry jobs, how to get greatest efficiency by handling, by crane, 10/2, p.889.
Foundrymen, prominent, of Philadelphia and vicinity, 9/25, p.106, Supplement.
Foundry organization, fusion of, in Germany, 12/25, p.1705.
Foundrymen's Association (see American).
Fracture in steel, mechanism of, explained, 9/11, p.694.
France:
America, reconstruction needs of, from, 10/30, p.1198.
Blast furnace operations in, notes on, 9/18, p.764.
Bureau Veritas revising ship steel specifications for, 8/28, p.573.
Coal shortage feared in, 7/17, p.187; 7/24, p.247.
Details of contract between war department and, for sale of surplus machine tools, 12/25, p.1721.
Eight-hour day becomes operative in, 7/10, p.114.
Eight-hour day in, brings novel wages, 7/17, p.187; 7/31, p.307.
Formation of new steel group in, 9/25, p.857.
German mines, mills and furnaces in Thionville basin now operated by, 8/21, p.501.

Heat treating shells at plant in, 7/24, p.235.
Hydraulic power to be developed in, 7/3, p.40.
Industrial questions involved in control of Alsace and Lorraine passing to, 7/17, p.158.
Iron and steel imports of, for 1916-1918, 7/3, p.22.
Machine tool industry in, to be protected, 8/14, p.443.
Map showing mines and iron and steel plants in Briey and Longwy district, 7/31, p.297.
Material may be denied Germans by, 7/17, p.158.
Names, locations and areas of ore holdings conceded to, 7/31, p.296.
News notes on, 7/3, p.40; 7/17, p.187; 7/24, p.247; 8/7, p.375; 8/21, p.515; 9/18, p.764.
Pig iron will be exported by, 8/7, p.375.
Rail and plate production, of, statistics for first third 1917, 1918, and 1919 of, 12/4, p.1514.
Report of British commission after studying iron and steel industrial conditions in, 9/18, p.775.
Steelmaking practice in, discussed by Major McIntosh, 9/4, p.631.
Steel situation in, summary of, 10/23, p.1124.
Tinplate industry in, 7/3, p.27.
War equipment in, may be returned to this country for sale, 7/17, p.178.
Frank, Isaac W., views of, on the art of handling workmen, 12/25, p.1726.
Fraser, Warren F., Co., description of cylindrical grinder designed by, 8/21, p.511.
Free port zones:
How, may be provided by next congress, 10/23, p.1126.
Constitutional objections to, 10/30, p.1204.
Free-trade zone bill, introduction of revision of, 11/6, p.1265.
Freight-handling, modernizing methods for, 8/7, p.351.
Freight differentials, equity of, in iron and steel industry may be investigated, 7/10, p.109; 7/17, p.152.
Freight elevators, description of operatorless, installed at Brooklyn army base, 11/20, p.1392.
Freight rates:
Fabrication-in-transit privileges requested by shipbuilders, 7/3, p.36.
Germany announces new, 10/30, p.1204.
Ore companies ask for reduction of, 10/23, p.1126.
Proposed changes in, on coke breeze, 8/14, p.435.
Protest against ruling on, for returned defective castings and forgings, 10/2, p.936.
Reduction in steel, to British ports, 8/14, p.438.
Reduction in, to Uruguay and Argentina, 9/25, p.841.
Freighters for foreign ore, description of, being built by Bethlehem Steel Co., 11/6, p.1258.
French foundries, description of reconstruction work of, in Meuse-Moselle district, 12/25, p.1715.
French, German plants in Thionville basin now operated by, 8/21, p.501.
French guns, pictures of, 7/31, p.294.
French machine tool builders, list of, 11/6, p.1256.
French producers of automobiles, list of, 11/6, p.1257.
French steel group, formation of, 9/25, p.857.
Frick, H. C., Coke Co., increase in miners' wages granted by, 12/18, p.1659.
Frick, Henry Clay, biography of, 12/4, p.1501.
Friction cones control crane movements, how, 10/16, p.1056.
Friction gears, description of turret lathe with double, 12/4, p.1519.
Friction, how the coefficient of, varies, 12/11, p.1584.
Fuel:
How, is distributed through regional committees, 11/13, p.1316.
How, rules foreign steelmaking, 12/4, p.1505.
Mill operations, how, uncertainty delays increase in, 11/27, p.1439.
Scarcity of, effect of, on steel plants, 11/27, p.1440.
Shortage, several factors affecting, in northwestern Europe, 12/4, p.1530.
Fuel administration, re-establishment of coal preference by, 11/6, p.1263.
Fuel administrator:
Resignation of, 12/18, p.1655.
Why, revives priority, 12/4, p.1503.
Fuel control in metallurgical furnaces, discussion of, by R. J. Sargent and Sir Robert Hadfield, 10/16, p.1044.
Fuel economy, discussion of, at fall meeting of Iron and Steel institute, 10/16, p.1044.
Fuel oil engine built by Nordberg Mfg. Co., description of, 12/4, p.1521.
Fulflo Pump Co., description of reversing centrifugal pump designed by, 9/4, p.639.
Furnace:
Description of portable, that burns kerosene, 10/30, p.1209.
Drawing showing typical Lorraine blast, 10/23, p.1106.
Description of automatic puddling, 9/18, p.781.
Description of billet-heating, built for United States navy yard, 7/17, p.167.
Description of combination valve, port and slag pocket for an open-hearth, 8/14, p.426.
Description of recuperative, designed to reduce heat losses, 7/31, p.293.
How, was relined in record time, 12/18, p.1654.
Temperature, how to measure, 11/6, p.1248.
Furnace linings, how lack in uniformity of firebrick causes failures in, 8/14, p.423.
Furnace temperatures, use of pyrometers in determining, 8/14, p.427.

G

Gage, description of precision taper, 7/3, p.29.
Galvanizing Corp. of America, increase of capital of, 12/4, p.1539.

Garfield, Fuel Administrator:
Objections of, to President's plan of coal strike settlement, 12/18, p.1656.
Why, revives priority for fuel distribution, 12/4, p.1503.
Gary, E. H.:
Address of, before American Bar association, 9/11, p.718.
Appears before senate committee in steel strike investigation, 10/2, p.888.
Letter addressed to union representatives by, on steel strike, 9/4, p.643.
Refusal of, to arbitrate steel strike, 10/23, p.1128.
Stand of, for open shop, 10/23, p.1128.
Stand of, on steel strike commended by Structural Steel society, 10/2, p.887.
Testimony of, before senate committee investigating steel strike, 10/9, p.995.

McCadden, J. E., vicious doctrines sowed by, in steel strike, 10/2, p.912.
McCarter & Cooper, organization of, 12/4, p.1536.
McCarthy Drill & Tool Corp., sale of factory operated by, 9/25, p.857.
McConnell, John, description of electric treatment of steel patented by, 11/13, p.1332.
McDougall-Duluth Co. installs open-hearth furnace, 7/24, p.243.
McIntosh, Maj. F. F., discusses British and French practices in steelmaking, 9/4, p.631.
McKinney Steel Co. begins plant operations, 10/23, p.1102.

M

Machine clamp made by Albert O. Mathison, description of, 10/2, p.903.
Machine guns, development of, reviewed by war department, 7/31, p.292.
Machine shop, description of a, for making jigs and fixtures, 7/3, p.28.
Machine shop to test tool steel, importance of, built by Ludlum Steel Co. 11/20, p.1394.
Machine tool center, description of, with replaceable point, 12/11, p.1592.
Machine Tool Dealers' association of New York City, formation of, 11/6, p.1282.
Machine tool industry, review of conditions in and plans for developing foreign, 8/14, p.443.
Machine Tools:
American, how Germany copies, 10/30, p.1176.
Bill suggests sale of surplus government, to schools, 7/3, p.35.
Details of contract between war department and France for sale of surplus, 12/25, p.1721.
Disposal of, to schools by war department, 11/20, p.1399.
Germany as a future factor in, 10/30, p.1175.
List of, for sale by the government, 8/28, p.577; 12/4, p.1524.
List of French makers of, 11/6, p.1256.
List of Swiss makers of, 11/6, p.1257.
Possible markets abroad for American-made, 11/6, p.1256.
Price-fixing plan adopted by government for sale of, 8/7, p.349.
Prices, comparison of American and German, of, 10/30, p.1176.
Prices, of low in Germany, 11/6, p.1256.
Shellmaking, how, have been rebuilt for automotive operations, 10/9. p.974.
Statistics on the increased production of, 8/7, p.363.
Machinery Exposition is opened in New York, 10/16, p.1063.
Machinery Sales association, report of meeting held by, 9/11, p.707.
Magazine, Chicago manufacturers publish new, 7/10, p.103.
Magnesite mill, operation of largest, in United States, 12/4, p.1533.
Magnet, clapper type, description of switch operated by, 12/18, p.1652.
Magnet, rectangular lifting, description of, manufactured by Cutler-Hammer Mfg. Co., 11/6, p.1261.
Magnetic analysis, how to test steel, by, 10/30, p.1181.
Magnetic testing, how, is supplemented by X-ray, 10/30, p.1189.
Mahoning Valley:
Furnaces recently becoming active in, list of, 12/25, p.1700.
Strikers returning to work in, 10/16, p.1039; 10/23, p.1103; 10/30, p.1171; 11/6, p.1243.
Malleable cast iron, data on, brought out at Testing society meeting, 7/3, p.45.
Malleable industry, how shortage of labor handicaps, 10/23, p.1132.
Malleable iron and its production, association issues booklet on, 9/4, p.646.
Malleable session of American Foundrymen's association, report of annual meeting of, 10/9, p.992.
Malleable Steel & Iron Co., description of rolling-cylinder type electric furnace installed in, 12/18, p.1652.
Management, factors of successful industrial, 11/13, p.1323.
Management, shop, how to co-ordinate, 12/18, p.1647.
Management, standardization as an aid to successful industrial, 11/27, p.1449.
Manganese deposits, description of, at Hohenkircken, 11/20, p.1394.
Manganese, domestic, statistics showing how production and demand of, fell off in first half of 1919, 12/25, p.1705.
Manganese industry, high production costs may result in abandonment of, 8/14, p.442.
Manganese ore, production of, is decreasing, 8/21, p.517.

Manganese ore, shipments of, in 1918, 7/10, p.119.
Manganese ores, using domestic, in making steel, 7/3, p.34.
Manganese, process for recovering, from blast furnace slag, 9/11, p.706.
Manganese steel, how to make, by open-hearth process, 12/25, p.1701.
Manning, Van H.:
Summary of work of bureau of mines, by, 10/30, p.1191.
Views of, on extending study of steel by bureau of mines, 12/11, p.1596.
Mansfield Sheet & Tin Plate Co.:
Manager of sales of, on single price base, 9/25, p.850.
Use of powdered coal in, 10/23, p.1130.
Manufacturers Publicity Bureau, Inc., *Successful Methods* is new magazine published by, 7/10, p.103.
Manufacturing costs, efficient method of finding, 7/3, p.23.
Map of Longwy and Briey, showing mines and iron and steel plants, 7/31, p.296.
Map showing extent of destruction of industrial plants in Valley of the Meuse, 11/20, p.1386.
Map showing increase in machine tool output, 8/7, p.363.
Map showing Luxemburg in relation to iron and steel industries, French engineer's, 10/16, p.1051.
Margolis, Jacob, why disbarment of, is sought, 12/18, p.1659.
Marion Steam Shovel Co., how manganese steel is made at, 12/25, p.1701.
Marting, Col. Henry A.:
People of Ironton present loving cup to, 8/21, p.514.
An appreciation of, by James A. Green, 10/9, p.1009.
Marysville, Mich., the various plants started at, 12/11, p.1600.
Mason Machine Works takes over Worcester-Crompton Loom Co., 10/23, p.1138.
Massachusetts Associated Industries, report of annual meeting of, 10/30, p.1172.
Measuring furnace temperatures by use of pyrometers, 8/14, p.427.
Mehl Machine Tool & Die Works, description of plant of, making jigs and fixtures, 7/3, p.28.
Melingriffith Tin Plate Works, description of novel tin plate machine at, 10/16, p.1054.
Merchant and Manufacturers Exchange will have permanent exhibit of mining equipment, 7/31, p.299.
Merchant Shipbuilding Corp., hearings in case of, to revise fabrication-in-transit privileges, 9/11, p.711.
Merchant vessels, plans for disposal of government-owned, 9/25, p.841.
Merger of scrap firms, Bishop, Freidman & Bergstrom, Inc., formed by, 12/11, p.1607.
Mesaba-Cliffs Iron Mining Co. formed to operate Lake Superior mines, 9/18, p.747.
Mesta Machine Co., description of air-operated pickling machine designed by, 8/28, p.570.
Metal and slag temperatures, table showing calculated, 11/27, p.1455.
Metal exchange, organization of, in Switzerland, 11/13, p.1321.
Metallurgical and molding problems, how a steel foundry solves, 9/11, p.701.
Metallurgical Society of Aubrives and Villerupt, description of reconstruction work by, 12/25, p.1715.
Metallurgy, economy in, urged by Isaac Lester, 7/10, p.98.
Metals, simplified method for thermal analysis of, 7/24, p.235.
Metric, protect against adoption of the, 7/17, p.169.

Oil cups, drilling machine is designed without, 7/10, p.103.
Oil, discovery of, in Chesterfield district, England, 7/24, p.229.
Oil engine made by Nordberg Mfg. Co., description of, 12/4, p.1521.
Oil Film, importance of wedge shaped groove in formation of, 12/11, p.1583.
Oil industry, importance of Mexico in, 11/13, p.1325.
Oil, method for recovering lubricating, 8/7, p.364.
Oil room, how to avoid dangers lurking around the, 12/4, p.1520.
Oil, yield of, from shale deposits, 7/10, p.96.
Ojibway plant being pushed by Steel Corp.'s Canadian subsidiary, 10/16, p.1058.
Old Dominion Iron & Steel Corp., how 2-inch ingots are rolled directly into horseshoes at, 12/18, p.1654.
O'Leary, John W., discussion of, on employers' position, 10/23, p.1128.
Oliver Mining Co., why, asks for reduction of freight rates, 10/23, p.1126.
Ontario Steel Products Co., annual report of, 8/14, p.442.
Open-hearth future, what is, 11/6, p.1250.
Open-hearth plant, description of the Inland Steel Co., 7/10, p.89.
Open-hearth process, how to make manganese steel by the, 12/25, p.1701.
Open-hearth reports, how to keep daily, 8/14, p.433.
Open-hearth series, plan of American Iron & Steel Institute to present, 11/6, p.1250.
Open-hearth, why the, is not used extensively in Europe, 12/4, p.1505.
Open Shop:
- Attitude of employers' group of industrial conference toward, 10/16, p.1061.
- Bridge builders and structural societies uphold steel industry in stand for, 10/2, p.887.
- Decision of New York fabricators with reference to, 12/11, p.1604.
- Endorsement of, by American Steel and Iron institute, 10/30, p.1194.
- Focal point, as, of labor problem, 10/30, p.1192.
- Judge E. H. Gary on, before senate committee investigating steel strike, 10/9, p.997.
- Piez, Charles, on how the Link-Belt Co. has maintained an, 9/25, p.844.
- Stand taken by Judge Gary toward, 10/23, p.1128.

Open Shop association of Jefferson county, organization of, by Texans, 12/18, p.1659.
Operatorless freight elevators, description of, installed at Brooklyn army base, 11/20, p.1392.
Ordnance Department:
- Annual report of, 11/27, p.1440.
- Disposal of last of surplus steel by, 11/20, p.1398.

Ordnance plant at South Charlestown, annual report of, 11/27, p.1439.
Ore:
- Companies ask reduction of, freight rate, 10/23, p.1126.
- Discovery of iron, in Dutch India, 7/31, p.301.
- Estimate of 1919, shipments from Lake Superior district, 11/13, p. 1342.
- French holdings in the Longwy and Briey basins, 7/31, p.296.
- Germany's loss of iron, under terms of peace treaty, 7/17, p.158.
- Iron, how Germans fear scarcity of, 11/13, p.1328.
- Iron, how supply of, is limited in Germany, 10/23, p.1115.
- Lake Superior district, distribution of, in 1918, 10/23, p.1130.
- Lake Superior iron, average analyses of, 7/10, p.72, p.84.
- Loading record for, broken by Steamer D. G. Kerr, 7/24, p.243.
- Mesabi sinter gains by ignition, 7/31, p.290.
- Mexican, property will be developed, 7/24, p.216.
- Process for making steel direct from iron, 8/7, p.366.
- Report on electric smelting of, in British Columbia, 8/21, p.498.
- Shipments of, from upper lake ports for June, 7/10, p.77; August, 9/11, p.681; September, 10/9, p.959.
- Shipments of Lake Superior, held up by strike, 8/21, p.518.
- Shipments of manganese, in 1918, 7/10, p.119.
- Tonnage of iron, mined and shipped in the United States in 1918, 8/14, p.459.
- Using domestic manganese, in steel, 7/3, p.34.

Portable furnace, description of, that burns kerosene, 10/30, p.1209.
Potash, how, can be recovered from blast-furnace charge, 11/13, p.1331.
Potash, how to produce, from blast furnace gas, 12/25, p.1705.
Pouring castings, proper method of, 10/2, p.893.
Pouring device, description of, which saves labor, 9/4, p.637.
Powdered coal as fuel for annealing, advantages of, 10/9, p.972.
Powdered coal, description of equipment, for use of, at Mansfield Sheet & Tin Plate Co., 10/23, p.1130.
Powdered coal, system developed for burning, in furnaces, 7/3, p.31.
Powdered coal system, plans of Inland Steel Co., for installation of, 12/18, p.1654.
Power loader, description of tumbling barrel having, 11/27, p.1457.
Precision cutting tools from scrap heap, how to reclaim, 11/20, p.1379.
Prentiss & Co., G. W., plan of, to give course to officials in production methods, 11/20, p.1400.
Prentiss Tool & Supply Co., merger of, with O. S. Walker Co., 11/13, p.1345.
Press, description of stamping. designed by Toledo Machine & Tool Co., 12/25, p.1716.
Pressure and volume indicator, description of, designed by Bacharach Industrial Instrument Co., 12/25, p.1715.
Prest-O-Lite Co. and Canadian National Carbon Co., Ltd., erection of joint plant by, 12/18, p.1668.
Preventing occlusion of gases, 8/21, p.504.
Price-fixing, a thorough system for, asked by Birmingham congressman, 7/31, p.302.
Price-fixing plan adopted for selling government-owned machine tools, 8/7, p.349.

Prices:
Government investigation of high, to be far-reaching, 8/7, p.368.
Suggested steel, accepted by the navy department, 7/3, p.35.
Principles, declaration of, made by labor, 10/16, p.1063.
Principles enunciated by employers' group of national industrial conference, 10/16, p.1061.
Priority, why, is revived for fuel distribution, 12/4, p.1503.
Problems, how molding and metallurgical, are handled by the Electric Steel Co., 9/11, p.701.
Production control, details of a system for, 9/4, p.623.
Production department, arranging industrial cost factors in, 8/21, p.508.
Production, how, is aided by efficient planning and routing, 9/25, p.833.
Production, increased, as only hope for world, 9/25, p.856.
Production problems, how graphic records help to solve, 10/23, p.1116.
Professional men discharged from army, Colonel Woods makes plea for employment for, 9/25, p.841.
"Profit Sharing by American Employers," plans for revised edition of, 12/18, p.1654.
Profit sharing data for survey, plans of National Civic Federation for assembling, 12/18, p.1654.
Profit sharing, how, is being tried out by iron and steel companies of Great Britain, 11/13, p.1338.
Profit-sharing, outline of a plan for, which promotes thrift, 8/28, p.571.
Profit-sharing plan evolved for employes of Alfred Hickman, Ltd., 7/10, p.106.
Profits, how wages and, compare in big steel companies 10/2 p.918.
Proving ground at Sandy Hook plans for abandoning, 11/20, p.1399.
Puddler, description of automatic, installed in bar iron mill, 9/18, p.781.
Puddlers, wage scale for July-August, 7/24, p.241; September-October, 9/25, p.847; November-December, 11/6, p.1269.
Puget Sound Machinery Depot, rigging for portable electric drills devised by, 8/28, p.575.
Pullman Co., earnings of the, under U. S. control, 10/30, p.1215.
Pulverized coal as fuel for annealing, advantages of, 10/9, p.972.
Pulverized coal system, plans of Inland Steel Co. for installation of, 12/18 p.1654.
Pulverized coal systems, list of companies installing, 11/6, p.1275.
Pump casting, how welding was used to repair a dredging, 8/21, p.510.
Pump, description of a centrifugal reversing, 9/4, p.639.
Pump, description of fire, with double drive, 12/4, p.1522.
Pump, working parts of new, are rollers, 7/24, p.238.
Punch and shear, description of a combination, 7/31, p.300.
Punch, description of, with simplified spacing device, 8/7, p.364.
Punch, double, attachment, description of, designed by Cleveland Punch & Shear Works Co., 11/20, p.1394.
Purchasing Agents association, (See National)
Pyrometer problems, how to solve, 11/6, p.1248.
Pyrometers, use of, in determining furnace temperatures, 8/14, p.427.
Pyrometry in blast furnace work, importance of, 11/27, p.1452.

Q

Quaker City as the American Foundrymen's association's birthplace 9/25, p.100, supplement.
Quebec government, tractor contract of,11/20, p.1404.
Quenchings, repeated heatings and, cause warping in steel, 8/28, p.562.
Questionnaire, how, brings out interesting details of manufacture in General Steel Co., 10/16, p.1052.

R

Radial drill, description of, having safety features, 10/23, p.1119.
Radicalism, attitude of National Founders association toward, 11/27, p.1462.
Radicals, demand of, for consideration at industrial conference, 10/16, p.1060.
Radiography, how, is used for studying steel, 10/30, p.1188.
Railroad administration:
Equipment trust to finance purchase of, 8/28, p.591.
Plan to reimburse, for railroad equipment purchases, 7/10, p.121.
Railroad congestion, how, affects British, 12/4, p.1502.
Railroad rate case, tentative settlement of eastern, 9/11, p.710.
Railroads, chamber of commerce to present plan for operating, 8/14, p.438.
Railroads, why may be retained by government for another year, 11/27, p.1459.
Rails:
Action of acid on steel, discussed, 7/3, p.43.
Deep etching of steel, discussion on, 7/3, p.43.
How gas pressure may cause fissures in, 7/3, p.43.
Notes on manufacture of steel, 10/2, p.901.
Railway Association of Canada, how, will take place of railway war board, 11/20, p.1404.
Railway batteries, pictures of modern, used in France, 7/17, p.162.
Railway Supply Manufacturers' association, exhibit held by, 7/3, p.34.
Ranges, I. W. W. agitators busy on, 10/16, p.1039.
Rates for current consumption under differing conditions, methods for determining, 12/25, p.1708.
Rates, shipping board revises Pacific-Far-East commodity, 8/28, p.577.
Reading Iron Co.:
Puddling rate agreed upon by, 7/24, p.241.
Reorganization of the, 12/11, p.1598.
Reading Iron & Steel Co., president of, on question of single price base, 9/25, p.851.
Reclaim high speed precision cutting tools from scrap heap, how to, 11/20, p.1379.
Reclaiming tools, list of companies engaged in, 11/20, p.1381.
Recommendations of senate committee, in regard to steel strike, 11/13, p.1335.
Reconstruction activities in foreign countries, council issues report on, 7/31, p.314.
Reconstruction needs of Europe, members of committee on metals having charge of, 10/23, p.1125.
Reconstruction period, tool builder's association discusses, 10/23, p.1136.
Reconstruction plans of Belgium plant, 11/6, p.1252.
Reconstruction, requirements of European, 10/30, p.1197.
Reconstruction work, committee formed at Sheffield to promote, 7/31, p.301.
Records, how to keep coke, iron and steel, 8/14, p.433.
Recover potash, how to, from blast furnace gas, 12/25, p.1705.
Recovery of potash from blast-furnace charge, method of, 11/13, p.1331.
Rectangular magnet, description of, manufactured by Cutler-Hammer Mfg. Co., 11/6, p.1261.
Redelivery of ships used in war, advantages in the, 11/20, p.1399.
Refining of Basic Electric Steel, data on, 10/16, p.1052.
Reflecting equipment, guide showing how to select proper, 12/18, p.1639.
Reflectors and lamps, how good, aid production, 12/18, p.1637.
Refractories:
Effect of heat on, 10/23, p.1112.
Production of, for 1917 and 1918, 8/7, p.367.
Refractory materials, preventable defects in, 8/14, p.423.
Regional committees, how coal is distributed through, 11/13, p.1316.
Remedies for labor ills, discussion of, by American Society of Mechanical Engineers, 10/30, p.1200.

Repeal, why, of deficiency appropriation bill is proposed, 11/13, p.1338.
Replogle, J. L., reported to have purchased American Vanadium mills and mines, 8/21, p.494.
Replogle Steel Co.:
Officers of, 12/4, p.1539.
Plans of, to take Wharton property, 10/30, p.1172.
Report of meeting of, 11/27, p.1461.
Report of, to stock subscribers, 11/27, p.1475.
Wharton Steel Co. reorganization of, into, 11/13, p.1347.
Representation, plan of employe, inaugurated by International Harvester Co., 10/16, p.1041.
Republic Iron & Steel Co.:
How wages and earnings compare in, 10/2, p.918.
Plans of, to install pig-casting machine at Atlantic furnace, 12/11, p.1600.
Probable expansion of the, 12/11, p.1606.
Profits of, in third quarter of 1919, 10/23, p.1141.
Report of, for second quarter, 7/24, p.255.
Sheet mills to be built at DeForest plant, 7/24, p.220.
Republic Tool & Mfg. Co., organization of, 11/20, p.1406.
Research laboratory, suggestions for planning an industrial, 8/28, p.572.
Research work, importance of, in tinplate industry, 12/18, p.1643.
Restaurant, installing and operating an industrial, 9/11, p.691.
Resting test bars, ductility of steel is increased by, 7/17, p.164.
Restoration of French factory loot, extent of, by Germany, 11/20, p.1387.
Reversing rolling mills, advantages of electrically driven, 10/30, p.1184.
Rhondda, Lady, purchase of John Lysaght, Ltd., by, 10/9, p.1007.
Rich Foundry Equipment Co. consolidated with American Foundry Equipment Co., 8/7, p.378.
Richard Roberts & Son, erection of new foundry for, 12/4, p.1537.
Rickard, S. D., on how to avoid danger of explosive vapors in oil room, 12/4, p.1520.
"Right to Organize," explanation of term, 12/11, p.1579.
Risers, how to make, properly, 10/2, p.893.
River Rouge, how Safety Week was observed at, 11/20, p.1391.
Riverside Steel Casting Co., completion of new furnace of, 11/27, p.1461.
Rivet heater, description of electric, invented by Geo. A. Jones, 11/20, p.1393.
Roads, material for construction of, held by war department, 7/31, p.303.
Rochester Forge, Inc., description of, 11/6, p.1274.
Rock Island arsenal, Secretary Baker denies report that employes run, 9/11, p.712.
Rockford Machine Tool Co., description of automatic, rapid production lathe built by, 7/24, p.237.
Rods, production of wire, in 1918, 7/31, p.311.
Roger, Robert, & Co., results of frequent quenchings of steel at plant of, 8/28, p.562.
Rogers, Brown & Co.'s case against Pennsylvania Railroad Co., why, was dismissed, 10/23, p.1126.
Roll prices, how advance in pig iron costs increased, 12/25, p.1700.
Rolled iron and steel products, production of miscellaneous, for 1918, 7/31, p.311.
Rolled wheels, how to make ingots for, 10/30, p.1186.
Rolling mill data, formula for, 12/4, p.1513.
Rolling mill equipment, description of modern, used in English plants, 8/28, p.559.
Rolling mills, advantages of electrically driven reversing, 10/30, p.1184.
Rolling mills, good arrangement of, in Europe, 12/4, p.1507.
Rolling steel, data on strains in, 12/4, p.1512.
Rolls, improved type of scouring copper for, 8/7, p.358.
Rolls-Royce of America, Inc.:
Plans for first plant of, 12/4, p.1535.
Purchase of East Springfield plant by, 12/25, p.1732.
Roseclaire Lead & Fluorspar Mining Co., incorporated to operate fluorspar mines, 7/10, p.110.
Rotospeed Co., extension plans of, 12/4, p.1539.
Routing, how efficient planning and, aids production in plant of National Acme Co., 9/25, p.833.
Ruder, W. E., biographical sketch of, 10/30, p.1191.
Ruder, W. E., discussion of, on mechanism of fracture in steel, 9/11, p.694.
Rushmore, David B., views of, on application of electric drive to steel mills, 11/27, p.1445.
Russ Mfg. Co., description of industrial cafeteria equipment manufactured by, 9/11, p.691.
Russell Motor Car Co., annual report of, 12/4, p.1532.
Russia:
Iron and steel famine exists in, 9/11, p.696.
Trade, resumption of, attitude of American Manufacturers' Export association toward, 10/23, p.1123.
Russian industry, lifelessness of, 10/23, p.1120.
Ryan, Daniel, description of pouring device invented by, 9/4, p.637.
Ryerson Joseph & Son, description of combination punch and shear developed by, 7/31, p.300.
Ryerson, Joseph T., & Co., description of new plant purchased by, 10/16, p.1067.

S

Saar valley, industrial questions raised by French control of, 7/17, p.158.
Safety, booklet on, issued by Kempsmith Mfg. Co., 7/31, p.300.
Safety brake for traveling cranes, description of, 11/27, p.1456.
Safety council. (See National.)
Safety exhibit, plans for, to be held in Cleveland, 9/11, p.715.
Safety in steel plant, how to promote, 10/23, p.1110.
Safety of labor, education as an aid to, 12/25, p.1716.
Safety supervisors, first class of Ohio, graduated, 7/31, p.299.
Safety week, how, was observed at River Rouge, 11/20, p.1391.
Safety work, how, reduced plant accidents in American Rolling Mill Co., 12/18, p.1646.
Saginaw Products Co., description of new foundry built by, for casting motor parts, 11/6, p.1245.
Sand, description of machine employing projectile principle in ramming, 8/28, p.567.
Sand from New Plymouth deposits, average analysis of, 11/20, p.1389.
Sand Mixing Machine Co. consolidated with American Foundry Equipment Co., 8/7, p.378.
Sand-mixing machine, description of, with 3-foot span, 8/14, p.435.
Sandy Hook proving ground, plans for abandoning, 11/20, p.1399.
Sanford, Raymond L., biographical sketch of, 10/30, p.1190.
Savage Arms Corp., earnings of, for three months ended Sept. 30, 12/4, p.1538.
Saving plan for employes which promotes thrift, 8/28, p.571.
Saving plan, General Electric Co. adopts thrift bond, for workers, 7/31, p.307.
Schenk, J. M., views of, on bonus system, 7/24, p.250.
Schneider, Eugene:
How, is honored in Cleveland, 11/20, p.1401.
Metallurgical medal is awarded, 11/27, p.1439.
Presentation of gold medal to, 11/20, p.1405.
Views of, on world chamber of commerce, 10/23, p.1124.
Schneider plant, description of, as an industrial pillar, 10/30, p.1178.
Schools, government-owned machine tools may be sold to, 7/3, p.35.

Schwab, Charles M.:
Flag-raising to be held in honor of, 7/24, p.246.
Receives insignia of the French legion of honor, 9/4, p.650.
Reported to have purchased American vanadium mills and mines, 8/21, p.494.
Steel as industry's king, opinion of, on, 12/4, p.1522.
Trade unionism, why, opposes, 11/13, p.1338.
Scotch molders, failure of, to join British strike, 11/27, p.1440.
Scrap, Chicago foundrymen to buy, collectively, 7/31, p.303.
Scrap firms, merger of, 12/11, p.1607.
Scrap heap, how to reclaim high speed precision cutting tools from, 11/20, p.1379.
Scrap, government sells, at big profit, 7/31, p.302.
Scrap pile, educational value of the, 10/2, p.892.
Screw cutting bench lathe, description of, 12/4, p.1522.
Screw machine, the units of which are interchangeable, description of, 12/4, p.1521.
Screw stock, sales of, made by war department, 7/10, p.86.
Screw thread commission, plans for last meeting of national, 9/25, p.846.
Seaboard Steel & Manganese Corp.:
Receiver appointed for, 8/21, p.527.
Receiver for, order given to, for operation of Temple blast furnace, 12/4, p.1540.
Seamen's strike, how, has crippled Australian works, 10/9, p.986; 11/13, p.1339.
Self-expression, importance of the demand for, by workmen, 12/4, p.1509.
Selling price, method of determining basis for fixing, 9/4, p.630.
Senate committee, Americanization legislation planned by, 10/16, p.1040.
Senate committee, coal operators testify before, 9/11, p.709.
Senate committee, testimony of Samuel Gompers and John Fitzpatrick on steel strike before, 10/2, p.915.
Senate inquiry bares iniquity of steel strike, 10/2, p.915.
Service men, plans for giving vocational training to, 11/20, p.1399.
Shafting and cold rolled finished steel, new extra card issued for, 8/28, p.584.
Shale deposits, possibility of extracting oil from, 7/10, p.96.
Shapes, production of structural, in 1918, 7/31, p.311.
Shaping machine, description of a duplex universal milling and, 7/24, p.237.
Sharon Steel Mfg. Co. consolidated with Hydraulic Drawn Forging Co., 7/3, p.13.
Shawinigan Electro Products Co., new ferroalloy produced by, 8/14, p.445.
Sheet and tin mill wage scale. (See Wages.)
Sheet Steel Products Co., extension plans of, 12/18, p.1665.
Sheets, corrosion of iron and steel, discussed by Testing society, 7/3, p.45.
Sheets and plates, production of iron and steel, in 1918, 7/31, p.311.
Sheffield Forge & Rolling Mills, Ltd., welfare work done by, 7/10, p.106.
Shell steel, sales of, made by war department, 7/10, p.86.
Shellmaking tools, how, have been rebuilt for automotive operations, 10/9, p.974.
Shells, high-explosive, importance of uniform castings for, 12/11, p.1573.
Ship steel specifications, French will revise, to conform with A. S. T. M., 8/28, p.573.
Shipbuilders ask extension of fabrication-in-transit privileges, 7/3, p.36.
Shipbuilders, expectations of, for future business, 12/18, p.1660.
Shipbuilding, condition of, in the northwest, 12/4, p.1533.
Shipbuilding industry, expansion of, 12/18, p.1661.
Shipbuilding material, description of southern plant for fabricating, 9/4, p.632.
Shipbuilding plant, description of steel, at Chickasaw, 9/4, p.635.
Shipbuilding program, status of, on June 30, 1919, 7/17, p.179.
Shipping board, new tariffs issued by, for Pacific-Far East shipments, 8/28, p.577.
Shipping bureau, approval of thermit welding given by, 10/2, p.936.
Ships, demand for fabricated, is good, 9/18, p.778.
Ships, description of a yard which builds steel cargo, 9/4, p.635.
Ships, how, used in war are returned to service, 11/20, p.1399.
Ships, plan for disposal of government-owned merchant, 9/25, p.841.
Ships, statistics compiled by shipping board on tonnage of, built and building, 9/18, p.778.
Ships, status of government program for building, on June 30, 1919, 7/17, p.179.
Shop calls, audible electric signal system for, 8/7, p.355.
Shop management, how to co-ordinate, 12/18, p.1647.
Shrink heads, how to make, properly, 10/2, p.893.
Sibley Machine Co., description of sliding head drilling machine developed by, 11/27, p.1457.
Side-coupled tractor, description of, used in tube plant, 11/20, p.1394.
Sidney Machine Tool Co., lathe made by, has quick-change gear box, 7/3, p.32.
Signals, audible electric, for shop calls, 8/7, p.355.
Signals in the foundry, advantages of audible, 10/2, p.894.
Silica and clay brick, results of tests on, to solve refractory problems, 10/23, p.1112.
Siliceous rock, analysis of, 11/20, p.1390.
Silicon content, table showing furnaces grouped according to, 11/27, p.1453.
Silicon contents in metal, table showing calculated, 11/27, p.1455.
Silicon, how occlusion of gases is prevented by the use of, 8/21, p.504.
Silicon in metal, comparison of calculated and actual content of, 11/27, p.1454.
Silicon range, southern makers adopt, for No. 2 foundry, 8/7, p.350.
Silver Mfg. Co., Salem, O., description of radial drill developed by, 10/23, p.1119.
Simplex Wire & Cable Co., description of course of training for executives of, 10/23, p.1130.
Sinter gains on ignition, 7/31, p.290.
Sintering plant in Carnegie Steel Co., installation of, 11/27, p.1461.
Sioux Falls Metal Culvert Co., extension plans of, 11/13, p.1344.
Sizer Forge Co. entertains leading forge men, 7/10, p.119.
Skelp, production of iron and steel, in 1918, 7/31, p.311.
Skid leg, description of steel, designed for truck platforms, 9/18, p.773.
Skoda armament works, report of contemplated purchase of shares in, by Prague government, 11/30, p.1387.
Slag and metal temperatures, table showing calculated, 11/27, p.1455.
Slag, process for recovering manganese from blast furnace, 9/11, p.706.
Sleeve-bearing operation, two cardinal points of successful, 12/11, p.1584.
Slick-Knox Co.:
Formed by consolidation, 7/3, p.13.
Plant improvements made by, 10/2, p.936.
Sliding head drilling machine, description of, 11/27, p.1457.
Slips, how to prevent blast furnace, 10/23, p.1114.
Slots, blowpipe used for cutting, in large slip socket, 8/7, p.365.
Smalley General Co., Inc.:
Description of tool designed by, for cutting pipe flange threads, 8/21, p.511.
Extension plans of, 12/25, p.1729.

Smelter, zinc, plans of Burma Corp., Ltd., for construction of, 12/18, p.1654.
Smelting iron in Sweden 200 years ago, method of, 10/16, p.1046.
Smelting of titanium-bearing ores as a blast furnace problem, 11/20, p.1388.
Smelting titaniferous ores in 1834, data on, 12/25, p.1714.
Smith, Col. Cameron C., on industrial unrest; cause, effect and remedy, 12/4, p.1518.
Smith, Senator, Americanization bill of, before senate committee, 10/16, p.1040.
Smoot bill, how foreign products may be barred from U. S. by, 10/23, p.1127.
Snow, Maj. Gen. Wm. J., views of, on national preparedness, 12/4, p.1525.
Societe John Cockerill, refusal of, to purchase necessary equipment from Germany, 11/6, p.1252.
Society of Industrial Engineers, report of Cleveland convention of, 11/6, p.1272.
Solicitation of employes by union may be stopped, how supreme court ruled that, 10/30, p.1206.
Somers & Co., W., experiments of, in profit sharing, 11/13, p.1338.
South, description of new plant for fabricating shipbuilding material erected in, 9/4, p.632.
Southern Bridge Co. on Pittsburgh as the only basing point, 9/25, p.851.
Southern Ohio Pig Iron and Coke association, report of second annual meeting of, 11/20, p.1397.
Southern pig iron, changed conditions in production costs of, 7/24, p.251.
Southern plants, activity of, 12/4, p.1537.
Southington, Conn., centennial celebration held at, 9/11, p.700.
Southwark Foundry & Machine Co., description of blast furnace tapping machine built by, 7/31, p.293.
Sparrows Point, description of extensions to Bethlehem Steel plant at, 7/3, p.17.
Specializing to efficient buying, importance of, 12/18, p.1650.
Specifications, sulphur concessions on various, recalled by Testing society, 7/3, p.42.
Spencer Wire Co., sale terms of, 10/2, p.919.
Sponsor plan, attitude of United States bureau of standards toward, 11/27, p.1447.
"Spotting" charge, why independent companies ask interstate commerce commission to revoke, 10/23, p.1126.
Sprague-Hayes Mfg. Co., description of platen vise made by, 10/2, p.904.
Springfield Aluminum Plate & Casting Co., organization of, 11/27, p.1472.
St. Louis, steel strike has no effect at, 10/9, p.968.
St. Louis Coke & Chemical Co., plans of, to build additional furnaces and coke ovens, 9/18, p.784.
Stack, how, was relined in record time, 12/18, p.1654.
Stamping press, description of, designed by Toledo Machine & Tool Co., 12/25, p.1716.
Standard Parts Co., annual report of, 7/3, p.38.
Standard Steel & Bearings, Inc., incorporation of, 11/20, p.1406.
Standardization, importance of, in industry, 11/20, p.1391.
Standardization of duties, why, is important to efficient management, 11/13, p.1323.
Standardization of gears, how, becomes a reality, 10/23, p.1121.
Standardization of operations, why, is important to efficient management, 11/13, p.1323.
Standardizing works methods, advantage of, 11/27, p.1449.
Standards, national, plan of by council of German industrial standards committee to adopt, 11/13, p.1320.
Stanley works, plans for new steel mill of, 11/20, p.1407.
Stansfield, Dr., report of, on feasibility of electric smelting of ores in British Columbia, 8/21, p.498.
Star Safety Razor Co., merger of, with American Safety Razor Co., 10/30, p.1215.
Starters for motors, description of, designed with protective devices, 9/11, p.707.
Statistics on iron and steel production in Luxemburg, 10/16, p.1050.
Steel:
American, why Europe will require only little, for reconstruction, 10/30, p.1197.
Better grade of, should be produced in America, 9/4, p.631.
Bureau of mines, plan of, to extend studies of, 12/11, p.1596.
Canada, how strike retards shipments of, to, 11/27, p.1460.
Comparison of output of, in the United States and Europe, 12/4, p.1506.
Comparison of costs of converter and electric, 12/11, p.1582.
Cutting tools are cast directly from high-speed, 7/24, p.236.
Deep etching of rail, discussion of, 7/3, p.43.
Description of plant making high-grade tool, 7/17, p.153.
Disposition of surplus, by shipping board, 12/25, p.1720.
Electric, increase in production of, in Germany, 11/13, p.1321.
English airplane motors, how, is made by Baltimore plant, 10/30, p.1173.
Examination of, runner shows three structures, 7/3, p.30.
Facts shown by examination of torpedoed, 7/31, p.299.
Fracture in, discussion on the mechanism of, 9/11, p.694.
High speed tool, suggested limits and desired analysis for, 7/3, p.44.
How shortage of, affects steel business in Canada, 12/25, p.1719.
How temperature and time of rest increase elongation in, test bars, 7/17, p.164.
Ingots (see ingots).
Large locomotive requires much, 7/31, p.287.
Magnetic analysis, how to test, by, 10/30, p.1181.
Manganese, how to make, by open-hearth process, 12/25, p.1701.
Manufacture of, how the, is improved by electric treatment, 11/13, p.1332.
Method of annealing tool, by special packing, 7/17, p.166.
Mining and metallurgical engineers defend quality of American, 10/2, p.900.
New process for making alloy, 8/14, p.431.
Process for making, direct from ore, 8/7, p.366.
Refining basic electric, data on, 10/16, p.1052.
Relation between defects in manufacture and subsequent heat treatment of, 7/31, p.288.
Report on investigation of strike, senate committee to prepare, 10/30, p.1202.
Report on navy tests of new British tool, 7/3, p.44.
Statistics on production in Luxemburg, 10/16, p.1050.
Strains, data on, in rolling, 12/4, p.1512.
Strike, arbitration of, opposed by public and employers' group in national industrial conference, 10/23, p.1104.
Strike, how, handicaps Canadian industries, 12/4, p.1537.
Strike problem brought before industrial conference, 10/16, p.1060.
Strike, refusal of Judge Gary to arbitrate, 10/23, p.1128.
Strip, how, is rolled in long lengths, 11/13, p.1317.
Tensile tests of basic electric, 12/25, p.1709.
Tools formed from special sections of, by grinding, 7/3, p.27.

United States shipping board, consumption of steel in 1919, by, 12/18, p.1655.
Warping in, caused by repeated heating and quenching, 8/28, p.562.
Warrior river, how, is used in hauling, 11/27, p.1470.
X-ray, how to apply, to study of, 10/30, p.1188.
X-rays, how, is examined by, 11/13, p.1329.
Steel & Tube Co., erection of new stack by, 10/30, p.1172.
Steel club of Philadelphia, report of initial dinner of, 11/20, p.1405.
Steelduct Co., the, organization of, 11/20, p.1397.
Steel fabricators of the United States uphold stand for open shop, 10/2, p.887.
Steel in ladle, cost of one ton of electric furnace, 12/25, p.1707.
Steel links for stokers, advantages of. 11/6, p.1254.
Steelmaking, how fuel rules foreign, 12/4, p.1505.
Steel output, data showing how, overtakes lead held by pig iron, 12/4, p.1507.
Steel plant, description of American-built, in Japan, 7/24, p.230.
Steel plant, description of extensions to Sparrows Point, 7/3, p.17.
Steel plant, how to humanize labor in the, 12/18, p.1641.
Steel Plants:
How English have been modernized, 8/28, p.559.
How to promote safety in, 10/23, p.1110.
Steel practice in Europe and U. S., difference between, 12/4, p.1505.
Steel practice, two articles on early American, reprinted by Robert W. Hunt, 9/4, p.639.
Steel products, proposed sale of, at army supply base, 11/27, p.1470.
Steel strike (see also strike).
Steel strike:
Judge Gary refuses to confer with union on, 9/11, p.689.
Letters exchanged by Judge Gary and union committee on, 9/4, p.643.
Steel wages are far above pauper line, evidence showing, 10/2, p.887.
Steelworkers, increase in, in September, 12/18, p.1658.
Steel works, cost accounting methods as applied to, 7/10, p.97; 7/24, p.232; 8/7, p.361; 8/21, p.508.
Steel works, description of the Inland Steel Co.'s new plant, 7/10, p.87.
Steel works, using pyrometers in, 8/14, p.427.
Steel Co. of Canada, annual report of, 7/10, p.121.
Steel Treaters' society. (See American.)
Steel & Radiator, Ltd., annual report of, 7/3, p.39.
Steel & Tube Co. of America:
Acquires raw materials in new merger, 7/10, p.86.
May build new blast furnace at South Chicago, 7/3, p.39.
Sterling Car Body Corp., incorporation of, 12/18, p.1671.
Sternpost on the NORTHERN PACIFIC, repairing the, by welding, 7/31, p.291.
Stobie, Victor, suggestions of, on increasing the life of electrodes, 7/3, p.31.
Stock market, what the slump in the, may portend, 12/4, p.1538.
Stoker Manufacturers' association, plans for fall meeting of, 8/28, p.554.
Stokers, advantages of links of rolled steel for, 11/6, p.1254.
Stoney, S. W., method of producing tractor transmission housings patented by, 9/18, p.769.
Stores system with few form cards, how to organize an efficient, 12/11, p.1586.
Strains in rolling steel, explanation of, 12/4, p.1512.
Street car motor, description of gasoline, designed by Henry Ford, 11/6, p.1262.
Strickler Hay Tool Co., reorganization of, 10/30, p.1211.
Strike:
Agitators, grilling of, by senators, 10/16, p.1071.
Agitators, vicious doctrines sowed by, 10/2, p.911.
American labor only, employment of, as a, prevention, 10/23, p.1102.
Attitude of Wall street as indication of failure of, 10/9, p.1007.
British coal miners settle, 9/4, p.644.
British furnaces, how, cripples, 10/30, p.1208.
Canadian industry, how steel, in United States affected, 11/13, p.1343.
Chiefs are held most to blame, why, 11/13, p.1334.
Coal, attitude of manufacturers toward miners in, 12/4, p.1523.
Coal, settlement of, Dr. Garfield's objections to President's plan of, 12/18, p.1656.
Coal settlement of, how fuel administrator was ignored by President in, 12/18, p.1655.
Defeat of, conceded by Gompers, 10/16, p.1040.
Failure of steel, indications of, 10/2, p.884; 10/9, p.966; 10/9, p.1007; 10/23, p.1102; p.1122.
How the steel, is failing at vital points, 9/25, p.817; 10/2, p.884; 10/9, p.966; 10/16, p.1038.
Investigators, Americanization urged by senate, 10/9, p.965.
Iron and steel labor unions preparing to call a, 7/24, p.240.
Judge E. H. Gary's testimony on steel, given before senate committee, 10/9, p.995.
Motor car industry may be suspended by steel, 10/2, p.887.
Pickets enjoined by Judge Landis in South Chicago, 10/2, p.887.
Prosecution of William Z. Foster demanded for, activities, 10/2, p.920.
Report on investigation of steel, senate committee to prepare, 10/30, p.1202.
Seamen's, how, retards output in Australian steel, 11/13, p.1339.
Senate inquiry bares iniquity of steel, 10/2, p.915.
Shipments of ore held up by dock, 8/14, p.446.
Standard Steel Car Co., failure of, at, 11/27, p.1461.
Steel, refusal of Judge Gary to arbitrate, 10/23, p.1128.
Testimony of John Fitzpatrick contradicted by Inland Steel Co. employe, 10/2, p.887.
Testimony on, by Samuel Gompers and John Fitzpatrick before senate committee, 10/2, p.915.
Union representatives are divided on steel, 9/18, p.755.
Strike or lockout, attitude of employers' group of industrial conference toward right of, 10/16, p.1061.
Strikers:
Senate inquiry showing, not Americans, 10/16, p.1071.
Steel, how, make economic error, 10/23, p.1140.
Strikes, how, are lessened by works councils, 11/6, p.1268.
Strikes, how, hamper output of German works, 10/16, p.1047.
Strip steel, how, is rolled in long lengths, 11/13, p.1317.
Structural awards. (See Bridge Builders and Structural society.)
Structural shapes, Cambria Steel Co. issues new booklet on, 8/7, p.358.
Structural Steel society commends Gary's stand in steel strike, 10/2, p.887.
Struthers Furnace Co., issuance of preferred stock by, 12/18, p.1671.
Submarine Boat Corp., Italian government orders ships from, 9/18, p.778.
Substitute materials, how, restrict German industry, 10/23, p.1115.
Successful Methods is new publication of Chicago manufacturers, 7/10, p.103.
Sullivan Machinery Co., description of compressor air valve designed by, 7/17, p.159.

Sulphate of ammonia, scarcity of, 10/30, p.1204.
Sulphur contents in metal, table showing calculated, 11/27, p.1455.
Sulphur in metal, comparison of calculated and actual content of, 11/27, p.1454.
Sulphur in steel, effect of, 10/9, p.992.
Sulphur in steel, how too much emphasis is given question of, 10/9, p.986.
Sumner Iron Works retires preferred stock, 10/23, p.1130.
Superior Steel Castings Co., extension plan of, 11/27, p.1473.
Superior Steel Co., plans for new sheet mill of the, 11/6, p.1244.
Super-refining of steels, how, is done electrically, 11/13, p.1332.
Surface defects, how, are removed by grinding, 11/13, p.1333.
Surplus property, total of sales of, by war department, 11/27, p.1460.
Surplus stocks, statistics on, held by war department, 7/24, p.242; 8/21, p.513.
Sweden:
  Germany, grant of steel railroad bridge in, placed with, 11/13, p.1322.
  Report on iron and steel industry in, 7/24, p.243.
Swedish, depression of, iron production, 11/20, p.1395.
Swiss machine toolmakers, list of, 11/6, p.1257.
Swiss metal exchange, organization of, 11/23, p.1321.
Switch, description of, designed by Westinghouse Electric & Mfg. Co., 11/6, p.1261.
Switch, starting, with new type of overload protection, description of, 10/16, p.1057.
Switching service, why interstate commerce commission applies intracity rate to, 10/23, p.1126.
Switzerland, iron mines in, to be exploited, 8/21, p.500.
Sykes, Wilfred, biographical sketch of, 10/30, p.1190.
Synthetic cast iron as discussed at fall meeting of the Iron and Steel institute, 10/16, p.1045.
Syracuse Alloy Steel Co., reincorporation of, 12/4, p.1535.
System for cost finishing and production control, details of, 9/4, p.623.
Systematizing of control, explanation of, 12/18, p.1647.

T

Table showing how British workmen help to pay for 8-hour day, 7/10, p.113.
Tacks and nails, new schedule of net differentials of, 12/25, p.1725.
Tacony Steel Co. buys Tacony Ordnance Corp. plant, 8/7, p.347.
Tank noses, description of machine for forming, 7/31, p.286.
Tanks, work done by Americans in building, 7/17, p.157.
Taper gage, description of precision, 7/3, p.29.
Tapping machine, description of the Mullen type, 7/31, p.293.
Tariff commission, report of, on production of by-products in 1918, 9/18, p.779.
Tariff, efforts toward consolidation of amended forms of, into one order, 11/6, p.1264.
Tariff on tungsten, house passes bill providing, 8/28, p.576.

Vulcan Mfg. Co., description of rolling cylinder type electric furnace installed in, 12/18, p.1652.

W

Wage increases greater than cost of living, 10/16, p.1039.
Wages:
Changes made in bar iron schedule of, 7/10, p.86.
Evidence showing that steel, are far above pauper line, 10/2, p.887.
How, compare with earnings in big steel companies, 10/2, p.918.
Statistics of, and employment in the iron and steel industry, 8/28, p.582.
Larger total, with fewer employes shown in iron and steel industry, 7/24, p.241.
Midvale employes call halt on unceasing demands for higher, 8/28, p.582.
Puddlers for July-August, 7/24, p.241; September-October, 9/25, p.847; November-December, 11/6, p.1269.
Rate of, paid workers in Panama canal zone, 8/14, p.440.
Rising tendency of, for common labor, 7/10, p.106.
Sliding scale of, used in British iron and steel industry, 7/10, p.111.
Wage system, how the establishment of a proper, would help eliminate industrial unrest, 12/11, p.1579.
Walker Co., O. S.:
Merger of, 11/13, p.1345.
Reorganization of the, 12/11, p.1599.
Wappat Gear Works, extension plans of, 11/13, p.1344.
Walkout of miners, how, fails to complicate steel strike, 11/6, p.1242.
War:
Types of tanks built for, by Americans, 7/17, p.157.
Work done by Cooper company described in booklet, 7/24, p.238.
War control of coke prices, how, are restored, 12/11, p.1572.
War department:
Announcement of surplus of iron and steel by, 11/6, p.1264.
Explosive industry, rapid development of, reviewed by, 8/28, p.563.
List of machine tools for sale by, 8/28, p.577.
Machine gun development reviewed by, 7/31, p.292.
Price-fixing plan for machine tools adopted by, 8/7, p.349.
Progress shown in liquidation of government contracts, 7/17, p.180; 7/31, p.302; 8/21, p.513; 8/28, p.578; 9/25, p.840; 12/4, p.1526; 12/25, p.1731.
Report of, on development of head and body armor in the United States, 9/11, p.695.
Road construction material held by, 7/31, p.303.
Sale of tools by, 12/18, p.1656.
Sales of shell steel and screw stock made by, 7/10, p.86.
Scrap sold by, at big profit, 7/31, p.302.
Statistics on surplus stocks held by, 7/24, p.242; 8/21, p.513.
Surplus machine tools held by, may be sold to schools, 7/3, p.35.
War industries board, annual report of, 11/27, p.1460.
War industries board:
Report of activities of, to President, 12/25, p.1721.
War labor board, activities of, terminated, 8/21, p.522.

War labor board, national, goes out of existence, 7/3, p.37.

War Material:
Big tonnage of, produced by Thomas Firth & Sons, Ltd., 8/21, p.505.
Equipment in France may be shipped and sold in this country, 7/17, p.178.

War minerals, plan of Bernard M. Baruch for developing production of, 12/25, p.1721.

War minerals relief commission, rejection of claims by, 12/18, p.1657.

War paper, elimination of, 11/6, p.1280.

War tonnage, advantages of returning, 11/20, p.1399.

Warner & Swasey Co., description of turret lathe with double friction gears, developed by, 12/4, p.1519.

Warrior river, how the, is used for hauling of steel, 11/27, p.1470.

Washburn Wire Co., incorporation of, 12/18, p.1660.

Water, system for cooling drinking, employed at Youngstown Sheet & Tube Co. plant, 8/14, p.421.

Watertown arsenal, description of method of making high-explosive shells at the, 12/11, p.1573.

Watertown arsenal:
Increase in tests of iron and steel at, 10/16, p.1049.

Watt, James, centenary of pioneer engine builder, held in Great Britain, 9/18, p.766.

Weirton Steel Co., description of new blast furnace of, 10/2, p.921.

Weld, C. M., report of, on high costs in manganese industry, 8/14, p.422.

Welded pipe, how tensile strength of, was determined, 12/18, p.1653.

Welding, approval of thermit, given by American bureau of shipping, 10/2, p.936.

Welding, dredging pump casting repaired by, 8/21, p.510.

Welding, how arc, is used in the foundry, 10/9, p.985.

Welding, how, of large mill engine cylinders is accomplished, 12/25, p.1710.

Welding, how the sternpost on the Northern Pacific was repaired by, 7/31, p.291.

Welding, discussion of theory that metal is expelled from electrode in form of metallic vapor in arc, 12/4, p.1515.

Welding tight joints electrically, 7/24, p.234.

Welding torch embodies new features, description of, 10/16, p.1057.

Welding unit, new electric, has generator set and control panel, 9/4, p.639.

Welfare Work:
Figures given by Judge Gary on, in steel strike investigation, 10/9, p.1000.
Home-building plans for Midvale employes, 7/17, p.176.
Installing and operating an industrial cafeteria, 9/11, p.691.
Recreation plans for Sheffield forge employes, 7/10, p.106.

Wellman, Samuel Thomas, death of, 7/17, p.184.

Wellman-Seaver-Morgan Co., description of clam-shell bucket made by, 10/2, p.904.

Welsh steel plant, description of, that is selfcontained, 11/27, p.1441.

Welsh tin mills, merger of, 7/10, p.121.

West Side Foundry Co., Troy Foundry & Machine Co., successor to, 10/30, p.1211.

Westenhaver, Judge, importance of decision of, enjoining mayor and police chief from barring importation of men to take place of steel strikers, 12/25, p.1726.

Western Association of Rolled Steel Consumers:
Answers filed in basing point complaint of, 9/4, p.640.
Federal trade commission will hear case of, to establish Chicago basing point, 7/17, p.152; 7/31, p.283.
Suit filed by, on Chicago basing point, 7/24, p.219.
Supplemental declaration filed by, in basing point case, 9/18, p.780.

Western Rolling Mill Corp.:
Construction plans of, 10/9, p.1004.
Plans of, to build open-hearth furnaces, 11/6, p.1261.

Westinghouse Air Brake Co.:
Fiftieth anniversary celebrated by, 10/9, p.973.
Plans of, for building additional homes for employes at Wilmerding, 9/4, p.629.

Westinghouse Electric & Mfg. Co.:
Awards four annual war memorial scholarships, 12/4, p.1521.
Description of electrical heaters made by, for drying metal patterns, 9/25, p.838.
Description of switch designed by, 11/6, p.1261.
Plan of employes of, for co-operative store, 11/27, p.1466.
Transformer cases of sheet metal, description of, manufactured by, 11/6, p.1260.

Wharton Steel Co.:
Plans of, for modernizing plant, 12/18, p.1662.
Reorganization of, into Replogle Steel Co., 11/13, p.1347.

Wheel and tire steel, chemical analyses of, 10/30, p.1187.

Wheeler Condenser & Engineering Co. develops new steam-surface condenser, 9/4, p.638.

Wheels, nine causes for breakage of grinding, 12/25, p.1712.

Wheeling Steel & Iron Co., plans of, for lighting stack, 12/25, p.1719.

Wheels, how to make ingots for rolled, 10/30, p.1186.

White Oil Corp., merger of two companies with, 10/23, p.1138.

Whiteley Malleable Castings Co., merger of, 12/18, p.1664.

Whitley system be adopted, suggestion by public group that, 10/30, p.1205.

Williams, Hugh R., properties of monel metal discussed by, 8/7, p.355.

Wilson, President, plans of, to organize new industrial conference, 10/30, p.1205.

Wilson, Secretary of Labor, plan of, for industrial board for settlement of labor disputes, 10/16, p.1062.

Wilson Welder & Metals Co. designs welding unit with generator set and control panel, 9/4, p.639.

Winterly, James T., & Co., supply business started by, 8/28, p.579.

Wire rods, production of, in 1918, 7/31, p.311.

Wodack Electric Tool Corp., organization of, 11/27, p.1472.

Women in industry, report issued by British on, 8/21, p.498.

Wood patterns, description of shop making, 8/14, p.429.

Woodbridge, Dwight E., data on smelting titaniferous ores in 1834, given by, 12/25, p.1714.

THE IRON TRADE REVIEW

Vol. LXV Cleveland, July 3, 1919 No. 1

June Turns Steel Trade Upward

Pig Iron Production Shows Increase After Eight Months of Steady Decline—Mill Operations Keep Up Gradual Gain—New Buying is Sustained—June Pig Iron Sales Estimated at Over 1,250,000 Tons

JUNE definitely turned the tide in the iron and steel industry toward better and more stabilized conditions and the evidence of this fact grows with each passing week. Cumulative effects of the recent period of freer buying are marked not only by the steadily mounting line of production but, what is probably more important, by the apparent adjustment of consumers to present price levels. This acceptance of prevailing conditions is bringing forth a continuing movement in placing future wants under contract and in ordering out tonnage for immediate use. Blast furnace activities for June furnish another index to the upturn of the steel industry. The steady monthly decline of production dating from September, 1918, was broken and an output of 2,116,702 tons for the 30-day month is a gain of 8973 tons over May with 31 days. The June daily average was 70,557 tons against 67,991 tons in May. Steel works production gained 72,438 tons over May but merchant output lost 63,332 tons. Furnaces in blast on the last day of June were 200, a gain of 3.

General operations of the industry continue to expand and are well covered by a range of 70 to 75 per cent of capacity. Steel corporation activities are on a slightly higher plane than those of the independents. Sheet mill output now is up to 75 per cent with the leading interest scheduled at 88 per cent for next week. Tin plate and wire operations are around 80 per cent. Lapweld pipe makers continue to run full and are sold up for three to five months. Some of these producers now are refusing orders and others are scaling offered business, 50 per cent. Merchant bar operations at Chicago are estimated at 60 per cent but the situation is being helped by the inauguration of last half buying by farm implement makers.

Iron Sales Are Huge

Sales of pig iron in June based on a careful canvass are shown to have totaled in excess of 1,250,000 tons. This summary credits about 375,000 tons to Cleveland sellers; 300,000 tons to Buffalo; 200,000 to 225,000 tons to Chicago; 100,000 tons to eastern Pennsylvania and Virginia; 100,000 to 150,000 tons to the south; 40,000 to 50,000 tons to Pittsburgh and the remainder to southern Ohio and scattered districts. Probably nine-tenths of this aggregate was made up of foundry and malleable grades and necessarily the number of individual sales was unusually large. Steelmaking iron which included a 20,000-ton basic sale just made by southern Ohio furnaces for St. Louis delivery, furnished an exceedingly small proportion for so large a movement. New buying of iron now is continuing to run in a more subdued way although it still foots up a favorable tonnage weekly. The General Motors Corp. has inquired for 11,000 tons of malleable and foundry.

Take Private Armor Bids

Somewhat of a departure in matters of this kind is the taking of private bids on approximately 50,000 tons of armor plate for six battleships by the navy department. This is the largest quantity of this material ever sought at one time and is equal to 18 months' production of the three producing plants of the country.

An important order of collateral importance to the steel industry is the 300,000 to 400,000 barrels of portland cement placed with the Steel corporation subsidiaries for the approaches and viaduct of the new Cleveland union station. This is one of the largest contracts of its kind ever closed.

June, as had been looked for, made the best record of the year in structural work placed. As showing the liberal way in which work is being released, of 13,000 tons recorded as offered to independent shops in one week in June, 9000 tons were put under contract. An interesting order awarded to a Pittsburgh shop calls for 2500 tons of bridge work for the South Manchurian railways.

Chicago Base Hearing

The controversy over Chicago as a basing point for finished steel prices is to be laid before the federal trade commission for settlement. This is in accordance with the suggestion recently made by Chairman Gary of the Steel corporation to the western association of consumers which had been formed to push the latter's claims.

Stable Prices Before Normal Trading

WITH the war officially ended by the Versailles treaty machine tool sellers hope that by the same token a real period of industrial rehabilitation and reconstruction will have been begun formally. Spasmodic recoveries of the equipment market have been made since the signing of the armistice and sudden spurts in machine tool buying have occurred. These mostly have been confined to the automotive industries. Withal, however, promising outlooks have not developed into real business, there has been an intangible something which ever has pulled the other way. This has been shown in the postponement from month to month of a resumption of normal business. Varied solutions have been offered and discarded.

This deterrent, whatever it is, is still present. June did not come up to expectations as a tool-selling month. Industry generally, outside of the automobile trade, has not resumed its full stride. Something is acting as a checkrein. What is it? Some say labor. In some measure that may be true. But, the advertising columns of the daily newspapers prove there never was a larger demand for skilled labor. As for the labor troubles that crop out here and there, those always have been present. Apparently it is something more deeply rooted.

One likely answer to the question is prices. It is claimed that purchasing agents do not know just where they are with quotations fluctuating in an abnormal way. Dealers do not blame them; they are in a similar position. Before the war, manufacturers' agents did not know what it was to have price changes, unless an improvement in a machine increased its manufacturing cost. Sheets in their listing books were replaced only when worn out; now the sheets do not have a chance to become soiled. In some cases, new prices come before others are filed.

It is thought by some who have studied the situation that this price uncertainty is at the bottom of the unsettled condition in the machinery-using trade, at large. Buyers are not anticipating their needs, not knowing what prices will apply at the time they close.

Tool builders have been loud in their complaints against the consuming public for not being able to make up its mind. If market uncertainty is the correct answer to the procrastination in buying then it is up to these manufacturers to lead in the resumption of prewar practice by stabilizing prices. The sooner confidence in prices can be established the sooner will the country be able to realize the unusual industrial prosperity for which all signs show it is destined.

Locomotive Crane Situation Good

PERHAPS no industry, which has played a heavy part in the war, finds itself in a more healthy position at the present time than the locomotive crane industry. Unlike many of the other branches, that industry was forced to expand comparatively little to meet the war emergency. Prior to the war, the total locomotive crane capacity, figured on a 10-hour basis, was estimated at anywhere from 110 to 120 cranes a month, and although this output during the war was increased anywhere from 30 to 40 per cent, this gain was brought about more by increased operating schedules than by actual plant expansion. It is doubtful if at present capacity has been enlarged more than 5 or 10 per cent at the utmost. Therefore, it is obvious that the locomotive crane industry has an advantage over many other branches in coping with the problems of readjustment.

Another fundamental factor in the present good position of the locomotive crane industry has been the government work which has been allowed to be completed. While some of the business was canceled upon the signing of the armistice, fully two to three months' work was left on the books of most builders. As in the case of government work, a number of accumulated orders were canceled; nevertheless, enough were left to aid materially in maintaining normal production through the recent dull months.

While the disposition of government locomotive cranes still is to be officially announced, it is pretty generally conceded that they will be absorbed by the

railroad administration. That such a disposition was to be made was unofficially announced some time ago, and it is known that the government is accepting these cranes and at the same time is not offering them for sale, as has been the case in some instances with machine tools. By the disposing of these cranes to the railroads, a large buying factor partially has been taken out of the market. Nevertheless, it has afforded the locomotive crane builders an opportunity to better gage their position, and if the present rate of new inquiry can be taken as a guide, the industry will have considerable work for many weeks.

Again, while it is now impossible to state accurately the volume of new orders being placed, it is estimated that the total number of cranes booked at the present time is not under 30 a month, and in all likelihood higher. This compares favorably with the output of normal times, and in view of the rather unsettled state of industry is gratifying to most manufacturers.

Emigration Problems Must be Met

A SURVEY of the emigration situation just completed by the department of labor discloses that 1,300,000 aliens are planning to return to Europe. This number is in excess of the ordinary outgo of aliens, which will swell the total, and confirms reports that have been coming from large industrial and mining centers for weeks, that thousands of aliens are determined to get back to their native lands as soon as they can obtain passports and ships.

This development incident to the ending of the world war is certain to have a profound effect upon the labor situation and large employers are rapidly awakening to an appreciation of the fact. Because of the large number of aliens employed as common laborers in the coke regions, the coal fields, and in iron and steel plants, the problem especially is important for the iron and steel industry. A widespread shortage of unskilled labor in all probability, would result in the offering of excessive wages to attract men to this class of essential work. Such a development would increase further the present high cost of production.

How may the movement be checked? Before attempting to stay the outflow it is necessary to understand what is causing it. A number of reasons may be cited why the alien is eager to return to Europe. Among them are, his homesickness to see his native land now that the war is over; desire to look up relatives not heard from in years; belief that great opportunities exist under the new order of things and inability to realize the deplorable state of disorganization and lack of food in Europe; failure to become assimilated into American life; and false propaganda spread by unscrupulous fellow-countrymen agents of steamship lines.

In cases where family ties are drawing aliens back to Europe little can be done, but where these employes are laboring under misunderstanding of conditions abroad, or are being preyed upon by steamship agents, it would appear that there is opportunity for effective work by the employer. The big need is to impress the advantages of the United States strongly upon the alien mind. Sympathetic treatment, good wages and working conditions, and a candid description of conditions abroad as they actually exist, together with efforts to truly Americanize aliens are the means being successfully employed by some plants. One large company which has an Americanization department reports that only 30 of its employes are going to Europe. For their own good, aliens who desire to return to the unstabilized nations should be discouraged. An association of eastern employers and the Cleveland chamber of commerce have begun a study of the problem and it is probable that the government will be asked to co-ordinate a national effort to check the exodus of desirable foreign-born as well as to expedite that of those who are undesirable.

Why is Labor So Blind?

ORGANIZED labor seems determined to abolish premium and bonus systems but its efforts to demand high wages without giving value received are inconsistent and ignore the economic equation. The manufacturer of the present day faces serious problems which in the easy days of ten years or more ago were much less vital. He must pay high wages, enormous taxes, build modern plants and install up-to-date machinery or be outdistanced.

A consistent premium or bonus system whereby the honest worker is rewarded in direct proportion to his efforts aids materially in helping the manufacturer to get value received from the wages he pays. Yet organized labor cannot or will not admit the practical justice of this system. Its stand seems to be that labor must be continually employed at all hazards including the poor workman and the indifferent. The slacker and the incompetent, according to the edicts of organized labor must be paid as much as the fair-minded worker who does his best.

If organized labor were half as sincere as it pretends to be it could not advocate measures to compel manufacturers to pay the lazy and the incompetent the same wages as are earned by the honest toiler. Productive efficiency is and must remain the guiding star of industry for this country if prosperity for employer and employed is to be enjoyed and kept. If labor and capital would co-operate as partners in business this country could embark on an industrial expansion program the like of which the world has never known. On the other hand, however, if labor is so blind that it cannot see the employers' side of the question, we are bound to be seriously handicapped while more progressive nations reap rewards of reconstruction.

Iron and Steel Prices

Corrected to Wednesday Noon

SCRAP, WAREHOUSE, ORE AND OTHER PRICES ON PAGES 66 AND 68

Pig Iron

Bessemer, valley	$27.95
Bessemer, Pittsburgh	29.35
Basic, valley	25.75
Basic, Pittsburgh	27.15
Basic, delivered, eastern Pa.	26.00 to 26.25

Tank plates, New York	2.92c
Bars, soft steel, Pittsburgh	2.35c
Bars, soft steel, Chicago	2.62c
Bars, soft steel, New York	2.62c
Bars, soft steel, Philadelphia	2.595c
Bar iron, refined, Phila.	2.595c
Bar iron, common, Chicago	2.62c
Bar iron, common, Cleveland	2.52c
Bar iron, refined, New York	2.62c
Bar iron, extra refined, Pittsburgh	2.75c
Hard steel bars, Chicago	2.45c

Rails, Track Material

Standard bessemer rails, mill	$45.00
Standard open-hearth rails, mill	47.00
Relaying rails, light, St. Louis	35.00 to 38.00
Relaying rails, Pittsburgh	38.00 to 40.00
Angle bars, Pittsburgh base	2.75c
Angle bars, Chicago base	2.75c
Light rails, 25 to 45, mill	2.45c
Spikes, railroad, Pittsburgh	3.35c
Track bolts, Pittsburgh	4.35c
Track bolts, Chicago	4.62c
Track spikes, Chicago	3.62c
Tie plates, Chicago	2.75c

Wire Products

(Per 100 lbs. to jobbers, carloads; retailers 5c more)

Wire nails, Pittsburgh	3.25c
Plain wire, Pittsburgh	3.00c
Galvanized wire, Pittsburgh	3.70c
Barb wire, painted, Pitts.	3.40c
Barb wire, galvanized, Pitts.	4.10c
Cut nails, Pittsburgh	4.445c
Coated nails per count keg, Pitts.	$2.75 to 2.85
Polished staples, Pittsburgh	3.40c
Galvanized staples, Pittsburgh	4.10c

Chain, Piling, Strip Steel

(In cents per pound)

Chain, 1 in. proof coil, Pitts.	6.50c
Sheet piling, base, Pittsburgh	2.55c

Cold rolled strip steel, hard coils, 1½ inches and wider by 0.100 inch and heavier, base per 100 pounds, 5.65c.

Eastern Basic Sold at Advance

Market Established at $26 to $26.25 by Sales of 10,000 Tons, or 50 Cents Higher—General Sales Less Vigorous But of Good Total—General Motors Wants 11,000 Tons—St. Louis Basic Closed

Philadelphia, July 1.—Pig iron sales in this district during the past week aggregated 30,000 to 40,000 tons. Of this approximately 10,000 tons was basic sold by two makers at prices which established the market for this grade at $26 to $26.25, delivered eastern Pennsylvania. These sales leave the market considerably stronger as one of the two sellers has no more of this grade to dispose of for this year. It is figured that the minimum cost of making basic in the eastern district at the present price of raw materials is considerably in excess of $27 and in fact is nearer $28 so that higher prices of necessity are expected to be quoted as soon as old raw material stocks are worked up. A sale of 1000 tons of standard low phosphorus for export was made at $38, furnace, and about 1000 tons of copper-bearing low phosphorus was sold at $35, furnace. Some charcoal iron was sold at $29.25, Michigan furnace. The remainder of the week's business was made up of foundry iron which went at practically the same prices previously ruling. These are the equivalent to all the way from $28.60 to $30.60, delivered Philadelphia, for No. 2X (2.25 to 2.75 silicon). Most of the foundry business was divided among three eastern Pennsylvania furnaces. Only three furnaces now are operated in Virginia, Iron Gate, Max Meadows and Pulaski. The Leesport, Pa., furnace now is making foundry iron preparatory to producing ferromanganese. The Robesonia furnace will blow in shortly after July 4. It was shown at last week's meeting of the Eastern Pig association that stocks of pig iron now piled at furnaces throughout the country are much smaller than in normal times. The Pennsylvania railroad is inquiring for 3000 tons of charcoal iron. The Stanley G. Flagg Mfg. Co. is in the market for 1000 tons of foundry and 1000 tons of malleable.

New England Inquiry Good

Boston, June 30.—While it is too early to predict the effect of the signing of the peace treaty, a noticeable increase in inquiries has appeared in pig iron. Prices are firmer in all districts supplying this market and the shading noticeable a week ago has disappeared. Furnaces which made concessions to obtain backlogs are now well supplied. A Buffalo maker who has been finding good business here at $30.40 for 2X, 2.25 to 2.75 silicon, has jumped his price to $33.40. Another interest which until the end of last week was the weakest factor in the New England market, this week has refused orders at the regular market price and quotes $29.75, furnace, for 2.75 to 3.25 silicon. The larger portion of the year's tonnage from the big consumers is known to have been placed and few large orders are looked for until 1920 business starts. The aggregate of small orders, however, continues favorable. Current inquiries out are for small tonnages, several of 500 tons being reported and two of 1000 tons. The inquiry for 3000 tons noted last week evidently has been split and placed in part for last half delivery. A sale of 500 tons of 2X (2.25 to 2.75 silicon) at $28, Buffalo furnace, is reported this week. Other districts are maintaining a freight differential to equal the delivered price in many cases. One southern interest has refused to go below the so-called Redfield schedule of $26.75, furnace, for 1.75 to 2.25 silicon, and reports that all its furnaces are to blow in soon and pile the iron.

15,000 to 20,000 Tons Sold

New York, June 30.—Buying of pig iron reflected some improvement during the past week. It is estimated that at least 15,000 tons were sold and probably the total was considerably in excess of this figure. Most of the business embraced foundry iron, which went at about the same prices as prevailed a week ago. However, some of the furnaces which were quoting these prices now have advanced. Considerable eastern Pennsylvania iron has been sold at $27, furnace, for No. 2 (1.75 to 2.25 silicon), and at $28, furnace, for No. 2X (2.25 to 2.75 silicon). More Buffalo iron has been sold at the equivalent of $29 to $30, delivered New York and Brooklyn, for No. 2X (2.25 to 2.75 silicon). In general, however, Buffalo makers are inclined to ask higher prices and one interest, which a week ago was on the above basis or lower, has advanced to the regular schedule. Several eastern Pennsylvania makers are disregarding the low prices which some of the furnaces in that district are doing and are rigidly adhering to around $28 to $29, furnace, for No. 2 (1.75 to 2.25 silicon), to $30, furnace, for No. 2X (2.25 to 2.75 silicon) and to $30.50 for No. 1 (2.75 to 3.25 silicon). Much of the eastern Pennsylvania foundry sold during the past week was taken by an interest which usually makes low phosphorus. Recently this producer blew in his furnace on foundry, and is filling orders for the remainder of the year. An unusual sale was 200 tons of Alabama iron to a Connecticut maker.

This sale was not a market factor, however, since southern furnaces are unable, by reason of the freight to sell on a competitive basis in this district. The business of the week included a small tonnage of basic. Numerous export inquiries are out. One involves 10,000 tons of foundry for England and there are numerous other inquiries for foundry for that country. There also is some inquiry from abroad for hematite, but it is not looked upon seriously. It is considered likely that some of the big English inquiries for basic and foundry which have come out lately, including one lot of 20,000 tons, will result in business shortly.

Dealings Extremely Limited

Pittsburgh, July 1.—Demands for pig iron have fallen to extremely slim proportions, with almost no business whatever in the steelmaking grades. The inquiry of the American Steel Foundries for 2000 to 3000 tons of basic, has not yet progressed beyond the preliminary stage. Other inquiries for steelmaking iron are for small lots for prompt shipment, while shipping instructions against contracts, although fairly good, could be much better and still be far from satisfactory. A brokerage inquiry for 1000 tons of bessemer iron is out but a sharp cut from the regular price of $27.95, furnace, is sought on this business. Users of foundry iron appear to be well covered for the present and like steelmaking grades the bulk of the inquiries is for small lots. Blowing in of blast furnaces by some steel manufacturers points to a better market at no distant date in basic pig iron, but the assertion is still heard that increased production by the steel manufacturers is partly due to the scarcity of scrap steel. As far as prices are concerned, the market probably is better described as steady, rather than strong. While merchant producers generally are quoting full prices against all inquiries, it is believed some tonnages are being moved with brokers for slightly less than the regular quotations. The situation is better to the extent that the valley furnaces are having less competition than those of other districts. Foundries outside of those engaged in making castings for the automobile manufacturers are not crowded with business at present. It is reported that the new 600-ton blast furnace of the Weirton Steel Co., Weirton, W. Va., which for the present will be a merchant stack, is being warmed up preparatory to being blown in. The Carnegie Steel Co. still has 33 of its 59 stacks in blast.

Shipments Moving Promptly

Buffalo, July 1.—Although demand for iron has dropped off to some extent there is still sufficient tonnage to keep makers busy. Inquiries for small lots are coming in for third and fourth quarter delivery. One interest has contracted for small tonnages amounting in total to 8000 tons. Shipments on old and new contracts are moving promptly, and producers regard this as a sign that iron bought recently will soon be consumed, leading to another buying movement. Shipments are going now from Buffalo by way of the barge canal to tidewater points. Shipments of high silicon irons have been particularly good. So far as can be learned no price concessions have been made during the past week. One interest reports its total tonnage for the past week as 5000. Most of the tonnages sold thus far have been foundry iron, principally of high-silicon grade. One interest which has had two furnaces out since the armistice is considering putting them in blast shortly.

Fair Selling Continues

Cleveland, July 1.—A fair buying movement in iron has been carried forward during the past week but it falls considerably short of the activity of the several weeks preceding. Sales by Cleveland interests in the week total probably 40,000 to 50,000 tons additional. Some large producers now report that they are substantially sold up for the last half and are cutting into the tonnage previously piled. No steel making iron of consequence is included in the sales which still are made up of foundry and malleable grades. One transaction for last quarter represented 4500 tons of malleable. A Berea, O., implement manufacturer closed for 2000 to 3000 tons of foundry and is seeking an additional amount. The General Motors Corp. is inquiring for 7000 tons of foundry and for 4000 tons of malleable for last half. The American Steel Foundries which was asking for 2000 to 3000 tons monthly of basic for Alliance, O., for July-August has increased its inquiry to include a similar amount for September-October. Furnace A at Detroit was blown in last week. One of the McKinney Steel Co. stacks in this city may blow in within the next week.

Holiday Slows Buying

Chicago, July 1.—With the approach of a double holiday at the end of the week, pig iron inquiry and buying have slowed perceptibly from the rate it had been going formerly and there is a distinct lull. Another reason for the present slowness may also be found in the fact that producers have been pushing the market to some extent but are now willing to let it drift for a time as their bookings are ample. The leading producer in this district finds its sales during June exceed any other month during the present year and experience of others is practically parallel. Malleable melters continue to show more interest than formerly and two inquiries became current today for 1700 tons and 1400 tons. Foundry iron leads in activity with practically no demand for basic. One inquiry for 2500 tons of basic has been current for delivery to an Ohio plant. Among inquiries now pending are 500 tons of low phosphorus iron for third quarter, 500 tons of silveries and 1200 tons of foundry iron. A recent sale of 1800 tons of silvery iron went to a Michigan melter. Southern producers are less anxious to sell iron into this district and this department is quieter, although some sales are being made. Eastern iron is not as active as formerly and several makers formerly selling here have withdrawn.

Southern Market Growing Firmer

Cincinnati, June 30.—There has been a let-up in the inquiry for foundry iron, but some business is being transacted by nearly all selling agencies. A sale of 1000 tons of southern iron was made to an Ohio melter last week, and it is understood that the difference in freight rate was absorbed by the furnace. Southern producers, however, are not inclined to equalize freights as freely as they were a month ago, and the market in the South is much firmer. As far as can be learned no foundry iron can be obtained at $24.50, Birmingham, for any shipment, and $25 is considered minimum. The report of a sale of 20,000 tons of basic from the Ironton district to a St. Louis user has been confirmed. It is not known at what price this business was taken, but it is rumored the seller took it considerably below the regular schedule in order to meet Chicago competition. Both malleable and Lake Superior charcoal are in better demand, but sales are confined to carload and 100-ton lots. Sellers here are holding their own remarkably well, due not only to the good demand for high silicon iron, but also to the announced intention of furnaces in Jackson county to close down at an early date for repairs.

20,000-Ton Order Placed

St. Louis, July 1.—While leading consumers of pig iron have filled their needs optimism still prevails in the market. Sales during the past week have been in small lots, the largest heard of being 800 tons of 2.25 to 2.75 silicon, but the aggregate of such transactions is close to 7000 tons. This does not include the big order of the National Enameling & Stamping Co., which is understood to have been closed early in the week with the Ironton, O., furnace interest. The order involved 20,000 tons of basic, to be delivered during the last half. The inquiry for 1500 by a Quincy, Ill., stove manufacturer has been partially filled, and stove interests generally have covered on their immediate needs. This is especially true of the Belleville, Ill., foundries, which took liberal tonnages during the recent buying movement. Building operations have broadened to an astonishing degree. More structures are under way in the city than since the fall of 1914, and in the surrounding territory activities in this line are even more marked.

Southern Prices Advancing

Birmingham, Ala., July 1.—Prices of pig iron have advanced $1 and the base grade of foundry (1.75 to 2.25 silicon) has been sold at $25.25 for delivery during the third and fourth quarters of the year. For iron with 2.25 to 2.75 per cent silicon content, $26.25 is asked. No especial effort is being made to get business for last quarter delivery, and but little attention is being paid to inquiries relating to delivery in 1920. Furnace officials are very optimistic now, and reiterate their belief that No. 2 foundry will go to $30 shortly. The Republic

Iron & Steel Co. will blow in a furnace soon, in addition to two at Bessemer, previously announced. It is probable that two other furnaces will be made ready this month for operation. The third quarter begins with a large proportion of the probable production sold.

More Sales

Continue to be Made in Ore—June Shipments 7,400,000 Tons

Cleveland, July 1.—A stronger tone has developed in the ore market, most of the leading operators reporting an increase in inquiries and more sales than were made during the preceding week. Included in recent transactions were the sales of three blocks of 50,000 tons each, one of 60,000 tons and another of 75,000. The past week's business amounted to more than 250,000 tons. Formal contracts on a considerable amount of business negotiated several weeks ago were closed by one of the leading interests. The tonnage specified in one long-time contract was increased. While a better feeling is in evidence, ore men say there is room for decided improvement. They point to the fact that most of the ore sold recently is going into the manufacture of malleable and foundry grades of iron, and until more interest is shown in steelmaking grades the ore movement will not attain its full stride.

Operators of iron ore properties in Michigan have been advised of action by the tax commission of that state increasing assessments on all properties by approximately $7,000,000 and raising the total to about $116,000,000. Recommendations made by Dr. R. C. Allen, state geologist, following the filing of reports by the ore companies, considered an increase of approximately $10,000,000 over last year's assessments. The commission recently completed hearings in the principal towns on all the ranges. Some of the largest increases recommended by Dr. Allen were permitted to stand, while individual reductions from his figures amounted in some instances to as much as $400,000.

Vessel shipments of Lake Superior iron ore during June amounted approximately to 7,400,000 tons, or about 1,622,000 less than the shipments in the same month last year.

Jobbing Trade Fair

Boston, July 1.—Warehouse prices are sustained in spite of varying conditions in the finished steel market. Good business is looked for now that the peace treaty is signed and the long continued strike of local building carpenters is at an end. Some sizable building hardware inquiries are circulating and the demand for bars has perceptibly strengthened during the past week. These are going to textile machine manufacturers, toolmakers and automobile accessory plants. Demand for plates from shipbuilding interests has fallen off and the building trade in this line has not yet developed. Much new work is expected this fall. Some jobbers report increased activity in sheets for roofing purposes.

Spot Coke Prices Are Firm

Operators Indifferent at Selling at $4.25, Expecting Production to Taper Off—Car Shortage Hampering Operations

Pittsburgh, July 1.—Although blast furnace interests report no difficulty in picking up fair-size spot tonnages of standard furnace coke at $4 ovens, a number of operators having free supplies are indifferent about selling at less than $4.25, and brokerage houses claim to have paid as high as $4.40 in the past few days. The spot market may be described as firm this week, as expectations of a tapering off in production are strong. Not only are operations likely to be largely suspended over Friday and Saturday, but it is said that a good many of the coking operations are hampered through a shortage of cars. Under the car-rating scheme of the railroad administration, failure on the part of operators to report output means they will be alloted only a share of the surplus supply of cars after the distribution to those mines that have reported and made requests for cars. The contract market is holding within the recent price limits. On a sliding scale agreement, business continues to be done on a basis of 6¼ and 6 to 1, $25.75 basic pig iron, valley furnace, or $4.12 to $4.28 ovens. On six price contracts coke operators are having a good deal of difficulty in obtaining more than $4.50, ovens, although it is reported that bid of $4.35 on a contract calling for 3000 tons per month, has been refused. Operators have taken three months' contracts on a basis of $4.25 ovens. Blast furnace interests whose stacks are idle are trying to line up coke requirements to be prepared for resumption, but this sort of business does not find favor with the coke interests who prefer to have shipments begin immediately. The general asking price for standard foundry coke is $5 ovens on spot and $5.50 ovens on contract, but buyers are succeeding in bettering these prices by at least 25 cents per ton, and in some cases even more. Production of coke in the Connellsville region for the week ending June 21, is estimated by *The Connellsville Courier* to have been 131,200 tons as compared with 127,095 tons in the previous week.

Foundry Coke Goes Up

Boston, July 1.—Foundry coke in New England will advance 50 cents July 1. The Connellsville base price for July is taken as $5.50, making the New England price $9.90. This applies to contract consumers as well as for immediate delivery. Domestic coke does not take the same increase, although the New England Coal & Coke Co. states that a substantial increase will be made about the middle of July. Demand from foundries has been exceptionally large during the last few days in anticipation of a price increase July 1.

New Jersey Prices Higher

New York, July 1.—The northern New Jersey by-product coke producer has raised his price on foundry coke, effective July 1, to $5.50, Connellsville, an advance of 50 cents. Until the new price went into effect, this maker booked last half contracts at $5, Connellsville. The business booked at that price is on a flat basis and is not subject to the arrangement prevailing during the first half whereby the price was fixed at the beginning of each month to accord with the Connellsville market. The new price, $5.50 Connellsville, is equivalent to $8.60, delivered Newark and other northern New Jersey points. The New England Coal & Coke Co. is expected to advance its price on by-product foundry coke tomorrow.

Pennsylvania beehive foundry cokemakers are showing an advancing tendency. One has advanced to $5.50, ovens, equivalent to $5.30, Connellsville. Considerable last half contract business has been entered by the beehive makers during the past week at from $5 to $5.50, Connellsville, for standard brands, with considerably higher for choice brands.

Furnace Coke Advanced

Cincinnati, July 1.—The market is gaining strength and while no general marking up in prices may be noted all quotations are much firmer, especially in the Connellsville district. Furnace coke there is around $4.25 but some prompt fuel could probably be had around $4. Foundry coke is unchanged around $5.50 and while there is little contracting for future shipment, some sales of both furnace and foundry coke are being made for nearby delivery. Wise county furnace coke has advanced and is now around $6, oven, while as reported last week foundry coke in that field is held around $7.50. Very little Pocahontas coke is being shipped to this market at present, but foundry coke is quoted by producers around $6 to $6.50.

St. Louis Market Steady

St. Louis, July 1.—Dealers and consumers of coke describe the market as steady to strong, with a broadening tendency. Good inquiries in a majority of instances lead to actual buying. Melters are more disposed to cover for the balance of this year, and quite a number of contracts for the 12 months beginning July 1 have been closed. Shipments are not going along as satisfactorily as heretofore. Labor and car shortages are largely to blame, but coke also is scarce. A few plants are endeavoring to increase their accumulations. Price does not seem to be the drawback, but the leading buyers are loath to contract heavily for fuel until they know definitely about their needs.

Price Advances in South

Birmingham, Ala., July 1.—There is a better demand for coke, and beehive fuel has advanced $1 per ton. Inquiries are coming in from foundries, smelting works and furnaces, and the production is to be further increased.

Mills Take Steel Scrap

Purchases Made at $18.15 Pittsburgh and $18.75 Eastern Pennsylvania —Midvale Asks for 20,000 Tons of Borings—Market Moves Up

FOR COMPLETE SCRAP PRICES SEE PAGE 68

Philadelphia, July 1.—Scrap again reflects an upward price movement. In fact, the market is distinctly bullish, and dealers' prices as a rule are considerably higher than mills want to pay. For instance, $18.75, delivered, is the highest price paid for heavy melting steel in this market, but most dealers are holding out for $20 and $21. Wrought scrap continues dull because of the idleness of the iron mills, and foundry scrap is not much in demand, although prices on both grades are moving up in sympathy with steel. The latter shows the principal activity in the market. As a result of the Midvale Steel & Ordnance Co.'s recent inquiry for 5000 tons it had good offerings and bought at $18.75 a ton two to three times as much as it sought. The company now is inquiring for 20,000 tons of blast furnace turnings for the Cambria Steel Co., and is willing to pay $12.

Boston Prices Advancing

Boston, July 1.—The scrap market is stiffening rapidly. No. 1 machinery which has hovered around a cent a pound has advanced to $24 per gross ton, on which basis sales were made last week. Nearly all other grades are firm or advanced. Heavy melting steel has sold for $14, while $13.50-$14.50 probably represents the market. The manager of a large local scrap firm visited New York, Philadelphia and Pittsburgh furnace districts last week and found conditions so encouraging that he wired his house not to sell steel scrap under any conditions. Most dealers are holding their stocks in anticipation of higher prices. Much steel scrap is stored in New England as prices offered by open-hearth furnace interests are not sufficient to move it. Foundry scrap for local consumption continues in good demand but prices have remained practically unchanged. Bids on government stock of shell forgings at Orange, Mass., were rejected as too low, although one bidder offered $15.09 per gross ton. Bids on the same class of scrap elsewhere have exceeded market quotations.

Heavy Melting Steel Going Up

New York, July 1.—Prices of heavy melting steel scrap are moving rapidly upward, and $20 seems assured according to dealers. It is understood that some of the Coatesville consumers have already paid $19, delivered. Sales for shipment to the Pittsburgh district have been reported here at $15 and $15.25, f.o.b. New York. Demand is becoming more general. Borings and turnings also are moving in sizable quantities, although buying is still confined principally to one large eastern Pennsylvania consumer. This material also has advanced. Railroad wrought is stronger, with the market up about $1. While trading in cast scrap involves only fair tonnages, prices are up about 50 cents. Various odd lots of government scrap continue to come out. The 2000 tons of mixed scrap at the Morgan, N. J., shell loading plant went to Briggs & Turivas, at $20.36. This company also was low bidder on approximately 260 tons of high explosive shell forgings at Boston, at $17.631, f.o.b. cars. Another lot of shell forgings at Boston went to the Brier Hill Steel Co. at $17, f.o.b. cars.

Mills Paying Higher Prices

Pittsburgh, July 1.—Scrap iron and steel prices recently established by the bids of dealers either to cover sales or on speculation are beginning to be backed up by sales to the steel manufacturers. Sales of heavy melting steel as high as $18.50 have been made to some of the steel companies, but as yet the Carnegie Steel Co., has not paid that price. In fact, it has not raised its price limits of $16 to $16.50, and these prices, being $2 to $3 a ton below those of the dealers', it is not getting any acceptances. While the improvement in finished steel has prompted more interest on the part of consumers, actual business still is of rather moderate proportions and seems to be confined largely to heavy melting steel and similar grades. No lack of confidence in ultimately higher prices is observed among dealers, but while paying big prices to the government for shell steel, it is noted that they are not throwing down large tonnages of other kinds of material at current prices. Bundled sheets are reported to have sold at point of origin at $14.50 to $15, baled sheets at $16.50 to $17 and sheet bar crops at $22. Iron and steel foundries are buying much scrap and so many blast furnaces are inactive that borings and turnings are not much sought. Rerolling rails are in good demand and while $22 is as high as any recent business has been done, it is hinted that this price would not be attractive to those now holding supplies.

Little Demand at Buffalo

Buffalo, July 1.—Demand for scrap has fallen off. Local mills have not been in the market in this territory since the armistice, the demand having come entirely from outside sources. Dealers are practically the only interests trading, and they are buying freely. It is generally believed that local mills are stocked up for three or four months.

Steel Sells at $19

Cleveland, July 1.—Unexpected strength has marked the Cleveland scrap iron and steel market, the last few days. Early last week the market was uncertain with a slight tendency toward weakness. Some dealers claimed to see in this the effects of the seasonal dullness. But toward the close of the week consumers who had scoffed at $18 steel were displaying more interest. Some heavy melting steel in fact has been sold for $19 in this market, and there are reports that $19.50 has been done in a nearby district. Dealers are most active, and are willing to pay $19 for melting steel to cover contracts, where a few days ago offers of $18 and $18.50 was sufficient. Trading the past week has been in fair volume. Turnings and borings, to a degree, have reflected the increased strength of melting steel.

Chicago Buying Heavier

Chicago, July 1.—Much better feeling is in evidence in the scrap iron and steel market in Chicago than has been the case for some time and practically all consumers are buying more or less material. Prices have been advanced steadily at 50 cents to $1 per week and in some grades even more rapidly. Consumers are coming to the front to cover their requirements before the top is reached. It is doubtful if a heavy tonnage of steel or other scrap could be placed at present as dealers are not selling under present conditions. Such scrap as was laid down earlier in the year for a rise is being held tenaciously for the higher price which all dealers believe will come soon and this is helping to make the situation strong. In spite of government offerings, much of which is not scrap, the supply is not equal to demand and the market is absorbing everything readily. The Chicago, Milwaukee & St. Paul offers 1300 tons and the Chicago, Burlington & Quincy 350 tons. The ordnance department offers 3197 tons of forging billets and 95 tons of hand grenade castings.

Cincinnati Quotations Marked Up

Cincinnati, July 1.—Quotations on practically every grade of scrap have been advanced and there is a much better demand both from steel mills and foundries. Heavy melting steel and malleable scrap are in better demand than for a long time. There also is a good call for No. 1 railroad wrought.

St. Louis Prices Advance

St. Louis, July 1.—Prices of scrap have advanced again, increases during the past week ranging from 50 cents to $2.50 per ton. The upturn was due principally to the continued speculative enthusiasm among dealers, but several of the larger consumers were in the market for relatively sizable tonnages. The demands were filled, and the interests have again withdrawn from the market, leaving matters entirely in the hands of dealers. The latter are now buying everything in sight. Recent increases in prices make a favorable showing on paper, but the difficulty just now seems to be in realizing, as the industries here are not disposed to meet current quotations, and prices offered by eastern consumers are no better. The National Enameling & Stamping Co. was in the market for a heavy tonnage of steel, borings and turnings, and it is generally understood to have purchased a large quantity of this material at high figures. Dealers

who were speculating on this order raised prices virtually $1 a ton. Several dealers having tonnages of steel laid down are refusing to dispose of it at less than $20, although $18 to $18.50 is the best consumers are willing to pay. One interest with upwards of 1000 tons of rerolling rails in its yards is asking $22, but this figure is not obtainable. Cast iron is scarce and in demand.

Track Work

Wanted by Bulgaria and Other Foreign Buyers—Railroad Orders Few

Cleveland, July 1.—Various lots of railroad steel for export are being figured in this district. A recent inquiry from Bulgaria called for 2000 to 3000 tons of light rails and fastenings for track work. Several lots aggregating 1000 tons of similar material are pending for another foreign destination.

Rail Mills Not Pressed

Pittsburgh, July 1.—Current demands for standard rails are not proving much of a tax upon mill capacity. A fair amount of export business is on the books of the Carnegie Steel Co., which also is rolling its quota of the 200,000 tons recently placed by the railroad administration. The combined business, however, is only sufficient to keep busy one of the two standard mills of the Edgar Thomson works. It is said the Mexican government is planning construction of 1500 miles of new railroads, but inquiries have not developed. Fair inquiry is noted for light sections especially for export, but actual bookings are few. Orders for standard spikes seem to be waiting on delivery of rails recently placed by the railroad administration. Jobbers continue to stock up on light spikes. Prices of splice bars and bolts are holding firm, but price cutting continues in light rails, while it is said freights are being absorbed by some makers of spikes.

Military Cars Released

Chicago, July 1.—The Pullman Co. has received a release on 523 additional military cars for use in France. It is said this release will be the last and that all other cars remaining on the original purchase have been canceled. No other car buying is being done and the inquiries for cars for Poland and Chile still are pending. Railroads are practically out of the market on iron and steel products except for some track fastenings to take care of rails recently bought. Demand for light rails is slack except for some business coming from foreign countries.

Plates Look Better

Pittsburgh, July 2.—The situation in plates is looking better. One maker recently had an inquiry for about 50,000 tons of ship plates. The buyer, however, offered about 2.40c, base Pittsburgh, but the bid received no consideration. A price of 3c, Pittsburgh, was quoted against 10,000 tons of this business. A car builder recently closed for more than 2000 tons at 2.65c, Pittsburgh.

Sheet Production Rising

General Operations Now Up to 75 Per Cent—Leading Maker Schedules 88 Per Cent—Prices Seem Firmer

Youngstown, O., July 1.—Sheet mills in this territory now are well booked with orders. Demand for galvanized is heavy now that the building trade is consuming good-sized tonnages of both corrugated and roofing products. A good demand exists for black and blue annealed and few gaps in the rolling schedule exist for these grades under a three-week delivery. A good business is being done in highly-finished sheets. At present six mills at the only valley plant rolling this grade are operating. Heretofore, only four of these mills were active. Some of the orders under schedule now by certain valley makers were closed a few weeks ago at slight concessions but it is doubtful whether any tonnage could be obtained now at other than full market prices. The recent concessions were made on spot business only to swell production. Business came out more plentifully last week which resulted in a more regular mill schedule. With the usual yearly shutdowns at hand, practically all valley makers are filled until nearly the end of July. Several producers are declining to quote on certain material and are picking their specifications. An inquiry for approximately 800 tons of Nos. 30 and 31 black is before valley mills. A few makers are sending out lists of accumulated stock and in some cases the attached notification reads "Quotations at base prices" while in other cases it states "The maker is in a position to name an attractive price."

Chicago Mills Well Sold

Chicago, July 1.—The leading independent manufacturer of sheets in this market is unable to sell for delivery before fourth quarter and has taken some contracts for that period at the full price. Business for this delivery is not being sought, but customers desiring fourth quarter tonnage are being accommodated, and without concessions. It appears that occasional shading of price is still being done by some eastern interests.

Less Cutting of Prices

Pittsburgh, July 1.—Not only is the market in sheets still showing marked activity but prices are considerably firmer. Most of the manufacturers who recently were making concessions have become filled up and no longer are anxious for business except at the March 21 levels. Cutting of prices of galvanized sheets has been especially severe and is explained by the fact that one company that recently took a considerable tonnage at 5.50c, Pittsburgh, some years ago when the price of spelter went up so rapidly dropped its contracts for galvanized sheets. It has recently set out to re-establish its trade and has offered low prices. Manufacturers generally are well booked in black, galvanized and blue annealed sheets, some being sold from 60 to 90 days ahead. A meeting of the independent sheet manufacturers is scheduled for today at Mansfield, O. It is believed the meeting will consider the recent wage scale agreement and the contract with the unions. Independent mills now are running at better than 75 per cent of capacity and the schedules of the American Sheet & Tin Plate Co. are on about the same scale. Schedules of the latter for next week call for 80 per cent operations.

Orders Refused

In Lapweld Pipe by Filled Mills—Deliveries far Back

Pittsburgh, July 1.—Demands for lapweld pipe in connection with the oil boom still are on an enormous scale, and even though manufacturers are running their lapweld plants 100 per cent they are daily falling behind. New business either in oil or line pipe is not getting much consideration, so heavily booked are the manufacturers. An inquiry from an oil well supply house for 234 miles of 8-inch line pipe for shipment to Oklahoma is before manufacturers. In fact, in the aggregate probably more than 500 miles of 6, 8 and 10-inch line pipe are sought. The Sinclair Consolidated Oil Corp., is building an 8-inch pipe line from Healdton, Okla., to Burkburnett, Tex., and is said to be planning an 8-inch line from Healdton to Cushing, Okla., to parallel its present 6-inch line. In their lapweld departments manufacturers are sold from three to five months ahead. So urgent is the demand that they are unable to guarantee the usual protection to regular customers. As a matter of fact, new business, even from old customers, is being scaled to about 50 per cent of the tonnage asked for.

Eastern Prices Firmer

New York, July 1.—Sellers of cast iron pipe in the East state that prices are now somewhat firmer. They assert that there still is some shading being done, but that instances of this sort are fewer. While there is little municipal inquiry, demand from private sources continues to come out in fairly good volume. Included in recent awards are 1100 tons of 36-inch pipe for Hartford, Conn. This business was placed with the Warren Foundry & Machine Co.

Maker Refuses Business

Youngstown, O., July 1.—So heavy is the demand for lapweld pipe that one large maker in this district is refusing business. Most of this grade is being shipped into the oil country and the demand continues heavy. The demand for standard-sized pipe is improving, the building trade consuming good sized lots. Some good business for buttweld was taken this week.

Implement Trade Buying

Farm Tool Interests Place Last Half Business at Chicago and Cleveland —Reinforcing Steel Active—Barges Require 4500 Tons

Chicago, July 1.—Agricultural implement makers are in the market for some tonnage of soft steel bars but are buying conservatively and orders are considerably less than usual for these interests. General business is taking steel bars at about its usual rate and mills are operating close to 60 per cent as a general average. Inasmuch as the railroads are taking nothing, this seems to be as much as could be expected, as normal railway requirements usually take care of at least 40 per cent of production.

Hard steel bars are being contracted for by agricultural implement makers and one mill which has been down for several weeks will start up immediately after July 4, with an order book sufficient to give operation for some time. Some inquiry is being received from reinforced concrete builders but this has not yet become actual business. General manufacturers are taking more or less hard steel bars and angles.

Bar iron is slack. Occasional tonnages are being taken from railroads, though in much less quantity than usual. It appears that all mills in this district are holding firmly to 2.62c, Chicago mill, with one exception and this maker is expected to fall into line shortly.

Eastern Business Active

Philadelphia, July 1.—Steel bar orders continue coming in actively. All bar mills are operating full and have enough tonnage ahead to keep them busy for weeks. Considerable contracting has featured the past week. Further shading on bands is reported. This consists of selling bands on the bar schedule. Continued idleness of the Lebanon mills by reason of a strike keeps the iron bar business at a minimum. Makers report some improvement in bolt, nut and rivet demand.

Business Could Be Better

Pittsburgh, July 1.—Lack of railroad buying and the fact that the makers of agricultural implements are not yet covering freely more than offset rather generous demands for merchant steel bars from the automobile manufacturers and the liberal specifications from the makers of shafting. While a fair amount of business is being done, it could be considerably better and still not crowd the mills. However, most manufacturers are better provided with orders than they were a short time ago and practically no shading of the regular base of 2.35c, Pittsburgh, now is noted. Makers of iron bars are fairly busy and report that while orders individually are not large, they are fairly numerous. The plant of the Pittsburgh company is closed down this week for repairs. Makers of extra refined bars are adhering firmly to a base of 2.75c, Pittsburgh, claiming that a lower price is not possible. Inquiries for concrete reinforcing bars are numerous, both by consumers and by the jobbing trade. Orders from the latter source have shown a notable gain in the past week or so. Makers of rerolled bars are quoting 2.35c, mill, against all new business, but as yet 2.25c, mill, appears to be the maximum. Hard bars from new billets are firmly priced at 2.35c, base Pittsburgh, with the usual extras for twisting and deforming.

Implement Makers Placing Orders

Cleveland, July 1.—Implement manufacturers in this territory now are placing contracts for soft and hard bars and small shapes for last half. Several tonnages of this character have been closed and others are pending. These interests are paying the full price of 2.35c, Pittsburgh, on soft bars, and on hard bars have been quoted to 2.35c, mill, for third quarter to 2.35c for fourth quarter. In one case 2.30c, mill, for last half was named. Miscellaneous bar buying is going along steadily. Some members of the jobbing trade have placed contracts for round tonnages for stock. Specifications are more active in all directions, and the past week has been one of the best in this respect shown in a long time. Demand for reinforcing bars is lively. An inquiry for 4500 tons and 30 concrete barges for the railroad administration is being figured upon by local builders. For the Bamberger-Reinthal Co. knitting mill, 1000 tons are wanted. Other jobs include 300 tons for a bridge at Niles, O., for which the Walsh Construction Co., has the general contract, and 200 tons for the Crown building, this city. The 800 tons for the city sewage disposal plant are being closed and 300 to 400 tons for the Rivitz building, this city, have been placed with a Pennsylvania mill.

General Demand Growing

Chicago, July 1.—Buying of nuts and bolts is excellent on the part of general consumers and jobbers are also taking considerable material to replenish their stocks. Some makers who specialize in automobile bolts are operating at full capacity, while others not equipped to handle this business are running about 70 per cent.

Foreign Inquiries Heavy

Cleveland, July 1.—Foreign inquiries for nuts, bolts and rivets are more numerous and larger. French consumers are asking for 200 tons of hexagon nuts to be delivered monthly over a period of one year. One large maker is reported to have received an order from overseas for approximately 100,000,000 nuts and bolts and now is at work upon it. Specifications continue to come in freely from both jobbers and users and the tone of the market is increasingly strong, even in the absence of railroad business. Prices generally remain strong. A leading local manufacturer has withdrawn all prices as of July 1, the inference being that an advance will be announced in the near future.

Specifications Are Heavy

Pittsburgh, July 1.—The last week of the second quarter of the year found a great many buyers of nuts, bolts and rivets who have not forwarded shipping instructions, and the past week consequently has been marked by a rush of specifications. Automobile manufacturers are free buyers of bolts, and demands from other sources, except railroads, also are on a fairly heavy scale.

Business is Better

Pittsburgh, July 1.—Demand for hoops and bands especially for the narrower widths has been good in the past week, and mill operations are on a heavier scale.

Liberal Sales

Of Ferromanganese at $110 Continue —English Makers Reduce to $115

Philadelphia, July 1.—Domestic producers of ferromanganese here sold several thousand tons additional at $110, delivered, for 80 per cent. This business involved tonnage previously offered and on which there was some delay in closing. Now the minimum at which domestic will sell is $125, delivered.

Spiegeleisen reflects a firmer tone. Some makers are quoting a minimum of $35 furnace, on 18 to 22 per cent for any position. It is more difficult now to buy spot at less while this seems to be the absolute minimum on futures. Among current inquiries is one for 1000 tons and one for 1500 tons.

An unusual inquiry is for 1000 tons 10 to 12 per cent spiegeleisen believed to be for Holland or Belgium. Ferrochrome containing 6 to 8 per cent carbon now may be had at 30 to 35 cents for all position. Demand is quiet.

English Price Reduced

New York, June 30.—Following the reduction in the domestic price on 78 to 82 per cent ferromanganese from $125 to $110, delivered, an English maker has reduced from $121 to $115, c.i.f. This price is equivalent to around $119 to $120, delivered, and it probably is on a parity with the minimum at which domestic producers now would sell. During the past week several additional sales of standard ferromanganese running into thousands of tons were made at $110, delivered, but the producers now claim that higher would have to be paid for additional lots. New inquiry at the present time is not very active.

Demand for spiegeleisen is showing considerable improvement. There are numerous inquiries out involving up to 500 tons each. The prices asked are higher for the future than for spot shipment. On round lots for spot and nearby shipment, the makers now are asking $31 to $32, furnace, for 19 to 21 per cent metal, whereas on forward delivery there now is a tendency to ask as high as $36. Sales

of spiegeleisen during the past week have been moderate.

Several round tonnages of bessemer ferrosilicon have been sold during the past week for third quarter at prices which are withheld.

Ferromanganese Prices Erratic

Pittsburgh, July 1.—Prices of 80 per cent ferromanganese continue to move erratically. At last accounts this material was quoted at $110, delivered, by domestic producers but at least a couple of times during the week they have quoted $125. Passing of resale tonnages and a material increase in the demand was followed by a reduction from $125 to $110. Having closed on about 5000 tons at this price, makers withdrew and named $125. No business having been possible at that figure, the quotation then dropped back to $110.

A stronger market appears to be developing in electrolytic ferrosilicon, some speakers quoting 50 per cent metal at $90, furnace, freight allowed in bulk and $95 packed. Inquiry has improved appreciably in the past week or two, but as yet prices higher than $85 find little basis in sales. On actual sales the market still is quotable on new material at from $80 to $85, freight allowed. Small resale lots recently have been sold for considerably less.

Offerings of English ferrotungsten by the imperial munitions board at $1 per unit, delivered at Atlantic seaboard, have occasioned considerable uneasiness on the part of domestic producers. This English material is said to contain impurities, but the price is 25 to 30 cents below that asked by domestic makers.

A good many inquiries are coming out for ferrovanadium but so much of current production is going to meet contract obligations that almost no free metal is available. Ferrovanadium is moving on contracts anywhere from $5 to $6 a pound but brokers are unable to obtain supplies even at a substantial premium over those figures.

Ferro Tonnage is Closed

Cleveland, July 1.—Buying of ferromanganese for last half shipment by steelmakers in this territory has continued and recent sales are estimated at from 4000 to 5000 tons. A Canton, O., interest bought 1000 to 2000 tons, and a Youngstown plant is understood to have closed for 1200 tons. A local steelmaker also was a buyer of several hundred tons. All of this business was placed at $110, delivered, for domestic 80 per cent.

Sold on Low Level

Chicago, July 1.—A local representative recently placed between 1500 and 2000 tons of ferromanganese in the Chicago district at $110, delivered, before this price was withdrawn and $125 restored. Ferrosilicon 50 per cent is steady and resale material formerly disturbing the market seems to have been absorbed. Spiegeleisen is firm at $35 and resale is no longer evident. An exception to this statement is that the government has a lot of 500 to 600 tons in the St. Louis district which will be offered shortly.

Ship Plates Are Placed

Carnegie Steel Co. Reported to Have Tankship Tonnage—Chicago Mills Get Orders From Pacific Coast Yards—Market Quiet

Philadelphia, July 1.—Several thousand tons of steel for tank ships to be built for the Sun Oil Co. by the Sun Shipbuilding Co. are reported to have been placed with the Carnegie Steel Co. This is the only important development in the eastern plate market although one large sale for vessel construction is reported from another district. Eastern makers declare that the plate market from the general standpoint now is duller than at any time since the armistice. Nothing yet has resulted from the pressure being brought by the shipbuilders upon the Emergency Fleet corporation to declare the government's needs in yard capacity for its program so that the builders may determine to what extent they can accept contracts for private work.

Little Better Feeling Noted

Pittsburgh, July 1—Although business in plates continues of extremely moderate proportions, most manufacturers report better inquiry and a fair amount of tonnage moving to makers of oil and gas tanks. Pipe mills are taking some tonnages of grooved and universal plates for the larger sizes of tubular goods. Efforts on the part of buyers to secure concessions have been unavailing. At the same time talk of an early advance is not nearly so general nor so strong here as it seems to be in the East. Suggestions of higher prices seem to be coming chiefly from the independent companies. Some of the independent companies have a considerable tonnage of plates held up by the suspension of contracts by the Emergency Fleet corporation, but as a general proposition mills in this district have no considerable amount of advance bookings.

Mills Need Orders

Chicago, July 1.—With greatly enlarged capacity for producing steel plates, the mills have not nearly enough business on their books to insure comfortable operations. Present business is far from sufficient to give efficient operation. Builders of tanks are taking fairly large tonnages, especially those supplying storage tanks for oil. Boilermakers are not busy. Most demand outside of tank work is from miscellaneous sources. One interest finds the demand is increasing somewhat and recently was unable to take some business because desired delivery could not be made. Buyers seeking plates for export are asking concessions and apparently do not understand the present situation. The leading interest has finally received specifications for steel for two ships being built on the Pacific coast which were released recently. This involves about 4800 tons of plates and about 3000 tons of structural steel. It is understood other ship releases probably will be made during the summer.

Wire Advance

Fails to Take Place July 1—Mills Are Well Booked

New York, July 1.—The advance in wire prices which was expected in some quarters did not materialize. There is a possibility that wire prices may be advanced later in the last half. It now is thought as improbable that there will be any advance for at least another month. There is considerable disappointment on the part of some manufacturers at the failure of prices to advance. This is particularly the case with regard to the wire nail price, which some makers say does not cover their cost. New business in wire products continues to be entered at a satisfactory rate, and in most cases, in fact, the mills are taking on new business faster than they are shipping. It is to be doubted, however, whether any of the mills now are operating at more than 80 per cent of capacity.

Higher Price Talk Strong

Pittsburgh, July 1.—Although the attempt of one independent company to obtain higher prices on export orders for nails and wire has not yet been successful and rumors are current that one of the export combinations has been accepting business at less than 3.25c, Pittsburgh, talk of higher prices still is strong here. In fact, it was expected that announcement of an advance might be made this week, but apparently the leading interest is not yet ready to take this step and the independent manufacturers are waiting. Demands still are large and urgent and all makers have become so well sold ahead that they are indifferent about new business except from regular customers at current prices. Current specifications continue to run considerably in excess of present operating capacity and some manufacturers are worried that they sold so far ahead.

Jobbers Stocking Up

Chicago, July 1.—Demand for wire and nails is unusually active, with jobbers buying for stock. For several months prices appeared high and most wholesalers feared to lay in a stock for fear of a decline. The situation has been thoroughly sifted out in recent weeks and the impression is strong that present prices are here to stay and orders are being received for future delivery. This usually is a dull season in the wire market but these circumstances have brought about a reversal of the rule. It seems almost certain that an advance will be made before long. Jobbers hold this opinion and are seeking to obtain contracts before this event takes place.

New Lettings Keeping Up

June Record Remains Favorable—Chinese Bridge Work Closed—Big Chicago Building Projects Estimated Will Require 15,000 Tons

Pittsburgh, July 1—While demands for shapes are not of sufficient size to bring about any material increase in mill operations, structural inquiries and lettings continue to grow and fabricating shops now are busier than they have been at any time before this year. Lettings in the week ended June 21, according to reports to the bridgebuilders and structural authorities, come within a few thousand tons of the tonnage sought. The approximate figures were 13,000 tons up for bids and 9000 tons let. While not much improvement has yet developed in the prices of fabricated material, the fact that so many of the shops are now fairly well off in the matter of business has materially reduced competition on new jobs and the market is not nearly so much in the buyers' favor as it was recently. Among recent awards was one for 2500 tons for bridges for the South Manchurian railway which went to the McClintic-Marshall Co, being placed through Matsui & Co. The former company also is the low bidder on 3500 tons for ship ways at the Brooklyn navy yard. Plain material is firmly priced by all manufacturers. The McClintic-Marshall Co. has divided the 4000 tons of steel for the new plant of the Kelly-Springfield Tire Co, Cumberland, Md., between the Jones & Laughlin Steel Co. and the Bethlehem Steel Co.

Nothing is known at the main offices of the McClintic-Marshall Co. here about the large contract reported to have been taken by that company in conjunction with the Vulcan Steel Products Co. Although the company has a representative in France and has an export branch in New York, no word regarding the company's participation in the reported contract has been received here from either source.

Awards Keeping Up

New York, July 1.—Activity in the local structural market is being well maintained. Fabricators report a good volume of inquiry, involving both large and small tonnages, and a considerable amount of business continues to be placed. As a result, fabricators are showing less tendency to shade prices. There continues, however, a great lack of railroad demand, the last important inquiry of this description from the Boston & Maine railroad several weeks ago for 1800 tons, and this business still is pending.

Bids have been submitted recently on several navy yard jobs. M. H. McClosky, Philadelphia, was low on 1700 tons for an assembly shop addition at the League Island navy yard, and also on 300 tons for a pattern shop. Levering & Carrigues were low on 1500 tons for a structural shop at the Boston navy yard. This company was also low several hundred tons for a government power house at Indian Point. It has been announced through the local offices of the American Bridge Co. that the company has been formally awarded the steel contract for the new office building of the General Motors Corp. at Detroit. About 14,000 tons are involved.

Awards Coming Slowly

Philadelphia, July 1.—Discouragement is reflected in some corners of the structural market here over the failure of many projects now on the boards to materialize. A great amount of work has been figured lately but is not being awarded very fast. The only lettings of the past week were small. The largest was a small tonnage to the Pittsburgh Bridge & Iron Co. for trinitrotoluol buildings at Fort Mifflin. One eastern shape mill having faith in the future, now is rolling tonnage for stock.

Viaduct Steel Needed

Cleveland, July 1.—About 2500 tons of steel it is expected will be needed for viaduct work in connection with the new union station, this city, for which some large contracts for construction material have just been let. This steel is not likely to be needed, however, for several months. Fabricators in the Cleveland district declare that the time has arrived to stop making sales below costs and as a result an upward movement of the price curve is freely predicted. Reluctance of fabricators in this district to submit bids upon a certain important inquiry because the price expected by the inquirer was too low, is cited as indicating how far this feeling has developed. As business expands in number of inquiries and volume of awards, fabricators are disinclined to go after business, they say, to obtain which would mean diving beneath costs. The 2500 tons of plain material for bridge work for the Nickel Plate recently placed will be furnished in considerable part by the Bethlehem Steel Co.

Structural Buying Less

Chicago, July 1.—With most large tonnages of structural material placed with fabricators, the market in the west is somewhat quieter than has been the case for several weeks. Mills and fabricators now are provided with considerable business. A recent inquiry asks about 1500 tons of tank material for the Beacon Oil Co., Boston, the Leonard Construction Co., of Chicago, asking bids. A large tonnage is expected late this year on a new building for the combined Merchants Loan & Trust Co., and the Illinois Trust & Savings bank at Chicago, which is estimated at 15,000 tons. The new building for the Federal Reserve bank of Chicago promises also to furnish a large tonnage. Neither of these buildings is yet planned. The Scullin Steel Co., St. Louis, has awarded 1314 tons for a rolling mill building to the Christopher & Simpson Iron Works, the Banner Iron Works and Stupp Bros. Bridge & Iron Co.

CONTRACTS AWARDED

Addition to Pierce-Arrow plant, Buffalo, 200 tons, to Ferguson Iron & Steel Co.

Plant addition for Federal Sugar Refining Co., Yonkers, N. Y., 700 tons, to American Bridge Co.

Office building for Chicago Pneumatic Tool Co., New York City, 600 tons, to the Hedden Iron Construction Co.

Theater building at Wilkesbarre, Pa., 300 tons, to Bauman Iron Works.

Twelve storehouses for Marine Corps, Quantico, Va., 500 tons to McClintic-Marshall Co.

Bridges for South Manchurian railway, 2500 tons to McClintic-Marshall Co.

Steel mill buildings for rolling mill for the Scullin Steel Co., St Louis, 1314 tons, to the Christopher & Simpson Iron Works, Stupp Bros. Bridge & Iron Co. and the Banner Iron Works.

Beam spans for the Minneapolis Bridge Co., Norman and Clay counties, Minn., 138 tons, to the American Bridge Co.

Building for Northwestern Telephone Co., Minneapolis, 2500 tons, to the Minneapolis Steel & Machinery Co.

Extension to the plant of the J. P. Devine Co., Buffalo, 200 tons, to the Lackawanna Bridge Co.

New automobile factory building, Nordyke-Marmon Co., Indianapolis, 400 tons, to Fort Pitt Bridge Works.

Addition to Peerless Motor Co., Cleveland, 100 tons, to Van Dorn Iron Works.

Federal reserve bank, Dallas, Tex., 1200 tons to Mosser Mfg. Co.

No. 2 Telephone exchange, New York City, 950 tons, to Bethlehem Steel Co.

Apartment house West Thirty-fourth street, New York, 1100 tons, to Heddon Iron Construction Co.

CONTRACTS PENDING

Addition to New York stock exchange, 500 tons, contract pending.

Addition to assembly plant, League island navy yard, 1700 tons, M. H. McCloskey low bidder; also 300 tons for pattern shop.

Structural shop at Boston navy yard, 1500 tons, Levering & Garrigues low bidders.

Government power house, Indian Point, several hundred tons, Levering & Garrigues low.

Shipways for Brooklyn navy yard, 3500 tons; McClintic-Marshall Co. low bidder.

Leonard Construction Co., Chicago, oil storage tanks, 1500 tons, for Beacon Oil Co., Boston. Bids asked.

Building for Youngstown Steel Car Co., Niles, O., about 500 tons; bids asked.

Administration building for National Malleable Castings Co., Cleveland, 500 tons; bids asked.

Assembly building, Philadelphia navy yard, 1600 to 1700 tons, revised bids being taken.

Garage for B. Altman & Co., West Thirty-sixth street, New York, 900 tons, bids being taken.

Garage for George Keen, Inc., West Thirty-seventh street, New York, 350 tons, bids being taken.

Will Add Mill

Chicago, July 1.—The Interstate Iron & Steel Co. will add at its South Chicago plant a 75-ton open-hearth furnace and continuous bar mill and will rearrange trackage system. It also will install a scrap-handling system to be equipped with cranes. Counselman & Co., Chicago, have taken $7,400,000 seven per cent preferred stock to finance the work and will offer this for sale.

Liggett & Drexel and Knauth, Nachod & Kuhne, New York bankers, are taking subscriptions for stock in the new Clinton-Wright Wire Co., Worcester. This stock initially is being offered at $36 a share.

Good Orders

Keep Semifinished Makers Comfortable —Sheet Bars, Rods and Skelp Active

Pittsburgh, July 1.—With makers of sheets and tin plate running their mills on a steadily increasing scale, demands for sheet bars continue to grow. Tin plate mills are running now close to 80 per cent of capacity and the sheet mills rapidly are approaching that rate. Thus far, the nonintegrated manufacturers have been able to cover their requirements at their regular sources of supply and middlemen have had comparatively little chance to do any business. While the bar mills are busier than they were recently and orders are coming forward more freely with the makers of strip steel, specifications for billets are not particularly heavy, although they are much larger than they were three or four weeks ago. Offerings of skelp are extremely scant owing to the huge demands for pipe. One independent steel manufacturer in this district now has no skelp for sale. A large domestic demand for wire products, good size export orders, as well as improvement in bolts, rivets and chain keep makers of wire rods in a comfortable position. Export inquiries for all kinds of semifinished steel are numerous and a good business is being done, although individual transactions are of moderate size.

Sheet Bars Are Improved

Youngstown, O., June 30.—Ordering of semifinished material continues in good-sized quantities. A decided improvement is shown in the demand for sheet bars and plenty of business is being entered on mill books. The bessemer grade is in greater demand than open hearth although orders for the latter are fairly heavy. The increased activity for sheet bars is due to a certain extent to makers of auto sheets who have taken on considerable business during the past two weeks. Domestic inquiry is good and some fairly large tonnages are pending.

Fair-Size Purchases Made

Cleveland, July 1.—Consumers of forging billets in this district have been making some fair-size purchases for forward delivery. One important user placed 2000 tons of forging billets for third quarter and is figuring on a similar tonnage for fourth quarter. Smaller sales have been made. Sheet bar and billet specifications with local mills are much better.

Buyers Seeking Protection

Pittsburgh, July 1.—Demands for strip steel, both hot and cold rolled, are good but the most interesting feature of the past week has been an increased disposition on the part of buyers to seek protection for the remainder of the year. Manufacturers are not booking beyond the third quarter but they have had several chances to make contracts extending over the last half and in some instances running into 1920. The price of 3.30c, Pittsburgh, for hot rolled strip does not apply to much actual business as many mills are willing to accept the hoop and band base of 3.05c. On cold rolled strip steel, however, aside from the fact that some makers are absorbing a part or all of the freight, the base price of 5.65c, Pittsburgh, is observed.

Plants Consolidated

Consolidation is announced of the proposed Sharon Steel Mfg. Co. which recently acquired the site and buildings at Wheatland, Pa., of the Blaw-Knox Co., with the Hydraulic Drawn Forging Co., of Ellwood City. This involves the formation of a company to be known as the Slick-Knox Co. with an authorized capital of $6,000,000 in equal amounts of common and preferred stock. All of the machinery of the Hydraulic Drawn Forging Co. will be moved to Wheatland and installed in the plant there and new and special machinery added to the equipment and the plant considerably enlarged. The Ellwood City plant will be occupied by a subsidiary company known as the Pressed Steel Truck Co., at present making commercial trucks and trailors.

The directorate of the new company will include Edwin E. Slick, formerly vice president and general manager of the Cambria Steel Co., Johnstown, Pa.; L. L. Knox, of the Blaw-Knox Co.; W. H. Schoen, William McIntyre, C. K. Strausbaugh and A. R. McGill. Mr. Knox is the patentee of water-cooled furnace doors and steel plant equipment.

Large Order

For Tin Plate Placed by Standard Oil Co. at Pittsburgh

Pittsburgh, July 1.—The tin plate industry at last seems to be swinging back to its normal stride, and mill operations now are on the heaviest scale they have been since early last fall. Including both the American Sheet & Tin Plate Co., and the independents, operations today are averaging close to 80 per cent of capacity. Several of the independent companies in the greater Pittsburgh district are running 100 per cent and next week the American Sheet & Tin Plate Co. plans to put into full operation all but two or three of its smaller plants. Makers quite generally have opened their books for third quarter requirements and business has been coming forward in gratifying fashion. The Standard Oil Co. of New York has placed specifications with the American Sheet & Tin Plate Co. for 100,000 base boxes. Demands from other consumers of tin plate for container purposes also are good while there has been no let up in the demand for long terms and considerable business still is being booked in tin mill black for export to Japan. Makers quite generally are adhering to a base of $7 per base box, Pittsburgh, for standard cokes on domestic business but it is reported that on export transactions, which lately have been quite numerous, concessions of as much as 50c a box have been made.

The Nonferrous Metals

	Copper	Future Straits N. Y.*	‡Lead, New York basis	Zinc St. Louis basis	Aluminum	Spot antimony
June 25	18.50	52.25	5.40	7.00	33.00	8.375
June 26	18.625	52.00	5.40	7.02½	33.00	8.375
June 27	18.625	51.50	5.40	7.05	33.00	8.375
June 30	19.00	51.50	5.40	7.05	33.00	8.375
July 1	19.25	51.50	5.40	7.125	33.00	8.50

†United States Steel Products Co.'s price to consumers, dealers and jobbers; future Straits for shipment from Orient after ban, now 52.25c-52.50c, c.i.f. New York.

‡American Smelting & Refining Co.'s price.

*July shipment from Singapore, c.i.f. New York, August, 51.25c.

NEW YORK, June 30.—Zinc, as the market now is beginning to say, instead of spelter, has gained about 15 points in the past seven days. Since last Friday, however, the market has been comparatively quiet, after the good business with galvanizers at the end of the week. Brass mills still are saying little in the zinc market. Prompt metal now generally is quoted 7.05c St. Louis, with each month following five points up. Some prices are made a little above and a little below this level.

Copper continues to gain a fraction of a cent each day or two, amounting to around a cent in a week. Today prompt electrolytic metal was quoted at 19c and as high as 19.12½c, while August was quoted 19.25c to 19.37½c, delivered. Casting copper now is up around 18c and futures have been sold as high as 18.37½c. Much of the strength of the copper situation is due to sentiment, such as acknowledged cheapness of the metal for the past six months, expectation of big exports soon, concentration of supplies in the hands of producers. Sales lately have been fair but not large. There is strike talk at the mines but as yet there is nothing definite. A surplus of enormous size still exists.

Brass and copper products were put up two cents to two and a quarter cents last week. This unusual advance was caused partly by the strikes at a number of mills in New York and New England, some of which are not yet settled, and partly by the advance of the ingot market. Previous prices of rolled and drawn products were based upon 18c metal.

Tin for future shipment was weak in the past few days, with the market quiet today. At the end of last week several small lots of spot Straits brought 70.50c to 71c and one or two lots a little more. There is a possibility some tin mills will resell their stocks in part on account of the good price since the market has been opened up again, and buy futures, Straits for July shipment from Singapore being quoted 51.50c and August 51.25c. These prices are nearly one cent under those of a week ago. July shipment metal is expected to arrive in August or not later than early in September.

Lead is in a fairly active market and prices are holding firmly around 5.17½c to 5.20c St. Louis and 5.50c New York in the outside market for prompt metal, while the American Smelting & Refining Co. continues to quote 5.15c and 5.45c. Some metal is available in the outside market at these figures.

No. 12 aluminum remelted is stronger, 27c to 28c, and resale virgin No. 1 32c to 33c.

Peace Brings Joy to Exporters

England and Italy Plan to Buy Heavily of American Iron and Steel Products—June Business Far Exceeds That of May—India, Australia, Far East and South America Afford Flourishing Markets

NEW YORK, June 30.—England still is the center for all export iron and steel inquiries, and yet, due to the high prices prevailing in that country, a great volume of these negotiations are being transferred to the United States than ever before. According to recent statements made in the British house of commons, American manufactured steel can be delivered at English ports at a cost from $15 to $20 per ton below the British prices. According to a report of the National City Bank of New York the United States is today supplying approximately one-half of the manufactured products entering into international trade. In spite of this situation, England remains the predominating export market and foreign inquiries are usually directed there before they reach the United States.

With the downward tendency in ocean freight rates which became marked during the past week, English exchange went off, due to the fact that the British had raised their last governmental restriction. Some American export houses were prone to criticize the British for this action, being inclined to the belief that it was prompted by a desire on the part of our competitors to see that no advantage is given exports from the United States.

Notwithstanding this development the outward movement of steel products continues brisk. This has been particularly true of the shipments of sheets, plates and railroad material to Peru, while some large orders are pending with Japan. The U. S. Steel Products Co. shipped two large cargoes of steel this week. One went to Australia and the other to South America. Among the Australian shipments were galvanized wire, nails, plain wire, steel hoops, steel plates, rolled steel angles, etc. South American shipments contained the usual run of wire products together with various machinery and auto supplies.

While the wire and specialty business continues to predominate in the export trade there are reported many opportunities abroad for agricultural implements. Argentine as a market for such implements is expected to develop before long.

The Chinese market, which showed a sudden demand about a week or so ago, continues to develop. Among the recent sales made to China were bars, nails, and wire. The individual orders varied in size from 50 to 200 tons each, although the total volume would undoubtedly be large. The Chinese business is not confined to any particular export house or group of houses, but their inquiries seem to be distributed rather generally. Japan is a heavy purchaser. Shapes, plates, bars, wire products and nails are some of the products bought. Among the more recent inquiries received from Japan was one for 2000 kegs of nails, another for 700 tons of sheets and a third for 1200 tons of light rails. The heavy demand in Japan at the moment is for light gage sheets, which are galvanized there. Japan has repeated her inquiry for 10,000 tons of heavy rails. The chief business with the Far East today, however, consists of merchant orders. Probably the best sale made in India recently was 1700 tons of bars, which was received by an American house. About 2500 kegs of nails left this port last week for India along with 2500 boxes of tin plate, and fair quantities of steel plates, sheet steel, plain wire, steel strips, black pipe, bar steel, steel hoops and steel car plates.

European Prospects Are Better

England, being confronted with an enormous demand for finished products, is turning to the United States for the necessary raw materials. An English inquiry for 20,000 tons of basic pig iron has been in the market recently, and this may be closed at any moment. It is known that about 5000 tons of semifinished products were sold to England recently, and a small tonnage of finished goods.

During the past week or 10 days there has been little export business in rails although a small shipment was made to Belgium. The business at the present moment is concerned chiefly with light rails. Even England has purchased recently 300 tons of light rails from the United States, and the English rail inquiry in the market at the present is a pleasing development to American houses.

Spain has been purchasing plates, bars, angles and other miscellaneous products. Sweden has sent in an inquiry for approximately 200 tons of light rails, and an order for 500 tons has just been placed by Italy. One of the most recent inquiries received from Italy was for 20,000 tons of billets. One sale of 2000 tons of billets to that country was reported during the week.

Among other European shipments leaving this port during the past week were 200 tons of steel rails and a like amount of steel beams for France. About 100 tons of copper cable were shipped to Holland, and to Italy was forwarded 1000 tons of bessemer pig iron, 500 tons of scrap rails, 400 tons of spring steel, a number of freight cars and cast iron car wheels, and a small consignment of galvanized sheets. A shipment of 150 tons of steel bars was made to Sweden.

The confirmation by R. D. Chipp of the Vulcan Steel Products Co., of a contract closed by that company with the French government to rebuild the Nancy district has revived the interest of American exporters in the French market. According to the plans now reported to be under way the French will spread the period of reconstruction over 10 years and only such material as cannot be had in France will be purchased outside. Numerous French manufacturers have been visiting the United States; many are still here. Their statement of the case appears to close the doors of France to any of the basic iron and steel commodities. The contracts obtained by American engineers in France provide that French labor and French material must be used in all cases where it is at all obtainable.

Greece is coming into the market but no sales could be discovered as yet. Among the Greek inquiries were noted wire and bars.

South American business is going very strong, consisting of railway material and manufactured specialties chiefly. Sales of bars, plates, and other steel products are being made there, however. South America is a market second in importance only to the Far East. Argentine and Brazil have been purchasing wire products, bars, etc. One house reported a sale of approximately 2000 tons of light rails to South America and another, a sale of 150 tons of sheets. Shipments during the past week for Buenos Aires included 800 tons of plain wire and 200 tons of steel bars. Argentine shipments also included

miscellaneous supplies of galvanized wire, mild steel bars, hardware, nails, tacks, etc.

Export houses generally state that the business done during the last two weeks of June was much better than during the first half of the month.

Bid Privately on 50,000 Tons of Armor Plate

Washington, July 1.—Armor plate manufacturers are eager to know what course Secretary of the Navy Daniels will pursue in regard to private bids he has received on 50,000 tons of armor plate for six battleships. Daniels' dissatisfaction with prices quoted in the past by the manufacturers and the question as to whether he still has authority to commandeer their plants, if he considers such action necessary, contribute to the making of an interesting situation.

In view of the high labor cost it is not generally believed that manufacturers could reduce their bids, despite the large tonnage involved. Three courses now remain open for the secretary: To accept the bids, to reject them and negotiate privately for lower prices, or commandeer the plants.

In view of the signing of the peace treaty and the sentiment in congress against further exercise of wartime powers by various agencies of the government it is not believed the secretary will seek to take over the plants, even if the attorney general should rule he has the power to do so.

Nothing has been announced to indicate the price named by the manufacturers in their bids, and it is not known why the secretary asked for private bids, unless he considered that it would be an easier matter to negotiate in the same way subsequently if the bids were unsatisfactory.

This is the largest tonnage of armor plate ever asked for at one time by the department and represents about 18 months' operation of the three producing plants of the country.

May Exports

Show Increase Over April of 11,082 Tons

May iron and steel export statistics as issued by the department of foreign and domestic commerce, show that foreign trade is steadily on the increase. April exports were 396,813 tons, while in May they aggregated 407,895 tons, an increase of 11,082 tons. Importations of iron and steel also showed a slight gain, the imports for April totalling 16,500 tons, while those for May were 17,885 tons, an increase of 1325 tons.

Pig iron exports showed the greatest increase. They totalled 37,087 tons, compared with 17,038 tons for April. Structural iron and steel suffered a slight decrease, the figures for April showing 42,550 tons against 36,411 tons in May. The greatest decrease was suffered by sheets and plates, the exports for April totalling 121,544 tons, while in May only 90,116 tons were exported. Steel billets and blooms increased from 11,488 tons in April to 20,771 tons in May. Wire rods showed a marked decrease, the May total being 5357 tons, while that for April was 13,365 tons. Steel rails gained, exceeding the April figure by 15,671 tons. Hoops and bands stayed at about the same figure as in April, when the total exports were 4501 tons. May figures were 4464 tons.

Imports increased 1325 tons. During April 5089 tons of pig iron were imported and in May only 2428 tons were brought in. Importation of scrap showed a slight increase, April's imports being 8746 tons while May's figure was 10,130 tons.

No iron ore was imported from Spain as against 1358 tons in April, but 16,989 tons came in from Sweden, where during the preceding month none was received. The total imports of iron ore from all countries in May were 28,164 tons, compared with 24,195 tons in April.

There were no imports of ferromanganese during May, while 260 tons of ferrosilicon were received, an increase over that of April.

Knecht is Honored

M. Marcel Knecht, distinguished French scholar and publicist and well known to American iron and steel manufacturers through the invitation he recently extended to the American Iron and Steel institute to visit France next summer, was the recipient of the honorary degree of doctor of laws from the University of Wisconsin at the annual commencement exercises at Madison. This honor was bestowed on M. Knecht in recognition of his eminent work for the strengthening and preservation of the existing warm friendship between the United States and France. Following the conferring of the degree, Marcel Knecht was the honorary guest at a dinner given by Dr. Arthur G. Sullivan, of Madison, at the Madison club, at which E. A. Birge, president of the University of Wisconsin, Governor E. L. Philip of Wisconsin and other notables were present.

Chicago Base

On Steel Will be Inquired Into by Trade Commission

Chicago, July 1.—Inquiry into the fairness and feasibility of establishing a Chicago base on iron and steel products is to be made by the federal trade commission at the suggestion of Chairman E. H. Gary of the Steel corporation, according to an announcement made by the Western Association of Rolled Steel Consumers which was organized some months ago to push this matter. The proposal that the trade commission examine into the facts was made by Judge Gary under date of June 19 in a letter to John S. Miller, Chicago attorney, who has been retained by the association as its counsel.

In that communication Judge Gary wrote:

"I suggest to you that, under all circumstances, it might be appropriate and wise for you and me to visit the chairman of the federal trade commission, and for you then to state the position of your clients and ask the commission to make an inquiry into the subject. I would consent, so far as my corporation is concerned. Of course, the whole steel industry ought to be heard in regard to such a matter, and if the commission desired I would call the manufacturers together and ask them to appoint a committee to represent them before the commission so that we could have a full hearing at which all interests would have an opportunity to be heard."

Prior to this development Mr. Miller had taken up the case directly with Judge Gary and considerable correspondence was passed. The association's announcement covering these negotiations states:

"Judge Gary's first suggestion was that the matter was an economic and not a legal one. He then said he was giving it earnest consideration 'from the standpoint of what is fair and just.'

"Other correspondence passed between the two, culminating, only a few weeks ago, in a suggestion by Judge Gary that a committee of the Western Association of Rolled Steel Consumers meet a similar committee representing the mill interests and thus seek to bring about an amicable adjustment of the controversy.

"It appeared that such an adjustment was upon the brink of being consummated, when the general protest against the sole Pittsburgh base came from a number of other quarters."

It is expected that Judge Gary and Mr. Miller will appear soon before the federal trade commission and the date will be set for the hearing of the controversy.

Pig Iron Output Finally Gains

Increasing Production During June is First Shown Since Decline Began Last Fall —Steel Works Furnaces Responsible for Upturn—More Stacks Now Active

AFTER eight successive months of declining production, pig iron output has started on the upgrade. The June figures showing production of coke and anthracite pig iron, reveal a gain of 3.8 per cent over May. The 8-month steady decrease had brought production down 40 per cent from the high mark of September, 1918.

Production in June was 2,116,702 tons compared with 2,107,729 tons in May, a gain of 8973 tons. In view of the shorter month, the average daily production record reveals more clearly the extent of the gain. The furnaces averaged daily during June 70,557 tons against 67,991 tons in May, a gain of 2566 tons. The high mark set in September was 113,774 tons.

MONTHLY PRODUCTION

	1919	1918	1917
January	3,306,279	2,403,227	3,159,839
February	2,947,555	2,318,242	2,649,935
March	3,088,023	3,209,996	3,255,813
April	2,474,374	3,273,355	3,328,061
May	2,107,729	3,451,884	3,413,677
June	2,116,702	3,316,148	3,260,234
Total 1st half.	16,040,662	17,972,852	19,067,559
July	.....	3,408,584	3,337,442
August	.....	3,378,479	3,238,970
September	.....	3,413,223	3,140,742
October	.....	3,482,392	3,296,286
November	.....	3,347,844	3,198,597
December	.....	3,434,114	2,885,380
Total 2d half..	.....	20,464,636	19,097,417
Grand total..	16,040,662	38,437,488	38,164,976

Increased output of the steel works or nonmerchant furnaces was responsible for the gain, these stacks producing 1,647,117 tons in June against 1,574,679 tons in May, a gain of 72,438 tons. The production of merchant iron last month was only 450,670 tons against 514,002 tons in May, a loss of 63,332 tons. The average daily output of the steel works furnaces in June was 54,904 tons and in May, 50,796 tons, a gain of 4108 tons, or 8 per cent. Merchant stacks produced daily in June 15,022 tons, and in May 16,581 tons, a loss of 1559 tons, or 9.4 per cent.

AVERAGE DAILY PRODUCTION

	1919	1918	1917	1916	1915
Jan.	106,654	77,523	101,930	102,319	51,323
Feb.	105,270	82,794	94,641	106,157	59,521
March	99,614	103,548	105,026	107,343	66,009
April	82,479	109,112	110.936	107,517	70,484
May	67,991	111,351	110,119	108,535	72,747
June	70,557	110,538	108,675	107,127	78,998
July	.....	109,954	107,659	103,907	82,687
Aug.	.....	108,983	104,483	103,156	89,510
Sept.	.....	113,774	104,691	106,935	94,478
Oct.	.....	112,335	106,332	113,167	100,656
Nov.	.....	111,595	106,620	110,593	101,174
Dec.	.....	110,602	93,077	102,715	103,278
Avg.	88,622	105,293	104,562	106,610	81,022

Active stacks on the last day of June numbered 200, a gain of three over the May 31 record. Relighting of nonmerchant furnaces accounted for the gain as 13 stacks of this class were put in blast and three blown out. Six merchant furnaces were relighted and 13 blown out.

Production for the first half of 1919 totals 16,040,662 tons, a decrease of 4,400,000 tons from the total output in the last half of 1918, and a decline of 1,930,000 from the total in the first six months of last year.

The output of ferro shows a slight gain, increasing to 14,479 tons in June from 14,301 tons in May, a gain of 178 tons. Spiegel production dropped to 4436 tons in June from 4747 tons in May, a loss of 311 tons.

JUNE PIG IRON

States	No. of stacks	No. in blast last day of month: June	May	Total tonnage made: Merchant	Nonmerchant	Totals: June	May

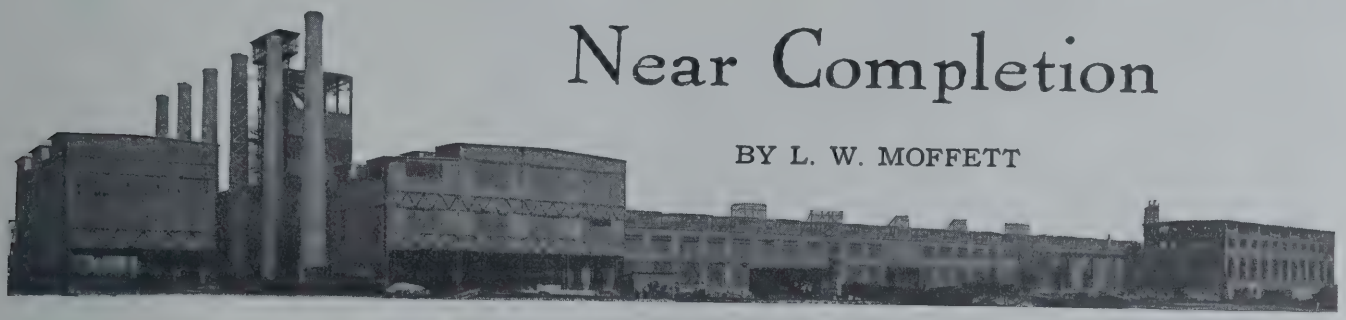
Makers Protest

Railroads Order to Bill at Price Ruling at Delivery

Washington, July 1.—Instructions from the railroad administration to car builders not to include in their material certificates, bills for steel plates, shapes, bars and sheets where the base billing price exceeds those in effect when shipment is made are based on the policy of some of the leading steel interests to continue for the benefit of the government a ruling the price fixing committee of the war industries board insisted upon when that body was in power. This ruling was to the effect that the price in force in the quarter in which delivery was made should be the price the purchaser should pay the maker.



Termination of the price-fixing authority exercised by the war industries board carried with it such injunctions as have been in force but several producers, reducing their prices along with those of the entire industry on Jan. 1, notified the government the clause calling for the price in effect at time of delivery would be continued until all government contracts or those by which the government would benefit would be filled or canceled. Then when the industrial board approved the reduction effective March 21 this intention was again expressed and apparently will remain operative until all the war-time contracts are terminated.

Many steel producers have protested the order and their claims in all probability will be given full legal consideration.

Mr. Spencer's order that steel hereafter be bought only from Pittsburgh mills is in fact only a recommendation to the regional purchasing directors. It had been contemplated to issue such an order, but after consideration it was decided to make it a recommendation.

Maryland Steel Plant Extensions Are Near Completion

BY L. W. MOFFETT

Exterior View of the Blooming Mill Building of the Maryland Plant of the Bethlehem Steel Co., at Sparrows Point

ASIDE from work on two new 450-ton blast furnaces and a 60-inch universal plate mill which is almost finished, the extensive additions and improvements to the Sparrows Point, Md., plant undertaken some time ago by the Bethlehem Steel Co. have been completed. According to the official announcements of Chairman Charles M. Schwab and President E. C. Grace, of the Bethlehem Steel Corp., the company by the end of 1919 will have expended $50,000,000 on the Sparrows Point property since its acquisition from the Pennsylvania Steel Co. It is the purpose of the company to continue its policy of expansion, eventually developing at Sparrows Point one of the largest steel plants in the country, with many lines of commercial products.

Supplementing this program, the company will authorize for immediate completion the doubling of the tin plate mill, making a 24-mill plant, and the building at once of a plant for the production of sheets, as well as adding another 250-ton tilting open-hearth furnace to the new furnace plant. This will involve an increased expenditure of approximately $5,000,000 over and above the work just completed and in progress. With the additions made and under way the Sparrows Point plant will have an annual ingot capacity of practically 1,200,000 tons.

Situated on the Patapsco river, about four miles from the point where the river enters Chesapeake bay, this plant, ideally located for export trade, is ready to meet demands at a time when there is promise that the steel industry of the United States will enter upon the greatest era in its history in serving foreign markets. Also, the Sparrows Point plant finds itself in a much better position to take care of domestic markets.

Before entering upon a description of the units added since May 31, 1917, when THE IRON TRADE REVIEW carried an illustrated article regarding the company's new tin plate mill, brief reference will be made to the general layout of the plant and the relative location of its extensions as shown in Fig. 2. A 600-foot ore dock, additional to the original 600-foot dock, has been built to the eastward on the water front. There have been no additions made to the originating loading wharves. Immediately to the west of these wharves is located a new central water pumping station and to the west of this, four new batteries of 60 Koppers ovens each, paralleling the water front. The other new units include two 450-ton blast furnaces running east in a line with the four old ones which stand to the north of the docks; a duplexing plant to the north and running at right angles with the furnaces; a 40-inch blooming mill; and a 110-inch plate mill and a 60-inch universal plate mill, nearing completion, north of the duplexing plant.

The ore dock frontage now is 1200 feet, the additional dock doubling the capacity, and is laid out with a view of further extensions east, which can be made almost without limit. The new dock is shown in Fig. 1. The river has been dredged so that there now is a channel 90 feet wide by 40 feet deep leading from the government channel, 600 feet wide and 35 feet deep, which is amply large to handle any boat entering the bay. Ore, which at this time is coming from Cuba, can be put into cars for shipment to other plants, into stock, or directly into larry cars for immediate use in the furnaces.

The ore is delivered by one 6500-ton and four 11,000-ton steamers and is taken from the boats by two 7½-ton grab buckets made by the Brown Hoisting Machinery Co., Cleveland, and two 17-ton grab buckets made by the Mead-Morrison Mfg. Co., Boston. There also is a 15-ton grab bucket for handling ore into and out of stock. The discharging capacity is one 12,000-ton boat in 12 to 14 hours, the 1200-foot pier being capable of unloading

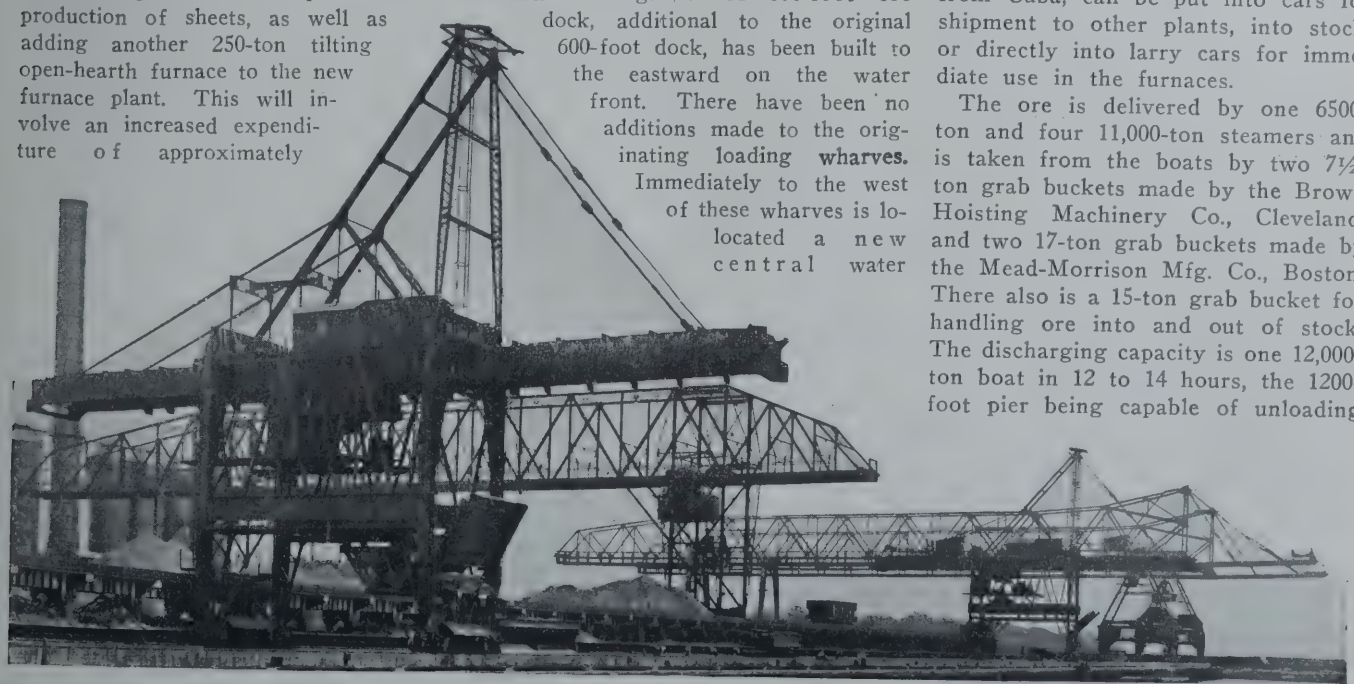


FIG. 1—VIEW OF THE NEW 600-FOOT ORE DOCK WHICH DOUBLES THE ORE HANDLING CAPACITY AT SPARROWS POINT

two ships simultaneously. The capacity of the ore storage yard is about 1,000,000 tons.

The extension at the coke plant consists of a 1000-foot coal dock of 300,000 tons storage capacity. The dock is equipped with two 9-ton man trolley buckets and a cable car system. The dock is arranged to unload coal shipped either by rail or water. A coal handling and preparing plant is provided with two breakers, four crushers made by the Pennsylvania Crusher Co., Philadelphia, and the necessary belt conveyors and bins.

With the four new batteries of 60 Koppers ovens each, the Sparrows Point plant has a total of six batteries, which can produce about 125,000 tons of coke each month. Modern by-product recovery equipment has been installed, including a benzol plant. Compressors made by the Ingersoll-Rand Co., New York, have been provided to pump the surplus gas to the city of Baltimore. New equipment similar to the old has been provided for handling the coke. It is quenched and discharged on a wharf and then elevated by an incline belt conveyor and screened over a revolving grizzly, after which it is conveyed on a horizontal belt to the blast furnace bins.

The old blast furnaces are 85 feet high, each with four stoves, while each of the new ones, being built by the Riter-Conley Co., Pittsburgh, is 95 feet high, with a 17-foot hearth and 22-foot bosh, each with four stoves which have 2½-inch checkers. All of the furnaces are equipped with Neeland tops.

Water for the furnaces is supplied by a new centrifugal pumping station erected immediately above the loading pier. The station has four electrically driven centrifugal pumps, each of 30,000,000-gallon capacity, with a 4-foot discharge main. The water is first pumped into a large standpipe before being supplied to the furnaces, each of which will be blown by two 2000-horsepower gas engines made by the Bethlehem company. As a reserve there are three blowing engines built by the Southwark Foundry & Machine Co., Philadelphia.

The new open-hearth extensions consist of a duplexing plant completely housed in a building 1100 feet long. The crane on the charging side has a span of 78 feet, while that on the pit side has a span of 70 feet.

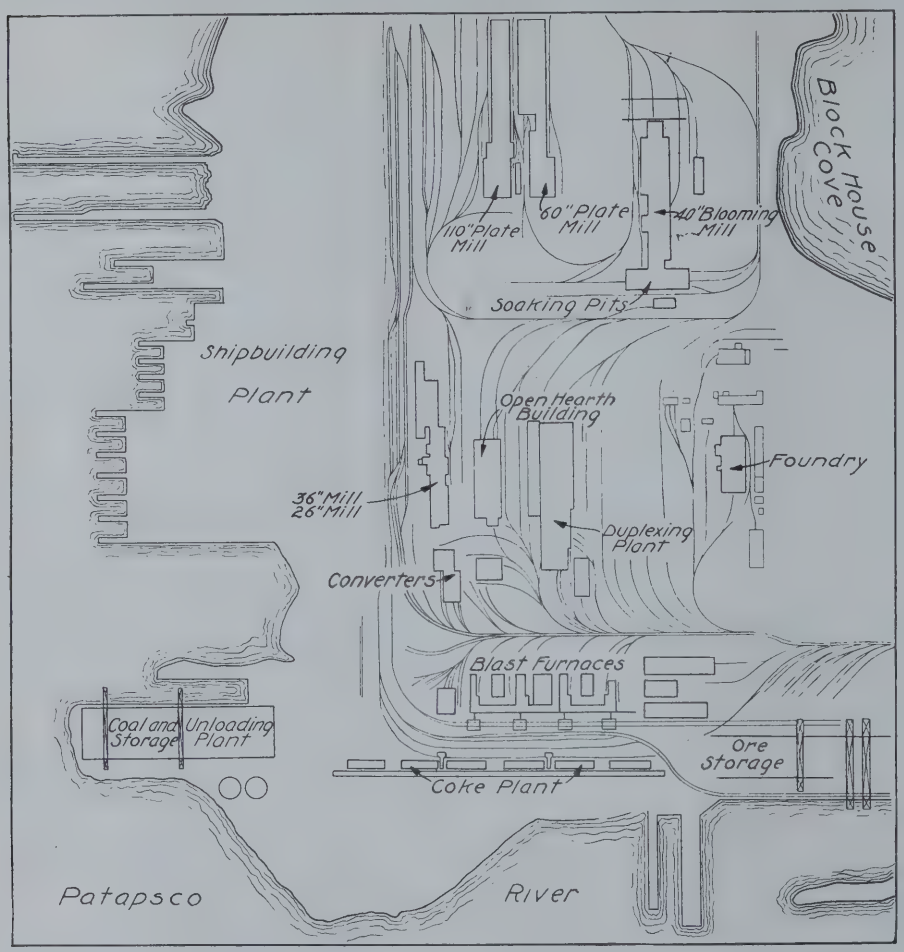

FIG. 2—ARRANGEMENT OF UNITS OF MARYLAND PLANT OF THE BETHLEHEM STEEL CO., SPARROWS POINT

There are four 200-ton open-hearth tilting furnaces, four 30-ton bessemer converters built by the Pennsylvania Engineering Works, New Castle, Pa., and one 1300-ton metal mixer, coke oven gas fired, built by the same company and located at the south end of the building adjacent to the converters. A 250-ton metal mixer is being installed between the second and third open-hearth furnaces. It is so constructed that hot metal can be poured out either on the charging side or on the pit side for recarburizing the heats in the ladle.

There are three 100-ton cranes on the charging side, and two 175-ton and two 40-ton cranes on the casting side, all built by the Morgan Engineering Co., Alliance, O.

Scrap is carried to the converters by means of a skip hoist shown in Fig. 5, the material being loaded in the skip with a magnet. The skip is raised by an electrically driven cable hoist to a point above the converters where it is dumped automatically into another car which travels parallel on a line with the converters. The scrap is dropped on the scrapping floor of any desired converter and from there it travels by chute into the converter in the usual manner.

The pit side of the mixer is served by a 100-ton crane. The metal can be poured from the mixer directly into a ladle hanging on a crane and carried to the converter or it can be poured into a ladle on a transfer truck on the scales. After being weighed a sifter moves the cars in front of the proper converter where the ladle is handled by a crane.

Novel Routing of Blown Metal

The blown metal is caught in a crane ladle and either can be carried directly to the open-hearth furnaces or placed in a transfer truck which runs on a track underneath the charging floor. In front of each furnace is a hatchway, as shown in Fig. 5, through which the metal can be lifted, allowing any furnace to be charged without interfering with the charging of the other furnaces.

Three of the 200-ton furnaces are in operation and the fourth is under construction. Each furnace has a 17 x 44-foot hearth, having an area of 748 square feet along the metal line and 54 feet from chill to chill. The furnaces are equipped with water-cooled frames, doors and chills made by the Blaw-Knox Co., Pittsburgh. At present oil and tar are being used as fuel and consequently no ports are used. Reversing valves of the Blaw-Knox type are installed.

Any reaction slag is poured off from the front side of the furnaces from

spouts into slag bowls on the ground level underneath the furnace. These bowls also are used for catching the overflow slag from steel ladles as shown in Fig. 6. Each furnace has waste-heat boilers constructed by the Babcock & Wilcox Co., and four mechanical producers built by the Morgan Construction Co., Worcester, Mass., which are housed in a building parallel to the furnaces on the charging side.

The stock yard is east of the open-hearth department. Limestone, ore and scale are carried on overhead tracks and dumped in storage bins and drawn out into standard charging pans through hoppers underneath.

The scrap yard paralleling the stock yard which is 600 feet long and 80 feet wide, is served by two 10-ton cranes equipped with magnets. The mold yard is adjacent and parallel to the pit for its entire length and has a span of 80 feet. In addition to the regular runway tracks it contains 12 lateral tracks, each of such length as to carry a sufficient number of trucks with roller bearings manufactured by the Hyatt Roller Bearing Co., New York, for a 100-ton heat. All cold stock and supplies are brought on the charging floor on an elevated track entering the building opposite from the converting end.

The stripping cranes are equipped with auxiliary hoists, making it easily possible to pick up molds or ingots which may be knocked off of the buggies.

Assures Cool Working Floor

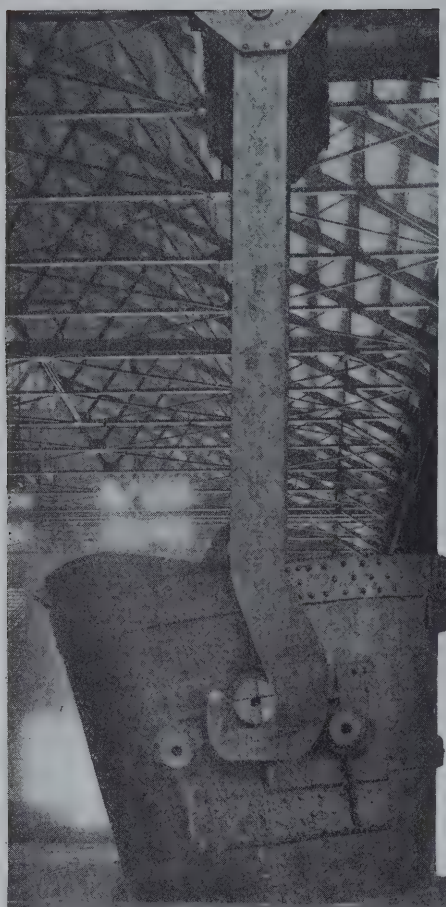
The soaking pit building has 24 pits equipped with electrically operated covers. The gas is supplied by mechanical feed producers built by the Morgan Construction Co. The soaking pits are provided with two cleaning holes; one in front and one in the back of the bottom of the pits. The cinder from these pits drops into cars on a narrow gage track which runs under each pit and is dumped into a large pit outside of the building where it is loaded by means of a grab bucket operated by an electric crane. The soaking pits are built with false crowns over the combustion chambers, allowing an air space of 3 inches. Above this is a steel plate working floor paved with fire brick which reduces the amount of heat radiated to the working area above.

After the steel is heated it is drawn by pit cranes and charged into ingot buggies which are pushed by an electric locomotive to a position over the hydraulic ingot tilter. The tilter tips the ingot pot in the buggy, throwing the ingot on the table. Two approach tables carry the ingot to the front reversing table of a 40-inch reversing bloom mill built by the Mesta Machine Co., Pittsburgh. The blooming mill, which is shown in Fig. 8, is driven by a 5000-horsepower reversing motor capable of a peak load of 200 per cent, built by the General Electric Co., Schenectady, N. Y. This bloomer rolls all sizes of slabs up to 40 inches wide and 10 inches thick and can roll blooms and billets down to 4 x 4 inches without a change of rolls.

FIG. 3—SCRAP IS LOADED AT DUPLEXING PLANT IN SKIP BY MEANS OF A MAGNET

The slabs when rolled are idled through a 500-ton hydraulic upcut crop shear. The slab then is transferred over to an 800-ton steam intensifier shear. This shear is equipped with two loading tables which are hydraulically operated. One of these loads slabs to be put in stock in the slab yard and the other loads slabs which are to be delivered to the plate mills hot, thus saving heat which ordinarily would be lost if the slabs were allowed to cool before being rolled. A 24-inch continuous mill built by the Morgan Construction Co. receives 8 x 8-inch blooms from the 40-inch mill. The blooms may be rolled into 6½ x 6½, 6 x 6, 5 x 5 or 4 x 4-inch billets or 2 x 8-inch sheet bar blanks.

The 4 x 4-inch billets or the sheet bar blanks enter an 18-inch continuous billet mill and are rolled into billets of any size down to 1½ x 1½ inches or any weight of sheet bar. The billets or sheet bars are cut to the desired length by a steam flying shear.



Handling Semifinished Material

The sheet bars pass through the pinch rolls and are placed in the piler in drafts of two ingots each, after which they are lifted from the piler by a 15-ton, 120-foot span electric crane equipped with a spider for lifting the bars which are then placed on specially constructed cooling beds.

When changing the 18-inch continuous mill from sheet bars to billets or vice versa, the practice will be to change the housings which are always

FIG. 4—VIEW OF DISCHARGE SIDE OF COKE OVENS, THE WHARF AND BELT CONVEYOR

set up and ready with rolls and accessories. The 18-inch mill is equipped with two 120-foot cooling beds with sufficient capacity to handle the product of this mill. These beds also are equipped with scales situated under the loading cradles so that it is possible to weigh the product of the mill.

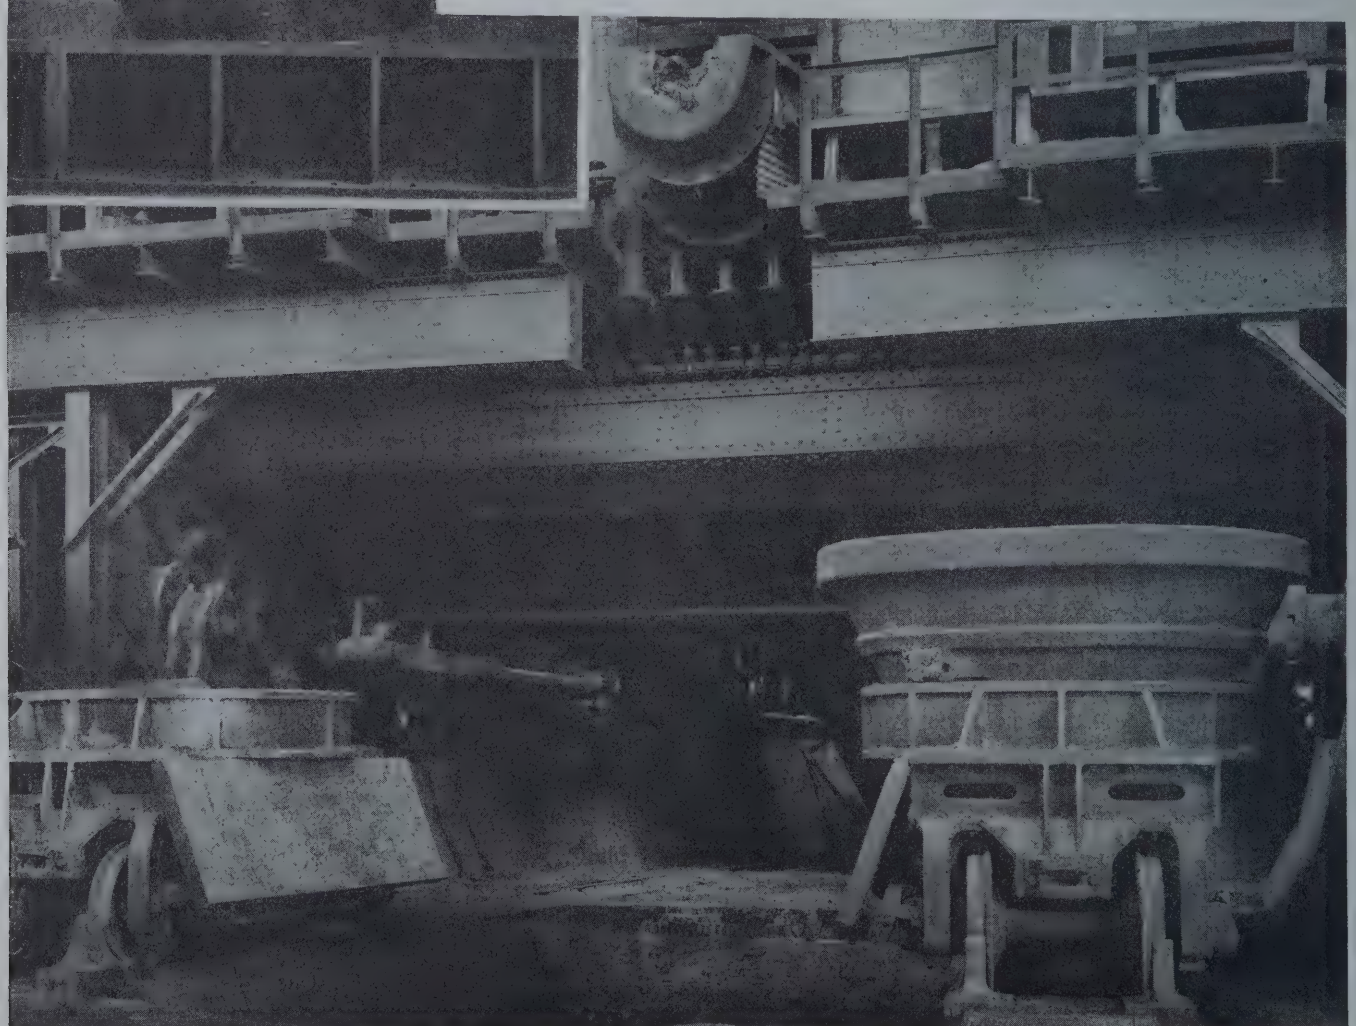
The 24-inch mill is equipped with a broadside transfer of sufficient length to transfer a standard ingot when rolled into 4 x 4-inch billets. This transfer carries the different products of the 24-inch mill, which it is not desired to send to the 18-inch mill, off to one side to tables which carry it to a separate billet shear. This product also can be weighed on scales similar to those used in the 18-inch hot bed.

All of the switchboards throughout the mill have spare boards, which makes it possible when the working boards give trouble for the operator to turn a knob and throw in a spare switchboard while the working board is being repaired, thus saving time which ordinarily is lost in making repairs.

The motor room contains the latest electrical appliances and is served by a 50-ton electric crane. The mill building is equipped with a 50-ton and a 25-ton electric crane. Three 15-ton 85-foot span electric cranes handle material in the slab yard. For handling hot slabs for the plate mill the blooming mill is equipped with two 15-ton, 21-foot span electric cranes which load the slabs on a specially constructed car for transfer by locomotives.

Crops from the 500-ton hydraulic upcut crop shears are transferred by an auxiliary conveyor to the large loading conveyor which handles the crops from the 800-ton steam intensifier slab shears. This latter conveyor loads all crops into charging boxes ready for charging in the open-hearth furnaces.

All of the mill buildings are built of brick and steel with metal sash windows. Good lighting and ventilation is assured. The motor room of the blooming mill has a cement floor while the mill proper is paved with brick. The stripper building is 58 feet 7¼ inches wide and 135 feet long, while the gas producer and soaking pit building is 90 feet 4 inches over the pits and 32 feet 4 inches over the producers, making a total span of



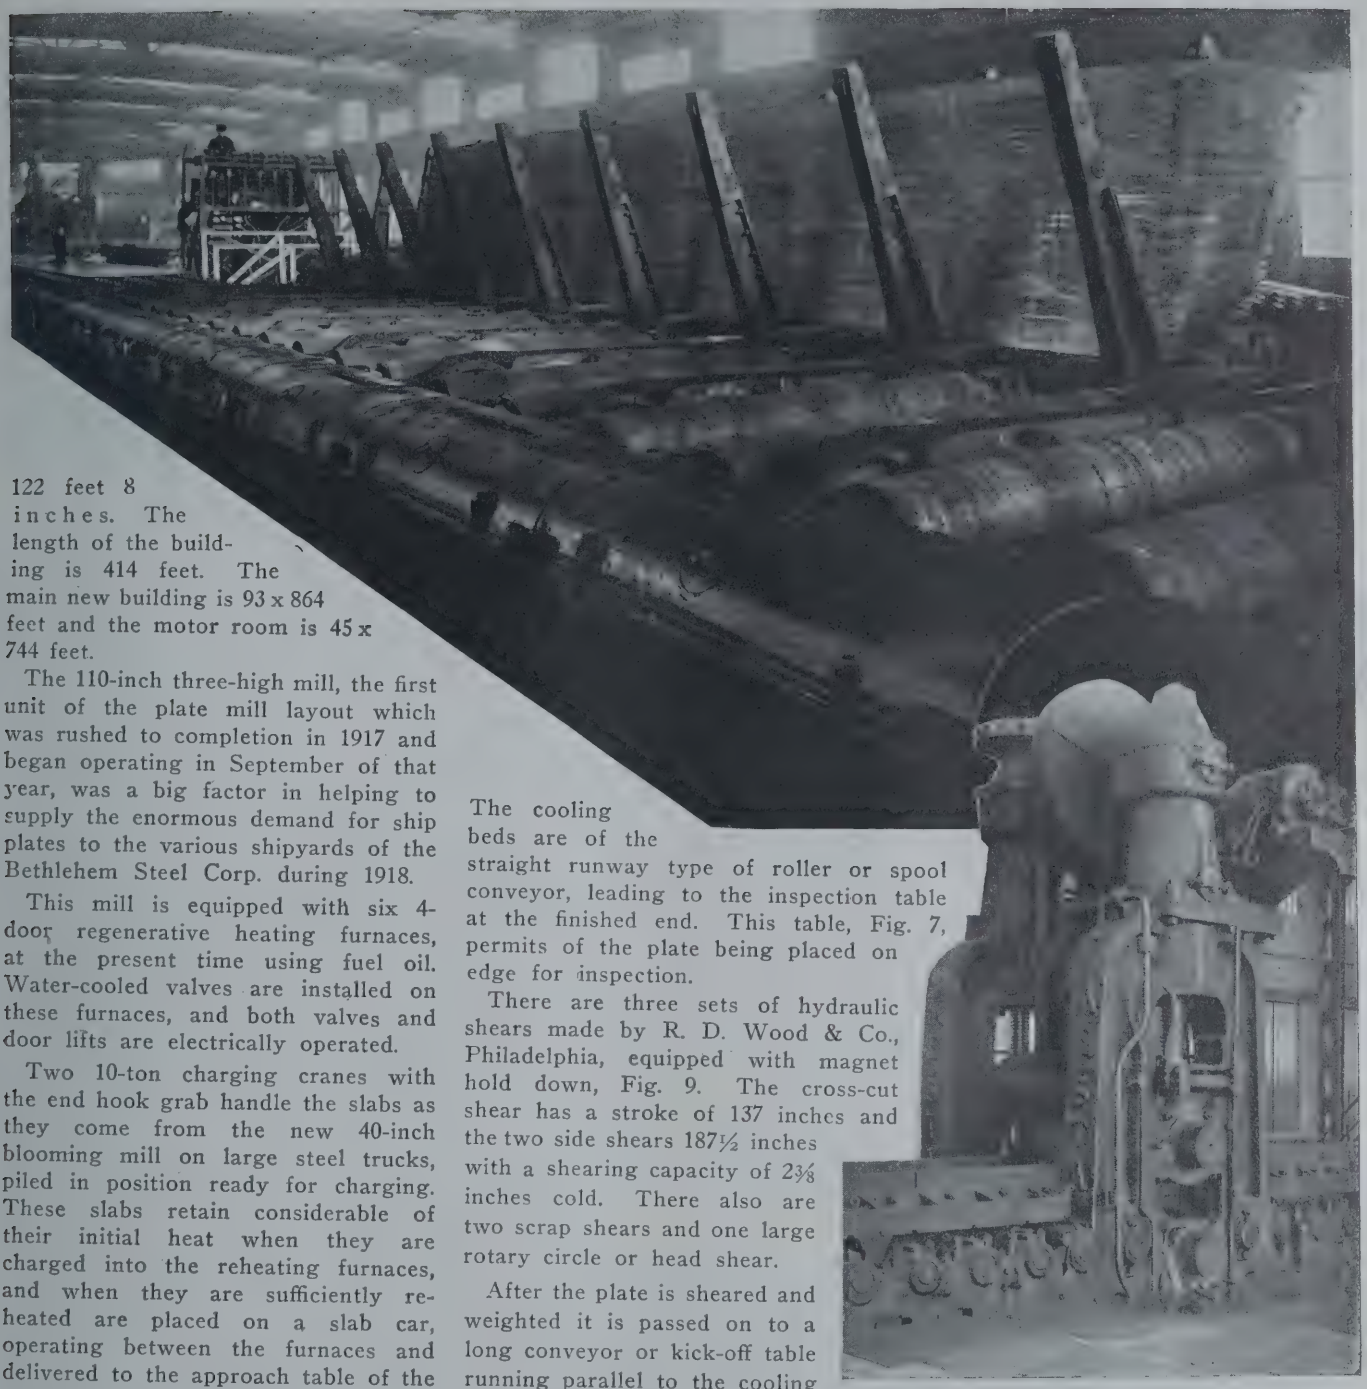


FIG. 5—RAISING BLOWN METAL THROUGH HATCHWAY PREPARATORY TO CHARGING OPEN-HEARTH FURNACE FIG. 6—THESE CARS RECEIVE OVERFLOW SLAG FROM LADLES

122 feet 8 inches. The length of the building is 414 feet. The main new building is 93 x 864 feet and the motor room is 45 x 744 feet.

The 110-inch three-high mill, the first unit of the plate mill layout which was rushed to completion in 1917 and began operating in September of that year, was a big factor in helping to supply the enormous demand for ship plates to the various shipyards of the Bethlehem Steel Corp. during 1918.

This mill is equipped with six 4-door regenerative heating furnaces, at the present time using fuel oil. Water-cooled valves are installed on these furnaces, and both valves and door lifts are electrically operated.

Two 10-ton charging cranes with the end hook grab handle the slabs as they come from the new 40-inch blooming mill on large steel trucks, piled in position ready for charging. These slabs retain considerable of their initial heat when they are charged into the reheating furnaces, and when they are sufficiently reheated are placed on a slab car, operating between the furnaces and delivered to the approach table of the mill proper.

The mill, one view of which is shown in Fig. 10, was built by the Mesta Machine Co., and is driven by a 4000-horsepower motor built by the General Electric Co., Schenectady, N. Y. The roll diameters are 36 inches for the top and bottom rolls and 24 inches for the middle roll.

A special feature in connection with this mill is the electrically operated lifting tables which are so designed in width as to prevent any overhang of the hot plates in the bearings to the rollers. The mill operates at 52 revolutions a minute and has no difficulty in rolling plates up to 70 feet in length. The minimum gage of material rolled is $\frac{3}{16}$-inch, and the maximum width of about 100 inches.

The cooling beds are of the straight runway type of roller or spool conveyor, leading to the inspection table at the finished end. This table, Fig. 7, permits of the plate being placed on edge for inspection.

There are three sets of hydraulic shears made by R. D. Wood & Co., Philadelphia, equipped with magnet hold down, Fig. 9. The cross-cut shear has a stroke of 137 inches and the two side shears 187½ inches with a shearing capacity of 2⅜ inches cold. There also are two scrap shears and one large rotary circle or head shear.

After the plate is sheared and weighted it is passed on to a long conveyor or kick-off table running parallel to the cooling tables, and divided into nine kick off sections that allow for the distribution of various orders into separate piles for loading or storing on the loading bank.

Running parallel with the loading bank is a depressed track capable of holding 15 cars for loading at one time. Three 15-ton 96-foot span cranes constructed by the Alliance Machine Co., Alliance, O., handle the entire product from this mill.

Electric energy for the Sparrows Point works is supplied from a power plant designed for an ultimate capacity of 100,000 kilovolt amperes. Five generating units are under installation, each unit consisting of a 5000-kilovolt ampere generator, made by the General Electric Co., producing 3-phase, 25-cycle current at 6600 volts. The generator is driven by a Bethlehem tandem blast furnace gas engine. A unique feature of the station is that all auxiliaries, including gas washing equipment, pumps, air compressors, ignition apparatus and exciters, are contained in the building proper.

The electric switching equipment, furnished by the Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa., is carried in three galleries, one containing the main bus structure, the second all switching equipment and

7—INSPECTION TABLE AND FINISHING END OF 10-INCH PLATE MILL. FIG. 8—A VIEW OF THE 40-INCH BLOOMING MILL

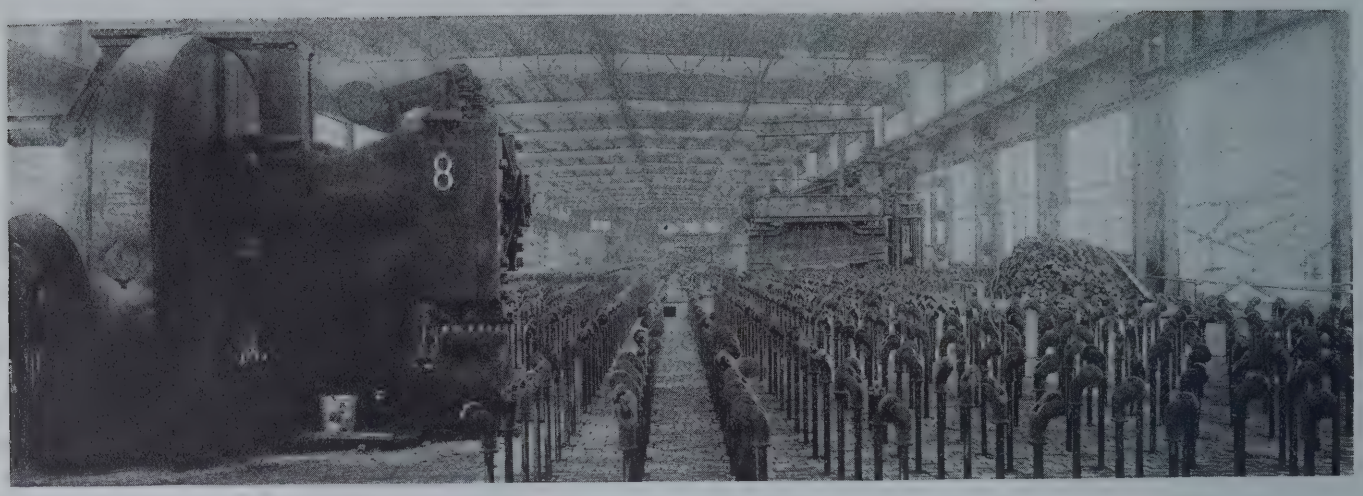

FIG. 9—THE PLATE MILL IS EQUIPPED WITH THREE SETS OF HYDRAULIC SHEARS HAVING MAGNET HOLD-DOWN

operator's bench board and the third reactances and lighting arresters.

A complete substation is arranged in one end of the power house to take care of all auxiliary electrical equipment in the blast-furnace and open-hearth departments which are in close proximity. This station furnishes electrical energy over a double ring bus transmission system to seven substations located throughout the plant.

In order to accommodate its employes, the Bethlehem company has built a number of modern hollow-tile stucco residences in Sparrows Point.

French War Imports

During the war French imports of iron and steel according to statistics just issued amounted to more than 50 per cent of her prewar production. The heavy total is suggestive of the extent to which the French iron and steel industry was crippled by the German occupation of the producing districts of northern and northeastern France. The imports of by-product in metric tons in 1916, 1917 and 1918 were as follows:

	1916	1917	1918
Pig iron	612,012	657,022	375,447
Steel blooms, billets and bars.	1,510,549	1,509,169	932,365
Wire rods	80,203	54,093	52,483
Plates	262,558	265,132	218,295
Wire	78,070	84,896	33,259
Rails	131,852	121,515	156,248
Tin plate	80,708	45,329	58,219
Total	2,755,952	2,737,156	1,826,316

The United Kingdom furnished more of this tonnage than any other country, supplying 1,448,894 tons in 1916, 1,482,030 tons in 1917 and 708,504 tons in 1918. The United States is credited with 170,832 tons in 1916, 1,277,349 tons in 1917 and 1,015,456 tons in 1918.

The pride of the former Germany navy, the "unbeatable" U-boats, are not designed for a watery grave as was suggested at the early sessions of the peace meeting. G. Cohen Sons & Co., London, England, recently purchased 25 undersea craft which had been turned over to England. This company during the war handled considerable quantities of scrap iron brought from the battlefields of France.

Vanadium From Waste

According to the *Stockholms Dagblad,* a new industry has been established in Smaland, Sweden. The concentration of ores at Taberg throughout the course of centuries has left huge accumulations of waste. Recent research has revealed a content of vanadium in this waste. A Swedish company has purchased a portion of these old workings with a view to the extraction of the vanadium.

FIG. 10—THREE-HIGH 110-INCH PLATE MILL WHICH HELPED SUPPLY SHIP PLATES DURING THE WAR

Finding Costs of Manufacture

Efficient Method to Enable Executives to Have Full Knowledge of Conditions of Their Business at All Times Outlined—Special Forms for Keeping Records Advantageous—Direct and Indirect Charges Computed

BY CLIFFORD E. LYNN

COSTKEEPING is a subject of such fundamental importance in manufacturing, that to solve its problems a man must bring to them an unbiased mind, and a determination to analyze situations thoroughly so as to form an accurate judgment.

When cost of production and operating is known it should be properly tabulated, so that it may be compared with previous or subsequent costs. In this manner any variations in the cost of manufacture are immediately determined, and any economy that may be necessary is at once brought to the attention of the executive, thus enabling him to have a full knowledge of the conditions of his business at all times.

Among other advantages of an efficient cost system, are the following: It serves as a basis for judging the efficiency or inefficiency of each plant, department, foreman, or group of men; supplies the proprietors with information requisite for increasing business; locates the leaks; serves as a basis for determining selling prices; establishes a perpetual inventory, and gives the employer a monthly statement of business conditions.

Cost-finding methods are divided into two classes, estimating costs and determining actual costs. The former consists of estimating the material used, labor expended, and a percentage to cover overhead expenses. The latter method, which beyond doubt is the best, consists of the special order system in which elements of cost are charged to an order, job or article, and the product system in which the costs are charged to the product direct. The elements of all costs are direct and indirect material and labor, and indirect expense, sometimes called burden or overhead expense, which includes supplies, light, heat, power, freight, maintenance, insurance, taxes, interest, rent, depreciation, in fact, anything that does not enter the product itself.

To secure direct and indirect material and labor costs it is necessary for the cost department to receive from the stores department all requisitions issued for material supplies, etc., to be charged to any department, product, job or order. These requisitions should then be checked against the production reports and orders to prevent useless waste of material and ascertain the correct amount, size, weight and description of the material and the date it was used. A record of all labor, showing on what job or product the expense was incurred, and salaries of clerks, foremen, inspectors, etc., should be secured from the time

This is the fifth article in the series on cost accounting methods suitable for industrial plants written exclusively for THE IRON TRADE REVIEW.

department. From such records a total of direct and indirect material and labor costs charged to any product, order or article must be computed. To determine the rate of distribution of indirect expense over direct material and labor costs, divide the total amount of indirect expense by the total cost of labor and material for the same period of time. Light, heat and power usually are distributed from one center, and it is necessary to arrive at a ratio in order to secure an approximate cost of each.

If interest is a factor of overhead, the ratio of distribution should be based on the value of equipment in each department, and distributed accordingly over production. To determine approximate maintenance, and as far as possible depreciation occurring in one department, the expense should be charged to the articles passing through that department, the remaining depreciation to be prorated over the whole plant.

In the steel industry, both the product and special order systems are used in cost finding. However, the writer believes the product system finds the most favor, especially in plants where the orders are small and costs uniform.

The personnel of a cost department varies in accordance with the number of operating departments, and may embrace the efficiency department, consisting of time study, rate, standardization, statistical, bonus and organization clerks.

In addition to the regular cost-office force, one large steel corporation maintains in each department a cost clerk who secures all cost data from that department on labor and material costs, losses, etc. These reports are checked with the regular time and production records of that department, results verified and then forwarded to the cost office where they form the basis for computing material and labor costs and for efficiency study.

Little Aids in Selection of Personnel

BY GEORGE E. HOLMES

GREATER and more lasting results will be obtained in the selection of the personnel in industrial establishments if both the psychological and physiological aspects of the situation are given due consideration. Too often the employer centering his attention on the physical side of his problem, to the exclusion of the mental side, leaves this to the direction of some one who has consecrated his life to "the emancipation of the workingman," only to be rudely awakened some morning to a realization that something was overlooked.

The mental attitude of the man should be the very first consideration whether his peculiar viewpoint is the result of his nationality or has been brought about by previous environment. Men will always work best, and remain longer contented in that class of work into which their natural desires would have led them had they been given free choice. Many men will be found working under conditions that are absolutely out of harmony with their mental viewpoints simply on account of fear of being idle or through lack of ability on the

The author of this article is general manager of Industrial Relations Service, New York City.

management's part to place them properly.

During a survey of one of our largest industrial centers, in an effort to relieve the housing situation, the peculiarities of different nationalities was taken advantage of. Efforts were being made to erect sufficient dwellings for the help, but due to a shortage of carpenters and material the management could not get the matter attended to as quickly as needed for accommodating the influx of new help.

Common labor gave the management its hardest problem. Most of the laborers were Poles, and objected most strenuously to being herded into close quarters. Italians were suggested, and this proved a solution, as their national tendency is to live in one room, all herded together like sheep.

In another instance the management of a plant had trouble in holding its help owing to the damp, foggy atmosphere surrounding the locality. In this case Portuguese were suggested, and they solved the problem. Portuguese love salt water fishing, and it is their custom to salt down large quantities for winter use. Having ample scope for activities of this sort, they simply took root on the spot and remained contented.

Other Traits may be Utilized

These illustrations show that certain national traits may be considered to advantage in handling labor. Many others of like nature are available. Traits of character, brought about through religious teachings, public or private schoolings, or through the home life of the worker can be used to an equal degree. In making a physical examination of an applicant, a day or two of habit-study before he is finally placed will accomplish wonders not only in fitting him for his job but in satisfying his personal desires.

If the employment manager will formulate leading questions often in direct opposition to what he hopes the man will answer he will find that he has come upon one of the oldest laws of nature, what we are pleased to call stubbornness. Most every human being in the world can be "sold negative."

It is the most natural thing we do when we take the opposite to any one's statement. In the first analysis it is a heritage from the old law of "self-preservation;" in the second it is ego, and in the third it is curiosity. The latter of the three is commendable because it is a desire on the objector's part for more information, but curiosity sometimes leads one into trouble—we are liable to be misunderstood.

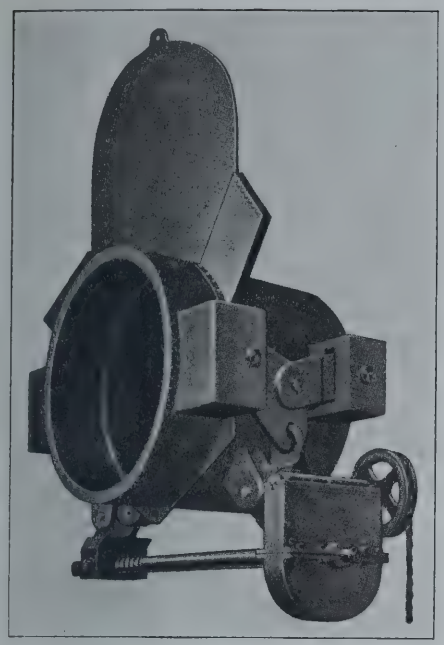
An examination should always be conducted in such a manner that the applicant is freed as much as possible from self-consciousness. It is not always the man who assumes a bold front and tries to impress one with his confidence in himself that makes the best workman. In fact the opposite is usually the case. Gentlemanly conduct or personal modesty often is misconstrued as lack of initiative. The habit-study referred to can be carried on by some member of the employment department passing as a workman, who cultivates the newcomer, and is able to make a first-hand study of him. But what seems to have greater possibilities for securing, placing and holding help in any industry is the idea of calling upon all the employes in the plant to assist.

Plant representation, or industrial democracy as it is called, opens up an avenue for the accomplishment of these things with a permanency that seems without limit. In the institution of the plan, the subject of labor turnover is one of the big items out of which the employes obtain their increased profits.

A report on turnover cost per department is given to the employes, and the company contracts to share equally any savings they are able to effect. This naturally has the desired effect in creating interest on the part of the worker not only to stay on the job but to induce his fellow workers to do likewise.

Bonuses Tend Toward Quality

Quality bonuses also are provided for, and as the profits are based on the joint results from the department, this creates a desire on the individual worker's part for quality, and his attention is turned to helping his fellow workers produce better products. In the event of need for more help, the interest created in the individual department is so great that the workers themselves will endeavor to induce their friends and acquaintances to accept positions in that plant. It is naturally to their interest to assist in the education of their fellow workers to the end of obtaining more products, and of a better quality.



Instances have occurred in plants, where representation plans are in practice, where men have gone to the extent of requesting the foreman to resign his position in favor of some other worker in the department, in an effort to raise the standard of the work and make for better management.

Such cases as this are rare, but it goes to show the extent to which interest has been developed within the rank and file of the workers through the application of ideas that give them a "square deal."

Valve For Gas Mains Is Quick-Acting

PROBABLY one of the most arduous duties which men are called upon to perform wherever blast furnaces are arranged in groups, is shutting off the gas supply of one stack from the common main. This is usually done by means of a goggle valve, which is shaped similar to a figure 8 with one loop open and the other loop closed. The isolation of any particular gas supply is accomplished by turning the goggle so that the blind end is inside the main, bolting the goggle plate to the flanges of the main. This usually entails shutting down the furnace for an hour or two. A crew of from four to six men equipped with gas masks are required to tighten the bolts while a crew of riggers are required to turn the goggle. Recently important improvements have been made in these valves. One of the latest types is shown in the accompanying illustrations. It was designed by Grant D. Bradshaw, B. F. Jones building, Pittsburgh, and it is said it can be closed or opened by one workman from the ground in approximately 10 minutes. One of the features of the valve is that it can be operated without taking the blast off the furnace. The valve consists of two steel sleeves to which the gas main is riveted. The ends of the sleeves, where they join, are faced and make seats between which a steel shut-off plate slides. Instead of bolting these sleeves together through the plate to make a gas-tight joint, as in the ordinary valve, no bolts are used. The sleeves are clamped together and seat on the plate by means of two powerful goggles, one on each side. These grip the plate with a force on the seating surfaces of 2000 pounds per square inch. Usually less than one-tenth of this force is required.

When the valve is to be opened the direction of the toggle action is reversed and almost unlimited force is available to separate the sleeves allowing the plate to slide freely up or down. With such an intensity of force avail-

BLAST-FURNACE GAS VALVE. THE JOINTS ARE MADE GAS TIGHT BY MEANS OF TOGGLES

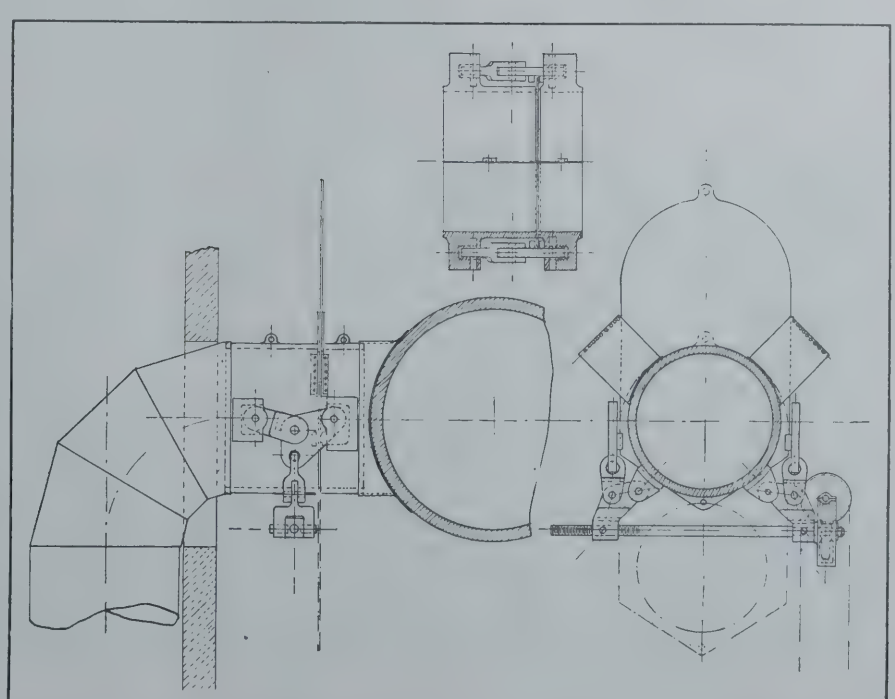
able for clamping the sleeves together on the valve plate, when the sleeves are separated the plate adheres to one or the other. Two lugs are provided on the inside of one of the toggle levers for the purpose of separating the sleeves from the plate. The valve plate slides between these lugs which also act as guides. When the toggle levers raise, separating the sleeves, one lug pushes off the plate from one seat while the other lug restrains the plate from following the other seat. This is possible by reason of the lugs working on a smaller radius than would correspond to the movement of separation of the sleeves. In this manner there is no possibility of the plate sticking to the seats.

In order that the seats on the sleeves shall be always in alignment the sleeves must operate in a guide. Due to the dirt in the gas a sliding guide is not practical and for that reason the diaphragm type was selected. Two wings are fastened to each sleeve on the sides; they extend out at 45 degrees to clear the valve plate which slides between them. The ends are riveted together, thus forming two diaphragms which permit the valve seats to separate freely, yet keep them always in line. The valve plate is handled by a light cable which passes over a pulley and carries a counterweight. The pulley is supported in a light A-frame carried on pads on the top of the sleeves. The valve is one more step in the safety movement which is receiving ever increasing attention in blast furnace design, for it provides a means of operation which eliminates any possibility of gassing the operator.

Figures compiled by the Metal Workers' Trade Union of Germany show that from the beginning of the war the number of women employed in the metal industries of that country increased from 12,968 in 1914 to 624,688 in 1917, which was 32.5 per cent of the total amount of labor employed at that time.

Tools Formed by Grinding

When forming a high-speed tool from a solid steel bar, it ordinarily is necessary to forge the steel to the shape required. This entails an item of expense for each tool produced, and involves a certain risk due to the development of cracks from careless handling. Some of the larger users of tool steel in this country admit actual losses of thousands of dollars per year through poor workmanship in this connection. Prior to the war, H. Boker & Co., Inc., New York, put on the market special high speed tool steel sections from which it was possible to form tools merely by grinding. These sections are rolled by Jonas & Colvar, Ltd., Sheffield, England. In 1914, the company's importation was stopped by the war and it only recently has been possible to resume deliveries.



From these sections, practically any desired lathe or planer tool can be made. In order to produce the greatest possible variety of tools, the sections are rolled in I and Z shapes. They are so designed that the cutting edge may be ground on either face and the webs contain enough metal so that in grinding the necessary clearance may be provided.

Chief of the advantages advanced for these tools is the economy afforded by their use. It is claimed that in grinding tools from pieces of I-section, approximately 40 per cent less steel is wasted than where the tool is formed from ordinary solid bar steel. A similar saving of approximately 30 per cent, it is estimated, is afforded when producing tools from Z sections. The I sections are made in four sizes while the Z sections are made in five sizes. The steel is shipped in various lengths and is annealed so that it may be cut by means of a hacksaw, to the desired tool lengths.

French Tin Plate Industry

The tinplate industry in France did not suffice to supply home requirements before the war. The production has increased from 20,000 tons in 1901 to 41,500 in 1910-11, while the consumption had risen from 36,000 tons in 1901 to 52,500 tons in 1910. This production was entirely stopped by the war, and France was dependent upon England for 80,500 tons in 1916.

Although the chief use for the plate is in the manufacture of containers for canned goods, there is also a large trade in ornamental boxes. The jam manufacturers ask for free imports of English tinplate to enable them to compete with their rivals in Spain and Portugal. The English production is quoted as 380,000 tons in 1908 and 954,979 tons in 1915, while the French production in 1908 was only 37,967 tons and in 1915 quite insignificant. It is pointed out that the tinplate industry and also the detinning of scrap must be protected in France if the industry is to be preserved. (*La Nature.*)

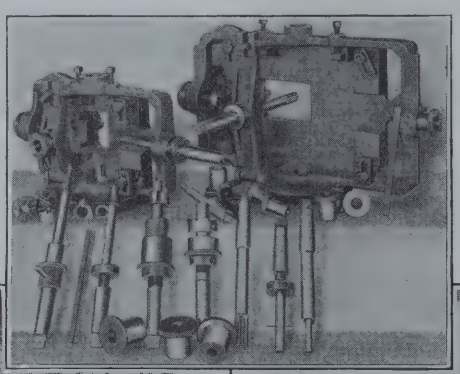
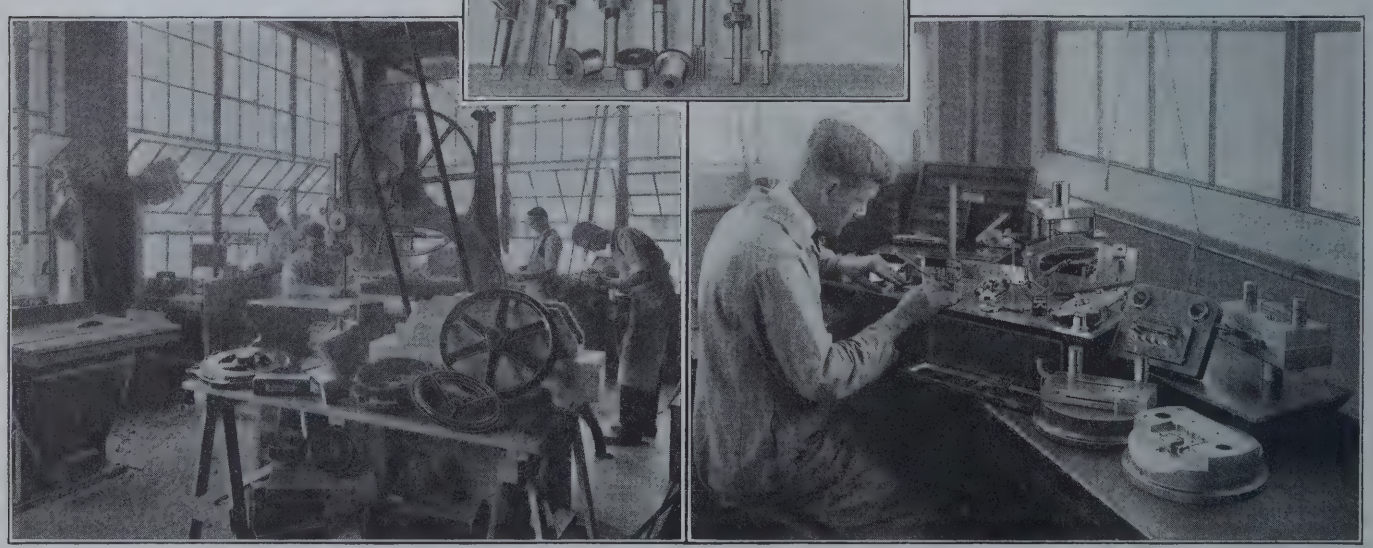
Plant Builds Jigs and Fixtures

Job-Work Establishment Called on for Special Exertion During the War Now Fills Peacetime Needs—Jigs and Fixtures Must be Made With an Eye to Economic Factors

BY B. K. PRICE



GREAT strides have been made in recent years in industrial organization. This is demonstrated by the growth of the idea of the tool manufacturing plant as a separate and complete unit. In the past, when manufacturers added new products, they were forced to design and build the necessary jigs and tool equipment themselves. This not infrequently worked a considerable hardship. Toolmakers, representative of the highest class of mechanics, were not easily available and costly delays were occasioned in organizing a satisfactory force. Furthermore when the tooling job finally was completed, it became necessary to reduce the force and allow the machinery to remain idle until the next proposition was offered. This constant fluctuation and loss in overhead was not only costly in itself, but it exercised a demoralizing effect upon the entire organization.



While a number of job-tooling establishments have been operating for many years, it was not until the full force of the war was felt throughout industry that the important work of the centralized tool shop became more generally appreciated. The shops then in existence virtually were deluged with work from all sides and so heavy were the demands that new shops sprang up by the score. Many, however, were doomed to failure, owing to the haste with which their forces were organized and to various other factors. With the passing of the abnormal conditions created by the war, a large number went out of existence. However, the services rendered by many such plants throughout the country during the war, has made and left an impression upon industry at large, which makes for them a permanent place in the business world.

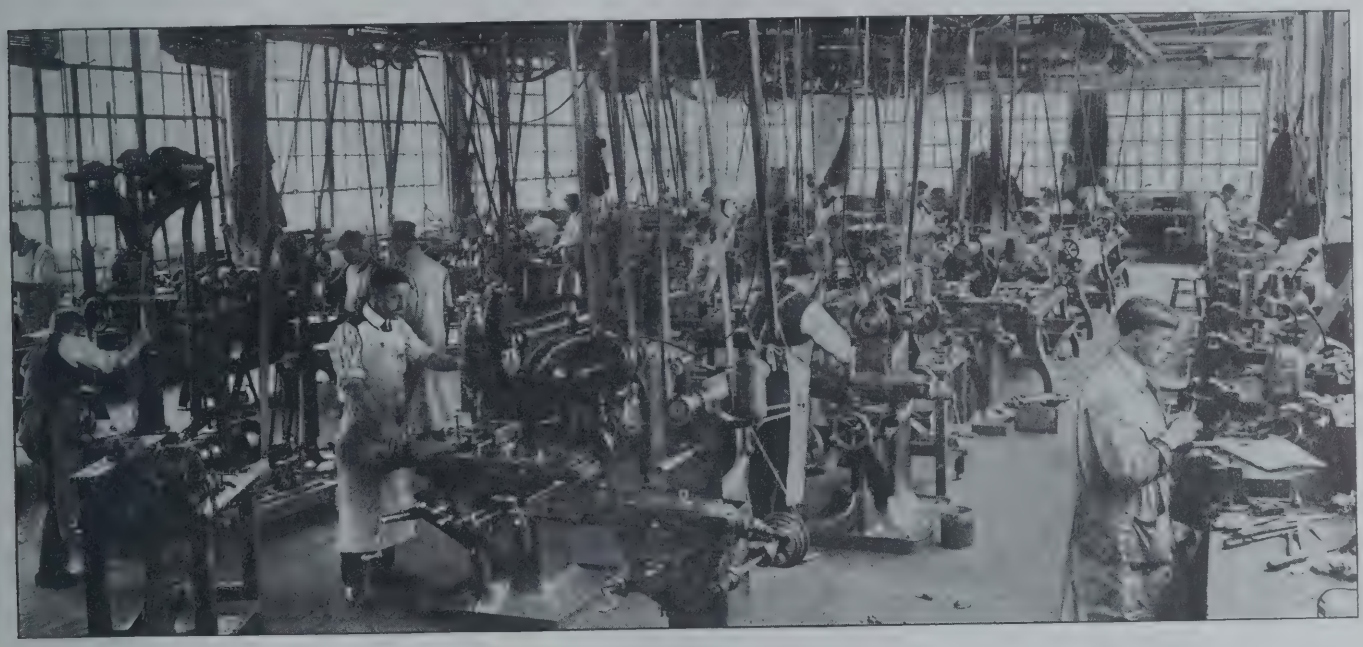
One of the more important plants of this character is that of the Mehl Machine Tool & Die Works, Roselle, N. J. This organization was established in 1913 by Walter Bird Mehl. Located in northern New Jersey, it has been brought into touch with the production problems of a wide and varied line of manufacture. The plant, which is of modern, daylight construction, is equipped to accommodate more than 100 operators; and, owing to the special character of its work, the machinery is nearly all of a precision character. The usual factory requirements call for speed and staunchness, but where the construction of gages, jigs, dies and fixtures is involved accuracy is the prime requisite.

The Mehl organization, in addition to the office staff, comprises four departments, namely, the designing, toolmaking, pattern and inspection departments. It is in the designing department that the manufacturer's problem is taken up for transformation into a definite solution in black and white; and it is an important function of the staff of this department to indicate where limits of accuracy should be observed and how close these limits should be.

The pattern shop is complete and patternmakers versed in foundry practice are employed. In the inspection department, the work of the staff differs in an important respect from that of the factory-production inspector, which calls principally for inspection of duplicate pieces. The latter, as a rule, works with a gage designed for the one purpose at hand, and, consequently, his work is semiautomatic. In the job tool shop, however, the inspector must

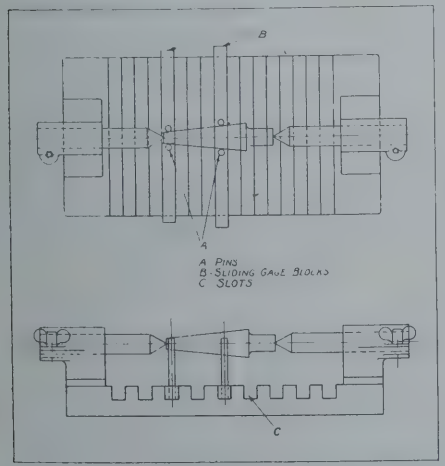
A CORNER OF THE PATTERN SHOP IS SHOWN AT THE LEFT, WHERE PATTERNMAKERS VERSED IN FOUNDRY PRACTICE ARE EMPLOYED. ACCURATE WORK IS ACCOMPLISHED AT INSPECTOR'S BENCH, SHOWN AT THE RIGHT. INSET SHOWS THE JIGS CAPABLE OF DRILLING, REAMING, COUNTERBORING AND TAPPING SHAPER VISES IN ONE SETTING

be a man of judgment, possessed of mechanical experience. It is true that blueprint notations are his main guide, but not infrequently, circumstances arise not provided for on the blueprint and the inspector therefore is left to depend upon his own judgment. A feature of the equipment of this department are several devices designed by the company's engineers for testing particularly exacting work. Several of these are shown in the accompanying illustration. One, the precision taper gage, shown in the accompanying drawing, was developed for the purpose of determining the exact angle and diameter of tapers.



In this taper gage the blocks *B* form a slip fit in slots *C*, which are accurately spaced so that they are 1 inch apart. Pins *A*, all precisely the same diameter, are mounted upon the blocks *B* and are placed exactly in the center of one end of the blocks. When it is desired to ascertain the angle of a taper, the taper is placed between the centers and one of the blocks is placed in each end of one of the slots *C*. Each is moved toward the center until each of the pins *A* come in contact with the taper at its opposite sides. At a point one or more slots distant, the same operation is then repeated, using the other two blocks.

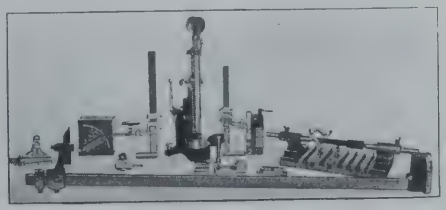
A micrometer measurement, as shown in the accompanying illustration, then is taken between the outside diameters of the pins *A* at each of the two posts and the total diameters of the pins are deducted in each case, which gives the exact diameter of the taper at each point. Since the distances between the two points is definitely known by reason of the accurate positioning of the slots, it is a simple matter to figure the exact angle of the taper in degrees, minutes and seconds, or in inches per foot and also to learn the diameter of the taper at any point to within 0.0001-inch.



Modern milling fixtures also have been constructed by the Mehl engineers, one of which is a continuous milling fixture. This fixture is designed like a turntable. A rotary table, which swings on a substantial pin at the center, is provided with a number of work holding devices so arranged that the work is inserted at one side of the table, while the cut is being taken at the opposite side. The center of the pin holding the rotary fixture is adjusted off center the correct distance from the milling machine cutter.

As previously stated, the production of dies, jigs, gages and fixtures, constitutes an important part of the work at the Mehl plant. War has brought home to the industry at large the importance of these refinements. The progress in the use of these aids to production may be aptly illustrated in the case of jigs.

Manufacturers at one time employed skilled mechanics to lay out and drill holes by the surface-gage and prick-punch method, a slow and expensive process. However, a demand for quicker and more efficient production finally resulted in the evolution of the modern drill jig, making possible interchangeable manufacture at a fraction of the old cost. Jigs now are made for drilling a single hole or for accurately drilling, reaming, tapping and counterboring many holes at various angles with but one setting of the work. As the accuracy of the jig influences its cost, it is necessary that judgment be exercised in making it just as accurate as the product demands but not more so.



A GENERAL VIEW OF THE MACHINE SHOP SHOWING DIVERSIFIED TYPES OF MACHINES

ORIGINAL PRECISION TAPER GAGE

Ore containing about 113,000 pounds of tin was mined in Alaska during 1918, according to a bulletin issued by the bureau of mines. Most of this ore came from the York district, Seward peninsula, where one tin dredge was operated. Stream tin was also obtained in this district.

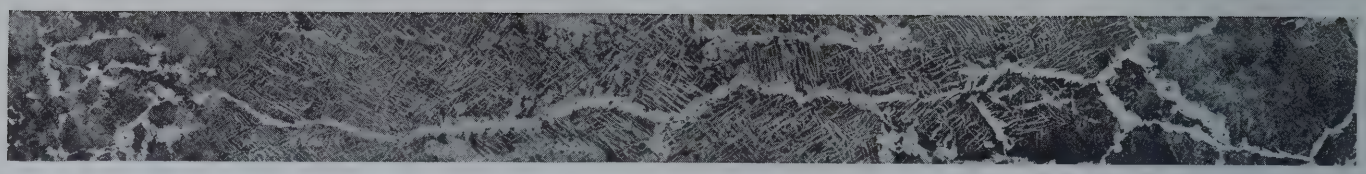

Fig. 1—Micrograph of Cast-Steel Runner Showing Differential Crystallization—Magnification About 30 Diameters

Odd Structure of Steel Runner

A Cast-Steel Sample Examined Microscopically Shows Three Distinct Structures Leading to Conclusion That Differential Crystallization Has Taken Place—Widmanstattian Zone Shows Decarbonization Under the Skin

BY FRANCIS B. FOLEY

IN examining steel under the microscope one is constantly confronted with structures which are difficult to interpret. Recently, in a collection of samples for exhibition purposes, the writer found a piece of open-hearth runner metal 2 inches in diameter which had been fractured for use as a sample of cast-steel structure. On polishing and etching a section of this runner for the purpose of photographing a field to typify the microstructure of steel in the "as cast" condition, a variety of structures was found so arranged as to arouse interest at once. For a distance of about 0.065-inch in from the skin of the runner normal ingot structure was found; this was followed by a zone, about 0.215-inch wide of considerably lower carbon content in which occurred a most pronounced widmanstattian structure; from this point on to the center of the runner the metal was again of normal ingot structure.

Representative samples were taken from the metal in the three zones for analysis the following results were obtained:

	C.	Ni.	Cr.
Metal from skin.....	0.34	1.26	0.63
Widmanstattian zone	0.21	1.18	0.63
Metal from center.....	0.34	1.32	0.67

Such a condition might result from decarburization followed by recarburization of the skin. This section came from one of the branch runners to the bottom of the mold, not from the main runner, and it is difficult to conceive of decarburization occurring in this portion of a runner. If the metal were stripped while quite hot it is true that some oxidation would take place but the recarburization is unaccounted for. It could not occur by segregation after solidification—the tendency then is for diffusion and homogeneity. The following seems to fit the conditions and is offered as an explanation.

The outside layer of normal structure 0.065-inch thick is a layer of metal which was chilled on the walls of the runner brick when the molten metal first entered the runner. As the molten metal flows by, the outside of the stream is cooled by the walls of the runner and crystallization starts, the crystals so formed being attached to the chilled metal on the wall of the runner. These crystals, being the first to form, are necessarily of the lowest carbon concentration. When the wall of the runner has reached a certain temperature, the outside of the flowing stream of metal comes to a fairly constant temperature, and, that temperature being just under the liquidus, solid metal of low carbon content is constantly separating out of the liquid, crystallizing on the walls of the runner. The crystals so formed build outward into the stream as it flows. When the difference in temperature between the solid metal attached to the walls of the runner and the molten stream has become so small that no chilling effect is any longer exerted, the formation of these low carbon crystals ceases or perhaps they grow until such a length that they are no longer strong enough to withstand the force of the flowing metal. After the mold has been filled and the metal comes to a state of rest, solidification proceeds normally and the structure of the interior of the runner is the result. In subsequent cooling in the solid state, some diffusion takes place, but evidently it does not become complete. This diffusion is first materially retarded when the metal of lowest carbon content passes through its Ar_3 point and is stopped completely at Ar_1.

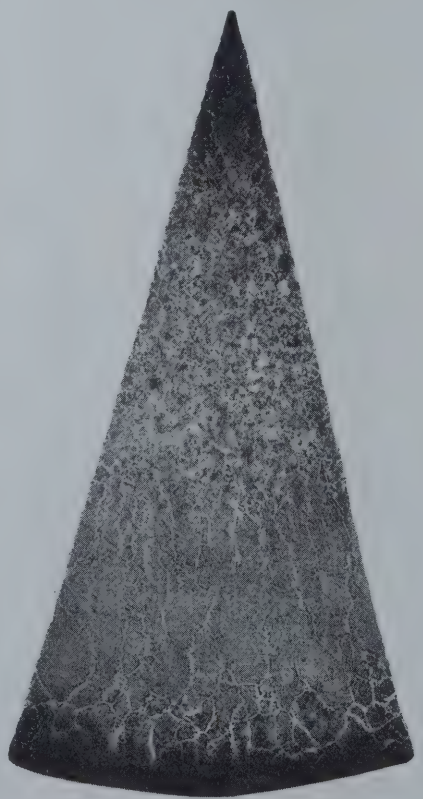

FIG. 2—SECTION OF CAST STEEL RUNNER UNDER MAGNIFICATION OF ABOUT FOUR DIAMETERS

Two Solutions Suggested

The very marked widmanstattian structure in the low carbon band might have been produced in either of two ways, or by a combination of the two. One possibility is that it is due to the fact that the metal where this type of structure is so pronounced existed in the solid state at a higher temperature and for a longer time than the metal elsewhere. Its freezing point is higher than that of either the skin or the center metal, and it did not cool as rapidly as the skin but somewhat faster than the center. The other possibility which suggests itself is that this type of structure formed more readily in the particular part of the runner than elsewhere because of the difference in the processes of crystallization, and that the ferrite needles are actually in the same position which the original low carbon crystals occupied during their formation and growth.

A paper prepared for presentation at the Chicago meeting of the American Institute of Mining and Metallurgical Engineers in September. The author, Francis B. Foley is metallurgist, U. S. bureau of mines experiment station, Pittsburgh and this paper is published by permission of the director of the bureau of mines.

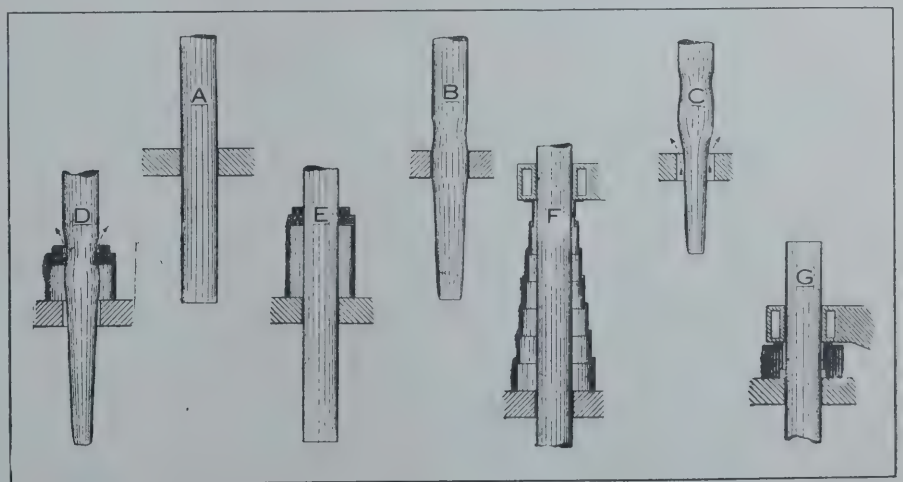
Increasing Life of Electrodes

Main Wear is Found to Result From Surface Burning on Parts Inside of the Melting Chamber—A Seal 24 Inches Above the Furnace Roof is Recommended

SOME interesting facts regarding electrodes were brought out in a paper on large electric steel-melting furnaces read recently at a joint meeting of the British Institute of Electrical Engineers and the British Iron and Steel institute by Victor Stobie. The author brings out the point that the main wear on electrodes in ordinary electric steel furnaces does not take place at the arc but results from the surface burning of the carbon all over those parts of the electrodes which are inside the melting chamber and up to a point about 15 inches above the roof. On looking inside most furnaces the electrodes will be seen to be considerably tapered from where they enter the roof. Fully 75 per cent of the heavy expenditure on electrodes is wasted through this defect.

It is thought by some people not acquainted with electric furnace practice that there is always a reducing atmosphere inside electric furnaces of the older types in use. This is an utterly mistaken notion, which is proved by the ease with which the raw materials charged into such furnaces oxidize, even without the help of iron ore or other solid oxidizing agents.

Gases Escape Through Clearances



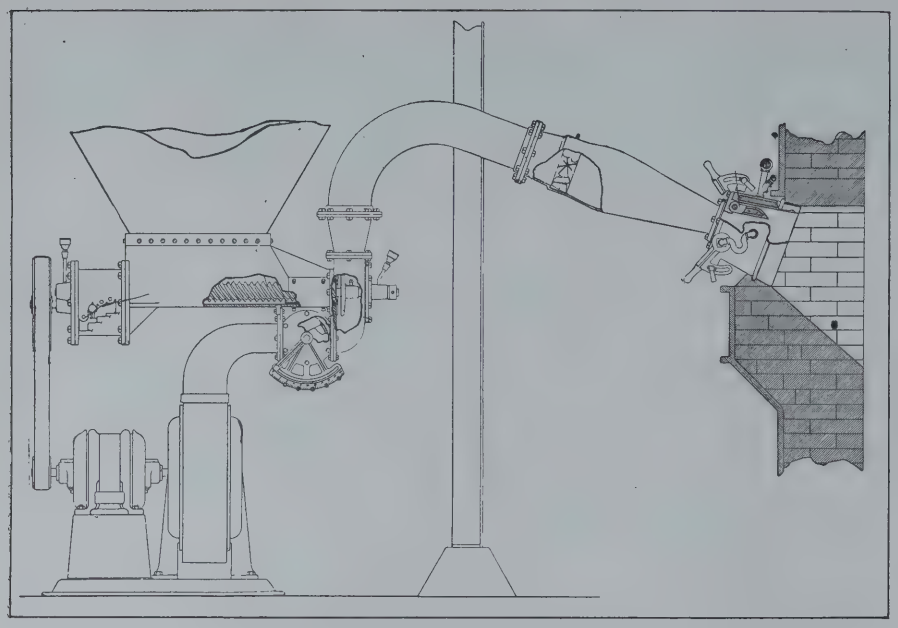
The cause of the oxidizing atmosphere inside the older electric furnaces lies in the crude method of feeding the electrodes into the melting chamber. This is usually done by leaving in the roof a number of plain holes equal to the number of electrodes which have to be fed continuously into the furnace, the bricks forming such holes support annular water-jackets which fit new electrodes with a small clearance. The heated gases inside the furnace continuously pass up those clearance spaces between the roof and the electrodes. The results are serious. The hot gases cause the clearance to be rapidly increased by burning away the electrodes; all the heat value of the gases and flames which are constantly pouring out of the furnace through the electrode holes is wasted; the duration of a heat is lengthened in proportion to the heat lost through the roof holes; and the undue heating of the electrode terminals necessitates their being cooled by means of water.

At first sight it may seem a simple matter to close up the clearance between the roof of a furnace and the electrodes passing through it but this is not so, as is illustrated by the fact that there have been few if any devices developed for this purpose. The author proposes a device which he has found to be successful in preventing the wasting away of the electrode by oxidizing gases.

Observations showed that at about 2 feet above the roof in most furnaces the electrodes, even when raised for charging, are seldom at a temperature at which they can burn; therefore, that is the only point at which a permanently good seal can be made round the electrodes. If an electrode is closed hermetically from the roof up to that point, the burning away of the electrode and the escape of the heated gases from the furnace are prevented.

In practice, a light metal cylinder a few inches larger in diameter than the electrode and about 2 feet in length is fixed on the roof around each electrode. The top end of this jacket is covered with a sealing plate which prevents the passage of the flames, the electrode passing through a neatly fitting hole in the center of such a cover. Another form of economizer, as this device is termed, has been developed for use on furnaces which have only a short electrode travel. It is sealed to the electrode in the same way as the economizer just described but differs from it in having a telescopic tube around the electrode.

In the accompanying illustration, *A* shows a new electrode in a roof; *B*, a used electrode burned away inside of the furnace and above the roof; *C*, a burned electrode raised for a fresh charge; *D*, ineffectiveness of seal 12 inches above roof, due to burning away in air of red-hot electrode; *E*, seal 24 inches above roof where it is maintained because the electrode does not get red hot above this point; *F*, telescopic economizer extended; and *G*, telescopic economizer closed.



ILLUSTRATIONS OF THE EFFECTS OF OXIDATION ON ELECTRODES WITHOUT SPECIAL PROTECTION AND WITH VARIOUS ECONOMIZERS

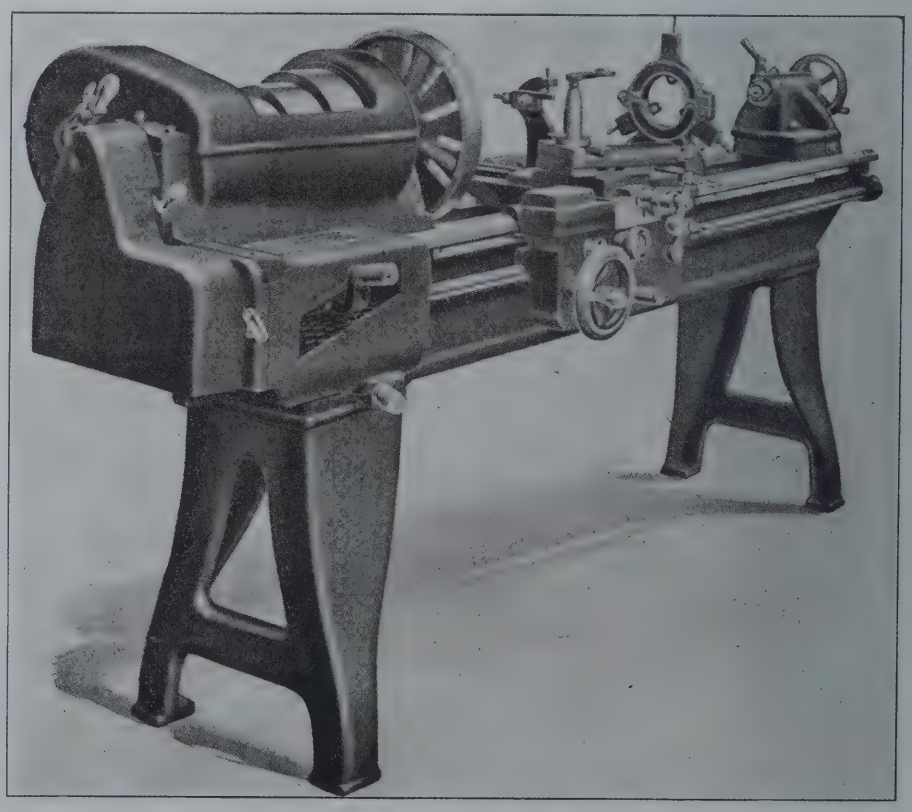
Feeds Powdered Coal Into Furnace

A system for burning powdered coal in furnaces, developed by the Combustion Economy Corp., Nineteenth and Rockwell streets, Chicago, has a number of interesting features. Since high temperatures are obtained and economy in fuel result from burning powdered coal, experiments have been conducted for the past century in an effort to devise a practical method for handling and feeding coal to the furnace in a powdered condition. The scheme in general has been to carry finely divided coal in a sufficient quantity of air to insure complete combustion with small losses due to smoke and inclusions in the ash.

In the accompanying illustration is shown diagrammatically the essential

DEVICE WHICH MIXES POWDERED COAL AND AIR FOR FEEDING INTO FURNACE

parts of the new equipment. The coal is first crushed to 1½-inch diameter or smaller, dried, and then pulverized in a roller mill to a fineness such that 85 to 95 per cent of it will pass through a 200-mesh screen. Supply for over 24 hours should not be accumulated as longer storage allows the coal to collect moisture and therefore it becomes more difficult to feed. A hopper holding from ½ to 10 tons is provided near the furnace. Enclosed in the cast iron hopper bottom is a worm feed screw which feeds the entire length of the screw and thus prevents the coal from packing and arching above the feed to interrupt feeding. A revolving disk at the discharge end of the screw breaks up any packing which has taken place along the screw so that the coal is delivered steadily to the mixing chamber.



A low-pressure air line fed into the mixing chamber mixes the coal with air and then carries the mixture to the carburetor which may be any place from 3 to 100 feet from the coal control. The low-pressure air supply is usually supplied by a blower connected to a constant-speed motor which also drives the coal control. A speed-change box connected with the coal screw shaft gives accurate control of the quantity of coal fed to the mixing chamber. The speed control is plainly marked for each speed and gives a uniform delivery at that speed. An air gate marked to correspond with the open area of the gate controls the air supply which, it is claimed, may be synchronized with the coal supply so that inexperienced workmen without knowledge of combustion practice may handle them without trouble.

While passing through the line the coal and air are partly carburized but the process is completed in the carburizer in which is placed a stationary fanlike mixer. The outlet of the carburizer is fanshaped and causes the flame to spread across the furnace and to ignite more readily. The nozzle is designed to give the operator complete control of the direction of the flame. Two plates are provided which can be raised or lowered to direct the flame upward or downward or by bringing them closer together, the flame can be lengthened. This adjustment is essential on some furnaces and successful operation sometimes depends upon the ability of the operator to control it.

Engine Lathe Has Quick-Change Gear Box

A light pattern lathe built by the Sidney Machine Tool Co., Sidney, O., is equipped with a quick-change gear box which is attached to the bed in a recess provided. The gears, which cover a wide range of thread cutting and feeding, are shielded from dirt and grit by means of a swinging cover at the end of the bed. This lathe is of the 14-inch size. As shown in the accompanying illustration, the headstock is made with a three-step cone pulley and double back gear, the pulley being locked to the spindle by means of a spring plunger. The bearings, which are ground to standard sizes, are scraped to seat in phosphor-bronze boxes. End thrust is taken up by a hardened and ground steel thrust washer. A positive locking plunger is said to insure the correct position for the gear centers.

The ways are wide and deep to give great rigidity under cuts. An oil trough around the front and the rear of the carriage prevents the lubricant from running down over the apron. The bridge of the carriage is heavy but still not so wide that it becomes necessary to overhang the tailstock arbor for short jobs. The feed rack is of high-carbon steel and is made in one piece, dowel pins and screws securing it to the bed. A back plate making a double walled apron, supports the studs front and rear. All pinions are of steel and the studs are of high-carbon steel.

LIGHT PATTERN LATHE PROVIDED WITH A GEAR BOX FOR QUICK CHANGES

Bronze bushings are provided where necessary. Due to a positive lockout device, the threads and feeding cannot be engaged simultaneously. In addition to being bolted, the apron is doweled to the carriage and has knurls for engaging the longitudinal and cross feeds. Graduated micrometer dials are provided for the cross and angular feeds.

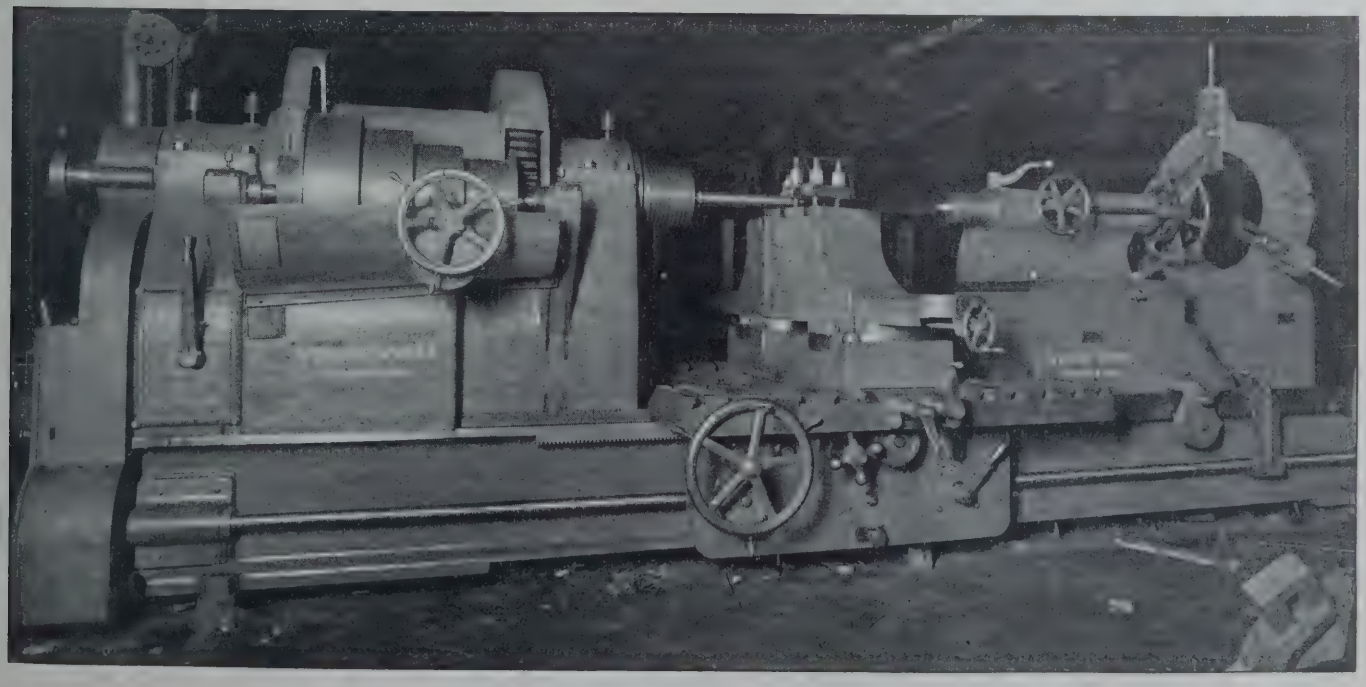
The Power Supply Co., Terre Haute, Ind., has increased its capitalization from $60,000 to $120,000.

British Steel Men Visit American Works

K. D. Mackenzie, general manager, and George West, chief engineer of Fredk. Braby & Co., Ltd., Eclipse Iron & Steel Works, Glasgow, Scotland, have been making a tour of inspection of a number of steel works in this country, especially those engaged in lines of production similar to their own. The Eclipse works is a producer of light plates and blue annealed, black and galvanized sheets up to 31 gage. It consists of 12 mills in two plants, one of which of 7 mills is steam driven and the other of 5 mills is electrically operated. During the last 18 months of the war, one of these mills was devoted to the production of copper plates for the ministry of munitions. The company also operates a tank works, manufactures steel sashes, special types of roofing and other lines, and carries on a structural engineering business. It operates no steel works and obtains its rerolling steel in the open market.

Engine Lathe Has Cast Iron Spindle

TO reduce chattering to a minimum, the engine lathe shown in the accompanying illustration is equipped with a cast-iron spindle. The machine recently was developed by the Wright Works, Chicago. To insure ample strength of the spindle its journals are large in proportion. The front bearing is 16 inches diameter x 24 inches long while the rear bearing is 14 inches diameter x 20 inches long.



The lathe is driven by an 8-inch overhead belt from a countershaft which transmits 40 horsepower. The lathe is triple geared and all gear changes are made by a hand wheel in front of the cone pulley, within easy reach of the operator. One change is through sliding gears while the others are manipulated by toothed clutches. The speeds are in geometrical progression ranging from 0.75 to 76 revolutions per minute. In all 12 speeds are provided. All gears are steel and the pitch and face width is increased in proportion to the load transmitted in running the lathe at low speeds.

All shafts in the headstock run in phosphor bronze journal boxes and are lubricated by sight-feed oilers. For thread cutting, 24 changes are provided by means of change gears which are incorporated in a quick change box with lever feed. For turning, four feeds of 0.025, 0.05, 0.1 and 0.2 inches per revolution of the spindle are provided. More feeds can be had by changing the regular feed gears with the thread cutting gears.

The carriage is equipped with two compound slides. These are so designed that they may be fitted with a power angular feed. The carriage has a 90-inch bearing on the ways. The apron is steel, equipped with bushings for accommodating the various feed units. The lead screw is prevented from buckling by adjustable supports.

The tailstock is of box design and is readily moved by a pinion that meshes with the feed rack. The tailstock spindle is actuated by a hand wheel. Each machine is equipped with a substantial 3-jaw steadyrest.

The bed is ribbed with box sections and is fitted with a rack over the center rib which engages a pawl on the tailstock. This takes the thrust of the cut from the tailstock clamps and transmits it directly to the bed. The lathe shown in the illustration has a 96-inch swing and is 48 feet long. It takes work 34 feet between centers, weighs 150,000 pounds and is said to be one of the largest engine lathes ever built.

ENGINE LATHE EQUIPPED WITH CAST-IRON SPINDLE

Better Demand

For Refractories — Production Increased—Fire Clay Brick Advanced

Pittsburgh, July 1.—Business in refactories is better than it has been in some time, and while the best demand still is for fire clay brick for relining blast furnaces and rebuilding stoves, a fair volume of orders is being booked for silica and other grades required for open-hearth furnaces. Plant operations are on a heavier scale, for during the recent period of limited output manufacturers made big inroads on their stocks. This had made necessary some speeding up of production, while summer weather also accounts in part for the increase. Plants now are averaging about 60 per cent of capacity, as compared with the recent rate of about 50 per cent.

Refractories

(Per 1000 f. o. b. works)

FIRE CLAY BRICK
(First Quality)

Pennsylvania	$36.00 to 41.00
Ohio	36.00 to 38 00
Kentucky	36.00 to 38.00
Illinois-Missouri	30.00 to 40.00

FIRE CLAY BRICK
(Second Quality)

Pennsylvania	$30.00 to 35.00
Ohio	20.00 to 25.00
Illinois-Missouri	25.00 to 30.00

SILICA BRICK

Pennsylvania	$40.50 to 45.00
Chicago	45.50 to 50.50
Birmingham	46.50 to 51.50

MAGNESITE BRICK
(Per Net Ton)

9 x 4½ x 2½	$80.00 to 85.00

CHROME BRICK
(Per Net Ton)

9 x 4½ x 2½	$80.00 to 90.00

BAUXITE BRICK
(Per Net Ton)

55 per cent	$ 40.00 base
76 per cent	100.00 base

Competition apparently is keener on fire clay brick than it has been and there has been a general revision of prices on first quality brick, few sales of which from any of the producing districts now are being made at better than $40 per 100, works. On Ohio and Kentucky brick of this grade, $38 now is the top price, and St. Louis manufacturers, while quoting this grade as high as $40, are known to have done business for considerably less. Makers in that district have a stiff freight rate to the East and consequently are obliged to quote low in order to do business outside their regular territory. Prices of second-quality brick have been revised in keeping with the cut in the first-quality grade now on the market.

The inquiry for the brick requirements for the seven 100-ton open-hearth furnaces to be constructed by the Weirton Steel Co., Weirton, W. Va., which are estimated at 4,000,000 brick, is expected to come out shortly.

Using Domestic Manganese Ores in Steel

As the result of an investigation conducted recently by Samuel L. Hoyt of the United States bureau of mines, department of the interior, on the use of manganese alloys in open-hearth steel practice, a bulletin has been issued containing the details of the research. Although the original purpose of the investigation was to determine how domestic manganese ores could be utilized in place of imported ores so that more shipping could be freed for war service, it is believed that the results obtained may be found useful to the steel industry in peace time. Although this country has considerable deposits of manganese, it occurs for the greater part as a low-grade mixture with either iron or silicon or both.

Domestic ores can be utilized in three ways. A molten spiegel mixture may be used for deoxidization and recarburization. Melting and refining the steel bath may be done in a manner insuring a comparatively high residual manganese content of about 3 per cent. Finally, the manganese alloys containing silicon may be utilized. The advantages of the first method are that low-grade or domestic ores can be used in the preparation of the mixture; that deoxidation is accomplished by means of a dilute solution with an increase in the efficiency of the deoxidizer; that the deoxidizer is added in the molten state insuring certain advantages; and that if a large output is desired, the amount of the recarburizer is large and capacity of the plant is increased. The advantages of the second method are that it leads to high-grade and uniform steel; the manganese finals can be added to the furnace with a recovery comparing favorably with ladle additions; and that the same pig iron used for the charge and containing more manganese than ordinary basic iron, can be used to recarburize and partly deoxidize the bath. There is nothing new about the practice of using manganese-silicon ores in steel making. Its use is limited, however, since in steel that is to be welded, silicon should be very low or absent. Silicon is always an efficient reducing or settling agent when used in the customary small amounts, but it may or may not be desirable in finished steel.

Display Tools

Railway Supply Manufacturers Stage Notable Exhibit at Atlantic City

Evidences that the war stimulated rather than hindered the development of machine tools, labor saving devices and machinery of all kinds were found at the exhibit of the Railway Supply Manufacturers' association, Atlantic City, N. J., June 18 to 25. In machinery hall, at the boardwalk end of Young's million dollar pier, was displayed a remarkably representative working exhibit of machine tools and accessories for railroad repair shops. Production tools were prominent and high-speed tool steels played an important part in a number of exhibits. Among the manufacturers who displayed machine tools and shop equipment are the Bullard Machine Tool Co., Bridgeport, Conn.; Cincinnati Milling Machine Co., Cincinnati; Landis Machine Co., Waynesboro, Pa.; Manning, Maxwell & Moore, Inc., New York; Newton Machine Tool Works, Inc., Philadelphia; Niles-Bement-Pond Co., New York; Southwark Foundry & Machine Co., Philadelphia; Warner & Swasey Co., Cleveland; and the Simonds Mfg. Co., Fitchburg, Mass.

The American Car & Foundry Co., New York, through the courtesy of the ordnance department, United States army, showed a mobile machine shop unit composed of a complete line of machine tools mounted on heavy trucks and trailers. This company also exhibited gun mounts and other ordnance material. The Baldwin Locomotive Co., Philadelphia, displayed caterpillar and railway mounts for heavy guns.

Of interest to all manufacturers who use coal or coke were the 100-ton capacity hopper and gondola cars exhibited by the Pennsylvania Railroad Co. The first car of this size was built in 1916 for the Woodward Iron Co. Six-wheel trucks and 6 x 11-inch axles are required to support the loads carried by cars of this type.

A large number of exhibits of material handling apparatus was noticeable. The Clark Tructractor Co., Chicago, and the Elwell-Parker Electric Co., Cleveland, showed various types of tractors for industrial use. Edgar E. Brosius, Pittsburgh, displayed an automatic clam-shell bucket. Hoisting apparatus was exhibited by the Shepard Electric Crane & Hoist Co., Montour Falls, N. Y.; the Whiting Foundry Equipment Co., Harvey, Ill.; and Yale & Towne Mfg. Co., New York. Nearly 20 steel companies exhibited steel and steel products.

Navy Accepts Suggested Prices

After Careful Investigation of March 21 Steel Conference and Subsequent Events Department Consents to Furnish Order Requisition for 15,000 Tons on Carnegie Steel Co.—5000 Tons Added—Price Inquiry Scouted

WASHINGTON, July 1.—The navy department, as did the railroad administration, has finally accepted the steel prices approved by the industrial board on March 21. Assistant Secretary Roosevelt, who had hesitated to accept the bid prices, which were identical with the board's quotations, in the midst of the board's controversy with the railroad administration, has notified the Carnegie Steel Co. the requisition made upon it May 18 will be supplemented by formal acceptance of the bid price in full. This action, after more than a month of careful investigation, vindicates the industrial board which, following two days' conference with the steel manufacturers' committee, announced the level at which it believed the government and the public should begin their purchasing.

In addition to accepting the Carnegie company's bid on the steel covered by the requisition, 11,000 tons of plates and 4000 tons of shapes, the navy has also awarded to this maker contracts for 5000 tons of steel making up the full 20,000 tons of plates, shapes and bars covered in the original inquiry and on which bids had been received at three different times before the order was served upon the Carnegie company. The requisition was issued under the navy's war powers in order to save the appropriation allowed by congress for four battle cruisers and one fuel ship, work on which was to have been under way by today in order to make use of the funds authorized. The navy has taken precisely the course outlined in these columns May 22.

Studied Market Reports

The navy department's cost inspectors, together with higher officials here in Washington, made a thorough study of steel prices both in the markets at Pittsburgh, Chicago, Youngstown and other producing points, and in the market columns of THE IRON TRADE REVIEW and other iron and steel publications. In addition to this the federal trade commission's costs information was thoroughly canvassed, the result of the entire investigation vindicating the action of the steel men who, under invitation of the government, suggested the proposed price level and the action of the industrial board in approving the schedule. This action, following Director General Hines' acceptance under protest of $47 per ton for open hearth rails, adds plates at 2.65c per pound, shapes at 2.45c and bars at 2.35c to the list gradually being reapproved by subsequent government purchases.

None of the members of the industrial board, which was disbanded through resignations of the members on May 9, have been in Washington since it became known that the navy had formally accepted the suggested prices, but it is evident what their expressions may be. Supporters of the board have at all times maintained that in the end the board's action would be justified and in addition to this the navy approval of the prices, practically all of which were uniform in the bids received, further scouts the possibility of an investigation by the department of justice into the combination alleged by Mr. Hines to have been entered into by the producers to sustain the board's prices.

The railroad administration so far has not indicated its intention to enter the market for additional steel purchases, although it has requested the federal trade commission to investigate the cost of manufacturing rails. This investigation is now under way by the commission, but, unless there are similar requests from the administration or other government departments, it likely will mark the last of these activities by the commission for sometime. Steel costs investigations, which had been carried on monthly from the middle of the summer of 1917, were discontinued on the first of the present year. Making the discontinuance of these investigations almost compulsory is the striking out of the sundry civil bill by the senate appropriations committee of $100,000 from the commission's salary roll.

May Sell Tools To Schools At 90 Off

WASHINGTON, July 1.—Surplus machine tools held by the war department will be sold to trade, technical and public schools and universities and other recognized educational institutions at 10 per cent of their cost value if congress acts favorably on a bill reported to the house by the house committee on military affairs, with recommendation that it pass. The report was made by the author of the measure, Representative Caldwell, of New York, who, at the previous session of congress had introduced a bill recommending that the machine tools be given to the educational institutions. The war department, however, pointed out the large expense it would have to assume if the machine tools were given to the schools and in a letter to the house committee on military affairs, as well as a similar suggestion to machine tool manufacturers in Cincinnati, recommended that the machine tools be sold at 10 per cent of their cost value. Machine tool makers, as well as the war department, favor the bill as amended. A provision in the bill holds the schools equipped with the tools responsible to the United States under regulations to be prescribed by the secretary of war for the proper care and safe return of such equipment when demanded, ordinary wear and tear excepted.

The report of the house committee on the Caldwell bill says:

The schools are sadly in need of these machine tools and few are financially able to buy what they need at ordinary prices. The committee does not know of any better use to which they could be put than the education of the youth of the country, for by this act will be added many native Americans who would not otherwise become so trained. At the beginning of the war one of our greatest needs was skilled artisans of this kind. It was thought best to amend the bill because of the representation of the secretary of war who, in his report to the committee under date of May 31, 1919, said among other things:

"If the tools are loaned, the department remains charged with the responsibility for the care and preservation of the tools until they are worn out. This would involve periodical inspections as in the case of other government property and would be a constantly recurring expense to the government. The war department would have no control over a great number of the institutions to which

these tools were loaned, and it would be difficult to protect the interests of the officers who would remain accountable for this property.

"The method of bonding each institution results in a constant source of annoyance to the school authorities and many schools would prefer not to take tools under those conditions. In any case the loaning of the tools involves constant expense in the pay of a number of officers required for administration. In addition, it has been estimated that the cost of intelligent distribution of these tools would involve an expense of $150,000, and if the project is to be accepted in its present form, it would be necessary to add an appropriation for this amount in order to make the distribution effective."

It was because of this expression from the war department that the bill was amended by which the tools would be sold to the schools at 10 per cent of their cost value.

The committee report said that there is a large quantity of tools to be disposed of and that their public sale would result in low prices, flooding the market and disorganizing the industry. To store the tools would require large expenditures in taking them down, cleaning, oiling packing and transporting them, to say nothing of the continuing expense incident to storage.

In the event the Caldwell bill is passed, which seems to be probable, the war department will be rid of much worry as to the disposition of its surplus tools. The army appropriation bill, as it passed the senate last week, carried an item of $14,000,000 for the salvage board of the war department, which would use part of this money for removing the tools from private plants, slushing them with oil, and packing, transporting and storing them. The house provided only $5,000,000 for the board. Brig. Gen. C. C. Williams, chief of the ordnance department, had asked for $20,653,111.

Contracts Have Moving Clause

In many of the department's contracts it is necessary to get facilities in the way of machines, etc., out of buildings in which they now are located because the contract provides that within a given time these facilities will have to be removed from the premises or buildings owned by the manufacturer. The department has endeavored where possible to sell the machines as they stood in the shop, but General Williams told the senate committee on military affairs that the department had not found that feasible and had not made much progress in that direction. Consequently the machinery has to be taken out, put in fair condition in order to get a better price in the market. This, it was pointed out, means an expenditure of considerable money for handling the machines, for transportation, storage and for the maintenance of the salvage board personnel throughout the country, the board being headed by Col. D. K. Shurtleff.

The comptroller of the treasury has definitely ruled that the money appropriated for the manufacture of ordnance material is not available for the purpose of salvage of material which is to be sold, nor can the money arising from sales be used for this purpose.

General Williams told the committee that the finance department has about $300,000,000 invested in machinery, but that he had no idea what percentage would go to the schools if they are provided with equipment. The department is reserving sufficient of that amount to fully equip the arsenals and is retaining some for manufacturing purposes, taking out the machinery that is worn out and replacing it with new and modern machinery. Until that is appraised, he said, he did not know just what the value is. Colonel Shurtleff, however, estimated the value of machinery and raw materials held by the department to be approximately $500,000,000, this including buildings erected under its jurisdiction. It was stated by Colonel Shurtleff that there are about 156,000 machines in this country, which includes manufacturing equipment of all kinds.

On the average, he said, it cost $15 a unit to dismantle, and in many cases the machines have to be cleaned, slushed with oil and crated and moved. It is necessary, he told the committee, to move practically all of them in the sales being made and in addition to that a great amount of this equipment has to be moved to temporary storage even before it is sold, because it must be taken away from the private plants so they can resume their commercial work.

Want Fabrication Privilege

WASHINGTON, July 1.—Extension of the fabrication-in-transit privilege to include iron and steel when fabricated for frame work and sections for steel ships is being urged upon the railroad administration with renewed vigor by eastern shipbuilding interests. Application was made in February, 1918, but was held up pending settlement of more important problems. Since the signing of the armistice, however, efforts have been put forth again, first with the division of traffic and now with the public service division, and an early decision may be obtained.

Steel shipped from the Pittsburgh district to the Philadelphia district for bridges, tunnels and buildings takes a rate of 24.5 cents with an additional charge of 1.5 cents for the fabrication privilege. Similar steel from Pittsburgh to Philadelphia, or the Delaware river shipbuilding district, when intended for ship construction, takes a rate of 40.5 cents. Extension of the fabrication privilege would mean a difference of 14.5 cents per 100 pounds, or from 60 cents to $4.20 per ton, depending upon the location of the steel mills and the fabricating plants, as regards Delaware river shipyards.

The net saving to the shipbuilders of the United States annually would approximate $60,000,000, it is estimated. The railroad administration of course would lose that amount and just now, when its financial troubles are paramount, this item is probably the main reason why the shipbuilders are experiencing delay in getting action upon their application. They point out, however, the railroad administration is losing an opportunity to promote the commerce of the United States, which they expect would ensue upon the extension of the privilege to ships.

Low On Steel Work

Washington, July 1.—With a bid of $403,936, the McClintic-Marshall Co., Pittsburgh, submitted the lowest bid to the bureau of yards and docks, navy department, for erecting a crane runway involving 3600 tons of steel for the shipbuilding ways of the New York navy yard. The company offers to make delivery in 180 days. The Bethlehem Steel Co. put in a bid of $427,000, delivery in 200 days, and the American Bridge Co. submitted a bid of $449,000, delivery in 180 days. The bids were opened on June 25.

The bureau of supplies and accounts opened bids today for about 3600 tons of plates, 1000 tons of shapes, and a small tonnage of bars for a repair shop at the Puget Sound navy yard.

The Chicago Ferrule & Nut Co., 880 Lill avenue, Chicago, has increased its capitalization from $40,000 to $100,000.

Short-Day Labor Schedule Hit

Investigation of National Industrial Conference Board Shows Production is Decreased by the Adoption of 48-Hour and 50-Hour Weeks in the Metal Working Plants—Few Report Gain of Output

THAT adoption of a 50-hour week by the metal manufacturing industries could not be done without a noticeable loss in production, is the conclusion reached in a report just issued by the national industrial conference board, Boston. This investigation includes the metal trades proper, foundries, automobile, hardware, electrical equipment and some miscellaneous establishments. The report states that it is possible for a proportion of establishments to maintain production on a schedule of 50 hours per week, but states, "that such a schedule could not be universally adopted without some loss in production."

In the case of a 48-hour week a much smaller number of establishments reported production maintained, and the report holds "that notwithstanding the fact that reductions to such a week proved satisfactory from a production standpoint in a sufficient number of cases to invest such a schedule with a high degree of interest, the weight of the evidence leaves little ground for doubt that a general reduction to a 48-hour week at the present time would mean a serious loss in production."

In establishments where a large percentage of the work is performed by automatic machinery the evidence gathered, indicates that in general, maximum production cannot be had on a schedule as low as 48 or 50 hours per week. No significant change in the health of the workers resulting from shorter hours, was developed by the investigation, but it was found that health conditions among the workers were relatively favorable judged by the average hazards of industrial employment.

What could and would will be done on a 50-hour schedule is pointed out by the report. Much depends on the degree of co-operation between the management and the workers. "No single factor," says the report, "could do more to accomplish good results, than the recognition by workers of the indisputable principle that their real interests for bettering their condition lies in increasing the efficiency of individual production.

"If both management and workers would actively co-operate to this end, a 48-hour week might prove practicable in a larger number of establishments than is now the case. But unless such co-operation is secured the general adoption of a 48-hour week in the metal trades would involve a serious economic loss to the nation."

In the course of the investigation two questionnaires were sent out, one in the latter part of 1917 and the other in March, 1919. Replies were received from 1247 establishments employing 755,534 workers. Of these, 409 establishments employing 361,371 workers, had reduced hours and furnished data as to the effects of such reductions.

In the case of the 48-hour group, covered by the 1917 returns, the establishments reporting an increase in production had more than two-thirds of the total number of workers. It is significant, that 16 establishments, none of which were of unusual size, reported either an increased or a maintained output under the shorter schedule. Of 66 establishments which reduced to a 50-hour week, four reported increased production, 28 as maintained and 34 as reduced.

The results of the 1919 inquiry are less favorable to the practicability of a 48-hour or a 50-hour week. So far as the 48-hour group is concerned the number of establishments maintaining or increasing production was small. In the case of the 50-hour week, the result was similar, 11 establishments showing they held or maintained production, against 24 reporting a loss. The report states that due to the fact that the metalworking industry during the time the 1919 questionnaire was sent out, was in a somewhat demoralized state, because of the signing of the armistice and efforts to get back on a peace basis, the evidence gathered by the 1917 questionnaire is a safer criterion of the practicability of a shorter week schedule than that obtained through the 1919 questionaire.

A striking feature of the report is the rather general satisfaction with a 50 or a 48-hour week, expressed by manufacturers who had reduced to such schedules. Of the 40 establishments which had reduced to a 50-hour week, 29 expressed a preference for such a schedule, while of 40 who had reduced to a 48-hour week, 20 favored this schedule and 10 others a 50-hour schedule. It is shown that 93 per cent of the establishments investigated are open shops.

This report is the fifth thus far issued by the board in the course of an extensive investigation of the effect of reductions in hours of work on output, and on the health of workers in the various major industries.

War-time Labor Agencies Go Out of Existence

Washington, July 1.—Effects of congress' policy of retrenchment were apparent during the week ended June 28, when the national war labor board and several other bodies dealing with labor problems organized for the war, went out of existence. In the case of the war labor board, action by the President is still necessary to make its dissolution complete, although there are no funds for it.

No more cases will be accepted by the board. Those now under consideration will be submitted to the joint chairmen or a section of the board. All administrative duties in connection with any cases not settled will be transferred to the department of labor.

Other labor agencies which ceased to exist include the investigation and inspection service, the working conditions service, and the information and education service of the department of labor.

Train Foremen Class

The Taylor-Wharton Iron & Steel Co. of Easton, Pa., has inaugurated a special course of training for its foremen to improve production and labor relations in its plant. A study group has been organized under the direction of John E. Calder, of the Business Training Corp., New York, and W. M. Henderson, superintendent, to take up a course in modern production methods. An additional object is to develop competent understudies for the foremen among the more ambitious employes.

The class is studying plant layout and routing, purchasing, stockkeeping and storekeeping, reduction of waste, production records, cost accounting, labor turnover, the selection, training and supervision of employes, discipline, safety and sanitation.

Peace Problems Sober Sentiment

Stock Market Marks Time as Peace Comes—Many Uncertainties Loom in the Economic Horizon—Necessity of Sending Producing Goods to Europe Plain—Business Activity Ahead—General Financial News

BY JOHN W. HILL, FINANCIAL EDITOR

WALL STREET joined with the country as a whole in receiving with composure the news of the formal closing of the greatest and most destructive of all wars. This was natural in view of the fact that the event was precisely what had been expected. Moreover the actual dawn of coveted peace is not without its sobering effect. America, in common with a vast portion of the rest of the world, finds itself confronted with tremendous problems, hardly less difficult of successful solution than those of the war itself.

Contemplation of some of those problems—the present state of unsettlement in the world, uncertainty as to the future economic and political developments in Europe, the questions of labor and of credits for stricken Europe and of trade with the central powers—was sufficient to check any outburst of demonstration, even though the people had not exhausted all the enthusiasm and feelings of relief upon the signing of the armistice in November. Though of gigantic proportions, these problems are not of an insuperable character and none believes that they may not be satisfactorily solved.

As for the stock market, it displayed a tendency to mark time. Two things have combined to check the upward flight of the level of share quotations; the high call money rates, resulting from the adverse attitude of the federal reserve board toward runaway speculation; and the coming of peace. The treaty had long been a tangible objective of the bull movement, and with this accomplished the market finds itself under the necessity of finding a new basis for enthusiasm. This it doubtless will do in connection with the crop prospects and promise of unprecedented industrial activity.

America Has Needed Goods

Viewed economically the most outstanding fact shining forth in the post-war period of the coming months is the urgent world need for goods of every description. To this country, and to the rest of the world as well, the most important fact subsidiary to this, is that America is the only available storehouse of food and goods, and also the only nation with sufficiently unimpaired credit resources to supply these goods on credit to temporarily-impoverished peoples.

American financiers and business men, no less than the leaders in Europe, see the absolute necessity of providing the countries of Europe with food and goods in order that their people may get back to work and their industries again may be put upon their feet. Otherwise, idleness, non-production, extreme want and the inevitable consequence of bolshevism, must prevail. Europe must be supplied on long time credits, and definite announcement of the details of a plan being worked out by American financiers may be expected soon. This plan will point the way for the whole country to co-operate.

The proceeds of Liberty bonds were spent for engines of destruction. War represents economic waste upon a grand scale. The debentures of any corporation that may be formed to finance exports to Europe will be sold in order that machinery of production may be purchased. The money thus spent will set millions at productive, not destructive, tasks. It will help rebuild the shattered economic structure, and bring back prosperity to poverty-stricken lands. In this way, and this way only may Europe be put in a position to pay the enormous interest upon her debt to us. In the meantime the money spent for this purpose will keep our own expanded capacities busy, our export trade flourishing and the country in an era of undisputed prosperity. It is important that imports of productive goods, such as building materials, tools, agricultural implements and railroad equipment be permitted by Europe. French thought, at first inclined to the exclusion of foreign goods, now is swinging around to see that production is the great need and that to attain this, productive goods are indispensable. England is still inclined to maintain restrictions.

Probably the most difficult problem facing America is that of wages and labor. No surplus of labor is apparent in the immediate future. The heavy emigration of aliens returning to Europe will create a shortage of common labor, which will tend to lift the level of all wages.

To counteract the emigration of aliens, there may be an immigration movement from Europe of people desirous to escape the burdensome taxes. The condition of the labor supply, the insistent and never-ending demands of employes for higher wages with shorter hours, and consequently less production and the world shortage of goods creating a "scarcity demand" for food and materials, may keep the prices of commodities moving up for some months. That the advances of wages are ahead of the cost of living, is made apparent by the lavish spending for luxuries and expensive commodities of all kinds, now universally reported by retail stores.

Central Assets Shown

Current assets of $7,588,341 and total assets of $13,701,282 are shown in the financial statement of the Central Steel Co., Massillon, O., as of April 30. The property account is figured at $6,764,896. Investments in National Pressed Steel Co. amount to $982,125 while deferred charges to operation, prepaid interest, insurance and taxes amount to $38,001. The liability account shows accounts payable $1,240,537, notes payable to banks, $2,948,510; merchandise payable, $329,397, and deferred credits of $12,607, making gross liabilities of $4,531,052. There is $2,131,300 preferred and $1,969,300 of common stock outstanding, $1,801,583 reserve for taxes and $61,042 for new buildings and $3,207,003 in undivided profits, leaving net assets of $9,170,230.

War Causes Losses

War work done by the Standard Parts Co., Cleveland, required extensive readjustment of the plants and made it necessary to go into the surplus to meet dividend requirements, the annual report of the company shows. Net profits for the year ending Dec. 31, after deduction for taxes and contingencies, amounted to $1,261,419. Dividend requirements were $1,270,315, or $5894 more than the net profit earned. It was stated that the company operated

to about 75 per cent of capacity on war work. All but about $600,000 of a total of $1,632,892 in government claims outstanding on Jan. 6 has been paid. Officials report that orders are coming in on a large scale and that the plants are operating at capacity, with the exception of the axle plants, which will be doing likewise when tools are made.

Radiation Profits Good

The annual report of Steel & Radiation, Ltd., Toronto, Can., for the year ended Dec. 31, 1918, shows profits from operations almost double that of the previous year amounting to $556,191. Interest charges were $74,727, leaving a net profit of $481,464, compared with $213,516 in 1917. The balance at profit and loss at the beginning of the year was $49,803, making a total credit of $531,267. From this were deducted preferred dividends in respect of 1917, $46,529, transferred to depreciation and amortization reserve, $299,090; provision for reduction and inventory against falling prices of material and restoration of plant to resume peace business, $175,000; a total of $520,619, leaving a surplus for profit and loss at the end of 1918 of $10,647. President Sir Henry Pellatt, in his statement to shareholders says that the liquid position of the company is vastly improved; for the year 1917 there was a surplus of current assets over liabilities of about $125,000, while the present statement for 1918 shows a surplus of $332,614.

To Distribute Stock

The Charcoal Iron Co. of America has announced a 20 per cent stock dividend in lieu of the regular cash disbursement. At a meeting called for July 31 shareholders will vote on the directors' decision to increase the capital stock from $2,839,350 to $5,000,000, out of which increase the stock payment will come, the balance to go into the treasury for future requirements. In his statement to stockholders, President Frank W. Blair said the action was decided upon because of the fact that cash is tied up in inventories, which June 1 were $650,000 in excess of the amount on Jan. 1, a condition due to the difficulty of moving finished products. Practically all of the heavy inventory is covered by orders, according to the president. The company's pig iron situation has improved and earnings are fully up to expectations, he says.

Government Sells Steel

Various offerings of government-owned steel continue to be made. Bids will be opened at Rochester July 7 on 533 tons 1 x ⅞-inch carbon steel; 786 tons 3½ per cent nickel steel, and 294 tons soft steel; on July 9, 1997 tons 155-millimeter forgings and 685 tons 75-millimeter forgings; on July 10, 104 tons steel plates, assorted sizes; on July 11, 1857 tons sheet steel billets; on July 12, 59 tons head forgings for 75-millimeter shrapnel and 178 tons 2 13/16-inch cold rolled round steel bars; on July 15, 398 tons round cold rolled screw stock, assorted sizes; 49 tons 150 x 6¼ x 93¾-inch cold rolled strip steel; 32 tons ⅞ x 2-inch hot rolled forging steel; 1070 tons 9.2-inch steel base plug forgings and 2989 tons 9.2-inch shell forgings.

Philadelphia is offering for bids on July 3, 108 tons 23/32-inch squares; on July 7, 161 tons 15/32 and ⅝-inch rounds. Detroit will take bids until July 3 on 488 tons 75-millimeter common steel forgings; on July 7, 155 tons semisteel scrap castings and 397 tons 75-millimeter shell forgings.

Andrews Steel Additions Increase Ingot Output

An extension to the plant of the Andrews Steel Co., Newport, Ky., which increases the ingot capacity of that plant by about 8000 tons a month, recently was completed and now is in operation. Work which included excavations, foundations, two 100-ton basic open-hearth furnaces, charging floor, building storage bins, the installation of a mechanical gas producer plant, ash and coal handling equipment and the rearrangement of all railroad and stock tracks, was under the direction of the S. R. Smythe Co., Pittsburgh, consulting and contracting engineers.

The mechanical gas producer plant consists of five Morgan mechanical producers. The Smythe company also rearranged the gas producer plant of the company for the blooming mill, soaking pits, changing the gas system from underground to overhead. By this change the gas is conveyed from the producers entirely over the top of the blooming mill building with downtakes, headers and connections embodying a number of new features as to soot catchers and insulation. New soaking pit furnaces have been built embodying the patented ideas of H. E. Smythe. These furnaces have no checkers for the gas, but are arranged for checkers in the air chambers only.

Considers New Stack

Chicago, July 1.—The Steel & Tube Co. of America is considering plans for an additional blast furnace stack at the South Chicago plant of the Iroquois Iron Co. The size and design of the stack and its location have not yet been definitely decided but it probably will be as large as or larger than the one erected more than a year ago.

Prices Firm

In Market for Coke Oven By-Products —Sulphate Inactive

New York, June 28.—Although considerable strength is manifested, prices in the eastern coal tar products market remain unchanged. Pure benzol, for which the demand continues heavy, is still holding at 24 to 28 cents, and 90 per cent benzol at 23½ to 27 cents. Toluol and solvent naphtha are quoted at 25 to 35 cents and 22 to 27 cents, respectively, and owing to a good movement of these products, in conjunction with the heavy buying of motor benzol, of which they are a component part, supplies are exceedingly scarce.

Spot phenol is now available in better quantity and the market on this delivery is pretty clearly defined at 9½ to 10½ cents per gallon. Contract shipments are being booked at the same level. Trading in naphthalin continues to slump off, the drug trade now being virtually out of the market. Nevertheless, the market on this product is unchanged. Naphthalin in flakes for spot and contract business is quoted at the producers' plants at 8½ to 9½ cents, and in balls at 10½ to 11½ cents.

The market for sulphate of ammonia is still inactive. Sellers, however, are hopeful that the fertilizer industry will come into the market shortly. In the absence of any domestic business the market continues nominal. Prices on the little foreign business booked appears around $4.85 for material in double bags.

Coke Oven By-Products

Spot

Per Gallon at Producers' Plant

Pure benzol	$0.24 to .28
Toluol	.25 to .35
Solvent naphtha	.22 to .27

Per Pound at Producers' Plants

Phenol	0.09½ to .10½
Naphthalin, flake	0.08½ to .09½
Naphthalin, balls	.10½ to .11½

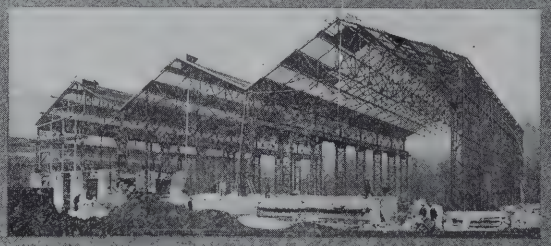
Per 100 Pounds at Producers' Plants

Sulphate of ammonia	nominal

Contract

Pure benzol	$0.24 to .28
Toluol	.25 to .35
Solvent naphtha	.22 to .27

Per Pound at Producers' Plant



Phenol	$0.09½ to .10½
Naphthalin, flake	0.08½ to .09½
Naphthalin, balls	.10½ to .11½

Per 100 Pounds Producers' Plants

Sulphate of ammonia	nominal

Commercial Treaty With America Favored in France

Yesterday Today and Tomorrow in European Industry

BY FRANCIS MILTOUN

Paris Correspondent of The Iron Trade Review

PARIS, June 13.—The Paris and provincial Republican committee of commerce, composed of the "Republican" senators and deputies of the French parliament and provincial counsellors, has indorsed a motion, on the basis of a report by Monsieur Havey, of the customs committee, urging that an immediate commercial convention be signed between France and the United States to develop and augment commercial exchanges between the two countries.

This convention is intended to make amends for errors committed in 1910 in surtaxing a large proportion of American products, while the tariff convention with Germany, of which there is nothing said in the peace treaty, allows that country to export to France on a minimum tariff basis, to the detriment of the United States.

This is something that every American ambassador to France, every consular officer, and the American Chamber of Commerce at Paris have been working for, but without success, or without having made any appreciable progress, since the original decree was made. The reform, however, is now near achievement and it is believed that it only is a question of time before its adoption.

As a rider the project carries with it a "rectification of tariffs in comport with the constantly rising costs of most of the necessities of modern life." Certain products which the United States and France previously bought of Germany are desired to pass under a regime which shall transfer the surtax to them, thus permitting French and American merchants and manufacturers to arrive at an understanding as to a reciprocal "most favored nation" basis which hitherto has been absent from Franco-American relations.

* * *

Belgium Orders Rails

The Belgian State railways have just ordered 40,000 tons of rails. The circumstance demonstrates that Belgium itself already is in production. The price quoted was a trifle less than 500 francs per ton. For a moment it was a question of placing this order in the United States or England but time presses and actually with local furnaces lighting their fires, notably Cockerill at its Marchienne au Pont plant, it was deemed good business and good politics for Belgium to handle this business itself. There is a big project in view for the electrification of Belgian railways almost in their entirety, looking to a normal speed of 60 to 80 kilometers an hour. This presumes that many bridges, road-beds and rails will be laid anew, the work beginning with those portions which have suffered most under the intensive service rendered during the war. The first line to be electrified will be Brussels-Antwerp, the second Brussels-Charleroi, arriving ultimately at Luxembourg.

* * *

Report Wire Orders

The "Revue Metallurgique" cites an instance of German manufacturers reporting a big demand for iron and steel wire in spite of the cessation of hostilities, the period covering the past three months; furthermore that these demands come from allied countries by "indirect" solicitation. Whether this is true or not is a question. Since it is a German report it is believed to be significant. The following prices quoted as of May 1 in Germany may have some bearing on the productiveness of German plants: Wire, 550 marks per ton; plates, 660 marks; pig iron, 440 marks; billets, 475 marks; profiles, 520 marks, and bars, 550 marks.

* * *

Revive Douai Foundry

The Wauthy foundry at Douai which was transferred to Eu during the period of the invasion, now has been returned to the former city with a considerable program of extension. Bronze castings for ship work, locomotives and electrical machinery are to be its specialty, with a department devoted to the casting of bells. A new property acquired since the armistice will enable this foundry and forge to become one of the most important and highly specialized of the Douai region.

* * *

Promote Electro-metallurgy

Hydraulic power is to be developed intensively in the France of the future. The metallurgical industry especially is interested as the production of electric steel throughout mid-France and the mountainous districts around Grenoble and in the Rhone valley will bring a new and prosperous industry and a decentralization which in every way is desirable. French industry of all kinds previous to the war largely was centralized, to its detriment. The fact that so much of the metallurgy of France was flanking the eastern frontier actually brought about its devastation. Of the costs of production of steel in electric furnaces there

is a wide divergence of opinion, as recent discussion in the French parliament has shown. The largest scheme projected is to use the torrential Rhone as it flows out of the Lake of Geneva down through mid France to the Mediterranean. A convention soon is to meet at Grenoble to discuss the procedure of harnessing the Rhone but curiously what may well be called a snag has been encountered. The fact is water cannot be drawn from the Lake of Geneva by the Rhone at a rate which will reduce the lake level below 372 meters above sea level. This was arrived at by an international agreement in 1884. The Rhone project which has been studied in all its details by the inspector general of Ponts et Chaussées provides for an expenditure of 900,000,000 francs, and a like outlay to care for the demands of navigation in the shape of new locks, bridges, etc. The use of the portion of the upper river between Lyons and the Swiss frontier alone it is expected will effect an economy of 5,000,000 tons of coal annually.

* * *

Krupps In Holland

The *Matin* publishes a report from its correspondent to the effect that the Krupp Works of Essen are about to erect a gigantic plant at Appledoorn in Holland. The plans are already completed and the land necessary already acquired. Naturally products from the Krupp Dutch works will go forth into the world as of Netherlands origin, though the plant will be connected with the iron of the Ruhr and the coal of Westphalia. Shipments will be readily made through the great port of Rotterdam, which has always been the predilection of Germany to the detriment of Antwerp, which has been at a disadvantage because of Holland controlling the Scheldt. It is only an indication of the way the wind may blow some day, but it does look as though it was in the Dutch quarter. Belgium won't like it, neither will France, neither will England. I wrote some weeks ago of the phenomenal growth of the metal trades of Holland during the war period, some seven fold increase in capital. Does this mean a new industry for Holland on a big scale, backed by German capital and nourished with German raw products, leaving a minimum of benefits to the Dutch? No one knows as yet but all the world will speculate.

* * *

Poland's Steel Needs

The economic council figures out that Poland's needs in iron and steel are insistent if that country is to be put into immediate condition to take care of itself, to say nothing of a future expansion when the time comes. The need of the moment is for 240 stationary steam engines (18,600 horsepower), 3000 dynamos, various metals, excluding iron and steel, 2700 tons, steel for machinery parts 1700 tons, copper 5000 tons, aluminum 200 tons, iron and manganese ore 600,000 tons, pig iron 400,000 tons, rolled iron —plates, etc., 300,000 tons.

* * *

Steel Plate Bureau

The Comptoir Sidérurgique de France—the metal sales office, has been inaugurated under the auspices of various metal groupments, but is virtually a distinct organization. It is to deal only with plates and large shapes and is under the direction of Monsieur Fournier, of Schneider et Cie. It will begin operations July 3, and will be the organization which will practically make the market price for plates. A similar organization was in operation from 1894 to 1904 under the sales managership of Monsieur Vital Hucguet, who is to occupy a corresponding post in the present organization.

Another sales bureau to occupy itself with "merchant steel" products on similar lines is in a way of formation but will not be ready for business for some weeks yet. Virtually these organizations are an exemplification of the trust, or combination or cartel idea, not only for export trade but for delivery and distribution at home. Orders placed will be handed out to members best fitted to produce the goods economically and expeditiously, with a view also to the geographical situation of the place of production and delivery.

* * *

To Make Tin Plate

The Longwy ore field was one of the most sorely tried districts of the war, and may be said to have marked the only victory to the credit of the crown prince. It was a declassed fortress at that, so it was not much of a victory. Today, it having been brought into such prominence, all its population and industry is spurred to a new effort. The Longwy Steel Works, the Aciéries de Longwy, are about to undertake the production of two new lines—corrugated construction iron and tin plates. France produced very little of either of these specialties in the past. The Mont Saint Martin plant of this company has already put its blast furnaces into operation along with a new rolling mill and an open-hearth furnace. The production is to be confined to large castings for naval and other industrial works. A great difficulty in getting the plant into operation at once is that of recovering essential working parts which were carried off to Germany as loot, but, remarkable as it may seem, much of this has been found and identified and a very great effort is being made to get into full production before autumn.

New Plant

For Columbia Motors to Double Capacity—Other Detroit News

Detroit, Mich., June 30.—A modern new plant is being planned for the Columbia Motors Co. to provide 150,000 square feet of floor space and double the present production capacity. The site containing six acres is located at Boyd street and West Jefferson avenue. J. G. Bayerline is president.

The Paige-Detroit Motor Car Co. is completing factory additions which are to give a total of 15 acres of floor space, according to President Harry M. Jewett.

The Detroit Radiator Corp., organized 10 months ago with an authorized capital of $300,000 to manufacture auto and airplane engine radiators, has purchased a 4-acre site at Royal Oak, Mich., for its new plant. The company manufactures the Curran radiator designed by E. T. Curran, president of the company. Headquarters are at 435 Woodward avenue. H. H. Rowe is general manager.

The Steel Products Co. of Detroit and Cleveland has purchased the $250,000 site and plant of the Parker Rust Proof Co. of America in this city. The plant includes four buildings constructed three years ago and contains 65,000 square feet of floor space. The Parker organization will move into new quarters.

The Fisher Body Corp. is having plans prepared for a 6-story reinforced concrete and steel sash building.

The Hupp Motor Car Corp. is running 50 per cent behind on its production schedule for 1919 which calls for 18,000 cars. The company has 2500 unfilled orders.

The McCord Mfg. Co., one of the largest manufacturers of automobile radiators in the world, has issued $1,500,000 of first mortgage bonds to provide for expansion of its local plant. A bond issue of $500,000 is also being marketed for the extension of the Chicago plant.

The Shuler Axle Co., Detroit, contemplates the erection of a plant second in size only to that of the Timken-Detroit Axle Co. Authorized capital has been increased from $200,000 to $500,000.

Recalls Concessions On Sulphur

American Society for Testing Materials in Annual Meeting Votes to Stiffen Acceptance Requirements—Metallurgists Discuss Deep Etching of Rails and Making of High-Speed Steel

A RULING of great importance to the manufacturers and users of steel products was made by the members of the American Society for Testing Materials at its twenty-second annual meeting, held at the Hotel Traymore, Atlantic City, N. J. The concessions made by the society in 1918 *by increasing the rejection limits of sulphur and phosphorus were recalled in the case of* 29 *specifications and action on* 14 *other specifications was deferred. The action of the society was governed by the belief that some of the difficulties in obtaining certain materials exist now as in* 1918 *when the note, which reads as follows, was applied:*

> *"In view of the abnormal difficulty in obtaining materials in time of war, the rejection limits for sulphur in all steels and for phosphorus in acid steels shall be raised* 0.01 *per cent above the values given in these specifications. This shall be effective during the period of the war and until otherwise ordered by the society."*

The specifications affected by this note in 1918, *classified according to their present status, follow:*

Specifications From Which Note is Removed

Designation	Specifications for
A 2 12	Open-hearth steel girder and high tee rails.
A 4 14	Medium carbon steel splice bars.
A 5 14	High carbon steel splice bars.
A 6 14	Extra high carbon steel splice bars.
A 49 15	Quenched high carbon steel splice bars.
A 50 16	Quenched carbon steel track bolts.
A 51 16	Quenched alloy steel track bolts.
A 7 16	Structural steel for bridges.
A 8 16	Structural nickel steel.
A 14 16	Carbon steel bars for railway springs.
A 58 16	Carbon steel bars for vehicle and automobile springs.
A 59 16	Silico-manganese steel bars for automobile and railway springs.
A 60 16	Chrome-vanadium steel bars for automobile and railway springs.
A 68 18	Carbon steel bars for railway springs with special silicon requirements.
A 17 18	Carbon steel and alloy steel blooms, slabs and billets for forgings.
A 18 18	Carbon steel and alloy steel forgings.
A 19 18	Quenched and tempered carbon steel axles, shafts and other forgings for locomotives and cars.
A 20 16	Carbon steel forgings for locomotives.
A 21 18	Carbon steel car and tender axles.
A 22 16	Cold-rolled steel axles.
A 63 18	Quenched and tempered alloy steel axles, shafts and other forgings for locomotives and cars.
A 57 16	Wrought solid carbon steel wheels for steam railway service.
A 25 16	Wrought solid carbon steel wheels for electric railway service.
A 26 16	Steel tires.
A 29 18	Automobile carbon and alloy steels.
A 70 18*	Boiler and firebox steel for stationary service.
A 71 17*	Carbon tool steel.
A 32 14	Cold-drawn bessemer steel automatic screw stock.
A 54 15	Cold-drawn open-hearth steel automatic screw stock.

Specifications to Which Note Still Applies

Designation	Specifications for
A 1 14	Carbon steel rails.
A 3 14	Low carbon steel splice bars.
A 67 18*	Steel tie plates.
A 76 18*	Low carbon steel track bolts.
A 9 16	Structural steel for buildings.
A 10 16	Structural steel for locomotives.
A 11 16	Structural steel for cars.
A 12 16	Structural steel for ships.
A 13 14	Rivet steel for ships.
A 15 14	Billet steel concrete reinforcement bars.
A 27 16	Steel castings.
A 28 18	Lap-welded and seamless steel boiler tubes for locomotives.
A 52 18	Lap-welded and seamless steel and wrought iron boiler tubes for stationary service.
A 56 18	Iron and steel chain.

Note:—*Indicates tentative standard.

Report On Steel and Wrought Iron

RARELY does a technical session in a convention of engineers and scientific men attract the attendance and sustain the unabated interest which was accorded the meeting on steel and wrought iron of the American Society for Testing Materials held Wednesday morning, June 25, at the Hotel Traymore, Atlantic City, N. J. The reports of two committees, one involving unusually important revisions in the specifications for a great number of steel products, were acted upon. Papers dealing with modern high-speed steel and the etching of rails and forgings brought forth 12 written discussions which contributed greatly to the interest of the session.

Upon the invitation of Capt. Robert W. Hunt, who presided over the meeting, J. A. Capp, chief of testing laboratories, General Electric Co., Schenectady, N. Y., as chairman of the committee on steel submitted a lengthy report covering the numerous activities of that committee during the past year. An abstract of the report, containing practically all of the important changes recommended by the committee, was published in the June 26 issue of THE IRON TRADE REVIEW.

Referring to the note added to a great number of specifications in 1918 providing that the rejection limits for sulphur in all steels and for phosphorus in acid steels be raised 0.01 per cent above the values given in those specifications, Mr. Capp stated that the conditions which necessitated the addition of the note still exist in regard to certain materials. Therefore the committee recommended and the society approved that the note be removed at once from 29 specifications and that action on removing it be deferred until the next annual meeting in the case of 14 specifications. The specifications affected by this ruling are listed in tabular form on this page. Chairman Capp also

announced that a committee composed of the chairmen of the subcommittees of the committee on steel has been created for the purpose of co-operating with the United States bureau of standards in thoroughly investigating the effect of phosphorus and sulphur on steel so that future revisions in specifications can be based upon more recent and complete data than are now available.

The report of the committee on wrought iron was presented by its chairman, H. E. Smith, engineer of tests, New York Central railroad, Washington. The committee recommended revisions in the specifications for engine-bolt iron and proposed tentative specifications for extra-refined wrought iron bars, both of which were adopted by the society. The changes in the specifications for engine-bolt iron involve the inserting of the words "all pig" before the word "puddled," making the section read, "The iron shall be made from all pig puddled iron and shall be free from any admixture of iron scrap or steel." The proposed specifications just adopted as tentative for extra-refined wrought iron bars were prepared to cover large rectangular bars used in the construction of locomotives. The iron described in the present specifications for refined wrought iron bars is not of the quality desired, especially with reference to the raw material, while the requirements of the present specifications for engine-bolt iron are too severe for rectangular bars of rather large dimensions.

Discuss Deep Etching of Steel Rails

PROMINENT metallurgists discussed the subject of deep etching introduced by F. M. Waring, who read a paper entitled, "Deep Etching of Rails and Forgings," by F. M. Waring and K. E. Hofammann. In this paper, which was published almost verbatum in the June 26 issue of THE IRON TRADE REVIEW, the authors present the results of some deep etchings with hot acid on new and old rails and infer that the cracks developed to visibility by this process may have been caused in the mill during some stage in the fabrication of the rails. The discussion was focused upon the factors influencing the development of the cracks revealed by the deep etching.

J. A. Capp suggested that the cracks are the result of gas pressure set up by the acid added to the internal strain of the metal. James E. Howard, interstate commerce commission, Washington, supported the contention that the cracks had their origin in the mechanical treating of the metal during manufacture. A series of investigations in which X-ray photographs of specimens are used in connection with deep etching was advocated by W. P. Barba, production division of ordnance department, United States army. J. S. Unger, central research bureau, Pittsburgh, asserted that the only way to distinguish good rails from bad is to etch a number of new rails; separate them into two classes, supposedly good and supposedly bad; place them in service and check their performance with the conclusions drawn from the etchings. A number of these discussions are presented in abstract form as follows:

Rate of Acid Attacks

By J. S. Unger

Whether the conclusion of Messrs. Waring and Hofammann to the effect that the defects shown in the rails have their origin in the manufacture of the material remains to be proved. We have been investigating rails to determine the rate of acid attack in the three dimensions; the transverse vertical from a disk section taken from the end of a rail; the transverse longitudinal, taken from a disk section at the interior or under side of the longitudinal slab; and the vertical longitudinal disk section taken from the interior of a longitudinal slab cut from the side of the rail.

In the few experiments made up to this time, the action of the acid has been found to be four times as rapid in the transverse vertical disk, or that from the end of the rail, than on either of the longitudinal specimens. When such specimens of the same area taken from the same rail and as closely adjacent as possible, are immersed in the same solvent at the same time, the difference is apparent at once by the rate of the evolution of the gas. If transverse sponginess exists in a rail which is not visible to the eye or under the microscope and this be developed by the etching solution and the action of the solvent is four times as great in one direction as in another, the extent of such sponginess is greatly magnified leading to erroneous conclusions as to the extent of the supposed defect.

A certain railroad has purposely removed several good rails from the track and cut them up for examination. Of these good rails some were found to show supposed defects after etching, while others were free from such defects. All showed longitudinal lines in the direction of rolling. Additional rails removed from the track were defective, some having transverse fissures. These were etched and the etchings were practically the same as those from the good rails.

In the face of such conflicting evidence, it appears unwise to draw any conclusions as to the detrimental character in service of a rail which has shown sponginess during etching.

The only solution of the question as it now stands is to take a number of new rails and etch them. Separate them into two classes, supposedly good and supposedly bad. Place these rails into the same service at the same time, alternating the rails as laid and from their average track service, determine what ones are good and what are bad. Until this is done, conclusive evidence to warrant drawing conclusions will be lacking.

Does Gas Cause Cracks?

By J. A. Capp

It is common knowledge that when hardened steel parts, such as springs, are pickled in acid, they frequently break up. Some years ago there were several papers on this subject published in the *Proceedings* of the American Electrochemical society which purported to prove that the breaking of the hardened steel springs was due to the absorption by the steel of the hydrogen liberated on the surface of the steel by chemical action of the pickle bath. The explanation given was that atomic hydrogen penetrates freely into the steel; in fact, it passes through such thin sections as spring steel. Wherever the atomic hydrogen finds sufficient room in the steel to unite with other atomic hydrogen to form the molecule of hydrogen or H_2, enormous pressure is set up. When the steel is already in a highly strained state the additional strains set up by the internal pressure developed by the formation of the hydrogen molecules is sufficient to rupture the steel. As further evidence it is pointed out that annealed steel, which is free from internal strain, is not ruptured by the internal gas pressure.

The articles examined by Messrs. Waring and Hofammann are of fairly hard steel and the methods of manufacture of them are such that an in-

ternally strained [illegible] may be expected. The acid used is strong and it is very active at the temperature employed. May it not be the case then that the fissures which develop are result of the gas pressure added to the internal strain? It would be interesting to test two adjacent specimens, one of them to be pickled in its hard state and the other to be pickled after annealing. If the explanation offered in this discussion is correct, the hard specimen should crack and the annealed piece should show no cracks.

Advises X-ray of Steel Before Etching

By W. P. Barba

As to deep etching and its use in determining the possible presence of fissures, either developed or potential, a great deal of work was done by the army ordnance office in the manufacture of gun forgings in 1917 and 1918. Deep etching with quite strong sulphuric acid with some hydrochloric acid developed surely the locus of what later developed into fissures as well as flakes. Many times flakes are incipient fissures, becoming fully developed upon later application of breaking force, especially when suddenly applied, as when fractured under the drop test.

Later work at the bureau of standards, carried on by Mr. Rawdon under Drs. Burgess and Stratton, caused us to resort to the Upton Lewis alternating-stress machine, using pieces 6 x 2 x 0.375 inches, stressing them only to about 30,000 pounds per square inch and using as many as 30,000,000 alternations. Mr. Rawdon applied the Coolidge tube to these pieces before, during and after rupture. The experiment was primarily started to see if known small flakes or incipient fissures would "run" or develop as in a detailed fracture under repeated stressing within the elastic limit. It was found that they did so develop and quite appreciably.

When Messrs. Waring and Hofammann displayed their work, it was at once evident that a similar method of research might well disclose the presence or absence of such steel defects as result in rail fissures. The deep etching can be applied after the Coolidge ray exposure, thus determining if the cause is a simple one or more complex as has been discussed by J. A. Capp.

Steelmaking is Secret of Good Tools

IN the absence of John A. Mathews, president, Halcomb Steel Co., Syracuse, N. Y., his paper on modern high-speed steel which appeared in the June 26 issue of THE IRON TRADE REVIEW, was summarized by C. L. Warwick, assistant secretary of the society. In the discussion which followed, practically all of the speakers agreed with Dr. Mathews on his statement that improvements in the method of steelmaking, rather than changes in the analyses of steels have been responsible for the progress made in high-speed tool steel during the past 15 years. Several metallurgists differed slightly in regard to the value of certain additions to steel, particularly cobalt. The heat treatment of the steel came in for considerable discussion, and it was the unanimous opinion of all speakers that too much attention cannot be given to the subject of uniformity in treatment. The need of standardization in this respect was emphasized by George L. Kelley, engineer of tests, Nicetown plant, Midvale Steel & Ordnance Co., Philadelphia. J. Heber Parker, metallurgist, Carpenter Steel Co., Reading, Pa.; N. B. Hoffman, metallurgist, Conolian Steel Co., Pittsburgh; W. J. Baxter, captain, United States navy, and Edward W. Rettew, assistant metallurgist, New Departure Mfg. Co., Bristol, Conn., discussed Dr. Mathews' paper. Abstracts from a number of these discussions follow:

Urges Standardization

Mr. Rettew presented the results of three months' study of a considerable number of analyses of high-speed steels representative of present American practice. As a result of these investigations the following limits and desired analysis were prepared:

Element	Limits (per cent)	Desired (per cent)
Carbon	0.60-0.70	0.65
Manganese	0.15-0.40	0.30
Phosphorus	not over 0.015	under 0.010
Sulphur	not over 0.015	under 0.010
Silicon	not over 0.30	0.20
Chromium	3.50-4.50	4.00
Tungsten	16.00-18.00	17.00
Vanadium	0.65-1.05	0.85

Continuing, Mr. Rettew stated that he firmly believes that if steel manufacturers and users will concentrate on the standardization of raw materials, melting practice, forging and annealing processes and methods of treatment and grinding involved in the manufacture and use of a high-speed steel which lies between the limits above indicated, aiming to attain the desired analysis, that truly remarkable improvements very likely will be attained.

Describes Cobalt-Chromium Tool Steel

A paper of considerable interest prepared by the bureau of construction and repair, United States navy, was presented by Capt. W. J. Baxter, captain, United States navy. The paper deals with a new kind of high-speed tool steel, samples of which were obtained from the mills of Darwin & Milner, Sheffield, England, by Lieut. S. E. Woodworth, bureau of ordnance, United States navy. This steel has been investigated in comparison with well known brands of tungsten high-speed steels and the data obtained forms the basis of the paper in question. One series of tests was conducted at the Brooklyn navy yard by William Campbell, consulting metallurgist, on samples of the steel in the form of a ⅞-inch octagon forged bar and a cast milling cutter 4 inches in diameter and ¼-inch thick. The octagon bar analyzed as follows: Chromium, 13.57; cobalt, 3.66; molybdenum, 0.84; carbon, 1.48; silicon, 0.80; and manganese, 0.19 per cent.

Hardness determinations were made by heating both samples to various temperatures in a small electric furnace, one piece being quenched in oil and the other cooled in air. The test on the forged bar showed that hardening begins at 850 degrees Cent. and reaches a maximum at 1000 degrees Cent., the hardness being practically the same whether the material is cooled in air or in oil. The tests of the cast metal show slightly higher values, with a maximum at 1000 degrees as in the case of the forged metal.

In a second investigation made at the bureau of standards at Washington, cast and forged samples were submitted to comparative tests with tungsten high-speed tools. The description of these tests is presented in detail in the paper. Tests of milling cutters made from the English non-tungsten steel and tungsten steel were made to compare the qualities of the steels in actual performance on a belt driven milling machine. Both cutters made an unusually good record, compared with current experience with the best grades of high-speed tool steel. While the tungsten

cutters were slightly superior to the cobalt-chromium cutters, the performance tests indicated that under slightly different conditions, their mechanical performance probably would have been about equal. The results seemed to indicate that when production is of secondary importance in comparison with precision, the nontungsten tools compare favorably with tungsten high-speed tools, but where the main purpose is to secure production, tungsten high-speed tools must be considered preferable.

Corrosion of Sheets

CONSIDERABLE discussion over the methods of testing corrugated iron sheets for corrosion developed during the Wednesday evening session. The report of the committee on corrosion of iron and steel was made by its chairman, F. F. Voorhees, chemist, United States bureau of standards, Washington. The report of the subcommittee on inspection contained data on the condition of corrugated test sheets which have been exposed at Fort Sheridan, Ill., Annapolis, Md., and Pittsburgh.

Following the report of this committee, D. M. Buck, metallurgist, American Sheet & Tin Plate Co., Pittsburgh, read a paper on the influence of very low percentages of copper in retarding the corrosion of steel, which was presented in abstract form in the June 26 issue of THE IRON TRADE REVIEW.

A. F. Robinson, bridge engineer, Atcheson, Topeka & Santa Fe railway, Chicago, stated that after witnessing tests of No. 26 gage corrugated sheets at Gary, Ind., he concluded that from 0.15 to 0.25 copper in steel retards the rusting of the metal; that all soft steels rust after exposure to the atmosphere; that there is no such thing as an absolutely rustless iron or steel; and finally, that it is not worth much extra expenditure to obtain chemically pure iron or copper bearing steel when the sole protection from rust is due to galvanizing, paint coating or other method of treating for protection.

A. S. Cushman, director, Institute of Industrial Research, Washington, entered into a lengthy discussion focussed principally on the methods pursued in conducting the tests described in the report of the committee on corrosion of iron and steel, and those mentioned by Mr. Buck. He said that rain and fog bring down on the inclined surface of the sheets very dilute sulphuric acid washed out of the air and that wind and sun evaporate the water, concentrating the nonvolatile sulphuric acid on the uncoated sheet until it is strong enough to etch into or cut the surface.

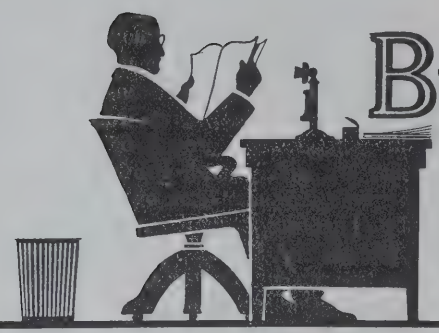
Continuing, Dr. Cushman said that if uncoated sheets, when newly exposed, meet a slow rusting attack for the first six months, either on account of environment or on account of comparatively good weather, they have the opportunity to grain themselves with a tight granular dehydrated oxide surface which in itself is a natural protective coating and enables the sheet to show an extraordinary long life out of doors. If, however, the initial attack on the raw uncoated sheet is very severe, as it was in the Pittsburgh case, because of the exceedingly acid atmosphere, the grain formed is loose and instead of being protective, is stimulative to corrosion.

For the first time in the history of the society, considerable importance was attached to magnetic analysis, the major part of the Wednesday evening session being devoted to a topical discussion on that subject. Abstracts of the papers, "Magnetic Analysis as a Criterion of the Quality of Steel and Steel Products," by Charles W. Burrows and Frank P. Fahy, and "Magnetic Surveys on New and Failer Rails," by P. H. Dudley, appeared in the June 26 issue of THE IRON TRADE REVIEW. A paper entitled "Application of Magnetic Analysis to the Testing of Ball-Bearing Races," by R. L. Sanford and M. F. Fischer, was read by Mr. Fischer. "Location of Flaws in Rifle Barrel Steel by Magnetic Analysis," by R. L. Sanford and W. B. Kouwenhoven, was presented by Mr. Sanford; and "Certain Aspects of Magnetic Analysis," was read by C. Nusbaum. At the conclusion of the reading of the papers listed, N. J. Gebert, New York, submitted a discussion, illustrated by lantern slides, showing the relation between the heat treatment and magnetic properties of tool steels. Dr. Unger discussed the entire series of papers on magnetic analysis, stating thoroughly the requirements which must be met by any form of testing apparatus and setting forth the advantages of magnetic testing.

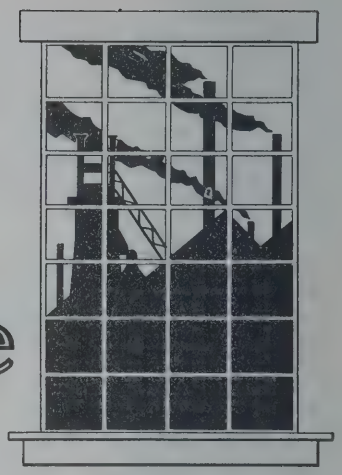
Obtains Interesting Data on Malleable Iron

Upon the recommendation of the committee on malleable castings, the society, at its Thursday evening session, decided to adopt as standard, the specifications for malleable castings which have been carried as tentative since their proposal in 1918. The new standard applies to malleable castings for railroad, motor vehicle, agricultural implement and general machining purposes.

H. A. Schwartz, chemist, National Malleable Castings Co., Indianapolis, read a paper entitled, "Some Physical Constants of Malleable Cast Iron."



Enrique Touceda, metallurgist, Albany, N. Y., stated that Mr. Schwartz should have entered more fully into the question of hardness tests for malleable iron. He pointed out that hardness tests of steel, gray iron and alloys in general have proved of great value and are widely used. Professor Touceda regards hardness tests on malleable iron by either the Brinell or the schleroscope methods to be of little value, except to indicate whether or not a casting has been under-annealed.



W. R. Bean, Eastern Malleable Iron Co., Naugatuck, Conn., said that he has records of several thousand tests which substantiate the data submitted in Mr. Schwartz's paper. Mr. Bean also mentioned tests made on a heavy section of malleable to investigate its physical properties. A test piece 3 inches square and 12 inches long was annealed in the regular way with light castings. Nine test pieces were cut from the same section of the bar; one at each corner, one at each side and one in the center. The bars from the corners had a tensile strength ranging from 45,914 to 45,450 pounds per square inch; the bars from the side, from 41,489 to 43,866 pounds, and the center bar, which naturally would be expected to be the weakest, had a tensile strength of 39,839 pounds per square inch. Mr. Bean summarized a number of tests made on bars which were tested as cast, and of duplicate bars which had $\frac{1}{8}$ inch machined off the surface. Two bars were cast from each of 58 heats, those tested in the rough being $\frac{5}{8}$ inch in diameter and those machined being turned to $\frac{1}{2}$ inch. The results of these tests are as follows:

Condition of bar	Elongation per cent, in 2 in.	Tensile strength, lbs. per sq. in.
Rough, maximum	22.0	58,263
Rough, minimum	8.0	51,333
Rough, average	12.8	53,259
Machined, maximum	23.0	60,060
Machined, minimum	8.5	50,241
Machined, average	13.2	53,234

At the Thursday morning session the executive committee reported its decision to move the headquarters of the society from the University of Pennsylvania to the Engineers' club, Philadelphia. A committee was appointed to negotiate for these quarters. Approximately 650 men and almost 200 ladies attended this year's meeting. Among the entertainment features was the annual golf tournament, held Thursday afternoon. Prizes were won by R. E. Griffith, H. M. Kinney, W. D. Lober, G. D. White and A. S. Hook.

Little Stories of Business Life

The Spirit of Morgan

A BRONZE bust of J. Pierpont Morgan has been installed in the board room of the United States Steel Corp., at 71 Broadway, New York. Mounted upon a stained pine column, the bust enjoys an impressive elevation at a spot along the southern wall of the room, overlooking the board table, and immediately opposite the seat of Chairman E. H. Gary at the head of the table. To the observer, there is something singularly appropriate in placing the dead financier's likeness in the chamber where are decided the policies of the gigantic industrial offspring which he fathered with so much pride, and the thought also occurs that the directors and the members of the finance committee at their meetings through the long future, always will have a sort of subconscious feeling that it is in Mr. Morgan's presence that they are shaping the destiny of the corporation. The bust, which is the work of J. Massey Rhind, the New York sculptor, reflects the light from the western windows of the room, and depicts the power and virility of Mr. Morgan in his prime.

Lucky Strikers

A DECISION just has been reached in an important matter at Newburgh, N. Y., which possibly may serve as a precedent for deciding all kinds of business problems and particularly during the hot summer months just ahead. A few weeks ago, the union sheet metal workers in Newburgh went on strike for an increase in pay to $5.40, whereas their employers thought that $5.25 was enough. On being brought together by an agent of the state department of labor, it was suggested that the dispute be settled by flipping a coin. This method of settling the controversy was accepted with acclaim and by the toss of the coin the strikers won their case. The men therefore went back to work.

Crittenden to Front

THE steel industry obtains a large percentage of its fluorspar requirements from the district of which Marion, Ky., is the center. In Crittenden county, in fact, of which Marion is the seat, the principal industry is the mining and shipping of fluorspar. In the victory loan campaign, the Crittenden county liberty loan committee obtained a huge oversubscription with the result that it was given the privilege of naming a vessel to be launched from the huge government yard at Hog island. Accordingly, the committee decided to name the vessel FLUORSPAR. The good ship FLUORSPAR took the water at Hog island on June 16, its sponsor being Miss Frances Gray, of Marion, Ky.

Youth Wins

THOUGH the manufacture of iron and steel goes back into the mists of antiquity, to Tubal Cain, the fourth man from Adam, it is a new industry in its present state. On a visit to a large steel plant recently an observer commented on the average youth of the men in charge of departments and mills and the absence of gray hair in the force. "So much of our practice is new," explained one of the heads, "that the younger men have grasped it more readily and therefore have occupied the positions." There seems to be no place for the man who cannot advance at the speed the industry has set. Changes in practice are rapid and what was excellent yesterday will not earn dividends today. The rare man who can keep abreast of this tide may stay in the harness until snow touches his temples but for the most part young men take the lead.

Blowing off Steam

AMERICANS are not the only people in the world having a penchant for investigations by commissions, and the ridiculous situations sometimes developed have counterparts in other countries. Describing the proceedings of the British coal commission, the *Birmingham Chamber of Commerce Journal* says:

"We had the opportunity of spending an hour in the king's robing room at the house of lords a few days ago, when the duke-and-earl baiting was about to commence. If the consideration of the future policy of the country were to be placed in the hands of other commissions of this kind, then we should despair of the result. If, on the other hand, the purpose of the coal commission is to provide a safety valve for the letting-off of steam, and this is successfully accomplished, then it does not so much matter. Mr. Justice Sankey has a difficult team to handle, in any case, and he seems to be satisfied if he can prevent the room becoming a beer garden. * * * Mr. Smillie asks a question, the witness answers, and the miners' leader contradicts the witness. Then Mr. Smillie tries to tell the witness what he ought to say, and if he refuses, he is

probably made the subject of some uncomplimentary remark."

Flying Talk

EVERYONE in the iron and steel business who has occasion to travel realizes how much a train telephone connection will increase his range of activity. It seems likely from investigations which now are being carried on by the McFarland Train Telephone Corp., of New York, that it soon will be possible to conduct telephone conversations from rapidly moving trains with the same facility as from one's desk. Several weeks ago a section of the Philadelphia & Reading railway's tracks between Tabor Junction and Jenkintown, Pa., was wired for experimental purposes, and it was found possible to carry on a conversation between a moving train in Jenkintown and the railroad offices at the Reading terminal in Philadelphia. Two trains from the Reading terminal now are equipped with telephones and valuable results have been achieved which will aid in leading to the development of practicable train telephoning apparatus. Officials of the Philadelphia & Reading railroad say that with the coming of the train telephone that can be used in everyday work, practically every train will include it as a part of its equipment.

Shades of Opinion

"Colors are an important factor in export transactions in many parts of the world which is not generally understood," says a leading Cleveland manufacturer of industrial haulage and handling equipment who does a large overseas business annually. "Take India for instance," he said, "one could not think of sending to certain districts a machine or product which is painted red because that color is held in reverence by the Mohammedans as it signifies to them the blood of the martyrs to their religion. Similarly green is a sacred shade to the Hindoos for the reason that it symbolizes the grass upon which the Hindoo martyrs were clain. Now black to Australia is essentially the mark of mourning. It is said there are no black automobiles in Australia. The other side of the picture is the importance of blue as applied to any product for which negotiations may be carried on with Cuba. Anything that is painted blue, it has been found, obtains a better price in Cuba because of the shade. It is these curious twists of fancy and sentiment and the various peculiarities of different peoples that make export trade so fascinating and demands such deep study to be successfully pursued."

Buy Cleveland Foundry

After seeing the Taylor & Boggis Foundry Co., Cleveland, grow from a plant employing five workmen to one with approximately 500 men on its payroll, C. J. Morgan retired as president last week, when he and his associates disposed of their interests to a Cleveland company headed by I. T. Kahn. Mr. Kahn is president of the Republic Structural Iron Works and the Columbia Hardware Co., of Cleveland. H. J. Boggis and B. F. Wade also retired from the Taylor & Boggis company as vice president and treasurer, respectively. Associated with Mr. Kahn in the purchase are Jos. C. Hostetler and Thomas L. Sidlo, law partners of Secretary of War Baker. Mr. Kahn is president, Messrs. Hostetler and Sidlo are vice president and treasurer, respectively; E. B. Emery is second vice president, and Fred Blundell is secretary of the new corporation. Mr. Blundell will likewise continue his duties as factory manager. The new owners propose to continue manufacturing a line of heavy and medium castings as well as builders' hardware.

The Taylor & Boggis plant is one of the oldest of its kind in Cleveland, having been founded in 1865. The company was incorporated in 1883 by Robert H. Boggis, C. J. Morgan, F. E. Drury and C. F. Emery, Mr. Taylor having died before the company was incorporated.

Welch Firm

Takes Over British Forgings, Ltd.—Will Establish Steel Plate Mill

Toronto, Ont., June 30.—According to an announcement made by R. Home Smith, negotiations which were being carried on between Baldwins, Ltd., Swansea, Wales, the harbor commission and the imperial munitions board, for the purchase of the plant of the British Forgings, Ltd., Ashbridges Bay, have been completed. Baldwins, Ltd., will take over the plant and site of the company and will establish a steel plate rolling mill here at a cost of upwards of $2,000,000. The British Forgings plant is one of the largest electric steel plants in the world, having a battery of ten 6-ton electric furnaces of the Heroult type.

Several of the larger Canadian carbuilders have been asked to tender bids for the construction of 20 steel mail cars and 20 first-class coaches for the Canadian National railways. The whole order is to be placed in Canadian shops and if the prices asked seem unreasonable the order will be held over until they are lower.

Contracts for the construction of new lines and extensions of existing ones in connection with the Canadian National railways system in the west have been let, aggregating approximately 340 miles, principally in Saskatchewan. It is understood that the work will be pushed forward rapidly.

The Ontario Steel Products Co., Ltd., has begun the construction of a new motor spring plant at Oshawa. The main building will be 80 x 360 feet. It will be a fireproof concrete and steel structure and will be finished by October and in operation early in 1920.

The steel trade is feeling strongly the injurious effects of the strike of metal workers which has been in progress for some weeks. Much construction work has been postponed until next year. This has caused a falling off in the demand for steel, as a number of orders involving a considerable tonnage are known to have been withheld. The most encouraging feature is the increasing demands of the motor companies, which are showing much activity in production.

The General Motors Co. of Canada, Ltd., has planned important alterations and extensions of its plant at Oshawa, Ont. A building, 80 x 400 feet, four stories, will be erected, for the assembling of Oldsmobile motors and trucks. This building will be completed in time to start production this fall. A central shipping building, 80 x 200 feet, with a capacity for 56 freight cars under roof will be constructed, so that rough weather will not interfere with loading operations. Another addition will be a four-story, 80 x 400-foot storage building with a capacity of 1000 cars. A large central enameling plant will be built and equipped with the most modern facilities. It will be a three-story structure, 80 x 300 feet. All buildings will be of steel and concrete. There will be many alterations and improvements in the present plant equipment. Good progress is being made at the large plant of two units, 160 x 600 feet, now under construction at Walkerville, Ont., where the motors, transmissions and the heavy parts of cars assembled at Oshawa will be manufactured.

The tariff bill passed the Canadian house of commons on June 19. An amendment advocating free food, free farm implements and a general downward revision of the tariff was defeated by a vote of 121 to 70.

Here and There in Industry

Live Information Which Records the Expansion of Various Lines of Productive Enterprise

INCREASED business during the past four years has compelled the J. P. Devine Co., Buffalo, manufacturers of vacuum drying and evaporating apparatus as well as chemical apparatus, to build several additions to its plant, located at 1372 Clinton street. One of these additions of steel and brick construction with improved light and ventillating systems 30 x 100 feet, has just been completed and is housing the vacuum pump assembly department. Another addition, 90 x 100 feet of the same general type, now is in course of construction. It will enlarge the general assembling department. For this equipment machine tools are to be purchased. The foundations for a third addition, a new foundry, have been laid and steel construction is proceeding. This foundry, 90 x 225 feet, will be fully fitted out with new equipment which is to be purchased. It will give the company greatly increased facilities for casting large commercial units. The general contractors are Chas. Berrick & Sons Co., and the steel contractor is the Lackawanna Bridge Co., both of Buffalo.

* * *

STOCK in the Belcher Malleable Iron Co., Easton, Mass., has changed hands and the plant is to be operated under new management. The officers of the new corporation are: R. P. Rowe, president, and C. B. Swasey, treasurer.

* * *

AFTER being engaged in the iron and steel brokerage business for many years, Henry Potts & Co., 650 Real Estate Trust building, Philadelphia, have started a fully equipped scrap yard at Coatesville, Pa. It is in charge of Vice President Charles J. Scott. John R. Briggs is president.

* * *

THE National Copper & Smelting Co., Cleveland, has taken a 99-year lease on four acres facing the Nickel Plate railroad. The lease requires construction of a $20,000 building in the first two years. The company plans to improve the land with a large plant in the near future. It recently bought the Erie Buffalo Tube Co., Buffalo, and the Michigan Tube Co., Detroit. Its product is seamless brass and copper tubes.

* * *

ARRANGEMENTS have been completed by the Cincinnati Ball Crank Co., Cincinnati, with C. H. Clark, New York City, whereby it will manufacture and market the Clark compression coupling, on which patents are pending, under the name of the Cincinnati compression coupling at its plant in Cincinnati.

* * *

NEW construction for the Lakeside Forge Co., Erie, Pa., comprises a warehouse and office building and does not call for any new machine tool equipment. A new forge shop is contemplated, however, to be erected in the near future, at which time the company will require machinery of that nature.

* * *

THE American Bosch Magneto Corp., Chicopee, Mass., has closed an order for 200,000 high tension magnetos, aggregating in value $2,500,000. It is the largest order of its kind ever booked. Deliveries will start within the next 30 days. The order is equivalent to over 40 per cent of a normal turnover for a year.

* * *

THE Oil City Silica Sand Co., recently incorporated with a capital of $300,000, has completed organization with the election of the following officers: President, Dr. George C. Magee; vice president, Edward J. Quigley, secretary and treasurer, H. Merrill Hughes, these men with R. G. Koch and Homer H. Schauer, to comprise the board of directors.

* * *

THE Maher Engineering Co. has been formed with offices in suite 818 Michigan Boulevard building, 30 North Michigan boulevard, Chicago. It will handle lines manufactured by the Erie Engine Works, the Sims Co., the Dayton-Dowd Co., the Wagener Steam Pump Co. and the Pratt Engineering & Machine Co.

* * *

OF steel and brick construction, a new foundry, 140 x 250 feet, was recently constructed for the Mahoning Foundry Co., Youngstown, O. It is located at Kyles corners, about 1½ miles from the company's Poland avenue plant. A 2-story warehouse also was recently erected for this company, 100 x 240 feet. All equipment has been installed. The company recently increased its capitalization from $65,000 to $150,000 to provide additional working capital.

* * *

THE contract has been let for the erection of the main and the dry kiln building for a $2,200,000 automobile body factory which the St. Louis Mfg. Corp., St. Louis, will build. The company is a subsidiary of the General Motors Corp., Detroit, and its automobile plant is expected to be completed by October. The main factory will be 600 feet long by 430 feet wide, and will cost about $400,000.

* * *

TEMPORARY offices have been opened at 729 New York block, Seattle, by the New Era Iron & Steel Corp., which was but recently organized. According to an announcement by O. B. Dagg, secretary, the company has taken over the plant of the Washington Iron & Steel Co., Sedro Woolley, Wash., which is equipped with a 60-ton open-hearth furnace. Definite information concerning the company will be announced later.

* * *

THE Ferguson Steel & Iron Co., Buffalo, launched its third seagoing tug on its navy contract for six all-steel 1000-ton tugs, Wednesday, June 25. Of the two which previously had been launched, one was completely fitted out and accepted by the department, sailing from Buffalo on June 14. Machinery on each tug consists of two Scotch marine boilers and a 1800-horsepower triple expansion reciprocating engine. The tug launched June 25 was christened KEWAYDIN by Miss May Martin as it lunged sideways into the Buffalo river. Aside from the work which the Ferguson company is doing for the United States navy department, it also is constructing a wood tug for the state of Pennsylvania and has a contract to build a steel oil barge of about 1000 tons displacement for private owners.

Men of the Machinery Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

CHARLES L. ALLEN, who became president and general manager of the Norton Co., Worcester, Mass., when the latter took over recently its subsidiary the Norton Grinding Co., has been treasurer and general manager of the company for some time. He succeeds Prof. George I. Alden, formerly president of both corporations, who has been made chairman of the board of directors of the combined companies. Aldus C. Higgins, who has been secretary and general counsel, has been named treasurer and general counsel, and George N. Jeppson, formerly works manager, secretary and works manager.

Mr. Allen is a native of Worcester and always has made that city his home. His business life, covering a period of about 35 years, has been entirely devoted to the interests of the Norton Co., and of its predecessors. When F. B. Norton commenced the business in a small experimental way in a pottery shop on Walter street, Worcester, in the early '70s, Mr. Allen was employed as his bookkeeper. It was not until 1880 that the business assumed any importance and its real development dates from 1885. At first conducted under the name of the F. B. Norton Co., and later as the Norton Emery Wheel Co., the Water street plant was operated until 1886, when it was removed to another location comprising a single building. From that time growth has been constant and the plant now occupies many acres. When the Norton Emery Wheel Co. was organized on June 20, 1885, Mr. Allen was made secretary; Milton P. Higgins, president; George I. Alden, treasurer, and John Jeppson, superintendent. Excepting Mr. Higgins, who died in 1912, all these officials serve as directors at the present time. In 1906, the Norton Co. and the Norton Grinding Co. were incorporated with Mr Allen in an important executive position. Since that time until last week the business of the two companies had been carried on independently, although having the same board of directors.

In addition to his Norton affiliations, Mr. Allen is a director of the Merchants' National bank and a trustee of the Worcester Five Cents Savings bank. He was the first president of the Bancroft Realty Co., owner of the Bancroft hotel. He is a member of various Worcester clubs and business organizations and of the Engineers' club, Boston. He was chairman of the fourth Liberty loan campaign committee in Worcester.

William LaCosta Neilson, Leicester, England, foreign manager, and Carl F. Dietz, general sales manager, Worcester, have been made vice presidents,

CHARLES LUCIUS ALLEN

newly-created offices of the new Norton organization. Herbert Duckworth becomes sales manager of the grinding wheel department, and Howard W. Dunbar, assistant chief engineer of the Norton Grinding Co., sales manager of the grinding machine department. Clayton O. Smith, who has been sales manager of the Norton Grinding Co., has been consulting sales engineer to Mr. Dietz. Henry Duckworth is controller. Ross C. Purdy, research engineer is to leave the exclusive employ of the company to become a private consulting engineer in Buffalo, although he is retained as consulting ceramic engineer. Lewis E. Saunders, Niagara Falls, N. Y., manager of the abrasive plants, is transferred to Worcester, and in addition to these duties he becomes research engineer.

Charles H. Norton, for many years chief engineer of the Norton Grinding Co., Worcester, Mass., has been chosen chief engineer of the grinding machine department and John C. Spence, superintendent of the Norton Grinding Co., works manager of the same department of the Norton Co., Worcester, under the reorganization plan.

Charles W. Jimnette has been made district manager of the recently established office and salesroom at 73-75 West Congress street, Detroit, for the Norton Co., Worcester, Mass.

F. W. Willett who has been treasurer for the Standard Fuel Engineering Co., Detroit, recently was promoted to be president, succeeding J. J. Beaman, who resigned.

John H. Schuler has been appointed Pittsburgh sales manager for the Camden Forge Co., Camden, N. J. His territory will include western Pennsylvania, Ohio and West Virginia.

A. E. Metiver, Paris, France, is visiting makers of machine tools and machinery in Worcester, Mass., with a view of purchasing for a private enterprise, in no way affiliated with the French government.

Arthur K. Wood recently was elected vice president and treasurer of the Westinghouse, Church, Kerr & Co. Inc., New York. He formerly was president of the Franklin Trust Co.

John Siegel, manager of the Wesseling, Germany, plant of the Norton Co., Worcester, Mass., has arrived in this country to discuss with the officials of his company the future of the plant, now in the hands of British authorities.

C. N. Talhelm now represents the Landis Tool Co., Waynesboro, Pa., and the Kearney & Trecker Co., Milwaukee, manufacturer of milling machines, on the Pacific coast. He formerly was in the New York office of the Landis company.

F. L. Hutchinson, founder of the Heating & Power Equipment Co., Milwaukee, has retired from that company to engage in the practice of mechanical engineering with offices at 1226 First National Bank building, Milwaukee. Mr. Hutchinson will specialize in central station installations and general designing and equipment of power and heating plants.

Men of the Iron Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

JOHN A. CAPP, who recently was elected president of the American Society for Testing Materials, first was employed in the testing laboratory of the Thomas-Houston Co., Boston. He accepted this position after he completed a course in mechanical engineering at the University of Pennsylvania in 1891. After working two years the company was combined with the Edison Electric Co., Schenectady, N. Y., to form the General Electric Co., Mr. Capp was transferred to the testing laboratory of the Schenectady works. Shortly afterwards he was placed in charge of the laboratory, and as chief of the testing department has been an important factor in its development. Since he became affiliated with the American Society for Testing Materials in 1898, Mr. Capp has been active in standardizing the specifications for copper wire and steel, and was chairman of committee A-1 on steel and B-1 on copper wire. Mr. Capp has been a member of the executive committee during the past two years.

Joseph A. Rogers has become identified with the sales force of A. C. Daft, Oliver building, Pittsburgh, dealer in ferroalloys and ores.

Fred Hooving, works manager of the Standard Seamless Tube Co., Ambridge, Pa., recently left for Sweden, where he will spend the summer.

George L. Norris, metallurgical engineer of the American Vanadium Co., Pittsburgh, for many years, has been transferred to the sales department of that company with headquarters at the New York office, 120 Broadway.

Walter W. Fowler has sold his interest in the Northwest Trading Co., Chicago, and has resigned as an officer and trustee. He is about to leave soon for the Orient and will announce his future plans upon his return.

Albert E. Dyment, who has been elected vice president and chairman of the board of directors of the Canadian General Electric Co., Ltd., Toronto, Ont., in place of the late W. D. Matthews, is a prominent figure in financial and commercial life, a director of several other companies, vice president of the Maritime Coal, Railway & Power Co., and president of the Dyment Securities Loan & Savings Co.

C. F. Michael has been elected president of the reorganized Carroll Foundry & Machine Co., Bucyrus, O. The other officers of the company are A. G. Stoltz, secretary; W. H. Picking, treasurer, and Fred C. Horn, formerly with the Ohio Foundry Co., assistant secretary-treasurer.

Howard W. Callahan, for the past two years a chemist at the Worcester Gas Light Co., Worcester, Mass., has resigned to take charge of research work in connection with combustion furnaces and thermal efficiency with the Jones & Laughlin Steel Co., Pittsburgh.

Alex Lentz, who for the past five years has been secretary and manager of sales of Brown's Copper & Brass Rolling Mills, Ltd., New Toronto, Ont., resigned on July 1. He has become associated with the Kent Ockley, Ltd., Toronto, Ont., as vice president, secretary and treasurer.

Scott Turner, E. M., has recently been appointed consulting engineer to the Mining Corp. of Canada, Ltd., 1511-20 Bank of Hamilton building, Toronto, Ont. Mr. Turner has had an extensive experience in consulting mining work, not only in the United States and Canada but in many foreign countries.

Frank R. Whitehead has become purchasing agent for the Parker Co., 165 Broadway, N. Y., exporters and importers. He formerly was purchasing agent for the United Steel & Metal Corp. The Parker Co., has branch offices in Japan and the Scandinavian countries.

H. S. Wineland, at one time connected with the Pittsburgh agency of the Missouri, Kansas and Texas railroad and later chief clerk to David W. Kuhn while the latter was fuel administrator for the Pittsburgh district, recently was appointed sales manager of the Le Moyne Steel Co., Pittsburgh.

E. W. Kratzer on Aug. 1 will become manager of the Pacific coast sales office to be established in the Monadnock building, San Francisco for the Oliver Iron & Steel Co., Pittsburgh. Mr. Kratzer for a number of years was Pacific coast sales agent for the American Iron & Steel Mfg. Co., Lebanan, Pa., now a part of the Bethlehem Steel Co. He recently resigned as assistant manager of sales of the Pacific coast office of the Bethlehem Steel Co. to join the Oliver company.

J. I. Thompson, chief engineer, and A. W. Grant Jr., gas engineer of the Koppers Co., Pittsburgh, designer and builder of by-product coke and gas oven plants, who have been investigating the by-product coke oven practice in France, Great Britain, Belgium and Sweden, expected to sail for home from Christiania, July 3.

Frank L. Estep has been made a member of the consulting engineer firm, Perin & Marshall, 2 Rector street, New York. For several years he was chief engineer of the Tennessee Coal, Iron & Railroad Co., Birmingham, Ala., and later became identified with the Nova Scotia Steel & Coal Co., Sydney, N. S., in a similar capacity.

John Gillespie succeeds Arthur S. Breithaupt as general superintendent of the Philadelphia Electric Steel Corp., Conshohocken, Pa., which is controlled by the American Metallurgical Corp., Franklin Trust building, Philadelphia. Mr. Gillespie has been with the steel casting department of the Midvale Steel & Ordnance Corp. for many years.

Albert Mann recently resigned as purchasing agent of the Illinois Central railroad to become vice president in charge of purchases of the American International Steel Corp., New York City. Morris Metcalf continues as vice president in charge of the company's business. No successor yet has been named to Lieut. Col. Merrill G. Baker, who recently resigned as president of the corporation.

Jose M. Garmendia, who for the past two years has been connected with the iron, steel and machinery departments of the Federal Export Corp., sailed June 28 for Buenos Aires. He will take charge of these particular departments of the Federal Export Corp., in Argentina under the direction of the general manager, George V. Guyer. Mr. Garmendia is a member of one of the well known steel families in Spain, and obtained his early experience in the manufacture of steel in that country.

British Labor Restricts Output

Absenteeism and Tendency to Shirk in Coal and Ore Mines Curtails Iron Production—Supplies Are Short—Iron and Steel Wages Still Advancing—American Finished Products Competing Successfully in British Markets

Bureau of THE IRON TRADE REVIEW,
Prince's Chambers, Corporation St.,
Birmingham, Eng., June 6.

ALTHOUGH government restrictions are removed other limitations to output and to trade generally seem to be just as difficult to overcome. The report of Pease & Partners, Ltd., just issued says:

The output of the company's products has not been equal to the demand. The shortage of labor was felt in every department up to the time of demobilization; the shortage still continues at the iron works and iron-stone mines but the most serious feature is that the output per man employed at the colliers and iron-stone mines shows a heavy reduction, owing in some cases to absenteeism and in others to less work done per shift.

This shortage of supplies is one of the most ominous facts the trade has to face. In Cumberland the furnaces in blast have been considerably curtailed since the beginning of the year, and now, from the same cause, another furnace has had to be damped down at Cleator Moor in the heart of the ore field. At first it was said the shortage was due to the influenza scourge, but that explanation no longer is available and the inference is that as the coal owners do not hesitate to declare the men are not doing their best to supply ore in adequate quantities.

As in other branches of the trade, the export business is the first to suffer, no export licenses being issued until home requirements have been met. This is embarrassing to those of our foreign customers who have been accustomed to depend upon supplies from this country. It is impossible to get sufficient foundry iron, and the output of castings is being reduced accordingly, where forge iron cannot be mixed to make up for the deficiency. Forge iron is fairly plentiful. In fact, some of the Staffordshire furnaces are putting some of their iron on the bank, to be picked up later, an almost forgotten experience.

The northern ironworkers get a raise of 15 per cent on their wages as the result of the wages board ascertainment of selling prices by firms connected with the northern board for the two months ended April 30. The average selling price was £18 5s 7d ($87.14). This is attributable to the largely increased rates paid for bars. A year ago the average selling price was £14 2s ($67.68) while for January and February of this year £16 12s 10d ($79.78). Angles are 13s 3d ($3.18) more than in the last return and £4 12s 4d ($22.16) more than a year ago. The men received an increase of 12½ per cent on the last return so that the increase since the beginning of the year is 27½ per cent. The total rise in northern wages since August, 1914, is 125 per cent. The output is slightly below that of a year ago.

Iron Shortage is Far-reaching

The shortage of output in the iron trade is working mischief in various directions. The Cradley chain trade is nearly stagnated. There is no lack of call for chains, but the makers cannot get the requisite supplies of bars. Some of the chain shops have been restricted to one day per week. A few days ago, a large maker visited Birmingham warehouses to pick up any old lots of bars he could get. He was quite indifferent as to the charges, and was glad to get the material at any price. This state of things represents an entire change, as in the old days the Cradley chain makers often succeeded in beating down prices below the standard. A new trouble has been added to this industry, and that of nut and boltmaking, through the strike at the Earl of Dudley's pits which has stopped the supplies of coal, and shut down all the earl's great works with several others in addition. The chainmakers would be glad to use some of the American bar iron coming over; but the general impression here is that the metal will not be altogether suitable, American iron having the reputation of being rather "steely." It is hoped, however, that it will serve for nuts and bolts. There will be a scramble for the first cargo of iron coming over whenever it arrives.

Labor troubles are constant, and nearly universal. The ironmasters have made a great point of carrying out in letter and spirit the new scale adopted by the wages board to adapt wages to the 8-hour system. But this has not prevented some of the men giving notice to leave in case they fail to get satisfaction on their claim for higher wages recently presented to the board. This in itself is a flagrant violation, equally of the board's regulations, and of the honorable understanding maintained in the trade, which binds both employers and workmen to maintain production pending any wage controversy. It means, of course, that the men if they do not get what they want, mean to throw over the wages board and enforce their demands by strike—another sign of the new spirit prevailing between capital and labor—a spirit of a retrograde and utterly indefensible character.

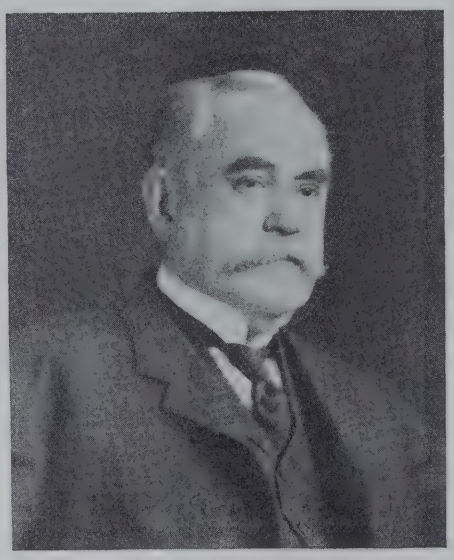
THE IRON TRADE REVIEW cable received today states that billets are being sent over from America to this country for $63, delivered. This is evidence that British material is being undersold here. The Welsh billets sent from Wales are at the rate of £13 10s ($64.80) at works or about £14 ($67.20) delivered here. British makers heretofore have consoled themselves under the weight of American competition by the reflection that at all events it has been in the foreign markets. But this boast is now at an end since the above figure undersells the British billets as will be seen to a substantial extent. Scotch sheetmakers it is learned have placed several thousand tons of sheet bars with the United States Steel Products Co.

The fact, however, gradually is being realized that the successful competition in open markets is nothing short of a disaster to this country. The British maker of steel bedstead angles finds that he is being undersold in Bombay, hitherto almost wholly a British preserve, by no less than £7 ($33.60). Any number of similar cases are quoted by London merchants who are in despair at the loss of old customers, who find American quotations irresistible. A large structural expert in Birmingham, who has the handling of numerous structural undertakings abroad, declares that to his certain knowledge, no less than $20,000,000 worth of trade has been lost to this country in the last four months through American competition in South American, colonial, Indian and other markets.

Obituaries

IRA B. BASSETT, aged 71, retired steel merchant of Cleveland, died last week at his home in Hyannis, Mass. He was born in Hyannis and was educated in New York. At the age of 21, he located in Cleveland, and entered the employ of the jobbing firm of Butler, Wick & Co., where he remained until 1871, when he became connected with another jobbing firm, W. H. McCurdy & Co. This company became involved financially and Mr. Bassett carried on the business for the creditors for about two years. The business then was turned over to him. In 1886, with George Presley Jr., he organized the firm of Bassett & Presley. For a few years, A. R. Train was a member of the firm and during that period it was known as Bassett, Presley & Train. In 1901 the Bassett-Presley Co. was organized with Mr. Bassett as president. One year later Mr. Presley died. In June, 1911, the United States Steel Corp., through the Carnegie Steel Co., purchased the warehouse and stock of the Bassett-Presley Co., at Cleveland and took possession on July 1. Subsequently Mr. Bassett retired and re-established his residence in his native town.

C. A. Fuiden, vice president and general manager of the Continental Can Co., Chicago, died of heart disease at Minneapolis, June 17.



Edward A. Caswell, of Caswell & Starke, 99 John street, New York, nonferrous metal dealers, died June 25 at Westchester, Pa., aged 75.

William J. Schilling, aged 61, a retired foundryman, died recently at his home in Columbus, O. Mr. Schilling conducted a foundry in his home city for a period of 45 years.

Thomas Hill, aged 83, inventor of a patent steel dump cart, died recently at Jersey City, N. J. Mr. Hill was born in Birmingham, Eng., and removed to Jersey City 51 years ago.

J. Rossiter Valentine, president of M. D. Valentine & Bro. Co., firebrick manufacturers, Woodbridge, N. J., died suddenly of heart failure at Asbury Park, N. J., June 25. He was 74 years of age.

William Peat, aged 58, superintendent of masonry at the Farrel, Pa., plant of the Carnegie Steel Co.,

IRA B. BASSETT

and who laid the first brick for the initial building of that plant, died at his home in Sharon, Pa., June 24, after a lingering illness.

William A. Bole, vice president in charge of manufacturing of the Westinghouse Machine Co., East Pittsburgh, and for years a conspicuous figure in the foundry industry and in engineering circles, died at his home in Pittsburgh, June 16. He suffered a stroke of paralysis about a year ago and had been in ill health since. He was 58 years old. Following his graduation from the Allegheny high

WILLIAM A. BOLE

school, he took the examination for appointment to West Point. He passed successfully all but the physical requirements. He then entered the Western University of Pennsylvania, now the University of Pittsburgh, from which he was graduated with the degree of mechanical engineer in 1871. That year he entered the employ of the Westinghouse Machine Co. and remained with that company continuously until his death. In his capacity as vice president of the company he had charge of all of the foundry work. He was prominent in the affairs of several engineering societies, notably the Engineers' Society of Western Pennsylvania, of which he was president in 1900. He also was active in the American Society of Mechanical Engineers; in the Pittsburgh Foundrymen's association and the American Foundrymen's association, serving as vice president of the latter in 1910. He was a member of the Duquesne club of Pittsburgh and of the Engineers' club of New York.

James F. Larkin, organizer of the American Spiral Spring & Mfg. Co., Pittsburgh, died at his home in Pittsburgh, June 27, after an illness of about two years. He was born in Pittsburgh in 1857 and always made his home there. He retired from business several years ago.

Lewis A. Becker, vice president of the Bishop & Babcock Co., Cleveland, until his retirement from active business a year ago, died June 16 at his home in Chicago. He was president of the L. A. Becker Co. from 1900 to 1911, when it was consolidated with the Bishop & Babcock Co.

Thomas Hartley Given, Pittsburgh financier identified with the Crucible Steel Co. of America, the Window Glass Machine Co. and many banking and railroad interests, died at his home in Pittsburgh, June 28. He also was the owner of the *Pittsburgh Post* and the *Pittsburgh Sun*.

J. H. Bradley, president of the David Bradley Mfg. Co., Chicago and Bradley, Ill., died June 17, in Chicago. He was one of the founders and president of David Bradley & Co., when they located in Council Bluffs, Iowa, in 1882, who later were succeeded by Bradley, Merriam & Smith. He was prominent in the manufacturing, banking and social life of Chicago.

June's Tool Trading More Normal

Automotive Industries Lead All Buyers—Few Large Lists Current—Miscellaneous Inquiry Maintains Splendid Volume—Exporters Send Many Tools Overseas—Government's Tools Do Not Reach Market

MARKED for history as the month when Germany signed on the dotted line, June will be remembered in machine tool circles as the period when the market resumed some of its antebellum aspects. The improvement was not as great nor as steady as had been expected but it is believed that with the peace treaty now an accomplished fact hesitating buyers will fall into line and July will see many of the inquiries issued in June, translated into orders. While large lists, judged from a wartime standard, did not appear in number in June, a sufficient assortment of smaller inquiries were acted upon to make a considerable aggregate. The sale of new tools was somewhat hampered by the large amount of used machines which changed ownership. Delayed deliveries on many new tools militated against the invoicing of some large shipments. This latter factor also helped to influence buyers against placing their orders. Labor troubles both in the United States and in Canada, were a deterrent in many directions both among manufacturers of tools and the users of their products. Prices appear to have reached the low level and in some instances give every indication of recovering.

Automobile Trade Maintains Lead

FROM all reports, it is apparent that as has been the case for several weeks, the automobile trade in June led in the number of inquiries; in the number of orders and in the value of tools requested. In harmony with its May announcement of huge expenditures for buildings and new equipment, the General Motors Corp., Detroit, is reported to have purchased upward of $1,500,000 worth of tools from a Defiance, O., maker. The Studebaker Corp., Detroit, and South Bend, Ind., issued actual inquiries on its recently-announced 1919 requirements; it likewise made some extensive purchases. The Haynes Motor Car Co., Kokomo, Ind., bought several hundred thousand dollars worth of tools in Chicago and the Nash Motor Co., Kenosha, Wis., also took a fair number of machines. A Connecticut tool manufacturer is said to have given an option on about $500,000 worth of machinery to one automobile interest. A large list is expected from former Ford Motor Co. men, C. Harold Wills and John Lee, in the near future. They have acquired 3000 acres in Michigan for an automobile plant.

Floods of Miscellaneous Inquiries Filed

DIVERSIFIED lines of manufacturing activity again are reflected in June inquiries and orders for miscellaneous equipment. Industries generally find themselves in need of replacement and fill-in machines and during the month, a liberal flow of inquiries was received by sellers in every district. Two of the largest lists came from the Chicago Pneumatic Tool Co., Chicago, for its Franklin, Pa., plant and the Worthington Pump & Machinery Corp., for its Cudahy, Wis., plant for 40 and 35 tools, respectively. Rubber products and tire manufacturers bought heavily in Cleveland and Cincinnati. The Goodrich Tire & Rubber Co., and the Firestone Steel Products Co., Akron, O., both issued fair sized lists. The Bethlehem Shipbuilding Corp., Sparrows Point, Md., purchased on a sizable list and the Bethlehem company's new subsidiary, the Redington Standard Fittings Co., Redington, Pa., bought 12 machines. The Osgood Bradley Car Co., Worcester, Mass., bought about 50 tools. The Midvale Steel & Ordnance Co., closed considerable machinery for the Cambria plant at Johnstown, Pa. The Bucyrus Co., Milwaukee, Wis., took about $200,000 worth of tools during the month and the Columbia Graphophone Co., Bridgeport, Conn., made total purchases of about $500,000. Many steel manufacturers also purchased cranes.

Government's Tools Still Unsold

PUBLISHED first in THE IRON TRADE REVIEW, the government's plan for the inventorying and disposal of its machine tools, attracted widespread attention. This method places a value upon each tool commensurate with the length of service. No federal tools appeared among the large numbers of secondhand machines offered for sale. Bids received on advertised lists of federal-owned machines were not acted upon during June; some were returned as rejected because they were too low. One eastern bidder who bid 90 per cent of market value, stated that after filing his offer, he heard nothing and believed that the government would not sell any tools until its inventory was complete. War plant machinery continues to appear in all markets. One of the largest lists to come out in June was that of the Savage Arms Corp., from its Philadelphia and Sharon, Pa., and Utica, N. Y., plants, valued at about $1,000,000.

Raliroad Buying Remains in Abeyance

WITH the passage by congress of the railroad revolving fund of $750,000,000, hope was revived among tool sellers that the long-deferred buying by railroads would commence. Requirements in many instances, have been lined up for some time, but purchases will not be made until the money is available. The Pennsylvania railroad, however, is reported to have purchased tools for its Columbus, O., and Logansport, Ind., shops as well as several cranes for Stark, O. The Baltimore & Ohio and the New York Central roads both issued specifications on some cranes. The Cumberland Valley and the Long Island railroads have out lists of 25 and 10 tools, respectively.

Exporters Absorb Considerable Machinery

SELLERS of machine tools abroad express faith in the future. They believe these markets will flourish in the near future, now that peace actually has been restored. During June many fair sized inquiries were received from overseas, particularly from France and England. It is claimed by American toolmakers' representatives abroad that the market across the ocean has been hurt by the reported sale of surplus tools by the United States government at 10 and 25 per cent below prevailing prices on new and used machines, respectively. One New York export house received an inquiry for 40 tools for France. English and French buyers took many milling machines and lathes from the Cincinnati district, which also furnished much miscellaneous equipment to Central and South America. Japan likewise has been a big buyer in both Cincinnati and Cleveland.

Machine Trade Lull Widespread

Belief Prevails However That Many Tool Requirements Will be Placed in July—Projected Buildings Numerous—Railroads to Buy Soon—General Electric and Hydraulic Pressed Steel Issue Lists

IF a lull precedes a storm, it would seem that a flood of business is due to break in the machine tool markets. Dullness prevails in practically every district, particularly in the East. In the Cleveland and Chicago territories, free buying is being done in small lots and single tool orders predominate. The aggregate of this business is considered fairly heavy. Foundation for the belief that July will be different from midsummer months of other years in point of tool buying is laid in the large number of tool inquiries current, upon which action has been deferred as well as in the many construction projects which would seem to spell extensive machine tool requirements. It is claimed that if prices could show some stability, some large buying would culminate.

As indicated at the recent railroad convention at Atlantic City, railroads were never more in need of equipment. It is thought that buying by these interests will materialize within the next two months.

Tool inquiries come from many different lines. Among those who recently issued fair sized lists are the General Electric Co., Schenectady, N. Y.; the A. B. C. Elevator Co., Jersey City, N. J.; and the naval fueling station, Constable Hook, N. J., in the East; the Hydraulic Pressed Steel Co., and the Hussey Power Parts Co., Cleveland, and the Ohio Oil Co., Findlay, O., in Cleveland.

Orders chiefly are confined to single tools and small lots. It is reported, however, that in Chicago, the Victor Mfg. & Gasket Co., that city, bought 10 punch presses. Several other purchases were made there, each comprising four tools each. The majority of sales cover one or two machines. The General Motors Corp. has been buying again in Detroit and Cleveland. The Eastern Rolling Mills Co., Baltimore, has placed its heavy equipment requirements in Pittsburgh and Avonmore, Pa., and in Chicago. The Weirton Steel Co., Weirton, W. Va., also bought some heavy equipment. Other orders are pending for this type of machinery in Pittsburgh and Cleveland. Crane orders in the East are fairly numerous, although large lists are absent.

Several announced building projects arouse expectations for large tool needs. Included is the new $1,500,000 plant at Columbus, O., for the Timken Roller Bearing Co., Canton, O.; a $2,000,000 plant at McCalle, Md., for the American Cellulose Chemical Mfg. Co., Baltimore; and three additions to the plant of the Superior Gas Engine Co., Springfield, O. Many other smaller additions and buildings have yet to announce their equipment requirements.

As announced from Washington and fully covered on another page in this issue, there is every likelihood that the Caldwell bill calling for the selling of the federally-owned tools to schools at 10 per cent of cost value to cover handling charges, will be enacted. It has the approval of the house committee.

Tools Dull; Cranes Active in Eastern Market

PROFOUND dullness characterizes the eastern machine tool market and the inactivity which has been in evidence of late is more pronounced than ever before. Inquiries are few and far between and only a few scattered machines are being placed. Included in the few inquiries current is that of the General Electric Co., Schenectady, N. Y., which is in the market for a turret lathe, grinders and some other small equipment.

Despite the prevailing inactivity, however, machine tool sellers remain optimistic. Those who visited the railroad convention at Atlantic City recently appear particularly cheerful. Prevailing opinion among those present was that considerable railroad buying would materialize within the near future or as soon as congress has finally passed on the appropriation bills now pending. The railroads generally, it appeared, were in greater need of equipment than ever before in their history. While some are still skeptical over the possibility of any early business materializing in the railroad market, owing to the incessant delay which has prevailed since the beginning of the year, the general concensus of opinion, however, appears to be that the next two months will see considerable railroad buying.

Eastern machine tool builders who have been urging the war department to dispose of its equipment by giving it to various vocational schools throughout the country have apparently lost their fight. It now is believed that these will be sold to the schools at 10 per cent of their cost value. An article from Washington covering this proposition appears elsewhere in this issue.

Included in recent contracts for machinery and equipment are those placed by the Eastern Rolling Mills Co., of Baltimore. The hot mills for this company's new plant will be erected by the National Roll & Foundry Co., Avonmore, Pa. The cold mills will be erected by the Hyde Park Foundry & Machine Co., Chicago. The furnaces will be installed by George A. Hagan & Co., Pittsburgh, and the driving gears and the pickling equipment has been awarded to the National Machine Co., also of Pittsburgh. It is stated that contracts in all run well over $700,000. Another Baltimore concern likely to be in the market in the near future is the

American Cellulose Chemical Mfg. Co., Ltd., which is now completing plans for the erection of a $2,000,000 plant at McCalle, Md. During the past few days, equipment has been purchased for a repair shop at the naval fueling station at Constable Hook, N. J The machinery includes a shaper, a few lathes and grinders. A few heavy tools have also been bought, it is understood, by the A. B. C. Elevator Co., Jersey City.

The eastern crane market, while far from active, does not present the appearance of dullness noted in the machine tool market. No large lists are up, but there continues to be a fairly satisfactory amount of small inquiries. The Standard Oil Co. finally has issued inquiries for all electric cranes it has had under contemplation for its Bayway, N. J., plant. The list, as it now stands, calls for two 30-ton cranes, with 5-ton auxiliary, 34-foot span; two 20-ton cranes, with a 5-ton auxiliary, 48-foot span; one 10-ton crane, 2-ton auxiliary, 21-foot span; and one 10-ton crane, 2-ton auxiliary, 30-foot span. The International Petroleum Co., Ltd., a subsidiary of the Standard Oil Co., 26 Broadway, New York City, is inquiring for a special gasoline operated crane of either 2 or 3 tons capacity. Shewan & Tomes, 10 Broadway, New York City, are inquiring for two 1½-ton jib cranes for shipment to China. Another new inquiry is that of the Dilts Machine Works, Fulton, N. Y., calling for a 10-ton and a 5-ton overhead crane, both of 20-foot span. H. J. Horn & Sons, Lister avenue, Newark, N. J., are expected to close within the next few days on a 5-ton crane, with a 60-foot span. Julius Blum & Co., 510-512 West Twenty-fourth street, New York City, will require an overhead crane for a warehouse improvement. The company deals in iron and steel products. Jerome A. Jackson, recently noted as being in the market for a 20-ton electric crane for Long Island City, also is inquiring for a 10-ton electric crane with a 50-foot span, for Bridgeport, Conn. The Eastern Rolling Mill Co., Baltimore, it is learned, placed the eight overhead cranes recently referred to, with the Chesapeake Iron Works. Other recent awards include a 3-ton crane with 17-foot span for the Nichols Copper Co., Laurel Hill, L. I., this business going to Niles-Bement-Pond Co.

Many Tools Sold in Small Lots

INQUIRY and selling are in heavy aggregate volume in the machine tool trade in Chicago, represented in small lots and single tools, as has been the case for some weeks. Large lots continue practically unknown. An illustration is found in the experience of one seller when in a day's business one buyer took a miller, a boring mill, a radial drill and a shaper; another took a lathe and a miller and a third took two lathes, a miller and a shaper. It is rare where a buyer asks for or buys 10 machines of one kind. In other words, present buying is a process of sorting up and filling in rather than buying complete outfits, as was the case during the war period.

The recent informal inquiry of the Rock Island arsenal for considerable equipment has not yet been made formal, although it is understood the appropriation has been made available. This is expected to be active in a short time.

The Worthington Pump & Machinery Co. has not yet closed on its recent inquiry. The Victor Mfg. & Gasket Co., Chicago, which is about to build a new plant, is placing orders for its equipment and recently bought 10 punch presses of a type already in use in its present plant. In the experience of several dealers inquiry is increasing steadily. No changes have been made in prices, though advances are expected to be made later in the year.

Heavy Equipment Makers Wait for Closings

SOMETHING of a lull has developed in the Pittsburgh machinery and tool market. While a good many orders for tools are being placed, they are largely for individual machines and only a few lists of any considerable size are being closed. In the heavier lines, aside from an inquiry put out by a Pittsburgh district manufacturer of sheets for a crane and a few other pieces of equipment needed in connection with an enlargement of his plant, it has been a case of manufacturers sitting back and waiting for buyers to close on some of the inquiries put out some time ago and upon which they have been quoted by various builders. Manufacturers of cranes and other heavy equipment are not running their plants much better than 40 per cent of capacity at present.

Miscellaneous Demand Keen; Deliveries Poor

MANUFACTURERS who supply the Cleveland demand for machine tools and machinery are said to have taken so many orders, they now are hampered in making deliveries. Many of them report that they are having labor troubles and in several cases, this is known to have held up delivery. One dealer reports that his

Japan Fast Becoming Factor in Tool Manufacture

THAT within five or six years the Japanese factory efficiency and skill in machine tool plants will be developed to a point where products will measure up to any turned out by American manufacturers was the view expressed to Commercial Attache James F. Abbott at Tokyo recently by an American iron and steelmaker of prominence. This expert has spent some time in Japan with the intention of investing and participating in a co-operative enterprise of some sort and has made a thorough study of the manufacturing plants of that country. He believes that the future of American competition in machine tool products is not good for the reason that Japanese plants are gradually getting into a state of efficiency.

On the other hand, however, his investigations show that Japan is extraordinarily deficient in the fundamental field of foundry practice and believes that it will be some time before Japan can become independent of the United States in the way of fabricated materials out of which machines and machine tools are made. This is an interesting point, it is declared, and worthy of being considered seriously by American iron and steel men. Japanese methods in foundry work are reported as being crude and inaccurate and unskilled. Moreover, it is found that in point of castings actually produced, an American at $4.50 a day is more efficient than a Japanese at 40 cents since the former can set up 60 box castings in a day, while the latter with a helper can set up only four. This observation was made at the Kawasaki foundry. It is also stated that the Mitsubishi works at Nagasaki are by all odds the most up-to-date and efficient in Japan.

Is The Lack of Hoists Robbing You of Profits?

WHENEVER you permit a crew of men to handle pieces that could be better handled by one man and a Link-Belt Electric Hoist, you are robbing yourself of profits that should be yours.

Not only is the time of the men wasted, but also the time of the operator and machine which is waiting for the work.

There are few investments in mechanical equipment that render greater returns than a hoist. It is used every day in the year to save productive time of machinery and skilled labor. It increases output and reduces costs.

Link-Belt Electric Hoists are made in many sizes and types. They can be installed in old plants as well as new whether the headroom be small or great.

Let our engineers help you increase your output and profits. Their years of experience are at your service. Write us. Ask for Book No. 246.

LINK-BELT ELECTRIC HOISTS

customers are more concerned about obtaining shipment against old orders than they are about placing further requirements; he has not taken an order for about a week. Other dealers report that small orders are coming in freely, although there seems to be a widespread hesitancy to close, owing to the more or less unsettled condition regarding prices. It is thought that if these become more stationary, large buyers will close.

Purchasing agents evidence a lack of knowledge regarding delivery possibilities on machines which are not made for stock. Several oil companies who delayed making their purchases of pipe threading and pipe threading and cutting machines now are demanding quick deliveries and builders are unable to ship this side of from three to four months. This is what the Ohio Oil Co., Findlay, O., is up against on its requirements of four pipe machines of varying sizes including a 16-inch, for its Oklahoma operations. The B. F. Goodrich Co., Akron, O., wants an 18-inch pipe machine.

Practically all industrial operations are represented in the miscellaneous inquiries and orders received. Most of these cover, one, two or three machines, as has been the case for several weeks past. Larger inquiries are rare. The Hydraulic Pressed Steel Co., Cleveland, however, issued a list of 12 machines of various types last week. The Hussey Power Parts Co., 1341 Giddings road, Cleveland, is in the market for a 20-inch shaper, a No. 2 universal milling machine and a No. 2 arbor press. In addition to the list issued early last month, the Truscon Steel Co., Youngstown, O., wants a Toledo No. 168 or 168¼ or a Bliss No. 3 or 4 power press, a tumbling barrel, 30 inches in diameter and two open-end tumbling barrels. The Torbenson Axle Co., Cleveland, as well as the Firestone Steel Products Co., Akron, O., still are looking for equipment. The Ohio Millwrighting Co., 1958 West Forty-fifth street, Cleveland, is understood to be in the market. The Dow Chemical Co., Midland, Pa., wants a powerdriven roll, 8 to 10 feet, with ½-inch plate capacity. The Defiance Screw Machine Products Co., Defiance, O., desires a Barnes standard all geared 24-inch drill or tapper. J. P. Devine Co., Buffalo, manufacturer of vacuum drying, evaporating and chemical apparatus, will buy machines and tools for its general assembling department. Greenlee Bros., who operate the Jackson Augur Bit Works, Jackson, O., are to install machinery soon in a new addition. The Chelsea Screw Co., Chelsea, Mich., is purchasing automatic screw machines, drills, grinders, milling machines, etc. The Bryan Screw Machine Products Co., Bryan, O., is understood to be about ready to purchase additional machinery. The Timken-Detroit Axle Co., Canton, O., has started work upon an addition to its machine shop which will require machine tool equipment. The Cleveland Milling Machine Co., Cleveland, again has increased its capitalization to $2,000,000 and is understood to be equipping itself to manufacture automobile motors. The Lake Erie & Western railroad will establish a new machine shop at Peru, Ind.

With many large projects in the formative stage, July is expected to be different from the usual dull summer months, since large tool needs are indicated. Among the major construction items noted is a large branch plant to be erected at Columbus, O., by the Timken Roller Bearing Co., Canton, O. Buildings and machinery are to cost $1,500,000 and a list is expected soon, since the plant is to be built within the next 30 days. Three additions to the plant of the Superior Gas Engine Co., Springfield, O., which supplies the Standard Oil Co., with its engines, are expected to develop large tool requirements. The Bourne-Fuller Co., Cleveland, is erecting a warehouse and among the equipment wanted is two cranes. Equipment for the new buiilding being erected by the Home Elevator Co., Indianapolis, will cost $30,000 and includes an electric crane. The Ohio Electric & Controller Co., 588 Maurice avenue, Cleveland, is to build a 2-story addition, 80 x 100 feet, and probably will need some machinery, as will the Cuyahoga Spring Co., Cleveland, which has let a contract to the Austin Co., for a 2-story factory in which it will manufacture coiled wire springs.

The trade is much interested in the announcement out of Washington carried on another page in this issue, that in all probability the government's stocks of machine tools are not to be sold on the open market. An amended bill features the selling of this equipment to educational institutions at 10 per cent of their cost value. While Cleveland sellers have always more or less discounted the effect of placing this equipment on the open market, they had conceded that it would be a factor in the sale of both new and used machinery. The statement now is made that the passing of the bill as amended will solve a really large problem.

Construction and Equipment

Concise and Timely Business Building Opportunities from the Field of Industry

Among New England Plants

CONCORD, N. H.—The Power Securities Co. has been incorporated to develop power plants of all descriptions with $27,500,000 capital by Thomas Hollis, Joseph W. Worthen and Robert C. Murchie.

BOSTON.—The Holtzer Cabot Electric Co. is having plans made for a storehouse.

BOSTON.—The Leary Automatic Muffler Co. recently was incorporated with $90,000 capital, by D. Francis Leary, Francis M. Doyle and George F. McKelleget.

BOSTON.—The Alexander-Porter Co. recently was incorporated to make automobile supplies with $25,000 capital, by William L. Alexander, C. Harold Porter, Quincy, Mass., and A. E. Yont.

BOSTON.—The Hadley-Hayden Co. has been incorporated to make mechanical and electrical appliances with $25,000 capital, by Ralph E. Hadley, Fred L. Hayden, South Braintree, Mass., and B. P. Hadley.

NEW BEDFORD, MASS.—John I. Paulding, Inc., has been incorporated to make electrical fixtures, appliances, etc., with $75,000 capital, by Gustav A. Johnson, John I. Paulding and A. A. Johnson.

NORTH CAMBRIDGE, MASS.—The Beckwith Box Toe Co., 35 Clarendon avenue, has had plans drawn for a machine shop and storage building, 2-stories, 32 x 92 feet, estimated to cost $20,000.

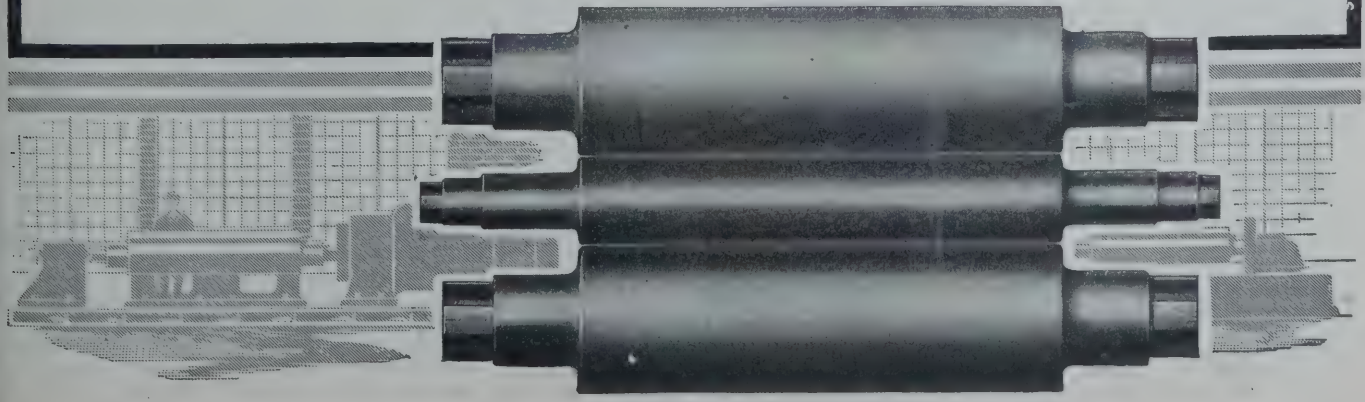
WATERTOWN, MASS.—The war department has let the contract to the E. D. Ward Co., Worcester, Mass., for alterations and additions to the machine, smith, press and hardening shops and a concrete foundation for a 78 x 500-foot storehouse for ma-

SIGNING PEACE PAPERS FOR R. M. J.

Say Fellows:

You had better sign those orders for the Hubbard Rolls or you wont be able to get them.

You know what happened to the Huns by not signing early.



So Long,

Rolling Mill Jim.

Hubbard Steel Foundry Co.

EAST CHICAGO, IND.

All Kinds of Iron and Steel Rolls and Steel Castings.

chinery at the United States arsenal, to cost $150,000.

WEBSTER, MASS.—William C. Klebart and George H. Rowley, metal workers, plan to erect a 2-story, 45 x 90-foot plant, which will be a branch of their Putnam, Conn., business.

WORCESTER, MASS.—The M. B. Hill Co. has been incorporated to make machine tools with $5000 capital, by Milton B. Hill, William Arter and Harold Tattersall.

CRANSTON, R. I.—The General Fire Extinguisher Co. has let a contract for a pipe shop, 3-stories, 70 x 120 feet, estimated to cost $70,000.

PROVIDENCE, R. I.—The Atlantic Mills has let a contract for a power house, 3-stories, 46 x 98 feet, estimated to cost $25,000.

PROVIDENCE, R. I.—The Iodine Antiseptic Pen Co., Inc., has been incorporated to make pens with $50,000 capital, by Montafix W. Houghton, John F. Giles and Henry Hood.

BRIDGEPORT, CONN.—The Schwardtle Stamp Co. has let a contract for a plant, 3-stories, 40 x 100 feet, to cost about $25,000.

BRIDGEPORT, CONN.—The Presteel Mfg. Co., 183 John street, recently incorporated, has perfected its organization and will engage in the manufacture of steel specialties. Alexander Berg is president.

HARTOFRD, CONN.—The Fuller Brush Co., maker of wire brushes, etc., will build a 4-story factory to cost $150,000.

GROTON, CONN.—Plans will be ready to figure July 5 for a 3-story, 60 x 170-foot mill to cost $90,000 for the Max Pollock Co., which is in the market for motors, shafting hangers and elevators.

MILFORD, CONN.—The Lake Engineering Co. has been incorporated with $5000 capital by Cecil P. Ford, Thomas E. Lake and R. Melvil Keys, Bridgeport, Conn.

NEW BRITAIN, CONN.—The Cooley Co., Inc., iron and steel, recently was incorporated with $1,000,000 capital, by H. S. Hart, N. P. Cooley, E. N. Stanley and others.

NEW HAVEN, CONN.—The Standard Iron Works Co. recently was incorporated with $10,000 capital, by S. D. Pardoll, Louis Sachs and others.

North Atlantic States

ALBANY, N. Y.—The William G. Sheehan Construction Co. has the contract to erect a plant for the Thacher Foundry & Propeller Corp.

BROOKLYN, N. Y.—The Metal Package Co. is ready for bids for a plant addition, 5-stories.

BROOKLYN, N. Y.—The Edison Electric Illuminating Co., 360 Pearl street, has awarded a contract for a plant addition.

BROOKLYN, N. Y.—The York Sheet Metal Works, Inc., has been incorporated with $5000 capital, by I. Litner, H. Blecher and S. Wacht Jr., 170 Broadway.

BROOKLYN, N. Y.—Ground has been broken for the erection of the first unit of the proposed plant of the E. W. Bliss Co. The plant will be in four units and when completed will be 200 x 1200 feet.

BROOKLYN, N. Y.—Oscar M. Carter, Inc., tools, hardware and agricultural implements, recently was incorporated with $50,000 capital, by A. P. Saas, 140 West Fifty-seventh street, R. C. Perlman, 949 Fox street, and M. Berger, 600 Beach street.

BUFFALO. — Large additions to its plant are planned by the J. P. Devine Co. Foundations for a new foundry, 90 x 225 feet, are being put in.

BUFFALO.—The Auto Device Mfg. Co. recently was incorporated with $100,000 capital, by W. Miller, G. A. Loohn and P. S. Wheaton, Kenmore, N. Y.

BUFFALO.—The Auto Motive Tractor Corp. of America has been incorporated with $4,000,000 capital, by J. O. Moore, H. L. Jauch and F. J. Maloney.

BUFFALO.—The M. & M. Tractor Co. has been incorporated with $300,000 capital to manufacture tractors, etc., by C. M. Baldy, Marine Bank building. T. R. Wheeler and J. L. Kenefick.

BUFFALO.—The Smith Metal Arts Co. has been incorporated with $100,000 capital, by F. C. Smith, C. F. Damm and A. H. Jamieson. The company is establishing a plant at Niagara street and Massachusetts avenue.

MONTAUK, N. Y.—C. W. Parks, chief of the bureau of yards and docks, navy department, Washington, is taking bids for a power house.

MOUNT VERNON, N. Y.—The Charleston Dry Dock & Machine Co. has been incorporated with $2,225,000 capital, by Harold J. Gallagher, Winthrop H. Kellogg and Robert M. Reid.

NEW YORK.—The John Trageser Steam Boiler Works will erect a small addition. J. O. Whittenback is architect.

NEW YORK.—The Tungsten Tool Co. recently was incorporated with $50,000 capital, by G. Posner, A. and J. Simons, 2139 Daly avenue.

NEW YORK.—The Empire Metal Aircraft Corp. has been incorporated with $50,000 capital, by J. H. Claffy, W. M. G. Watson and H. A. St. George, 41 Park Row.

NEW YORK.—The David E. Allen Yonkers Foundry has been incorporated with $25,000 capital, by H. Whitehead, W. S. Pronk and E. E. Allen, Yonkers, N. Y.

NEW YORK.—The Universal Metal Parts Mfg. Co. has been incorporated with $10,000 capital, by J. Mumaw, G. Meyer and S. A. Lichtenstein, 608 West 188th street.

NEW YORK.—The Un-X-Ld Products Corp., signal devices, recently was incorporated with $10,000 capital, by N. Fishman, A. J. Concotta and R. M. Schnuer, 51 Chambers street.

NEW YORK.—The Finkel Umbrella Frame Co., B. Finkel, president, 2534 East 177th street, has had plans drawn for a plant, 1-story, 100 x 200 feet, estimated to cost $75,000.

NEW YORK.—The Martaler Mfg. Co. recently was incorporated with $10,000 capital to engage in the manufacture of electrical devices, by A. Ascher, M. Fogel and A. Kutz, 320 Broadway.

NEW YORK.—The American & British Mfg. Co., automobiles, airplanes, etc., recently was incorporated with $3,260,000 active capital, by W. J. Cullen, D. T. Connett and C. M. McKeever, 120 Broadway.

NEW YORK.—The Riverside Package Machinery Co., foundry and factory supplies, has been incorporated with $50,000 capital, by J. D. Reifsnyder, M. Galibert and E. Hirschberg, 434 East 157th street.

NEW YORK.—The Morse Magneto Clock Co. has been incorporated to manufacture clocks, etc., with $25,000 capital, by A. G. Morse, 233 Broadway, J. S. Morse, 222 Riverside drive, and E. F. Howard, 163 Lefferts place, Brooklyn, N. Y.

NEW YORK.—The Morrow Sales Corp. has been incorporated to manufacture machinery and supplies with $25,000 capital, by R. H. Clarke, 53 West Eighty-fifth street, I. F. Browne, 209 West 102nd street, and M. E. Barnaby, 20 Stephens court, Brooklyn, N. Y.

NIAGARA FALLS, N. Y.—The Carborundum Co. has let a contract for a tank storage building, 3-stories, 37 x 85 feet.

NORTH TONAWANDA, N. Y.—The Buffalo Bolt Co. will build an addition, 81 x 171 feet.

OSSINING, N. Y.—Hughes-Saunders Motors has been incorporated with $50,000 capital, by C. J. Hughes, E. L. Ryder and W. Saunders.

OSWEGO, N. Y.—The Hinkley Towing Co. has arranged to build a ship repair works to cost $40,000.

ROCHESTER, N. Y.—The Rochester Auto & Tool Co. recently was incorporated with $25,000 capital, by C. Wassill, K. Wojdakowicz and F. Rzepeci.

SYRACUSE, N. Y.—The Syracuse Auto Supply Corp. recently was incorporated with $60,000 capital, by H. W. Smith, L. W. Bennett and C. H. Sanford, to manufacture automobile specialties.

Syracuse, N. Y.—The King Shipping Case Corp. is being organized with $750,000 capital, to manufacture steel shipping cases. Those interested are F. C. King, A. N. Ellis, Levie S. Chapman and W. H. Foxhall.

ELLWOOD CITY, PA.—The Ellwood Nail Co. will build an addition 185 feet long.

FRANKLIN, PA.—The Chicago Pneumatic Tool Co. has arranged to build a plant here.

HOMESTEAD, PA.—The Homestead Valve Mfg. Co. plans to build a room for its melting furnaces.

LEECHBURG, PA.—The American Natural Gas Co. will build a plant here.

LEECHBURG, PA.—The Hutchinson Car & Roofing Co. has let the contract for a plant here.

McKEESPORT, PA.—Herman Telley, of this city, will fit up a plant to manufacture gas for welding purposes.

PHILADELPHIA.—The Niles-Bement-Pond Co. is taking bids for a boiler house, 1-story, 44 x 60 feet.

PHILADELPHIA.—A contract for the erection of a $262,000 pattern shop at League island has been awarded to M. H. C. McCloskey Jr., by the navy department.

PHILADELPHIA. — The Weston Automatic Steam Machinery Co. recently was incorporated with $100,000 capital, by Carroll C. Weston, Walter R. Moore and Edward E. Brent.

PHILADELPHIA.—The Philadelphia Textile Machine Co. recently obtained a permit to erect a plant addition, 1-story, 75 x 240 feet, estimated to cost $51,000. The contract has been let to the Hennebique Construction Co., 1170 Broadway, New York.

SOUTH ALLENTOWN, PA.—The International Motor Co. is taking bids on separate contracts for a factory and assembling building, 1-story, 300 x 600 feet, estimated to cost $150,000.

BUTLER, N. J.—The Apollo Magneto Co. and the Magneto Winding Co., Brooklyn, N. Y., with Isaac Q. Gurnee, Charles G. Wilson and William L. McCue, will build a plant for the manufacture of magnetos.

CAMDEN, N. J.—The Camden Auto Radiator Co. has awarded a contract to Potts Bros. & Cooperson for a small addition.

CAMDEN, N. J.—The Norton Mfg. Co., 38 South Thirty-second street, has been incorporated to manufacture novelties, hardware, etc., with $25,000 capital.

EAST ORANGE, N. J.—The Synthetic Coal & By-Products Corp. has been incorporated with $1,000,000 capital to manufacture a substitute for coal, by J. B. Day, B. J. Cummings and Charles Herzog.

JERSEY CITY, N. J.—The Diamond Flake Graphite Co., 15 Exchange place, recently was incorporated with $200,000 capital.

JERSEY CITY, N. J.—The Poertner Motor Car Co., Inc., of New Jersey, 15 Exchange place, recently was incorporated with $25,000 capital, to manufacture automobiles, airplanes, etc.

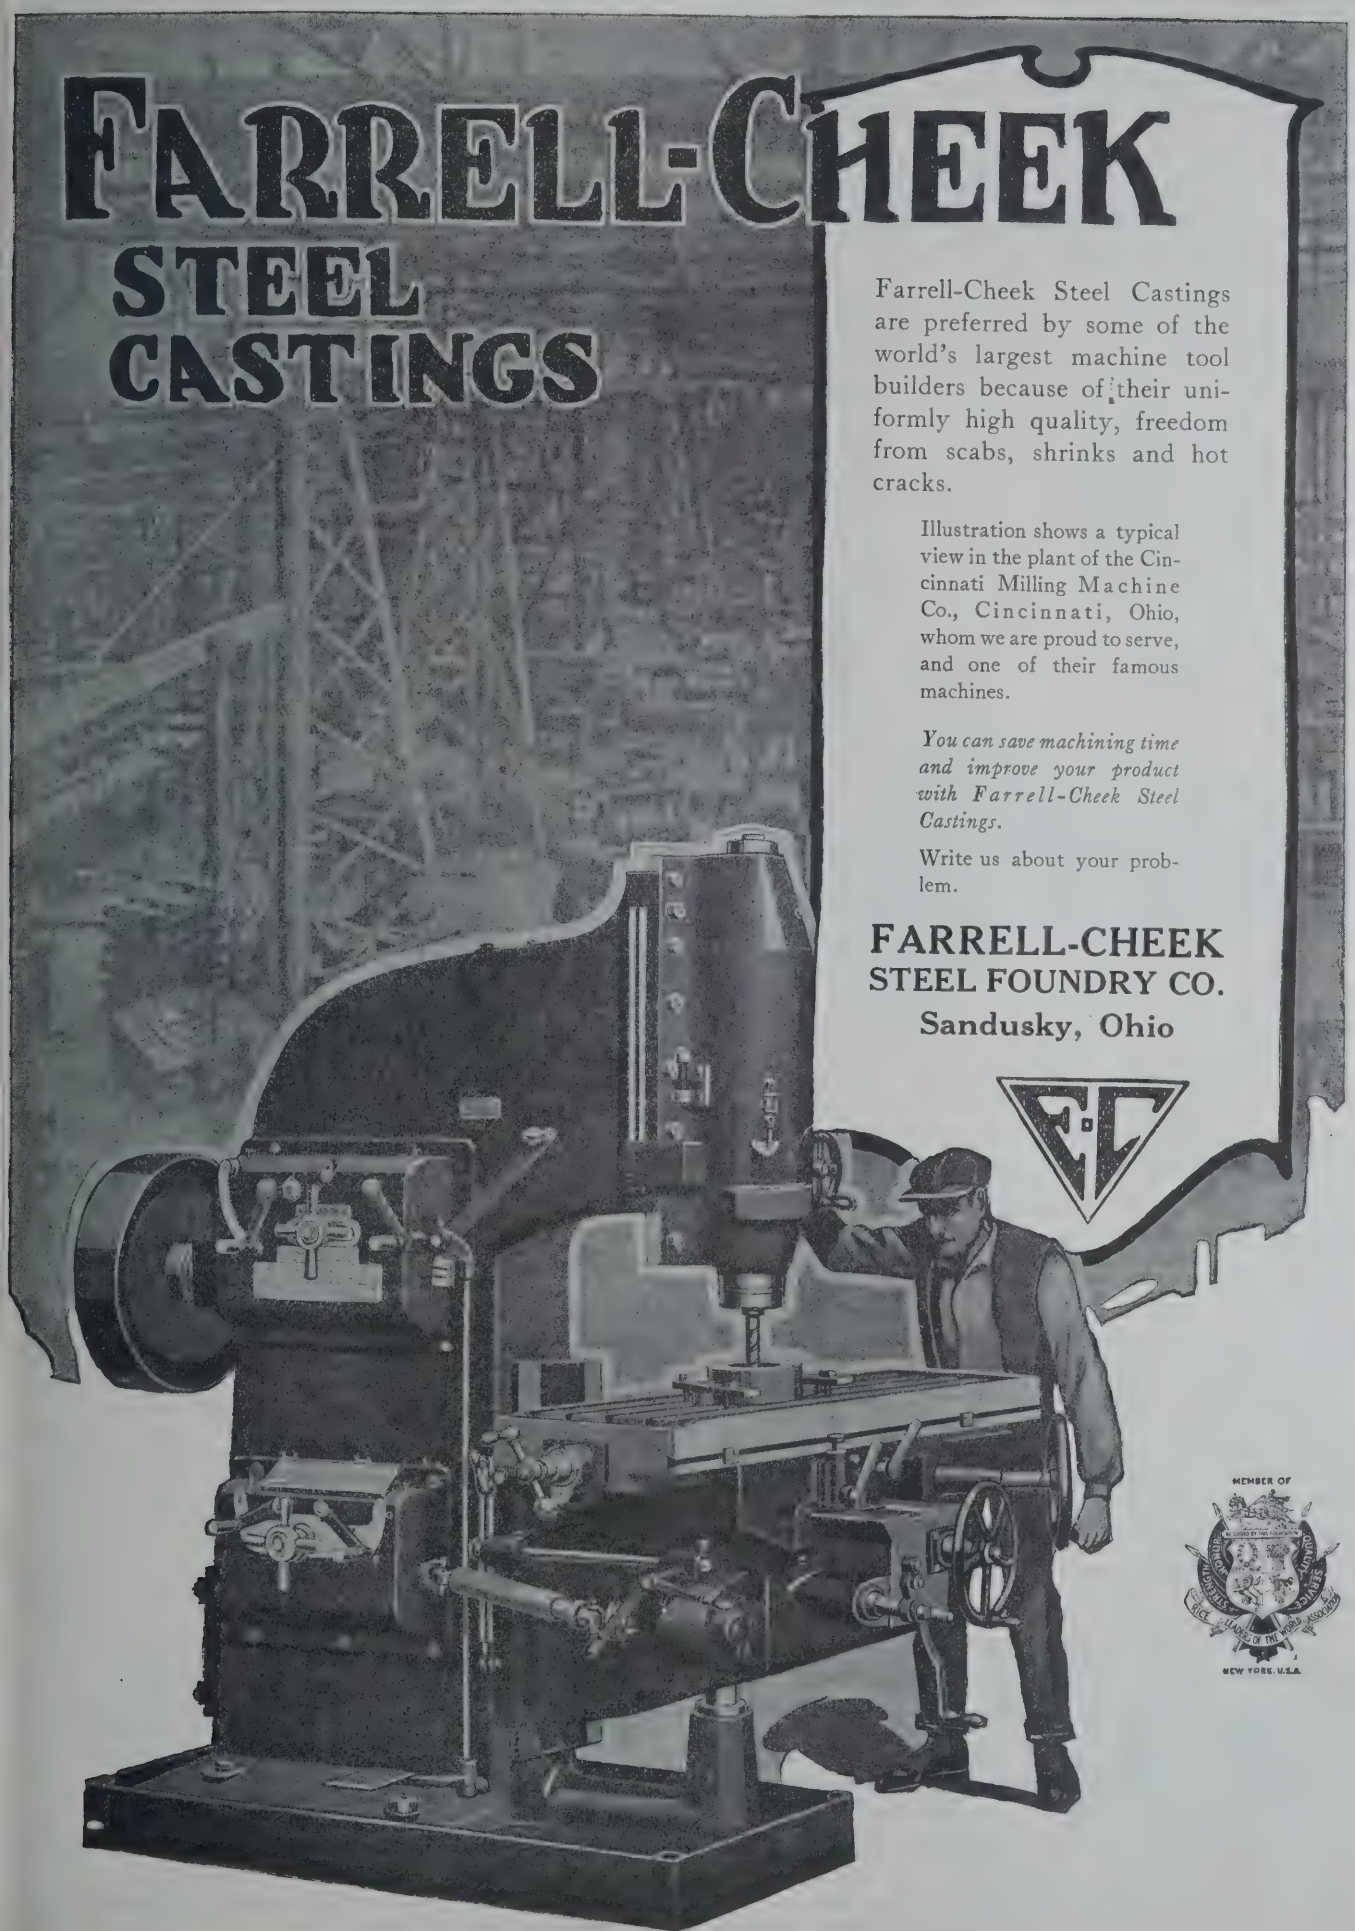
JERSEY CITY, N. J.—The D. D. Mills Co. has been incorporated with $18,000 capital to manufacture and deal in castings, by Agustine Davis, William G. McCune and William Lester, Plainfield, N. J.

NEWARK, N. J.—The Natural Carbonic Gas Co. will build additions estimated to cost $16,000.

NEWARK, N. J. — The A. W. Wheaton Brass Works will build a 2-story office and storage building.

NEWARK, N. J.—The American Aluminum Ware

FARRELL-CHEEK STEEL CASTINGS



Farrell-Cheek Steel Castings are preferred by some of the world's largest machine tool builders because of their uniformly high quality, freedom from scabs, shrinks and hot cracks.

Illustration shows a typical view in the plant of the Cincinnati Milling Machine Co., Cincinnati, Ohio, whom we are proud to serve, and one of their famous machines.

You can save machining time and improve your product with Farrell-Cheek Steel Castings.

Write us about your problem.

FARRELL-CHEEK STEEL FOUNDRY CO.
Sandusky, Ohio

MEMBER OF STEEL FOUNDERS' SOCIETY OF AMERICA

Co. has a permit for the erection of a 3-story addition.

NEWARK, N. J.—The Organic Salt & Acid Co., Passaic river and Avenue R, will erect a 1-story gas producing plant, 36 x 48 feet.

NEWARK, N. J.—The Standard Mfg. Co. has been incorporated with $50,000 capital to manufacture hardware, etc., by H. A. Black, W. J. Hilton and A. F. McCabe.

NEWARK, N. J.—The Craig-Bullion Mfg. Co., 15 Clinton street, has been incorporated with $100,000 capital to manufacture snips, flexible files, scissors, etc.

NEWARK, N. J.—The American Utilities Contracting Co., 671 Broad street, recently was incorporated with $125,000 capital, to operate sewerage systems, disposal plants, etc.

NEWARK, N. J.—Although the Central Stamping Co. has just acquired a 150 x 200-foot plot adjoining its plant, it is understood that no improvements will be undertaken at the present time.

TRENTON, N. J.—John E. Thropp & Sons Co. has let a contract for a machine shop addition, 1-story, estimated to cost $50,000.

BALTIMORE.—The City Spring Works contemplates a plant, 2-stories, 100 x 150 feet, estimated to cost $40,000.

BALTIMORE.—George R. Guild, 3418 Guilford terrace, plans to engage in the manufacture of railway block signals and devices.

BALTIMORE.—The American Cellulose Chemical Mfg. Co., Ltd., is having plans prepared for a $2,000,000 plant at McCalle, Md.

BALTIMORE.—The Canion Air Brake Co., 563 Calvert building, will erect a machine shop, 60 x 200 feet, and also plans to erect a foundry and pattern shop.

BALTIMORE.—Plans have been completed for the rolling mill, which J. J. Jones and associates have been planning to build here. A company will be incorporated to be known as the Eastern Rolling Mill Co. and will be capitalized at $6,000,000. Steel sheets for automobile goods, etc., will be manufactured. Mr. Jones formery was general manager of the Massillon Rolling Mill Co., Massillon, O.

BRUNSWICK, MD.—F. L. Spencer, city clerk, will take bids shortly for a 5,000,000-gallon reservoir.

HAGERSTOWN, MD.—The Hagerstown Welding & Automobile Works, Virginia avenue, has been organized and will erect a 1-story, 40 x 100-foot, and a 2-story, 40 x 50-foot, buildings.

LYNCHBURG, VA.—The Reeves Coal & Dock Co. recently was incorporated with $500,000 capital, by O. W. Gardner, V. P. Clinton DeWitt and others.

RICHMOND, VA.—The plant of the Victoria Metal Co. recently was damaged by fire.

Central States Activity

BLACK RIVER FALLS, WIS.—This city is reported planning improvements costing $25,000 to the municipal light and power plant. It is expected plans will be ready for bids about July 10.

BELOIT, WIS.—Bids for a junior high and vocational training school will be taken in July by the board of education.

CLINTONVILLE, WIS.—The Topp-Stewart Tractor Co. is contemplating two additions for heat treating and general forging.

FOND DU LAC, WIS.—The National Drop Head Projector Co. expects to begin operation in its new plant shortly. It now is installing machinery and equipment.

KENOSHA, WIS.—The Nash Motors Co. has let a contract for a manufacturing building, 100 x 200 feet, estimated to cost $30,000. Charles W. Nash is president.

KENOSHA, WIS.—The Simmons Co., manufacturer of steel and brass beds, has awarded a contract to the Kenwood Bridge & Iron Co., Chicago, for a 6-story plant addition, 90 x 320 feet.

MENASHA, WIS.—The Menasha Boiler Works is having plans drawn for a plant.

MILWAUKEE.—Th Universal Iron & Wire Works has broken ground for a new plant to cost about $15,000.

MILWAUKEE.—The Briggs & Stratton Co. has taken over the motor wheel department of the A. O. Smith Corp. The plant will be enlarged.

MILWAUKEE.—The American Metal Parts Mfg. Co. has been incorporated with $150,000 capital, by Edgar Harum, Leon Smith and Arthur White.

MILWAUKEE.—The Standard Steel Corp., manufacturer of farm equipment, located at 491 Virginia street, is reported planning a new plant estimated to cost $75,000.

MILWAUKEE.—The W. L. Romaine Machinery Co. has been organized by W. L. Romaine, formerly of the Badger-Packard Machinery Co. The new company is capitalized at $50,000.

MILWAUKEE.—An additional 20,000,000-gallon pumping unit will be installed at the North Point pumping station of the municipal waterworks. Bids are being received until July 16, by the board of public works.

MILWAUKEE.—Articles of incorporation have been filed by the Galvanizing & Sales Co., with $12,500 capital. The company will engage in hot process galvanizing, tinning, etc. The incorporators are Royden E. Webster, 389 Thirty-fourth street, Albert B. Houghton and Neele B. Neelen, attorneys.

OCONOMOWOC, WIS.—The board of education plans a high school building, with vocational training departments, estimated to cost $150,000.

PORTAGE, WIS.—The Loomis-Weinke Motor Co. is having plans drawn for a 1-story building, 90 x 120 feet, estimated to cost $20,000.

PORTAGE, WIS.—Slinger & Sons, founders and machinists, are building an addition costing $20,000 for machine and automobile repair work.

SHEBOYGAN, WIS.—The F. Blocki Co., manufacturer of agricultural implements, etc., has purchased a site for a new plant, estimated to cost $45,000.

WAUKESHA, WIS.—The Waukesha Automobile & Machine Co. has been organized by H. M. Mauer and will build a machine shop, 50 x 120 feet, estimated to cost $20,000.

WEST ALLIS, WIS.—A new gray iron foundry, which will specialize in gas engine castings, will be established here by the Motor Castings Co. now being organized. Frank E. Gray, architect, 86 Michigan street, Milwaukee, is drawing plans for a foundry, 114 x 182 feet.

ADRIAN, MICH.—The Schwartze Electric Co. will take bids soon on a plant addition, 1-story, 100 x 100 feet, estimated to cost $20,000.

DETROIT.—The Grand Rapids Blow Pipe Co. will start work soon on a plant addition.

DETROIT.—The Hudson Motor Car Co. has had plans drawn for a plant, 1-story, 340 x 400 feet, estimated to cost $225,000.

DETROIT.—Part of the plant of the Commerce Motor Car Co. recently was damaged by fire. The loss has been estimated at $100,000.

DETROIT.—The Brown Hutchinson Iron Works, W. H. Steger, president, 531 Clay avenue, will start work soon on a plant, 1-story, 110 x 156 feet, estimated to cost $19,500.

LANSING, MICH.—The Novo Engine Co. has let contracts for a foundry, 100 x 160 feet and a machine shop, 1-story, 90 x 260 feet. The company is also building a new bank of five core ovens and is installing new equipment in the machine shop to the extent of $40,000.

MUSKEGON, MICH.—The Muskegon Scrap Material Co. has been organized to take over the business of the Marcus Iron & Steel Co. and that of H. Rubinsky.

OWOSSO, MICH.—Construction of a foundry, 40 x 100 feet and a machine shop of the same dimensions, will be started shortly by contractors for the Owosso Bronze Bearings Co., which was organized several months ago.

CHICAGO.—C. H. Fisk, 1581 Ogden avenue, has let a contract for a machine shop addition.

CHICAGO.—The B. Mercil & Sons Plating Co., 1911 Fulton street, has awarded contracts for a 1-story addition, 32 x 99 feet.

CHICAGO.—Albert Pick & Co., 212 West Randolph street, contemplates a plant addition, 5-stories, 112 x 256 feet, estimated to cost $400,000.

CHICAGO.—The Elliot-Stephens Machinery Co. has been organized by H. C. Elliot, formerly vice president of the Marshall & Huschart Machinery Co.

CHICAGO.—The Charles F. Elms Engineering Works will take bids soon for a plant addiiton, 1-story, 50 x 100 feet, esitmated to cost $12,000.

CHICAGO.—Geraghty & Co., 3035 West Lake street, manufacturer of metal novelties, has had plans prepared for an addition estimated to cost $25,000.

CHICAGO.—The Pacific Flush Tank Co., 4241 Ravenswood avenue, has let a contract for a plant addition, 1-story, 35 x 125 feet, estimated to cost $20,000.

CHICAGO.—The Armstrong Bros. Tool Co., J. Armstrong, president, 339 North Francisco avenue, is taking bids for a plant addition estimated to cost $65,000.

CHICAGO.—The Chicago Roller Skate Co., care of Ware Bros., 224 North Ada street, contemplates a machine shop, 1-story, 100 x 400 feet, estimated to cost $75,000.

CHICAGO.—The Ilg Electric Ventilating Co., 154 Whiting street, is having preliminary plans prepared for a plant. 4-stories, estimated to cost $750,000. S. W. Weiss is president.

CHICAGO.—The Chicago Baling Press Co., 305 S. LaSalle street, capitalized at $35,000, has been chartered to manufacture presses by Frederick G. Manual, Maxwell C. Tobias and Charles R. Holton.

DES PLAINES, ILL.—The Benjamin Electric Co., R. B. Benjamin, president, 120 South Sangamon avenue, is taking bids for a plant, 3-stories, 66 x 286 feet, estimated to cost $200,000.

EAST FREEPORT, ILL.—The Stover Mfg. & Engine Co. is erecting a plant, 1-story, 48 x 75 feet.

MOLINE, ILL.—The Victor Storage Battery Co. contemplates the erection of a 1-story, 80 x 300-foot building, to be used for manufacturing purposes. B. F. White is secretary of the company.

PETERSBURG, ILL.—The Carroll Motors Corp. has been incorporated with $20,000 capital, to engage in the manufacture of valve-in-head tractor engines.

PONTIAC, ILL.—The Meadows Mfg. Co., manufacturer of washing machines, etc., plans an addition.

QUINCY, ILL.—A new foundry company has been organized here to replace the Quincy Casting Co. which has moved to Cedar Rapids, Iowa. Those interested are Frank J. O'Brien, C. G. McDaniel, A. W. Humphrey and John Barton.

ROCK ISLAND, ILL.—The B. & D. Mfg. Co. has been granted a charter to manufacture metal tools, dies, etc., with $15,000 capital. D. H. Donaldson is president.

WAUKEGAN, ILL.—The Chicago Hardware Foundry Co., North Chicago, Ill., will increase its capital

The Sivyer Service of providing Electric Steel castings has for its objects the decrease of machining costs and the increase of wearing-quality and life. Both are attained by methods which result from long experience and begin with the design of the casting itself. When we find that a casting we are asked to furnish is of a design not consistent with good foundry practice, we study its function in the completed unit and offer the necessary suggestions to make it a really practicable casting job without affecting in any way its function and efficiency in the completed unit.

Secondly, Sivyer Service analyzes the functions of the casting and specifies the proper composition steel for the job; long experience with carbon and alloy steels has enabled us to reduce costs and increase quality remarkably for many different industries.

Thirdly, Sivyer Service makes a careful study of the pattern and molding problem involved, for improper gating and insufficient risers are often the greatest wasters of metal and machining labor.

Fourthly, Sivyer Service analyzes carefully the proper annealing methods to be used and controls their proper application through unfailingly efficient equipment and men. In short the Sivyer Service supervises every step necessary to secure unusually and unfailingly good castings of electric steel. It never relies on one factor alone, relies very little on the natural freedom of electric steel from occluded gases nor even on its commonly recognized merit in resisting crystallization. It also depends but little on the inherent scientific accuracy of the electric furnace process. From casting-design to sand-blasting and tumbling, the fundamental superiority of Sivyer Steel is due to its men and metal. Their value is best proved by the fact that, although the production of steel castings is generally looked upon as a local one, the Sivyer market is national.

SIVYER S CASTINGS

CAST crank shafts for coal handling machinery caused the Roberts & Schaefer Co. much trouble until they came to us with a request to determine the steel proper for these castings. After careful analysis we recommended Sivyer Vanadium Electric Furnace Steel with a special carbon content, providing stiffness enough for the arduous work without loss of the necessary toughness and strength. This careful specification of the proper metal is one of the many factors in Sivyer Service that has set free the demand for Sivyer Castings from the usual local limits and made it nation-wide.

SIVYER STEEL

SIVYER STEEL CASTING COMPANY, MILWAUKEE

Business Changes Recently Announced

THE Pittsburgh office and store of the Niles-Bement-Pond Co., 111 Broadway, New York, machine tool manufacturer, has been removed from the Frick building to 425 Seventh avenue. A stock of the Pratt & Whitney Co.'s small tools will be maintained.

* * *

Edgar M. Moore & Co. has recently taken over the Pittsburgh sales agency for the Watson Wagon Co., Canastota, N. Y., manufacturer of industrial trailers.

* * *

The general office of the American Railway Equipment Co. now is located in the Liberty building, Philadelphia, with President G. W. Mingus in charge.

* * *

The Pittsburgh office of the National Trading Co. now is located in room 516 Oliver building. H. O. Price is general sales manager of the company.

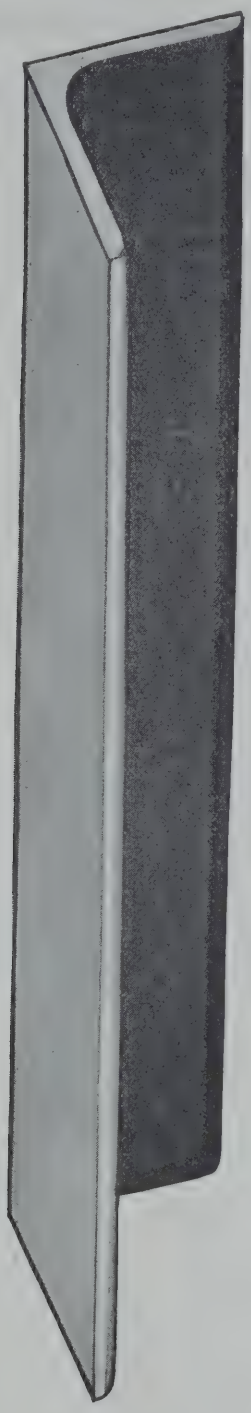
* * *

The Nathan Mfg. Co., New York, has opened new offices in room 707 Great Northern building, Chicago.

* * *

The Mexican government has opened a commercial office at 112 West Adams street, Chicago, to care for interests in the middle western states, in charge of Senor Sealtiel L. Alatriste. It is designed to bring closer business relations between the countries and furnish information of commercial openings of interest to Americans.

* * *



The Massey Concrete Products Corp., Chicago, has opened a new office at 1405 Oliver building, Pittsburgh.

* * *

The Oldberg Mfg. Co., Detroit, producing automobile and marine engine mufflers, has moved into its 3-story plant on East Grand boulevard.

* * *

The American Distributing Co. has taken new quarters in the Book building, Detroit. It is the agency for Livingstone automobile radiators, Weideley engines, Hartford automobile parts, Liggett springs and axles and other accessories.

A calendar in our organization indicates more than merely a date.

The trademarks at the head remind us daily of our obligation to uphold the century-old traditions of our house.

They stand for the highest in service to users of steel all over the world.

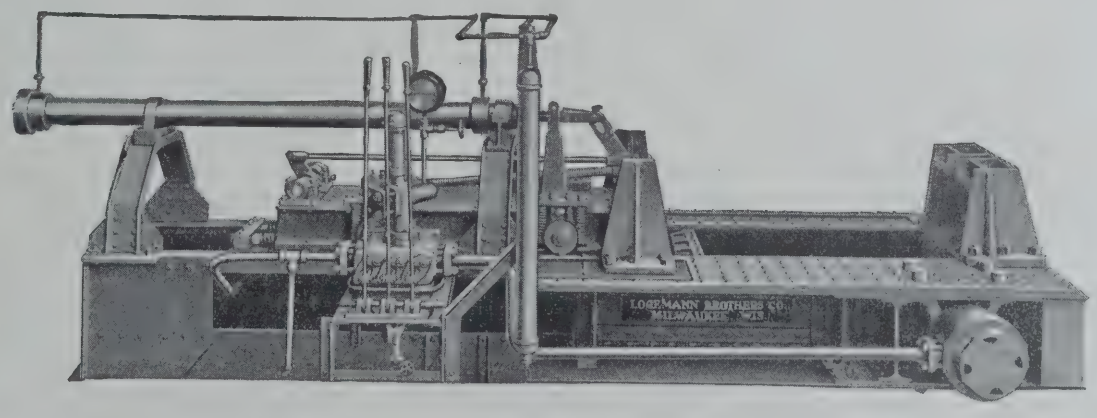
When the Scrap Market Is Dull

While seeking a more favorable market the best form in which to hold your sheet scrap, etc., and the form that always commands the best prices is the dense hydraulically compressed bundle.

Thus less storage space is required—under roof to prevent loss from corrosion; and because of greater car tonnage under minimum car rate, you add from 25% to 50% freight savings to your profits.



For greatest compression, largest daily output, at lowest operating cost, use

LOGEMANN Double Ram Hydraulic Scrap Metal PRESSES

You can enjoy the advantage of the accumulated experience from hundreds of Logemann scrap bundling presses now in use.

They embody a simplified mechanism that requires no special skill to operate rapidly. Press and pump are so designed that all the motive power applied is utilized, thus reducing power cost.

Powerfully built, all working parts constructed to resist the severest strains—selected material, first class workmanship—all minimize upkeep cost and insure lasting efficiency.

A medium sized press is shown; there are smaller and larger sizes in standard models.

Advise character and daily tonnage of your scrap and let us suggest press best suited to your requirements.

New Trade Publications

WELDING APPARATUS.—The Bastian-Blessing Co., Chicago, is ciculating a loose-leaf catalog, in which it describes and illustrates cutting and welding apparatus. Various parts and accessories of this equipment are also described and illustated.

PRODUCER GAS COSTS—The Steere Engineering Co., Detroit, is circulating a cardboard bulletin, containing a table showing producer gas costs, including those for fuel, power, repairs and maintenance, labor and supervision, interest and depreciation, etc.

PYROMETRY CHECKING—Bulletin No. 867-B issued by the Leeds & Northrup Co., Philadelphia, contains a treatise on the importance of standards and of checking in pyrometry. Various pyrometer and thermocouple equipment is described and illustrated.

LIFT TRUCKS—The Stuebing Truck Co., Cincinnati, is circulating a cardboard folder, calling attention to a lift truck which it manufactures. According to the folder, with these trucks one man can do work formerly requiring five, as there is no waste of time in loading and unloading, due to the platforms which are part of the trucking system.

STEEL FURNITURE—A loose-leaf catalog of 32 pages is being distributed by the Angle Steel Stool Co., Inc., Otsego, Mich., in which it describes and illustrates its line of metal furniture and equipment for factory and office use. Specifications, etc., accompany each illustration. Besides metal chairs and stools, factory trucks, tool trucks, machine tenders and merchandise conveyors are described.

INDUSTRIAL HAULAGE—Under the title "The Trackless Train," the Mercury Mfg. Co., Chicago, has issued an attractive 18-page booklet setting forth the development, etc., of a tractor which it manufactures. This tractor is driven by an electric locomotive obtaining its current from storage batteries in the body of the tactor. It is designed to pull or push one or more trailers.

ALLOY STEEL—A 4-page desciptive folder is being distributed by the Kinite Co., Milwaukee, in which it describes a new alloy steel said to be especially adapted for making cutters, dies, taps and other tools with multiple cutting edges. This tool steel is cast and not forged as are others. The booklet calls attention to the various properties of the steel and contains illustrations of several large dies.

ELECTRIC DRILLS. — Portable electric drills are described and illustrated in a 4-page folder recently published by the Black & Decker Mfg. Co., Baltimore. The motor with which these drills is equipped operates on either direct-current or alternating-current of 25, 40 or 60 cycles. It is cooled by means of a centrifugal fan on the armature shaft. Drills of various sizes are described.

HEAT CHART—The Onondaga Steel Co., Inc., Syracuse, N. Y., is circulating a graphic color heat chart, giving directions for the treatment of high-speed steel manufactured by the company. The directions given are said to be applicable to all first class 18 per cent tungsten vanadium steels. Directions are given for cutting for tool lengths, forging, hardening forged tools, hardening milling cutters and finished tools, tempering and annealing.

SPIRAL PIPE—The Standard Spiral Pipe Works, Chicago, is circulating a 40-page booklet in which it describes and illustrates reinforced spiral pipe. According to the booklet this pipe is made of two strips of steel of different widths. Both strips are rolled to shape on the edges and are interlocked and rolled down under high pressure. Various data are given and the illustrations include a number of actual installations.

RAILROAD EQUIPMENT—Catalog No. 145, issued by the Whiting Foundry Equipment Co., Harvey, Ill., is devoted to equipment for use in locomotive repair shops. Equipment described includes screw-jack locomotive hoists, shop trucks, movable jacks for locomotive hoists, spur geared hauling mechanism, transfer table cranes and other equipment. Illustrations showing the various equipment at work are given.

GAS MEASURING—The accurate measurement of gases and air is treated in a 16-page booklet recently issued by the Cutler-Hammer Mfg. Co., Milwaukee. The measurement of gases and air, according to the booklet, has always presented difficulties because of variations in physical conditions, pressure, temperature, gravity, humidity, composition, etc. The booklet is devoted to the measurement of gases and air in gas, coke-oven, steel, and chemical plants.

BOILER TUBES.—Seamless boiler tubes are described in a booklet being distributed by the Standard Seamless Tube Co., Ambridge, Pa. Data given include specifications for seamless boiler tubes, as adopted by the American Society of Mechanical Engineers. The first part of the booklet is devoted to a description of the company's plant. Illustrations showing the open-hearth plant, the pouring bay, the electric furnace, a 1000-ton hydraulic press, the chipping yard and other interesting parts of the plant are given.

ELECTRIC WELDING—Electric arc-welding is treated in a bulletin recently published by the U. S. Light & Heat Corp., Niagara Falls, N. Y. The equipment described includes an arc-welder of the stationary direct-current motor-generator type; an arc-welder of the stationary direct-current converter type; a direct-current converter; a portable alternating-current motor-generator welder, with cover; an arc stabiliizng reactor; electrode holder; panel for direct current motor-generator, and a direct-current motor-generator and armature for direct-curent motor-generator.

BUILDING PROJECTS.—Westinghouse, Church, Kerr & Co., Inc., engineers and constructors, New York, are circulating an illustrated folder showing actual construction work of all kinds done by the company. Some of the mechanical installations illustrated are those at the plants of the Cleveland Brass & Copper Mills, Cleveland, Freeport Sulphur Co., Freeport, Tex., mechanical handling apparatus at the shops of the Chicago & Alton railroad, Bloomington, Ill., electric power installation at the New York, New Haven & Hartford railroad, and one page of the folder shows construction of a plant step by step, which was started in May, 1917 and completed Jan. 1, 1918.

BUCKET CRANES.—An illustrated folder of four pages is being circulated by the Whiting Foundry Equipment Co., Harvey, Ill., in which bucket cranes are described and illustrated. Most of the illustrations are of actual installations and show cranes employed at the plants of the Scranton Electric Co., Scranton, Pa., handling coal; serving a cinder pit of the Western Maryland railroad at Hagerstown, Md.; handling cement clinker at the plant of Sandusky Portland Cement Co., Dixon, Ill., and handling coal in the milling plant of the Northwestern Consolidated Milling Co., Minneapolis. A list of railroads and steel plants using this type of crane and showing the capacity of each crane is given.

Opportunities Abroad

Information Can be Obtained From the Bureau of Foreign and Domestic Commerce. Requests Should be on Separate Sheets and Should be Accompanied by Opportunity Number

The purchase of steel, iron, metal sheets, black galvanized tin, foundry, hematite and malleable iron and steel for files and other tools is desired by a firm in England. Opportunity No. 29775.

A firm in Tunis desires to purchase calculating machines, typewriters, cash registers, numbering machines, etc. Opportunity No. 29781.

Saws, files, tools, builders' hardware, industrial hardware, screws, etc., are required by a firm in Spain. Opportunity No. 29713.

Cotton spinning and weaving machinery, 50 looms, one spooling machine of 200 spindles and one winding machine of 120 spindles, are required by a firm in India. Opportunity No. 29673.

The purchase of supplies for logging, such as wire rope, tree felling machines, motors, stump pullers, etc., is required by a company in Finland. Opportunity No. 29672.

A manufacturer in Argentina desires to purchase machinery and accessories necessary to install a plant for the manufacture of oleomargarine. Opportunity No. 29669.

The purchase of machinery for the manufacture of porcelain insulators is required by a manufacturer in Brazil. Opportunity No. 29666.

The purchase of tubing for high pressure turbines and electrical machinery of all kinds for developing waterfall power, is desired by a firm in a consular district in Spain. Opportunity No. 29741.

A firm in Denmark desires to purchase machine tools and other equipment for building a shop to make motorcycles. Opportunity No. 29743.

Engineering and building materials, such as iron, steel, metals, heavy hardware, machinery, electrical supplies for light, heat and power service, and for telephone and telegraph service, are required by a firm in Norway. Opportunity No. 29748.

A manufacturer in Italy wishes to secure an agency for the sale of iron, lumber, steel, coal, etc. Opportunity No. 29751.

A firm of manufacturers' agents in England desire to secure agencies for the sale in South Africa of hardware, motors and accessories, wire rope agricultural machinery, etc. Opportunity No. 29753.

The purchase of ice cream utensils is desirel by a firm in Wales. Opportunity No. 29755.

The municipality of a city in Greece desires to receive proposals until Sept. 11, for the installation and operation under contract for a period of years, of an electrical plant to furnish light and power to the city. Opportunity No. 29759.

THE IRON TRADE REVIEW

Vol. LXV Cleveland, July 10, 1919 No. 2

New Orders Gain on Shipments

Steel Corporation's Bookings Exceed Daily Capacity—Orders for Sheet Industry Above 20,000 Tons Daily—Large Automobile Builders Closing Big Tonnage—Pig Iron Orders for 1920 Appear—Labor Becomes Factor

A GROWING gap between incoming mill specifications and production, despite the latter's steady increase, furnishes a wholesome symptom as to fundamental conditions in iron and steel. The result is an accumulating backlog of live tonnage on mill books in a number of lines which tends to fortify future operations. Average bookings of the Steel corporation at present are considerably in excess of shipments and also of capacity which means something over 50,000 tons daily. This fact promises to be reflected in the June unfilled order statement to be issued today. The point needs to be stressed that this is an extraordinarily good showing for the whole industry considering the absence of railroad demand.

New orders and specifications in sheets are coming in at the rate of over 20,000 tons daily. In wire products, the mills now are booked practically full for the third quarter and some for a longer period. The rush of demand for oil and gas field pipe has fairly swamped makers and some of the latter are being forced to turn away further business. Tin plate output is up to 90 per cent. The idle Columbus, O. works of the Carnegie Steel Co. is being made ready for early production of sheet bars. A number of steel works blast furnaces are about to blow in.

Large Sales in Sight

Automobile and farming implement manufacturers have been among the week's most conspicuous buyers. Some of the leading automobile interests in the central west now are negotiating for their forward requirements and these amount to several hundred thousand tons.. Accessory and parts manufacturers have continued to place sizable contracts and specifications. Buying by the implement trade is coming along in better volume. One consumer of this class in the west placed about 10,000 tons of rerolled bars. The Moline plant of the Republic Iron & Steel Co. has resumed operations especially to serve the farming tool demand.

Advances are appearing in some of the minor lines. Various nut and bolt makers have boosted their schedules 5 per cent. In small rivets, $10 to $15 a ton has been added. Some rerolled bar makers now quote 2.35c mill, a rise of $2 per ton. Talk of early advances in wire products persist and some makers are restricting their present offerings especially for third quarter.

Buy Iron for 1920

Some buying of pig iron for 1920 delivery has been done although makers generally are discouraging any contracting so far ahead. Notable in this business has been about 20,000 tons of malleable placed by consumers in the Pittsburgh district which it is thought may be discounting a revival of railroad demand. Some producers have been accepting orders for delivery after Jan. 1 only when joined with fourth quarter tonnage. In all cases where iron for next year has been booked by the furnaces it has been on the price basis prevailing for last half. Generally buying is on a reduced level as compared with recent weeks. The American Steel Foundries is understood to have closed for a round tonnage of basic for Alliance, O. Sales of basic have been made at Philadelphia at an advance of 50 cents. The market for steelmaking iron, however, has shown no appreciable expansion.

An interesting export transaction is the purchase of 20,000 tons of basic iron in Luxemburg by England. American producers had a chance to bid upon this inquiry but were at a geographical disadvantage. It is learned, however, that good sized tonnages of American basic were sold to England about two weeks ago. England also bought 3000 tons or more of bars and Italy 5000 tons of scrap. The latter also wants 5000 tons of ship plates, 1500 tons of structural shapes and 6000 tons of scrap. Latin-American trade in steel is active.

Labor is a Factor

There is more reference to unskilled labor shortage as a factor in production especially in the Pittsburgh district, and this is being taken into account in regulating future sales. A strike for higher wages has put out of commission temporarily three blast furnaces in the Jackson, O. district.

War Fails to Halt Progress

AS WAS to be expected, war caused a great expansion in the capacity of the steelmaking plants of the United States. It is doubtful if there is a company engaged in making iron or steel or their products which did not extend its activities as a result of the increased demand brought about by the great conflict. Notable among the companies which greatly increased their facilities are the Bethlehem Steel Co. and the Inland Steel Co., whose new plants are described in this and last week's issue of THE IRON TRADE REVIEW.

While the enlargements to these works are typical of the manner in which the steel industry arose to wartime necessities, they are especially noteworthy because in each instance the new installations embody important improvements in equipment developed in spite of many hardships and in the face of the urgent need of completing the new work at the earliest possible moment. In the case of the new Sparrows Point plant of the Bethlehem Steel Co., a modern duplexing plant was built without interferring with the vast amount of war work being executed in other works of the company. The Inland Steel Co. practically doubled the capacity of its harbor works under great pressure and in spite of unusual difficulties. It is remarkable that in planning the extensions to each of these plants the construction engineers were not satisfied to accept the current standard designs but insisted upon improving upon them. Thanks to their enterprise the Sparrows Point plant possesses an unusual method of handling blown metal in its course from the converters to the open-hearth furnaces. The Inland Steel Co. is likewise indebted to the foresight of its construction experts for a notably elastic routing of hot metal and an ingenious pivoted pulpit for its 28-inch mill which greatly simplifies the changing of rolls.

This improving of steel mill equipment, especially in the face of wartime difficulties, is a most encouraging sign. It signifies the unrelenting purpose of steel works engineers to strive constantly to improve existing standards. Now that the restraining hand of war has been removed, new ideas in mill equipment may be worked out under more encouraging conditions. In view of the enterprise already displayed, the prediction is justified that distinctive strides in the design of steel mill machinery will find expression in after-war construction.

Lake Ores Maintain Quality

THE three-year period, 1916-18, marks a definite chapter in the history of the great Lake Superior iron ore district. Shipments in those years averaged more than 64,600,000 tons, an increase of 33 per cent over what had been counted as a good season. Under such conditions it is reassuring to learn that the district withstood the drain on its resources without materially affecting the quality of ore.

Charts presented on a following page show this condition graphically. Complete figures just made available by the Lake Superior Iron Ore association, show the average iron content, natural, during the three years of greatest shipments was on a parity with the level held since 1908. Average phosphorus showed a quite slight increase, silica and moisture were practically the same while the manganese content jumped from an average of 0.66 to 0.77 per cent.

The definite trend toward lower grade ore is revealed in a study of the association's tables covering ore shipments annually since 1902. Comparing shipments at the two ends of this 17-year period, average iron content, natural, has fallen from 55.77 per cent to 51.29 per cent, while average phosphorus has increased from 0.075 to 0.104; average silica from 6.23 to 8.12; average manganese from 0.46 to 0.87; and average moisture from 8.71 to 11.29. In making up this total loss in average iron content, natural, of 4.48 per cent, the Mesabi range shows a decline of 5.44, and the old ranges of 3.64. The latter showing by ranges, embraces a drop in iron content of Gogebic ores of 2.60; Marquette, 2.53; Menominee, 1.09;

Vermillion, 3.74, and the Cuyuna in five years, 6.22.

Shipments of bessemer ores have shown a relative but not an absolute decline. Total shipments in 1918 of bessemer ores were close to 20,000,000 tons, or above the average since 1902. The percentage of these ores to total shipments has dropped from 64.9 per cent in 1902 to 32.9 per cent in 1918. The Mesabi range shipments in 1902 were 80.6 per cent bessemer ores and last year only 36.3 per cent. The Gogebic shows a drop from 87.5 per cent in 1902, 90.2 per cent in 1905 and 80 per cent in 1910 to 41.1 per cent in 1918.

Metallurgical developments as reflected in blast furnace operations have successfully kept abreast of the falling quality of the lake ores, upon which the country relies for the great bulk of its pig iron. The success met in employing the sandy ores of the western Mesabi is an evidence of this progress in the chemistry of iron making. The prospect of utilizing the enormous tonnage of magnetite ores of the eastern Mesabi is brighter today than ever before. The question of quality of Lake Superior ores is evidently not one which demands immediate solution.

How Unionism Throttles Britain

LABOR problems, as there is ample and specific evidence on all sides, have become the big question for the industry of the world. Conditions incident to and produced by the war, have had a profound effect upon the individual and his methods of daily life and thought. Manifestations of this fact are to be seen in the general unrest, in the unreasonable obstinacy and in the bad temper which accompanies so many demands put forth by labor today. The United States though spared much of this outcropping of class insistence in its worst and most vicious form, has had and is now having its share of disturbances, the bill for which has mounted high for employer and employed. How Great Britain is effectually handstrung by the exactions of unionism, to the ultimate benefit of neither the employing or the employed classes is told in facts and figures in a special article entitled "British Fettered by Labor Rule" in this issue as seen through practical American eyes. The crippled position of English manufacturers in many lines today at a time when world's competition offers such promising returns to successful operations is the logical outcome of the fundamental policy of British labor unionism to restrict output, to which new powers for enforcement have been added by the war. The situation is truly expressed by the fact that the British government today is expending $5,000,000 weekly in out-of-work donations to the unemployed, while production in iron and steel is languishing because sufficient skilled employes are not available to operate the plants on the 8-hour day basis recently forced upon the industry. In the coal industry, moreover, statistics show that the average output per British miner is less than in Japan with that country's necessarily cruder methods, and about one-third of that in the United States. This rate still is declining. As a result, the United Kingdom promises to have little coal for export above its domestic needs. A 6-hour day now going into effect in the mines will further intensify this unfavorable showing. Yet Great Britain's prosperity in a large measure depends upon her coal industry and particularly so upon her ability to export this fuel and other products of her mines and factories.

Great Britain's distressing experience at this time, has in it much food for thought for both workmen and employers in this country. There is an economic limit to which any industry can be saddled by either restrictions or exactions. A sane, moderate course on the part of either is the best assurance of permanent benefits to both sides in the labor equation.

Turn Genius to the Shipyards

A FAVORITE argument in the past of those who believe the United States cannot develop a merchant marine on a competitive basis has been that it would be impossible to obtain a sufficiently low cost of construction at our present labor and material rates, plus our inexperience. The country has been building ships on a major scale now for several years and if this continues, and there seems no doubt that it will, the inexperience side of the problem should be eliminated after a little time.

But the side of personnel and applied skill is only one of the big phases of the question. Quantity production ever has been the tradition and the cornerstone of America's industrial success. To carry forward this policy in shipbuilding, it is indispensable that suitable and efficient tools shall be provided. The situation accordingly has now developed where the manufacturers of machine tools and the builders of small and special tools and other shipyard equipment have their part and a large part to fill if permanency and success are to crown the nation's present great venture in the maritime field.

If the engineers of this country will turn their thoughts to maritime problems and to the designing of tools and appliances which will expedite production with the same zeal and perseverence they have shown in other important lines of industry, as exemplified by the automobile industry the battle for a restored American merchant marine will be more than half won. The final issue then would be a question of how far they would be allowed free rein to develop their ideas and ingenuity. If any cumbersome governmental regulations interpose they should and must be removed. As events now portend it will not be long before the government will be obliged to answer to this test.

Pig Iron Orders for 1920 Placed

Pittsburgh Interests Close for 20,000 Tons of Malleable for Next Year and Other Tonnage for That Period is Booked—England Buys Basic in East and Also Places 20,000 Tons With Luxemburg

Pittsburgh, July 8.—Transfers of malleable iron for deliveries over the remainder of this year and the first half of 1920 aggregating about 20,000 tons have provided the feature of the past week in this market. In view of the fact that almost no real buying is coming out at present and hopes are rather slight that any will develop until after the railroads go back to private ownership, the demand for this grade of iron is considered extremely significant. Evidently consumers are satisfied that chances for an advance in prices are equal to those of a decline, for requirements it is believed cannot be normal so long as the railroads are out of the market for castings. Another striking feature of this business has been the difficulty buyers have had in getting the furnaces to accept first half of 1920 business. Considerably less than half of the bookings are for shipment over that period as few furnaces feel safe in being committed so far in advance at current prices owing to the uncertainty over costs. Already in a number of producing districts a scarcity of labor is beginning to be felt and fears are common that the situation will grow more serious as the year wears on. All of the business in malleable was at the full market price of $27.75 furnace. In fact all sales of pig iron recently made here have been at full quotations. New sales have included some fair sized lots of foundry as well as basic and bessemer. It would be some exaggeration to say the market was active, but quietly a considerable tonnage is being moved. Sales aggregating about 4500 tons of bessemer have been made at $27.95 furnaces, and two or three lots of 1000 tons of foundry iron also are included in recent transfers, including 1.75 to 2.25 per cent silicon, selling at $22.75 furnace, and some No. 2 (2.25 to 2.75 silicon) at $28 furnace. Inquiries from 1000 to 1500 tons of low phosphorus for last half are before makers and also an inquiry for 1200 tons of northern foundry (2.25 to 2.75 silicon) and one for 1000 tons of southern iron (2.25 to 2.75) have reached the market.

New England Orders Less

Boston, July 8.—A lull in the sales of pig iron is reported by all dealers for the short week preceding the July 4 holidays. Orders for 200, 300 and 500 tons were placed by several foundries but carloads for immediate shipment made up the bulk of the business. Furnaces seem reluctant to make big sales and in many cases are quoting last quarter iron only to old customers. Prices have remained firm except in a few cases. One Buffalo district furnace which because of its eastern location has the same freight rate as eastern Pennsylvania, has continued to quote at the Buffalo schedule, which means $1 concession in the delivered price. Southern iron has been weak in spots and has sold in 200 to 300 lots at not higher than $25.50 furnace for No. 2 southern (2.25 to 2.75 silicon). All sales from other districts are reported at the $28 price for eastern Pennsylvania and $27 at Buffalo for No. 2X eastern (2.25 to 2.75 silicon) for last half or immediate delivery. Some furnaces are asking premiums for last quarter. These have been in the neighborhood of $3 per ton, but actual orders at this price are not evident. Little Virginia iron is reaching this market for the Virginia Iron, Coal & Coke Co. has only one furnace active and is not offering anything to New England. Such Virginia iron as reaches here has been sold at $31 delivered for No. 2X (2.25 to 2.75 silicon). Last week's sales through Boston agents are estimated at 6000 tons.

Furnace Banks Well Filled

Buffalo, July 8.—The feature of the pig iron market is the filled-up condition of the orderbooks of the various furnaces in this district. All of them still have some iron to sell but there is really very little tonnage available. Anything that is booked must be for third or fourth quarters. All furnaces will not sell for next year's delivery under existing circumstances. The heavy rush of tonnage it is conceded, is over for a time, but inquiry continues fairly good and sales fair. One Buffalo interest is practically out of the market so close has its capacity been taken up. Basic and foundry were sold in small tonnages during the week, two of the outstanding contracts being 1000 tons of basic and 2000 tons of foundry, placed at the March 21 schedule. A Lancaster, N. Y. melter has closed for several thousand tons of malleable.

One interest here which had two of its furnaces idle for several weeks following the cessation of market activity has put one of its stacks back in blast and proposes to have the other going within 10 days. This interest will then be operating four stacks.

English Sale is Lost

New York, July 7.—The 20,000 tons of basic pig iron, for which an English consumer recently put out inquiries in this market, it is reliably reported, has been placed with producers in Luxemburg, at a price of

£8, ($38.40) c.i.f. an English port. This figure was considerably lower than any quoted by American interests. The loss of this business occasions considerable interest but not much surprise, owing to the proximity of Luxemburg to England. The price which was done is regarded naturally as an indication of what Luxemburg makers are able to offer in the way of a bargain. Export business closed by American producers during the past week was rather small. The largest lot reported sold was one involving 500 tons of foundry. Numerous inquiries for export are pending but there is no assurance as to when or whether they will be closed.

Domestic demand for pig iron here has fallen off materially. Sales made during the past week in this district are small as compared with the records of preceding weeks. It is not believed that more than 5000 tons of all grades were involved in transactions in this district and of this business practically all involved foundry iron. New inquiries which are out from domestic sources total several thousands of tons but no especial buying activity is promised.

Sold Up to 1920

Youngstown, O., July 8.—Foundry iron is being contracted for in fairly large quantities although in some quarters there is plenty of room for improvement. The Republic Iron & Steel Co. is sold up on this grade to Jan. 1, 1920, and is quoting at present $26.75, Birmingham, on all inquiries. Some sales have been made at this figure.

Some Sales for 1920

Cleveland, July 8.—With most of the furnaces now in possession of well-filled order books for the balance of the year and with many consumers of foundry and malleable grades under contract, buying of pig iron in Cleveland and surrounding territory is running in a quieter course. Some melters are showing interest in taking up their requirements after Jan. 1 and inquiry for that delivery is increasing. Although some sales for the first quarter of 1920 have been made to old customers where they have been joined with fourth quarter tonnage, makers generally are discouraging contracting so far ahead at this time. The first quarter sales that have been made in this way have been on the same basis of prices as at present, or $26.75 for No. 2 foundry (1.75 to 2.25 silicon). Sales by Cleveland interests during the past week have amounted to probably 40,000 to 50,000 tons, most of it outside the local market. Inquiry is not so lively but some sizable lots continue pending including the 11,000 tons of foundry and malleable for the Buick foundry, Flint, Mich. Some round lots of malleable have been embraced in the week's business both in new purchases and by the increase of orders recently placed. A local stove manufacturer bought 1000 tons of high silicon southern iron for last half at $28 Birmingham. Steelmaking irons still are inactive although the American Steel Foundries which recently was inquiring for 4000 to 6000 tons of basic for June-September shipment at Alliance, O., is understood to have closed for a round tonnage. The three Jackson county, O., furnaces are idle because of a strike of their employes for higher wages and the Jisco stack has been blown out. These producers for the time being are out of the market. Furnaces are shipping more tonnage from the stocks which they recently have piled, since consumers generally are ordering in iron in a more liberal fashion.

Cincinnati Prices Are Firmer

Cincinnati, July 7.—Word has been received from the South that order books are fairly well filled. Foundry iron running from 1.75 to 2.25 per cent in silicon, for third quarter shipment, has about been cleaned up, and there is not much of this to offer for the last quarter. For this reason the former quotation of $24.50 Birmingham made by a few producing interests is now a thing of the past. Some desirable business might be placed at $25, but it is doubtful if any tonnage of consequence could be secured. From all information in hand from $25.50 to $26 represent the general minimum figures. The first part of last week a few sales of iron analyzing 2.25 to 2.75 in silicon were made as low as $25, but the same interests are now quoting the full schedule of $28. Northern iron is also firming up and Ironton producers are now back to $26.75 at furnace for No. 2 foundry (1.75 to 2.25 silicon), although it is reported that firm offers have been accepted on some small lots all the way from 25 to 75 cents a ton. The inquiry has died down. A few tentative requests for prices on iron to be delivered in the first half of next year brought out no figures from the furnaces.

Market is Less Active

St. Louis, July 8.—Relative quietness prevailed in the pig iron market through the week. The volume of sales was about the smallest since the recent movement started but inquiries were fairly numerous, and heavier buying is looked for during the balance of the month. A number of users have taken odd lots of different grades in order to even up, but bulk of inquiry at the moment centers in foundry iron, mainly in 1.75 to 2.25 per cent silicon. With but one exception, southern producers have reached a satisfactory price basis with their customers, and it is believed a number of leading melters are about ready to close up for last half requirements. Makers of specialties show greater activity just now than any other arm of the trade. Automobile and truckmakers are working to capacity, and are good buyers of the various materials needed in their line. After holding off about as long as they could, farmers in this region are finally coming into the market. Stove manufacturers are looking forward to the heaviest fall and winter business since before the war. Improvement in the building trade continues to broaden, and is directly reflected in the demand for finished materials.

Southern Market Holding Its Own

Birmingham, Ala., July 8.—A little lull in the activity of pig iron buying was noted during the past week, but Southern manufacturers are again receiving numerous inquiries for fourth quarter. A $1 per ton advance is being maintained with two companies still out of the market. There is but little iron available for third quarter delivery. A price of $25.75 for No. 2 southern (1.75 to 2.25 silicon) for fourth quarter is considered low by furnace companies and for that reason there is no anxiety to sell. But little iron has so far been sold for the last quarter of the year. Three furnaces are in condition to resume operations and it is announced that if the demand warrants it there will be no time lost in blowing them in. Alabama production for July is expected to go beyond 150,000 tons, against 137,000 tons in June. Local consumers are not much interested.

Foreign Sales Are Made

Philadelphia, July 8.—Basic iron following the sales at advances a week ago is stronger in a more pronounced way. On additional sales of about 7000 tons, the market is now established at $26.50 to $27, delivered eastern Pennsylvania. It is learned here that fair sized tonnages of American basic were sold to England two weeks ago, one lot at 8 5s ($39.60) c.i.f. Bristol channel, and another at 8 6s 6d ($39.96) c.i.f. Glasgow. The market the past week has been fairly active. Foundry sales included 6000 tons of Virginia No. 1 X (2.75 to 3.25 silicon) and No. 2 X (2.26 to 2.75 silicon for export delivery at the rate of 1000 tons monthly over the second half. The belief prevails here that export buying is to be a bigger factor in the future than in the recent months. Domestic foundry iron sales of the past week were around 20,000 tons, including one lot of 1500 tons of pipe iron and another of 1500 tons of 1.25 to 1.75 silicon. While some furnaces which recently have been selling heavily, have advanced their prices, others are naming the old level. A steel company which heretofore has been selling some basic, has started to offer foundry iron and will blow in a furnace on this grade shortly. The Princess furnace in Virginia is expected to blow in before July 15. The Robesonia, Pa. furnace went in yesterday on foundry. Most producers who have been selling freely of late have booked 50 per cent of their second half output and are not anxious to dispose of more iron. It is conservatively estimated that orders are sufficient to keep stacks now active in the east, busy for two to three months. A large eastern consumer bought 1000 tons of malleable at $27, Buffalo, and $27.25 eastern furnace, making this grade $28.35 to $30.90, Philadelphia. Copper free low phosphorus inquiries for 1500 tons from western consumers are understood to have been placed in part with a Wellston, O., stack which has just undertaken the production of this grade. Bids were opened by the ordnance office here today for the third time on 3100 tons of copper free iron at Vernon, Pa. On one lot of 1980 tons of Thomas iron, William Wharton Jr. & Co. bid $25, Corning & Co., $25.05, F. R. Phillips, $25.30, Walter Walingford, $23.60, Charles Dreifuss, $24.05.

On 260 tons of northern iron all bids were the same as on the first lot, except that of Frank Samuel which was $27. On 860 tons of northern iron all bids were the same as the first lot. Low phosphorus makers several months ago agreed to cancel tonnages due on ordnance work for $10 per ton, but with some minor exceptions the board of claims did not approve this claim for this amount.

Chicago Business Again Grows

Chicago, July 8.—The leading interest in the Chicago territory, which sold 125,000 tons of pig iron in June, reports business picking up again following a lull incident to the holidays. Current sales are on an average with those of the previous month. Buying of foundry and malleable is continuing in a satisfactory way, but no demand has developed as yet for basic. Inquiry for foundry is not quite so heavy as it was about 10 days ago. An inquiry for 500 tons of foundry is now out, but this is the only one of consequence in this territory. A sale of 3000 tons of malleable recently was made for last half at the scheduled price of $27.25.

Ore Sales

Are Comparatively Small—More Vessels in Commission—June Shipments

Cleveland, July 8.—Ore sales continue in moderate volume. Small lot business during the past week has held near to the same level maintained during the past month, the total volume of sales, however, being comporatively small. The ore carrying fleet now is slightly larger, several large vessels having been put back into commission. Ore shipments are fairly heavy, the coal movement is brisk, while the grain trade will be abnormally heavy during the fall. Some shippers already have received notice to have freighters available for handling grain after Sept. 1.

Lateness in starting a heavier buying movement points to a heavy demand for vessel tonnage during the closing months of the season. One ore seller states that the average monthly volume from now on will have to reach 8,600,000 tons in order to have stocks of ore in furnace yards at their average level next spring.

Detailed figures of ore shipments from the Lake Superior district in June show a total movement of 7,980,839 tons. This represents a decline of nearly 2,000,000 tons from the movement in June of last year, and of about 3,000,000 tons to July 1, compared with the same period ini 1918. Shipments by ports are as follows:

Port	June, 1919	To July 1, 1919
Escanaba	759,647	1,414,527
Marquette	296,127	447,876
Ashland	951,287	1,768,292
Superior	1,889,294	3,241,561
Duluth	2,947,651	6,699,038
Two Harbors	1,136,833	2,437,125
Total	7,980,839	16,008,419
1919 decrease	1,941,021	2,941,311

Reaction in Coke Market

Spot Furnace Quotable at $4.25 Ovens and Some Supplies Available at $4—Connellsville Producers Indifferent

Pittsburgh, July 8.—Purchases of furnace coke in anticipation of a light production and restricted shipment over the Fourth of July has amply covered the blast-furnace requirements, and business this week has been extremely quiet. Prices also have reacted somewhat from the extreme levels reached during the flurry of buying last week and today the market is quotable at about $4.25 ovens for spot tonnages and fair sized supplies are available as low as $4. So little is going on that the market on standard 48-hour fuel largely is nominal. Practically all of the blast furnaces that are in operation are protected on coke requirements by contracts and while a few cases have come to light where shipments were not sufficient, in most cases the holiday interruption had little effect on the amount of fuel moving to the furnaces. It seems that because of the indifference of a large number of the Connellsville producers, much tonnage is available for last-half shipment. These operators have had the idea that coke was or would be scarce and, for that reason, maintained rather exalted price notions during the period when the blast furnace interests were ready to contract for the remainder of this year. The result was that those producers who were open to negotiation secured practically all the business and those who did not get in, largely must depend upon the spot demand until more furnaces come in. may be quoted anywhere from $4.12 Practically nothing has been done recently on contract and the market to $4.15 ovens, the latter price being the maximum on fixed price contract, while the lower price refers to a sliding-scale contract concluded on the basis of 6½ to 1 on basic iron at $25.75 valley furnace. Current spot demands for foundry coke also are light with $5 ovens the price.

Demand Continues Heavy

Boston, July 8.—Following advanced prices and general stiffening in the coke market the demand continues strong. New consumers are placing orders and many large interests are beginning to buy for storage purposes. During the week New Jersey byproduct and Connellsville coke came into the New England market in larger tonnage than heretofore since the war embargo was lifted. The New Jersey producer is reported to have quoted $9.90 delivered as a fixed price for the balance of the year which has caused considerable comment in the face of the announcement from New England producers that the $9.90 price covered their sales during July only, and might advance for August. To clear up the matter the local producer explains that all standing contracts, which are based on a month-to-month price governed by the Connellsville market, still hold and that under these, prices for August may advance.

By-Product Fuel is Sold

New York, July 7.—Included in business in the coke market here recently have been sales of good-sized tonnages of furnace coke by the northern New Jersey by-product producer for delivery over the last half of this year. The price on this by-product furnace coke is $4.50, Connellsville, which is $1 less than its maker is obtaining for foundry coke.

Contracting for second half reached generous proportions during the past week despite the holiday. Good sized tonnages, both of beehive and by-product coke have been placed during the period for second half, the price on by-product foundry coke being $5.50, Connellsville, or $8.60 delivered at Newark and other northern New Jersey points.

Prices on the Rise

Cincinnati, July 7.—The market is showing considerable strength. Quotations in all districts are being pushed up on both furnace and foundry grades. Connellsville foundry is very firm at $5.25 to $5.50 and furnace coke in that field now ranges from $4.25 to $4.50 at oven. New River foundry grades are quoted around $7.50 to $8, although little has been sold at the last named figure. Wise county 72-hour coke is priced at $7 to $7.50, and Pocahontas foundry is fast moving up to the same figures.

First Half Buying Done

St. Louis, July 8.—The week developed no change in the coke situation worthy of note. Some further contracting at steady prices for last half requirements was reported, and two sales were heard for delivery through the first half of 1920. Shipments from eastern ovens are slowing down, but are apparently meeting all needs, as few complaints or requests for expedition have been received by the dealers. The undertone of the market is decidedly firm, despite lack of present activity. Large users show a disposition to provide against the winter's needs, and the bullish sentiment is emphasized by talk of fuel shortages before the end of the year. Plans of several of the more important plants in the district provide for accumulations, beginning early in September. To date, however, little in the way of stacking has been accomplished.

Inquiries Are More Numerous

Birmingham, Ala., July 8.—There are more inquiries for coke and the foundry product is bringing an advanced price. Furnace coke is also picking up as blast furnace operations are resumed. The Woodward Iron Co. has all by-product ovens going. The Alabama Co. has its beehive ovens again in blast. The New Castle Coal Co. is starting up all idle beehive ovens in condition.

Scrap Still is Moving Up

Higher Prices at Chicago, Cleveland, Pittsburgh and in the East —$19 Paid for Steel—Corporation Subsidiaries in Market

FOR COMPLETE SCRAP PRICES SEE PAGE 134

Chicago, July 8.—Prices of scrap iron and steel continue to rise, and all grades are in strong demand, except rolling mill grades, which are listless. Angle bars, car axles, rerolling rails and coiled springs were marked up $1 a ton at the resumption of business Monday, while No. 1 boiler plate, No. 1 busheling, and pipes and flues were advanced 50 cents a ton during the past week. A feature of the market is the heavy demand for cast iron, and the scarcity of this material. The market for heavy melting steel also is good, and leading dealers predict that it will soon reach $25, although no advance in the price of this grade was to be noted during the past week. All government offerings are being absorbed promptly. The railroad administration is taking bids on approximately 7000 tons of miscellaneous material, among which are 400 tons of heavy melting, 500 tons of steel rails, 300 tons of railroad wrought and 300 tons of short-steel rail ends.

Eastern Dealers Advance Prices

Boston, July 8.—The local scrap iron and steel market continues speculative. Few orders for open-hearth furnaces have been placed although buying elsewhere is reflected in advanced prices here, and in considerable activity among local dealers. Machine shop turnings have been more active than any other grade and the price has advanced to $8 to $8.50. Blast-furnace turnings have also advanced and are quotable now at $7.50 to $8.

Rerolling rails have advanced $2 and are now at $15 to $15.50, dealers' price. In isolated cases $16 has been offered. The demand from Southern plants for cotton ties for rebaling purposes has fallen off. A sale of a sizable lot of government-shell scrap was made last week to a dealer at $16 f.o.b. New England point. Local foundry trade has dropped off some, although prices are not affected.

Volume of Trading Declines

New York, July 7.—Trading in scrap during the past week has again fallen off. Demand for heavy melting steel, which for the most part has been holding up well, is not quiet, and, in fact, there is little inquiry for material of virtually any description at the present time. One factor in the inactivity of the past few days has undoubtedly been the holidays, most offices in this city being closed from Thursday until Monday morning. Due to this dullness, the advance in prices apparently has been checked. In a couple of instances, the tendency, if anything, has been downward. In heavy melting steel, $14.75 is now possible, whereas a week ago $15 appeared to be the best that could be done. At the same time, however, holders of scrap are still backward about parting with their material.

Eastern Advance Continues

Philadelphia, July 8.—A substantial advance continues in the scrap market here. The demand for all grades is improving right along. All grades are becoming scarce on account of dealers holding their stocks. Several sales of heavy-melting steel and No. 1 railroad wrought were made recently at $19 and $25, respectively. Approximately 5000 tons of blast-furnace turnings were purchased by the Midvale Steel & Ordnance Co. at $12 to $13, delivered, Johnstown. Numerous sales of machine-shop turnings and foundry scrap also are reported. Heavy axle and forge turnings have commanded $14.50, although sales are reported as high as $15. A round tonnage of iron axles was purchased for export from New York.

Prices Still on Upgrade

Pittsburgh, July 8.—Scrap-iron and steel prices daily are finding more basis in sales to the steel manufacturers. Prices still are tending higher, for, finding the steel interests inclined to raise their price limits, makes the dealers firmer holders. One steel manufacturer in this district has paid as high as $19, delivered, for heavy melting steel. Some dealers, who a short time ago were holding for that price, marked up their quotations and today the general asking price is $20 on this grade. Knuckles, couplers, springs and other kinds of railroad scrap also have advanced. The Carnegie Steel Co. is making some scrap purchases for other corporation subsidiaries, but not for itself, officials of the company asserting that it is self-sustained on scrap and that furthermore, it still is getting fairly large tonnages contracted for at much lower prices than now prevail. Turnings and borings are plentiful. Dealers are naming their own prices on rerolling rails and iron axles. The demand for rails is sharp. Government shell steel is not being awarded so freely as recently. On a tonnage recently offered at the plant of the Allegheny Steel Co., Brackenridge, Pa., $20.25 was refused by the salvage board, whose idea is that this material should bring around $30.

Tonnages Are Scarce

Buffalo, July 8.—The market continues strong for all grades of scrap and dealers say a real shortage is in process of development. There is a strong demand for heavy melting steel on the part of eastern Pennsylvania mills but the local call has not increased. So far as can be learned no big tonnages have been sold and it is difficult to buy in large quantities. Dealers' stocks are said to be comparatively low and the fact that country scrap is conspicuous by its scarcity, has not helped conditions. The tone of the market is strong.

Assortments Are Heavy

Youngstown, O., July 8.—Scrap is moving only in fair-sized lots from valley yards. A few dealers are well stocked and are quoting attractive prices in some instances. Crop ends and billet and slab croppings command $21 here.

Prices Take Sharp Advances

Cleveland, July 8.—Iron and steel scrap again is breaking out of bounds. Enthusiasm is being evidenced by dealers and yard interests now are offering more than melters. Heavy melting steel no longer is obtainable at $18, and not much is to be had at $18.50. Yards say they would not consider $20 or $21 for the melting steel they have thrown down. Actual trading in scrap has not been large in the past week because of the week-end holiday. Large forge flashings, machine shop turnings, cast iron borings, heavy cast railroad, malleable stove plate and No. 1 busheling have advanced from $0.50 to $1. One of the largest users of heavy melting steel is expected to be forced into the market shortly, and may have to pay better than $18.50 for melting steel which he turned down at $16.50 and $17 recently.

Prices Still on Rise

Cincinnati, July 7.—Prices continue to rise on practically all grades of scrap material. Advances made this week were only nominal ones, but they tend to show the strength of the market. Cast scrap is in better demand, as is also No. 1 railroad wrought. Cast borings continue to gain strength, but steel turnings are quoted lower. Rerolling rails are in demand. The supply in this territory is limited. No railroad offerings of consequence are reported by any of the local dealers.

St. Louis Market Quieter

St. Louis, July 8.—While scrap iron and steel price lists were not subjected to any revisions worthy of note in the week, the market quieted down considerably, and there was a shade easier tendency in values. The apathy was due more to the hot weather and triple holiday than any change in supply and demand conditions. Many dealers, however, who figured in the recent buying flurry, have acquired about all they care to carry at the moment, and as the demand from industries has not picked up, a softer feeling has followed. Holders continue bullish on the future, and declare they are prepared to retain their scrap until their hopes are realized. Offerings through the week were light. The Cotton Belt had 12 cars for sale and the Missouri, Kansas and Texas 13 cars. The Terminal Railway association had a list of from 1200 to 1300 tons, and the Wabash disposed of 1300 car wheels. The government, through the local ordnance department, will sell on June 15 about 4500 tons of 5½-inch gothic billets at the Curtis Mfg. Co. plant. Bids made in the government's recent offering of cast-iron pipe at the Laclede gas plant were

all rejected, and this material will not be put on sale again before the end of the year.

Southern Dealers Still Waiting

Birmingham, Ala., July 8.—Dealers in scrap iron and steel in the South are still waiting for the change in the market. A little business is going on but as much stock is being taken in as goes out. Railroad scrap is being purchased by dealers. Country scrap is out of the question, in quantity, until a better price is offered. Quotations for the week show no change, and the assertion is made that published figures are but nominal. Advance in prices and activity at St. Louis, Chicago, Cleveland, Buffalo and elsewhere has played no part in the market of the South as yet.

Steel Demands

May Cause Difficulty in Filling Rail Orders When They Appear

Pittsburgh, July 8.—The rail mills in this district although a fair amount of foreign business has been placed, are not crowded with orders and not more than 50 per cent of the capacity is engaged. Talk still persists that the railroad administration must take considerably more rails but the hope does not run particularly strong that the additional requirements will be placed much before the railroads are returned to the original owners. So much capacity now is being devoted to the rolling of sheet bars and small slabs that the opinion has been expressed in well informed circles that when rail orders do not come out there may be difficulty of fulfillment. It is even hinted that higher prices may prevail when more rail tonnage seeks the manufacturers. Demands for light sections are of extremely moderate proportions although some purchases have been made at concessions by coal mine developments.

Light Rails Firmer

Philadelphia, July 8.—The demand for light rails has been increasing rapidly especially from Pennsylvania and West Virginia coal mines which want all weights from 16 to 45 pounds. Less shading now is reported on light rails; in fact practically all sales are on the 2.45c basis. Small standard rail orders have been placed at $47 mill for open hearth.

Mine Operators Swell Demands

Chicago, July 8.—A slightly better demand for light rails is in evidence in both the domestic and export markets. While most of the buying is being done by general contractors, road builders and industrial concerns, operations at coal mines are picking up, and a strong demand from this source in the near future is indicated. Stocks of coal are disappearing rapidly, and the mines are preparing for renewals in line with plans for heavier operations. No car buying of any consequence is noted, and there is no demand for heavy rails. One manufacturer points out that the need for track repairs is so great that on certain systems all trains are compelled to reduce speed owing to poor track conditions.

Sheet Orders Mount High

Bookings Running About 20,000 Tons Daily—More Heavy Automobile Buying—Export Business on the Increase

Pittsburgh, July 8.—Makers of sheets literally are being flooded with business and most of them now are practically sold for the third quarter. A considerable amount of fourth quarter business lately has been entered by the leading interests. Orders and specifications now are coming in at the rate of about 20,000 tons per day. The volume of business still greatly exceeds production and a substantial backlog of orders is being accumulated. The size of the business is extremely gratifying, being well distributed among the different kinds of sheets. Considerably less price-cutting is going on than was the case recently and almost all manufacturers now are quoting the March 21 prices. One of the larger automobile manufacturers is seeking to place a contract for sheets covering requirements over the remainder of this year and the first half of 1920. This proposition, however, is not being entertained by any of the manufacturers, none of whom wants to be committed for so long a period at current prices. Another large automobile company has not yet placed its last half requirements but it is expected to do so shortly. Substantial orders have lately been coming from makers of galvanized utensils and from corrugating companies. Demands for blue annealed sheets also are considerably heavier and a large amount of the bookings have been made at 3.55c, Pittsburgh, for No. 10 gage, notwithstanding that some makers have quoted as low as 3.35c.

Contract for Third Quarter

Philadelphia, July 8.—Good contracting for the third quarter marked the eastern sheet market during the past week. There was also fair spot buying.

Bookings Are Heavy

Youngstown, O., July 8.—Bookings of various grades of sheets are running heavy and plant operations in the valley this week will average close to 75 per cent of capacity. An inquiry from a Canadian interest for six carloads of automobile sheets is before makers and it is heard $4.15 mill was quoted. Inquiries in general call for small tonnages and include some choice specifications. The roofing trade is patronizing valley mills strongly and some good galvanizing and forming business is being closed. Export business in some quarters is on the increase. Japanese interests are buying large quantities of black sheets and, it is heard, are about to come into the market for heavier tonnages. It is understood this new business will include specifications of 30-gage and lighter, 36 x 72-inch black and blue annealed. It is thought mills here will not take on this business unless at a premium, inasmuch as it is difficult specification to handle in hot weather. The scrap loss when rolling this gage is also large. A 1000-ton inquiry for 30-gage material was before makers here recently but they declined to quote. Prices are firmer. Regular carload business is being closed at prevailing market quotations, as follows: No. 28 black, 4.35c; No. 10 blue annealed, 3.55c; No. 28 galvanized, 5.70c. However, where a maker is in a position to work in an order with present mill schedules, it is thought a concession of $2 per ton or so might be had. Bundled scrap is bringing $13 per ton; hydraulically-pressed scrap, ready for charging, $14; black wasters, 3.35c; hot-mill warmers, $25 per ton; galvanized wasters, 3.50c; and, galvanized seconds, 4.50c.

Mill Schedules Are Tight

Chicago, July 8.—The slight weakness in the price of sheets noted recently has entirely disappeared, as buying continues to increase. Makers report they had twice as much business in June as in May, and now have on their books all the orders they can take care of.

Output Gains

In Tin Plate and Operations Are at 90 Per Cent

Pittsburgh, July 8.—Specifications and orders for tin plate are on a scale that has necessitated a further increase in mill operations. The American Sheet & Tin Plate Co. this week is running better than 90 per cent of capacity and the average for the entire industry is around 90 per cent full. It seems that the Pacific coast fruit and vegetable crops are greatly exceeding early estimates and this has resulted in a scramble on the part of the container manufacturer to secure additional supplies of tin plate to meet the revised requirements for cans. While it is considered unlikely that perishable food container requirements will be anywhere nearly normal this season, still more tin plate will be required than was thought likely early in the year. Export demands for tin plate, especially for oil containers, is good. No let-up is observed in the demand for long terne tin plate and Japan still is a big buyer of black sheets for tinning. It has been stated that a price of as low as $6.50, Pittsburgh, has been made on tin plate for oil cans for export.

Export Business Shows Strength

Youngstown, O., July 8.—Tin plate makers here are booked tightly over the next 10 weeks. Export business has increased considerably of late. It is understood Japan is about to come into the market for several thousand boxes. The mill in Marietta, O., is running heavily on domestic business and it is understood to have three months' business ahead.

Large Bar Orders Closed

Automobile and Implement Manufacturers Are Prominent Buyers --10,000 Tons of Rerolled Bars Placed—Hard Steel Stronger

Chicago, July 8.—Operations were resumed today at the Moline, Ill., bar mill of the Republic Iron & Steel Co. to work up orders for farming implement manufacturers. The company now has orders on hand sufficient to keep this mill, which has been idle for some weeks, busy for some time. Demand for hard bars is good. Implement manufacturers have increased their orders for hard-steel bars, while an improvement is noted in the demand for bars for reinforcing purposes in connection with building operations throughout the country.

The railroads have been buying some bar iron, but business in this line is not up to expectations. Most of the mills are on a 2.60c, Chicago, basis, and while one is quoting at 2.50c it is expected to fall in line within the next few days.

Eastern Buying Going Ahead

Philadelphia, July 8.—Steel bars continue to enjoy a better demand than any other form of finished steel. Further contracting was done the past week with sellers in this district and there was considerable spot buying. The mills now have from six to eight weeks' run ahead of them.

Literal Specifications Received

Pittsburgh, July 8.—Although not much demand is coming to makers of merchant steel bars from the agricultural implement manufacturers, excellent orders are being received from other consumers and the mills gradually are filling up. Demand from the automobile and tractor manufacturers are especially liberal and it is believed that with the completion of inventory, makers of farm tools will enter the market more freely. While some concessions still are being made here and there, the market is more uniformly on the March 21 quotations than it has been before. Inquiries for concrete reinforcing bars continue numerous and among them is one for 1200 tons for a new building for the Goodrich Tire Co., Akron, O. The market is showing much firmness and higher prices for rerolling rails have led some makers to increase their prices. Rerolled bars now are quoted as high as 2.35c mill and while no business yet has been done above 2.25c, this latter price means a recovery of $4 a ton from the extreme low point. Higher prices are being talked for iron bars, due to the advance in scrap material. The demand for iron bars are reported to be steadily increasing.

Mills Are Well Booked

Youngstown, O., July 8.—Several good-sized contracts for bars have been closed recently with mills in this district. One large implement maker closed recently for approximately 10,000 of bars rerolled from old rails. It is understood this business went to a maker in a nearby district. Implement makers are thought to be well covered over the third quarter.

More Contracts Are Placed

Cleveland, July 8.—Contracting in steel bars for third quarter and last half is going ahead and the past week has witnessed the closing of some round tonnages of this character. As has been the case in recent weeks, automobile builders and accessory manufacturers have been most prominent in this buying. Some of the leading automobile interests in this territory especially have figured in the market in a big way. One contract with a manufacturer in this city closed for 3000 tons. A forging interest closed for 2000 to 3000 tons of bars and billets. Specifications have continued to come in on an increasing scale. The demand for reinforcing bars is keeping up at a lively rate. One Pennsylvania producer has advanced his prices $2 per ton to 2.35c mill. The 930 tons for the sewage disposal plant for this city has been placed with the Franklin, Pa., producer. Small rivets have been advanced from 65-10-5 off to 60-10-5 off, representing about $10 to $15 per ton.

Some Makers Advance Prices

Pittsburgh, July 8.—Recent improvement in the demand for nuts, bolts and rivets continues and the strength of that fact, some of the leading manufacturers have advanced prices 5 per cent over the March 21 levels. This improvement, however, has not yet become general enough to quote a new list of discounts. Both consumers and jobbers and particularly the latter, now are ordering tonnages out quite freely.

Cleveland Makers Advance

Cleveland, July 8.—A continued improvement was noted in the general tone of inquiries for nuts, bolts and rivets during the past week, and demand has reached such proportions that a general increase on these products has gone into effect. This rise in price follows the recent withdrawing by various manufacturers of all prices as of July 1.

One manufacturer states that the market at present is in a better state than it has been for months. Foreign orders are fair, one maker having received good sized orders from both China and India. Domestic business in the rivet market is more active and small rivets are higher. The Emergency Fleet corporation has been one of the big purchasers of this material in this district.

Nuts-Bolt Prices Advanced

Chicago, July 8.—A 5 per cent horizontal increase in the price of bolts and nuts is now in effect. Leading makers announced the advance last week and since then others have fallen into line, making it general. The volume of business has been growing by leaps and bounds, and all makers expect to be operating soon at full capacity. The effect of the increase thus far has not become visible, owing to the holidays intervening since the advance was announced, but demand has been so heavy and insistent that makers do not fear it will check the market.

Business Thoroughly Good

Pittsburgh, July 8.—Makers of hoops and bands heer are busier than they have been for some time although the demand from cooperage interests still is considerably below normal. Loss in this direction is largely compensated for by the fact that hoop and band mills are being devoted more and more to the production of stamping steel for makers of automobile accessories and parts. It is claimed that the March 21 base of 3.05c Pittsburgh is being closely observed on both hoops and bands.

Shafting Demands Expanding

Pittsburgh, July 8.—Makers of cold-rolled shafting are getting orders and specifications in steadily increasing volume and contrary to the practice of buyers during the early part of the year, a number of contracts now are seeking the manufacturers for periods running from three to six months. Hitherto, buyers have been satisfied to order their requirements as they needed them, content in the belief that it was not necessary to make contracts to insure prompt shipment. The demand from the makers of automobiles is larger than from other consumers, although farm implement manufacturers are making more frequent inquiries. Mill operations continue at around 50 per cent of capacity.

More Tonnage

Booked in Ferromanganese at $110— Strength in Spiegel Continues

New York, July 7.—Some further business in 80 per cent ferromanganese has been booked by domestic producers at $110, delivered. These sales in all cases appear to have involved tonnage which had come under negotiation when the producers originally began to offer at $110 delivered, a couple of weeks ago. The asking price of the producers now appears to be firm at $125, delivered, but in the absence of business the market is entirely nominal. English ferromanganese continues to be obtainable at $115, c.i.f. Atlantic ports, but as yet there has been not business on this basis. Current inquiry for ferromanganese is in small volume.

The stronger tone which has characterized spiegeleisen for the past few weeks is more pronounced, and the lowest price which any producer is willing to do apparently is $35, furnace, for 19 to 21 per cent. Sales which have been made during the past week involve only a moderate tonnage.

Prices Are Becoming Firmer

Boston, July 8.—Consumers have come into the market recently for ferroalloys, and prices have stiffened following the recent softening. A government plant in Massachusetts has received quotations on 50 tons of ferromanganese and 25 tons of

spiegeleisen. The successful bids were $119 for the ferromanganese and $35 for the spiegeleisen. The local ferromanganese market is generally considered at $120 delivered. Orders for several small-tonnage lots were placed during last week.

Indian Ore Sold

Philadelphia, July 8.—The only important sale of manganese ore is 8000 tons of Indian mineral sold to a Johnstown, Pa., consumer a month ago at 58 cents c.i.f. Atlantic tidewater. No arrangements yet have been made for converting this ore but the buyer probably will do this at his own furnace. It is believed that the Indian ore now could not be had at less than 60 cents tidewater.

Not Getting Asking Price

Pittsburgh, July 8.—Although domestic makers of ferromanganese generally are quoting $125 a ton delivered for 80 per cent that quotation has not recently been accepted in actual sales. Some makers have turned down bids of less than $125 but it is known that a considerable tonnage is available around $110 and the fact that no sales lately have taken place here at that figure may be ascribed to the recent big purchases by Pittsburgh and valley-steel manufacturers. Only a few inquiries are before manufacturers at the moment. English material now is quoted at $115 c.i.f. Atlantic seaboard, or about $119, delivered Pittsburgh.

Several inquiries are before makers for 50 per cent ferrosilicon, among them being 500 tons from a Pittsburgh steel manufacturer for delivery over the next four months. Quotations against this inquiry have ranged anywhere from $85 to $105 furnace, freight allowed. Some makers are quoting $90 on this material as a maximum, but as far as sales are concerned, $85 seems to be the top and some business recently has been done as low as $80.

Demands for bessemer ferrosilicon are on a much heavier scale than they were recently and the market is showing considerable firmness at $49.75 furnace, for 10 per cent. In explanation for the larger demand for the lower grades of ferrosilicon, it is stated that makers of automobile sheets have complained of the quality of the sheet bars they have been receiving. In correcting this fault, bessemer ferrosilicon has been used more freely.

Market is Quieter

Chicago, July 8.—Ferromanganese remains at $125, delivered, the market being rather dull following the advance from $110. Spiegeleisen is firm at $35, f.o.b., eastern furnace. The holidays had a decidedly quieting effect, and the leading selling agency in the Chicago territory reports that no large tonnages have been placed during the past week.

To Build Warehouse

Youngstown, O., July 8.—A large warehouse will be built in this city by the Sheet Metal Mfg. Co. for storing a complete stock of tinners' and roofers' supplies. Thomas E. Farrell, formerly of the Ohio Corrugating Co., has accepted the presidency.

Plate Market Still Lags

Eastern Mills Only 30 Per Cent Active—Carnegie Takes 8000 Tons for New Jersey Pipe Line—Ship Work Slow

New York, July 7.—The Carnegie Steel Co. has taken the order for approximately 8000 tons of plates for the proposed pipe line for the city of Jersey City, N. J. The pipe is to be fabricated by the East Jersey Pipe Co. for the general contractor, John T. Brady & Co., New York, which took the contract for Section 1 of the line. Section 2 involving about 7000 tons has not yet been awarded. With the exception of this business the plate market here has been very quiet. Current orders are of a scattered character and involve nothing in excess of 200 or 300 tons. New York representatives of steel plants all over the country report that the rate of operations at their plate mills is low.

The Staten Island Shipbuilding Co. which was inquiring for the steel for three large vessels will not build these ships. Kyle & Purdy, City Island, N. Y., have taken an order from the Emergency Fleet Corp. for three trawlers; the steel is to be shipped from a southern point where it already has been fabricated. The government has placed some other ship orders in this district lately, it is learned. Plate inquiries from domestic sources have improved somewhat, but do not involve large tonnages. The tonnages now in the market are principally from fabricators and several eastern railroads.

Export demand for plates is showing considerably more promise. A number of inquiries are on the point of being closed. Practically all of them involve plates for shipbuilding. One tonnage, which is expected to be placed this week for Italy, involves 5000 tons, another to be placed this week involves 350 tons for France, while a third, which also is expected to close this week, involves 7000 tons. Numerous other inquiries are in the market from abroad.

Demand Still is Light

Pittsburgh, July 8.—Aside from the demands from the makers of oil tanks and the movement of grooved and universal stock to the pipe mills, manufacturers of plates still report business as extremely slack. At the same time they have had plenty of chances to book some good sized tonnages if they were willing to shade prices. Although all of them need business, only a few are cutting prices and this has been chiefly for the purpose of providing business to k the plants in operation and the organizations intact. Those manufacturers who are holding for the full price of 2.65c Pittsburgh, for tank plates complain that they have run into considerable business placed at less. A price of 2.50c, Pittsburgh, was mentioned in one case. The situation is not so bad as it seems when consideration is given to the fact that in the past few years plate mill capacity has increased close to 40 per cent, which would require a really phenomenal demand to fill the existing mills. Uncertainty as to the government's program in regard to shipbuilding is keeping back the demand from the shipbuilders while the car companies in Pittsburgh are almost at the end of their orders.

Eastern Mills Run Low

Philadelphia, July 8.—Eastern plate demand continues the disappointing feature of the business. There is some improvement but it is very slight and eastern plate mills are operating at 30 per cent or less at capacity. Nothing yet has come of the ship steel inquiires which have been in the market for several weeks.

Inquiry Remains Unsatisfied

Youngstown, O., July 8.—Practically no business is being done in the plate market here. An inquiry for 1500 tons of tank plates put out over a week ago by the Standard Oil Co. is still pending and is likely to go unsatisfied.

Market Shows a Better Tone

Chicago, July 8.—Some buying of plates on the part of the railroads is noted in the past week's business, and while the volume of this business is small it is considered an encouraging sign of more developments in the near future in this line. The leading maker reports business good, the principal demand at present coming from builders of oil tanks and similar equipment, and for export. The holidays intereferred considerably with current business, but June sales amounted to 50 per cent more than those in May.

Stocks in Good Shape

New York, July 7.—Stocks at local warehouses are moving rather slowly. The new inquiry which presents itself is not large, and this in conjunction with the fact that some mills are able to make shipments on material within two weeks is making for little activity at the warehouses. Despite this dullness, however, prices are holding steady. Stocks at most warehouses are said to be the most complete in months; one large warehouse interest stated that his stocks are in a better shape than they have been for four years.

Specifications Are Good

Pittsburgh, July 8.—Makers of cotton ties report specifications as fairly liberal. Practically all of the business for this season has been closed and the dealings from now will be composed entirely of shipping instructions. Makers have calculated production on the basis of a cotton crop of 12,500,000 to 13,000,000 bales. The July price for ties is $1.71½ for a bundle of 45 pounds in lots of 3000 bundles.

Pipe Orders Are Avoided

Lap-Weld Makers Deluged With Tonnage—Mill Stocks Being Reduced—Merchant Product Better—Cast Pipe Fair

New York, July 7.—Demand for oil-country goods continues to reflect the discovery and exploration work which is being pushed in the various oil-producing districts. So filled with orders are the mills that they are forced to turn down big tonnages of lapweld pipe. One interest just has turned down an order for 70 miles of 8-inch pipe. Other firm orders which are being placed, in numerous cases involve 20 and 30 miles of line pipe and casing each, ranging all the way from 4 to 16 inches in diameter. Among the interests which have bought most heavily lately, is the Standard Oil Co. The bulk of the orders being placed in this district involve pipe for Texas, Oklahoma and Mexico. One large order involving $1,000,000 worth of lapweld pipe which recently was under negotiation here, is to be placed from Texas shortly.

Demand for buttweld, merchant pipe is good, although not nearly so brisk as the demand for oil-country pipe. Some merchant pipemakers are operating at 70 per cent of capacity or less, but in other cases the mills have more merchant pipe business than they can handle.

Mills Swamped With Business

Pittsburgh, July 8.—No let-up is observed in the demand for lapweld pipe and makers in this district have become so thoroughly sold up that large tonnages are going begging in want of mills in a position to accept them. Demand for buttweld pipe has reached the proportions where practically all manufacturers now are shipping much larger tonnages than they are producing. This development is brought about in increased buttweld furnace operation by the smaller manufacturers and has materially reduced the warehouse stock of the larger companies. No talk of price concession now is being heard on tubular goods of any consequence.

Demand Continues Heavy

Youngstown, O., July 8.—Consumers of lapweld pipe continue to place heavy orders and mills are sold far ahead. One maker is committed over the next three months and states that some business for fourth quarter is being done. A better tone is noticed in the buttweld market.

Buying is in Small Lots

Chicago, July 8.—Cast-iron pipe is in fair demand, the bulk of the business being made up of small tonnages. The city of Chicago has placed with the U. S. Cast Iron Pipe & Foundry Co. a contract for 940 tons of 16-inch pipe. Springfield, Ill., is taking bids on 1000 tons of 24-inch and 200 tons of 6-inch pipe, while Hamilton, O., will open bids June 10 on 140 tons of 4 and 6-inch; Great Falls, Mont., June 15 on 150 tons of 6 and 12-inch, and Decorah, Iowa, June 16 on 125 tons of 4-inch pipe. A big business is being done in steel pipe, and manufacturers say prices probably will be advanced within the next few days.

Shape Tonnage Keeps up

11,000-Ton Cunard Building at New York Reported Closed—Many Projects Are Being Developed—Fabricating Prices Are Firmer

New York, July 8.—Activity in the local structural market continues to be fairly well maintained. Possibly the largest new tonnage to come up for bids is one involving 2000 tons for a building for the Metropolitan Life Insurance Co. Bids are being received through the George A. Fuller Co. One of the largest tonnages to be closed in the east in recent months involves 11,000 tons for the new office building of the Cunard Steamship Co. An informal contract for this steel, it is authoritatively stated, has been given Post & McCord. It now appears that some of the government business recently figured upon will be held up indefinitely. Included in tonnages understood to have been postponed are about 2000 tons at the League Island navy yard and 1500 tons at the Boston navy yard. M. H. McCloskey and Levering & Garrigues were respective low bidders on these jobs. These projects, it is understood, were included in an appropriation which was effective until July 1, and as action in awarding this business was not taken by that date, a new appropriation will have to be made. Two projects, however, to be acted upon were the crane runways for the Brooklyn navy yard, involving 3400 tons, and about 300 tons for a government power house at Indian Head, Md.

Work Slow to Develop

Philadelphia, July 8.—Many structural jobs continue to be talked of but they do not come to a head. Eastern shape mills report an improvement but it is slight. Ship shapes are featureless.

Fabricating Shops Filling Up

Pittsburgh, July 8.—Leading fabricating shops in this district are working to a better position on orders and while as yet there has been no appreciable improvement in prices at least competition for business is not quite so sharp. Apparently it is no longer necessary to name prices that means doing business for nothing or at a loss. Reports from across the water still tell of large contracts being booked by American interests in the reconstruction of France and Belgium but such reports find no confirmation among structural interests here. The McClintic-Marshall Co., which was credited with having secured a large order in conjunction with the Vulcan Steel Products Co., still is without advice regarding this job. Although the demand for structural shapes is better than it has been the mills are far from crowded with business, especially as almost no orders in ship shapes are coming out at present. Prices for plain material are firmly maintained.

Fabricators Advance Prices

Cleveland, July 8.—With order books comfortably filled fabricators in this district are beginning to advance their prices on new business, some concerns asking an average of $5 a ton more than the level prevailing two months ago. Some interests have quoted from $80 to $85 delivered during the week. Mill prices for structural material remain unchanged. The fabricators for some time have complained that production costs were in excess of the selling prices. Another tendency is toward the reduction of competition for new jobs, diminishing the advantage held for months by the buyer. Requirement contracts for shapes continue to be placed by shops in this district. Inquiries continue to appear in satisfactory volume, and a number of important building projects for which considerable steel will be required, are taking form. The award for 7000 tons for the Hanna building has not been made.

Jobs Are Hanging Fire

Chicago, July 8.—Actual business closed in the structural market is far from satisfactory, the many big building projects talked of for the past few weeks still being in prospect. Inquiries for small tonnages are comparatively numerous, but fabricators are figuring on but one new job involving about 3000 tons. Among the largest awards made during the past week is one of 1300 tons for the federal reserve bank in Dallas, Tex., which went to the Mosher Mfg. Co. The contract for several hundred tons of structural shapes for the Studebaker assembly building was awarded in New York. Other contracts were small. The Stone & Webster Engineering Co., is taking bids on 500 tons for a forge shop for the Whitman & Barnes Mfg. Co., West Pullman, Ill. The Chicago & Northwestern and the Missouri, Pacific railroads are about to let several contracts for bridges, calling for about 300 tons.

CONTRACTS AWARDED

New factory buildings for B. F. Goodrich Co., Akron, O., 1300 tons, to American Bridge Co.

Fabricating boat material for the Dravo Construction Co., Pittsburgh, 500 tons to the Jones & Laughlin Steel Co.

Factory buildings for Monroe-Binter-Board Co., Monroe, Mich., 650 tons to the McClintic Marshall Company.

Crane runways at Brooklyn navy yard, 3400 tons, to McClintic Marshall Co.

Government wireless towers at San Francisco, 300 tons, to Pittsburgh Des Moines Steel Co.

Steel building for International Harvester Co., Deer-

ing rolling mill, Chicago, 234 tons, to Worden-Allen Company.

Bridge for Southern railway, 200 tons; to Virginia Structural company.

Standard Oil tank at Charleston, W. Va., 250 tons, to American Bridge Co.

Office building for Cunard Steamship Co., New York, 11,000 tons, placed with Post & McCord.

Federal Reserve Bank of Dallas, Tex., 1305 tons, to Mosher Mfg. Co.

Meyer-Livingston department store, Bloomington, Ill., 311 tons, to Decatur Bridge Co.

Foundry building for the Defiance Machine Works, Defiance, O., 207 tons, to Duffin Iron Works.

Verde river bridge near Cottonwood, Ariz., for Yavapai county, Ariz., 177 tons.

CONTRACTS PENDING

Extension to the plant of the Colburn Machine Tool Co., Franklin, Pa., 450 tons, bids being taken.

Blackstone theater, South Bend, Ind., 185 tons, bids being taken by Henry L. Newhouse, Chicago.

Forge shop for Whitman & Barnes Mfg. Co., Pullman, Ill., 500 tons, bids being taken by Stone & Webster Engineering Co., Chicago.

Office building for Metropolitan Life Insurance Co., New York City, 2000 tons, George A. Fuller Co. taking bids.

Hospital at Orange, N. J., 200 tons, bids asked.

Theater at Philadelphia, 300 tons, bids asked.

Addition to Vanity Fair Silk Mills, Reading, Pa., 400 tons, bids asked.

Addition to school building No. 73, Brooklyn, 200 tons, bids closed June 7.

Bath house for city of Cleveland, 118 tons Republic Structural Iron Co., lowest bidder.

Wire Orders

Exceed Production and Backlog is Accumulating—Still Talk Advance

Pittsburgh, July 8.—Manufacturers of wire and wire products note no let-up in the demands and all of them are practically booked for the third quarter and some of them to the end of this year. Although prices were not marked up on July 1, as many had expected, it is not believed that the matter of higher quotations has been definitely abandoned but that it merely has been put off for 30 days. Higher prices for nails seem inevitable for they show a loss on the present scale of operations. In view of the fact that the demand for nails is on a tremendous scale, manufacturers generally believe that the time is ripe for an advance. Mill operations have increased somewhat in the past week but they are considerably below the present rate of specifications and this means that a substantial backlog of business is being built up. Not only are the domestic demands big but makers are being called upon to supply a large export demand. Foreign purchases generally are of small tonnages but the aggregate is large and extremely satisfactory.

Demand Continues Active

New York, July 7.—Orders for all kinds of wire products continue to come in actively both from merchants and manufacturers, so that mills continue fully occupied and have a schedule of several weeks ahead of them. There is an increasing tendency to urge prompt delivery. A number of makers say that although the present price of wire nails does not cover the entire cost of manufacturing, they are booked to capacity on the product.

Some Business Being Rejected

Buffalo, July 8.—The wire business in this district was never better. One interest reports its plant sold up above capacity till 1920. This concern has rod and nail mills working night and day and is compelled to turn away bookings.

Demand Continues Heavy

Chicago, July 8.—Increase in construction work throughout the country is reflected in the steadily growing demand for nails. Jobbers continue buying heavily, and mills report a plentiful supply of orders on hand. Demand for wire also continues good. While jobbers apparently are making efforts to stock up in anticipation of an advance no change in prices is announced.

Sheet Bars

Continue to be Ordered Freely—Electric Steel Being Closed

Philadelphia, July 8.—More inquiry for sheet bars has been brought out during the past week than any time since the armistice. Actual needs now being negotiated in this district involve 10,000 to 15,000 tons monthly over the remainder of the year. There is a good wire rod demand but billets are lifeless.

Sheet Bar Demands Heavy

Pittsburgh, July 8.—In keeping with the increasing sheet and tin plate mill operations, there has been a considerable enlargement of the demands upon the makers of sheet bars. Both the American Sheet & Tin Plate Co. and the independent manufacturers are running their sheet mills this week at better than 80 per cent of capacity. While no actual scarcity of sheet bars exists, a number of mills are not getting as large tonnages as they are ordering. This condition probably will be corrected through an increase in the production of bars. Specifications for billets are comparatively light, although demands are considerably heavier than they were a short time ago. Makers of wire rods are in a comfortable position in the matter of supplies for those operating their own wire mills are booked several months ahead and demands from nonintegrated plants are sufficient to absorb any surplus production. An active export demand also exists for wire rods. Skelp also is in scant supply because of the tremendous activity of the pipe mills. Prices are firm on all kinds of semi-finished material. Ingot capacity in operation in this district now is averaging around 75 per cent full.

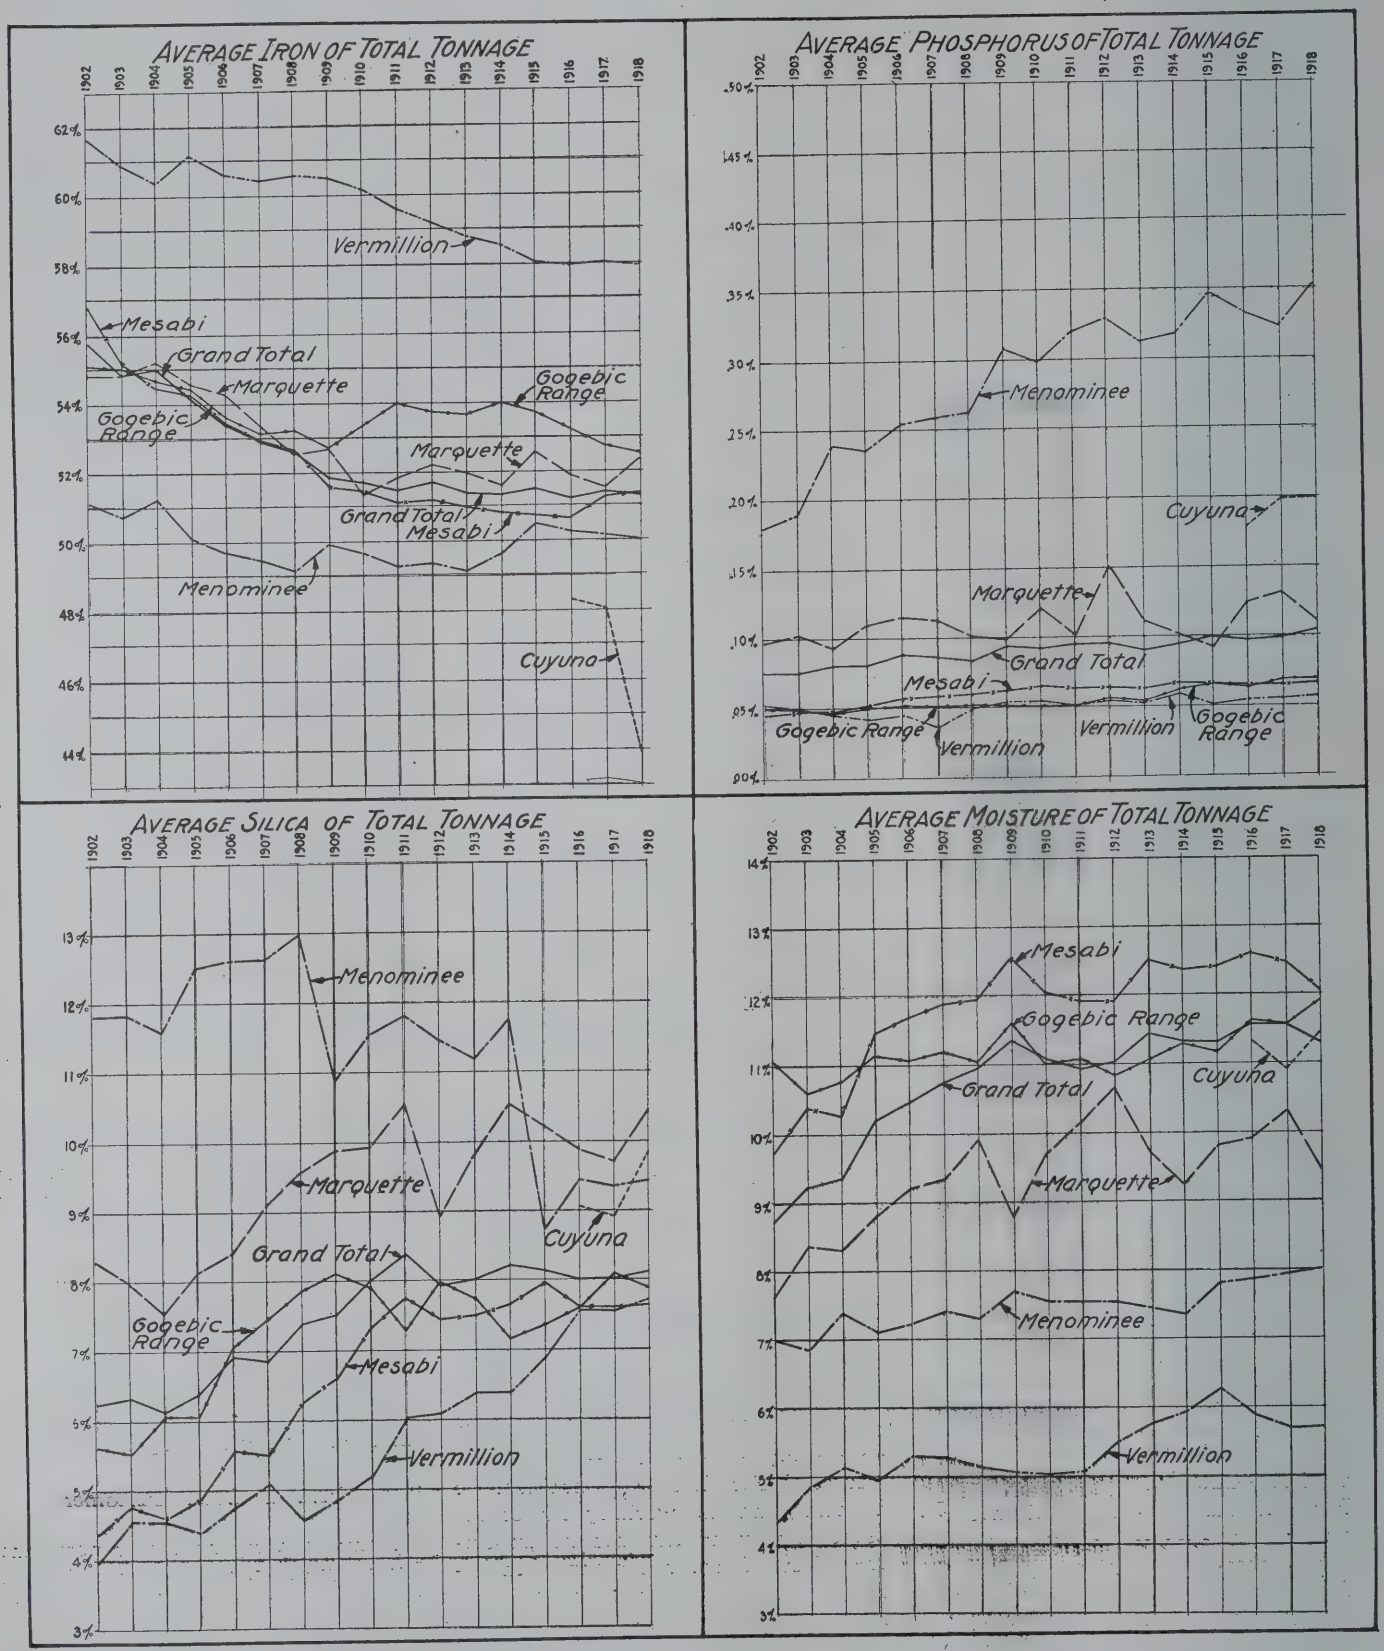
Electric Steel Placed

Cleveland, July 8.—Buyers of electric steel in this territory have been placing some sizable tonnages covering their requirements over the third quarter and the balance of the year. Automobile parts companies have been included among these. One of these contracts closed for an excess of 5000 tons of blooms. A local forging manufacturer has placed a fair sized tonnage of forging billets.

The Nonferrous Metals

	Copper	Future Straits N. Y.*	‡Lead, New York basis	Zinc St. Louis basis	Aluminum	Spot antimony
July 2	19.25	51.00	5.40	7.05	33.00	8.375
July 3	19.50	51.50	5.40	7.00	33.00	8.375
July 7	19.75	51.00	5.40	7.125	33.00	8.375
July 8	20.06¼	52.50	5.40	7.15	33.00	8.375

‡American Smelting & Refining Co.'s price.
*July shipment from Singapore, c.i.f. New York.



NEW YORK, July 8.—The approach of peace in formality as well as in the end of fighting, has brought further strength to the nonferrous metals in the past few days, and particularly copper is making a remarkable flight away from the low levels that prevailed all winter and spring. Brass and copper products are keeping company with the red metal. One of the factors in this climb is news of better business in the steel industry, indicating more activity in a number of kinds of manufacturing.

Copper has made one of the most remarkable records ever set up by any commodity, in that it has marched directly up from a level slightly under 15.00c to 20.00c and more a pound in less than four months, with hardly a hesitation and practically no reaction from the ascent at any point. For more than two weeks it has been averaging nearly a quarter of a cent a day. Buying has been of fair size by brass mills, but little is reported by the leading sellers for export. With the prediction of 20.00c copper fulfilled, gossip in the market is of 23c in the last quarter of the year.

Still further freedom of the tin market came in the past week. In fact, except for the dates set as the earliest time certain tin can be imported, this metal is as free as before the government began regulation nearly two years ago. Prices have shown little change until yesterday, when the Straits shipment price from Singapore, c.i.f. New York, went up about a cent, as shown in the table. The wide margin between spot tin and shipment is expected to shrink as the spot supply becomes larger in August and September, with the arrival of new metal. Some say the shipment price will move up several cents and the spot price down considerably, but this may not be expected at least for a few days.

Zinc was a little uncertain at the middle of last week and lost much of its strength, probably on account of slack trading that accompanies a holiday. In the first two days of this week has continued on its upward swing. Some good buying has been done by galvanizers but brass mills have said little. Lead is firm but prices have changed little in the past week. Aluminum is steady after some strength a week ago.

Heavy Shipments Affect Quality of Lake Ores

AVERAGE analyses of the iron ores of the Lake Superior district for the past 17 years are shown in the above charts. The average iron content, natural, has dropped from 55.77 per cent to 51.29 per cent. Average phosphorus has increased from 0.075 per cent to 0.104 per cent, silica from 6.23 per cent to 8.12 per cent, and average moisture from 8.71 per cent to 11.29 per cent. Figures in detail for all ranges and including old range manganiferous, low grade and siliceous, bessemer and nonbessemer ores have just been compiled by W. L. Tinker, secretary, Lake Superior Iron Ore association.

The charts are based on practically complete returns on all shipments each year. Heavy war shipments held at standard quality.

Europe's Needs Interest Market

England and Italy Send Large Inquiries to American Agents—Cargo Space Plentiful and Freight Rates Are Declining—Rumania Requests Novel Financial Accommodation—Foreign Sales Continue to Increase

NEW YORK, July 7.—Many important inquiries for iron and steel are in the market which promise tangible business at an early date. The heaviest of these come from England and Italy. While France is promising to become a better purchaser there is still no great confidence placed in that direction. The European inquiries upon which American export houses are busy at present are from England, Belgium, Italy and Denmark. One shipping company declares, however, it has between 5000 to 6000 tons of steel at southern ports awaiting shipment to Italy and France.

The prime obstacles confronted in Europe are the rate of exchange and the difficulty of financing the transactions. Even with England the exporters have obstacles to overcome. It may be necessary to extend a credit for but 120 to 90 days, but that is an important factor. Within the past two weeks it is known that England purchased approximately 3000 tons of bars, probably more. Italy has purchased 5000 tons of scrap and has made inquiry for 5000 tons of ship plates, 1500 tons of structurals and about 6000 tons of scrap including especially old wheels and axles.

American dealers of broad vision are not so enthusiastic over the sale of raw material to England and Italy as they might be expected. They would prefer to see America selling the finished goods instead. This raw material, it is pointed out, is merely to enable the English steel mills to fill their own export orders. More satisfaction is found in the sale of an occasional bill of rails, and a recent English inquiry for 500 tons of bars was received with satisfaction. It is noted by the more astute traders that the British competition is forcing finished American steel out of the Portugal market. Portugal has recently sent inquiries here for steel bars, sheets, and tin plate, but the English competition will not permit this country to get the business.

Advancing Europe Money

On the other hand is the problem of financing. A Rumanian agent has been making inquiries of American houses for various stocks of steel. The proposal to build a bridge across the Danube was one of these. An important American export house was approached this past week by the same agent with a proposition to purchase for Rumania approximately $1,000,000 worth of steel of all kinds for sundry rehabilitation purposes throughout that nation. The list of needs included plates, sheets, wire, structurals, lead, zinc, copper, etc. But when the problem of payment was reached it was suggested by this agent that he would give to the American salesman 3-year government notes. Naturally this was a medium of payment which could not be accepted.

The Rumanian situation is one that is not at all dissimilar from others in Europe. There is a great volume of business on the continent if Americans had the means of getting it. The Morgan committee of bankers is now working on this problem and exporters have given those bankers their full moral support and are hoping that some practical solution can be found. The tentative scheme under discussion involves the organization in each of the large industries, steel, cotton, cement, rubber, copper, lumber, etc., of corporations with full banking powers to trade in stocks, bonds, notes, and acceptances, issue debentures based upon these securities and to conduct all other banking transactions.

Some relief is naturally expected from the extension of credits by the U. S. treasury of an addition of $50,000,000 to France, $10,000,000 to Italy and $5,000,000 to Rumania. But after all debts are paid and the prime essentials of food and clothing purchased, it is doubtful whether much of these funds will remain to enable any of these three countries to purchase new steel supplies in the United States.

In the Far East this problem of financing and the working out of the peace settlement also has its important effect. China has planned an extensive railroad development. She hopes to increase her present 7000 miles of railways up to 100,000 miles, to cover the country with telegraph and telephone lines, and to establish wireless stations. American export agents have been making bids on business related to these improvements but little that is tangible has resulted. China has been purchasing wire and wire products in quantities, and today there are some good inquiries in the market from both China and Japan. Japan has purchased tin plate and structurals. One order of 1000 tons of bars recently was placed by Japan. A new inquiry from the same source for 1000 tons of sheets has appeared but inasmuch as it has been stipulated that these sheets must be 30 gage, difficulty is being encountered in finding a mill which rolls to that specification. A sale of 200 tons of wire rods was made to China by one house, and 1000 tons of similar goods were sold to Japan.

The notable thing about the Far East at this moment is the rapid recovery of the Japanese market. The armistice found Japan stocked with high priced steel. The merchants were able to work this off without great loss and Japan, being unable to fill its needs at home, has found it necessary to continue buying. The experience has taught Japan her lesson and it is believed for this reason many movements have been put on foot by that country to build steel mills and foundries so as to make her less dependent upon outside sources for finished products, although her dependency upon others for raw materials continues.

A small sale of steel bars to Singapore was noted last week. Singapore has also purchased 500 tons of wire rods. American interests are reaching far down into territory once supplied by England. Robert Dollar, the steamship operator, is now in Australia planning an extensive line between the island continent and the United States. He has been quoted as pinning his faith to the steel trade which will develop for supplying his ships with outward cargoes.

Cuba is Good Customer

Many export houses report that Latin-American trade is the best at the present moment. Mexico's railway equipment needs hold out a promise but this cannot be fulfilled so long as the present unrest exists in that country. To Cuba is being sold "the whole list", some of the special sales mentioned being concrete bars. Individual sales, however, are small in tonnage.

Chile has been taking some pig

iron. On the other hand this country is purchasing but little here, although the volume of trade with both Brazil and Argentine more than compensates for that. To South America generally, plates, structurals, angles, and vast quantities of wire are being sold. The Atlantic Steel Co. is reported to have obtained some of the best South American wire orders. A sale of 1000 tons of structurals to Argentine is noted. Brazil has been purchasing bars, sheets, tin plate, wire and pipe. Besides structurals Argentine has been buying bars, sheets, etc.

Prices have been holding rather firm, although no advances of importance have been noted. Other mills have failed as yet to follow the lead of the Jones & Laughlin Steel Co. to increase the price of nails. Any sudden drop in ocean freight rates, it is believed, might have the effect of running up slightly the export prices of iron and steel.

A movement is pending in shipping circles which promises to aid greatly the promised European business. The release of all neutral tonnage, the rapid dissolution of the war services and the return of ships to their owners, is breaking the freight market. A quotation of $1 from Boston to Europe was recently spoken of, and now the shipping board has promulgated a rate of $1.25 from North Atlantic ports to French and Dutch ports, a rate of $1.50 to Hamburg, $1.80 to Danzig, a direct rate to the Levant and similar reductions to nearly all ports.

Coincident with this, the railroad administration has announced that through bills of lading via North Atlantic ports will be issued from now on. Next through bills of lading will be authorized through South Atlantic and Gulf ports. This is a clear indication of the rapid restoration of normality. Many of these changes are directly due to the signing of the peace treaty and nearly all are dependent upon that political event indirectly.

Bid Lower Price

Philadelphia, July 8.—While on the usual run of business the makers are not shading $1.50 mill on high speed tool steel, lower prices were bid on an attractive lot of 73,000 pounds on which the navy department opened bids. On this business several makers quoted $1.35 mill.

Modify Scale Slightly

Youngstown, O., July 8.—Slight changes were made in the bar iron rate for the ensuing year at the meeting held recently at Atlantic City between representatives of middle-western bar iron makers and representatives of the Amalgamated Association of Iron, Steel and Tin Plate workers. A 5 per cent advance on a 1.30c card was agreed upon but the prevailing differentials above and below a 1.30c card remain unchanged. The only other important modification made was the reducing of the charging time on double-turn mills from 9¼ to 8 hours.

Sell Screw Stock

Washington, July 8.—Recent sales of screw stock held by the salvage board of the war department aggregate a little more than 2,000,000 pounds, leaving about 22,000,000 pounds still on hand. One transaction was for 1,500,000 pounds of 2⅞-inch free cutting bessemer bars, averaging about 12 feet in length, which went to F. R. Phillips & Son, New York, the highest bidder, at $34 a gross ton, f.o.b. cars, New York. Another sale involved 675,752 pounds of 2⅞-inch screw stock, made to William E. Friedman, New York, at $35.16 a gross ton. No distinction is being made by the board in prices between bessemer and open hearth steel. The latter is unusually high in sulphur.

Shell steel is being sold as scrap at prices which accord with market conditions. One sale made recently involved 528,159 pounds of 3-inch high explosive shell steel, which included 7304 pounds of copper bands attached. This tonnage went to Solomon Katz, New York, at $23.23 a gross ton, f.o.b. cars and netted the war department $19.80 a ton without the bands attached.

Index is Ready

The index to volume LXIV, of THE IRON TRADE REVIEW covering the first six months of 1919, now is ready for distribution. Copies will be sent to all subscribers who express their desire for them.

Government Sells Steel

Additional offerings of government-owned steel continue to be made. On July 15, bids will be opened at St. Louis on 4385 gross tons of billets for 155 millimeter shells, 5½ inches square, gothic structure in lengths of from 22 to 110 inches. At Rochester, on July 15, bids will be opened on 77 tons 9.2-inch adapter common steel forgings; 436 tons 5-inch shell forgings; 88 tons 4.7-inch common steel forgings; on July 17, bids will be received on 5501 tons 9.2-inch common steel forgings.

Raw Materials

Acquired by Steel & Tube Co. of America by New Merger

Chicago, July 8.—The Steel & Tube Co. of America has acquired the Newport Mining Co., owning the Newport, Palms, Anvil and Dunn mines on the Gogebic range, producers of bessemer and nonbessemer ores, and also has absorbed the Northwestern Iron Co., Mayville, Wis., with two blast furnaces and 108 by-product coke ovens, ore mines and large coal areas. The merger of these interests, announced in Chicago today, also includes the Harrow Spring Co., of Kalamazoo, Mich. At the same time the Steel & Tube Co. of America acquired from the By-products Coke Corp., 120 coke ovens at Indiana Harbor, adjacent to the plant of the Mark Mfg. Co.

The Steel & Tube Co. of America is the outgrowth of the merger about a year ago of the Mark Mfg. Co. and the Iroquois Iron Co. The company has mills at Indiana Harbor, Evansville, Ind., and Zanesville, O. At Indiana Harbor it operates an open-hearth plant with an ingot capacity of 160,000 tons per month. As a result of the merger, the Iroquois furnaces are now entirely self-contained in regard to the supply of raw material.

The Steel & Tube Co. of America has issued $17,500,000 worth of preferred stock, part of the proceeds of which will be spent in further developments. One of the first developments will be the building of another blast furnace at the Iroquois plant and a new tube plant and pipe mill.

The merger is the consummation of several years of effort along this line, and representatives of the principal interests concerned declare that the Steel & Tube Co. of America now has an especially strong position on ore and coal resources. Complete financial details of the new combine have no tbeen divulged, but it is understood the capitalization will be near $100,000,000.

To Improve Furnaces

Philadelphia, July 8.—Directors of the Cambria Steel Co. have authorized the installation of two dry cleaners, one on No. 5 blast furnace and the other on No. 6 blast furnace, at Johnstown. The remainder of the $3,500,000 appropriated at the last directors' meeting is to be expended for repairs and replacements.

Doubles Steelmaking Capacity

New Works of Inland Steel Co. Embody Many Important Improvements in Mill Equipment—Plant Layout Provides for Unusually Elastic Routing of Material

BY G. H. MANLOVE

FACED with the necessity of creating the site from submerged Lake Michigan land, and excavating in made land filled with slag waste, the Inland Steel Co., Chicago, practically doubled its plant between the summer of 1915, when the necessity for greater steel production became evident, and Dec. 30, 1916, when most of the new plant was in operation. Not only was this enlargement expediated under the circumstances, but the result is one of the most complete and efficient steel-producing units possible to conceive.

Plant Layout is Elastic

One feature that attracts notice is the provision made at every turn to prevent lost time because of delay to one part of the system. A veritable bypass or turnout is provided wherever continuous operation is likely to be stopped. To illustrate, blast-furnace hot metal may be served direct from the furnace to the open hearth in case the mixer is not in condition to be operated. If one of the three rolling mills is out of commission, ingots can be rolled by either of the others without delaying the progress of work unduly. These provisions give a high degree of elasticity.

When the problem of expanding to meet war needs was met in the summer of 1915, the existing plant consisted of two parts: The older, occupying about 45 acres

FIG. 2—POURING THE FIRST HEAT FROM NO. 18 OPEN-HEARTH FURNACE AT NEW HARBOR WORKS OF INLAND STEEL CO.

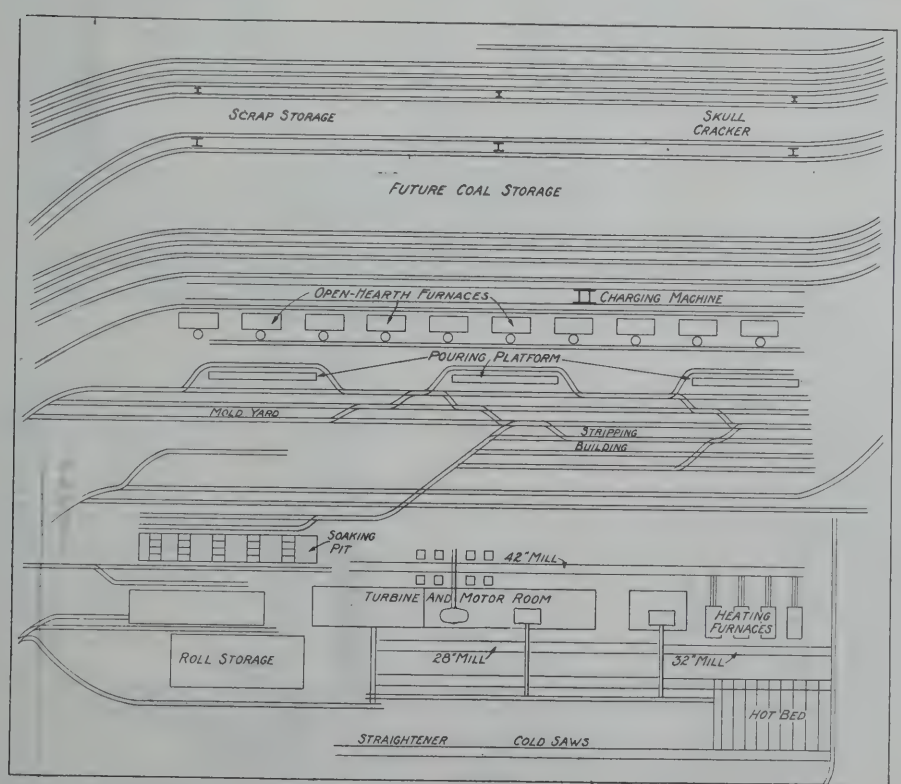


FIG. 1—SIMPLIFIED PLAN OF NEW STEEL WORKS SHOWING GENERAL LAYOUT OF PRINCIPAL UNITS

south of the tracks of the New York Central, Baltimore & Ohio, and Elgin, Joliet & Eastern railroads; and what is known as the No. 2 plant, between these tracks and Lake Michigan. The latter consisted of two blast furnaces and a coke plant, while No. 1 contained the open-hearth furnaces, mills and shops. Communication between the units was by two tunnels under the railroad tracks, one a single and one a double-track bore.

Preparation of Site Difficult

The space occupied by plant No. 1 was completely filled and offered no opportunity for additions of sufficient size to be worth while. On the lake shore, adjoining and including plant No. 2, was 240 acres of actual and submerged land, 128 acres of dry surface being available. This was practically filled by the two blast furnaces and coke plant and accessories, with the trackage necessary to serve them. The unoccupied land was a fill composed of slag which was dumped into the lake over a period of several years. This offered great difficulty in excavating for the complicated foundations

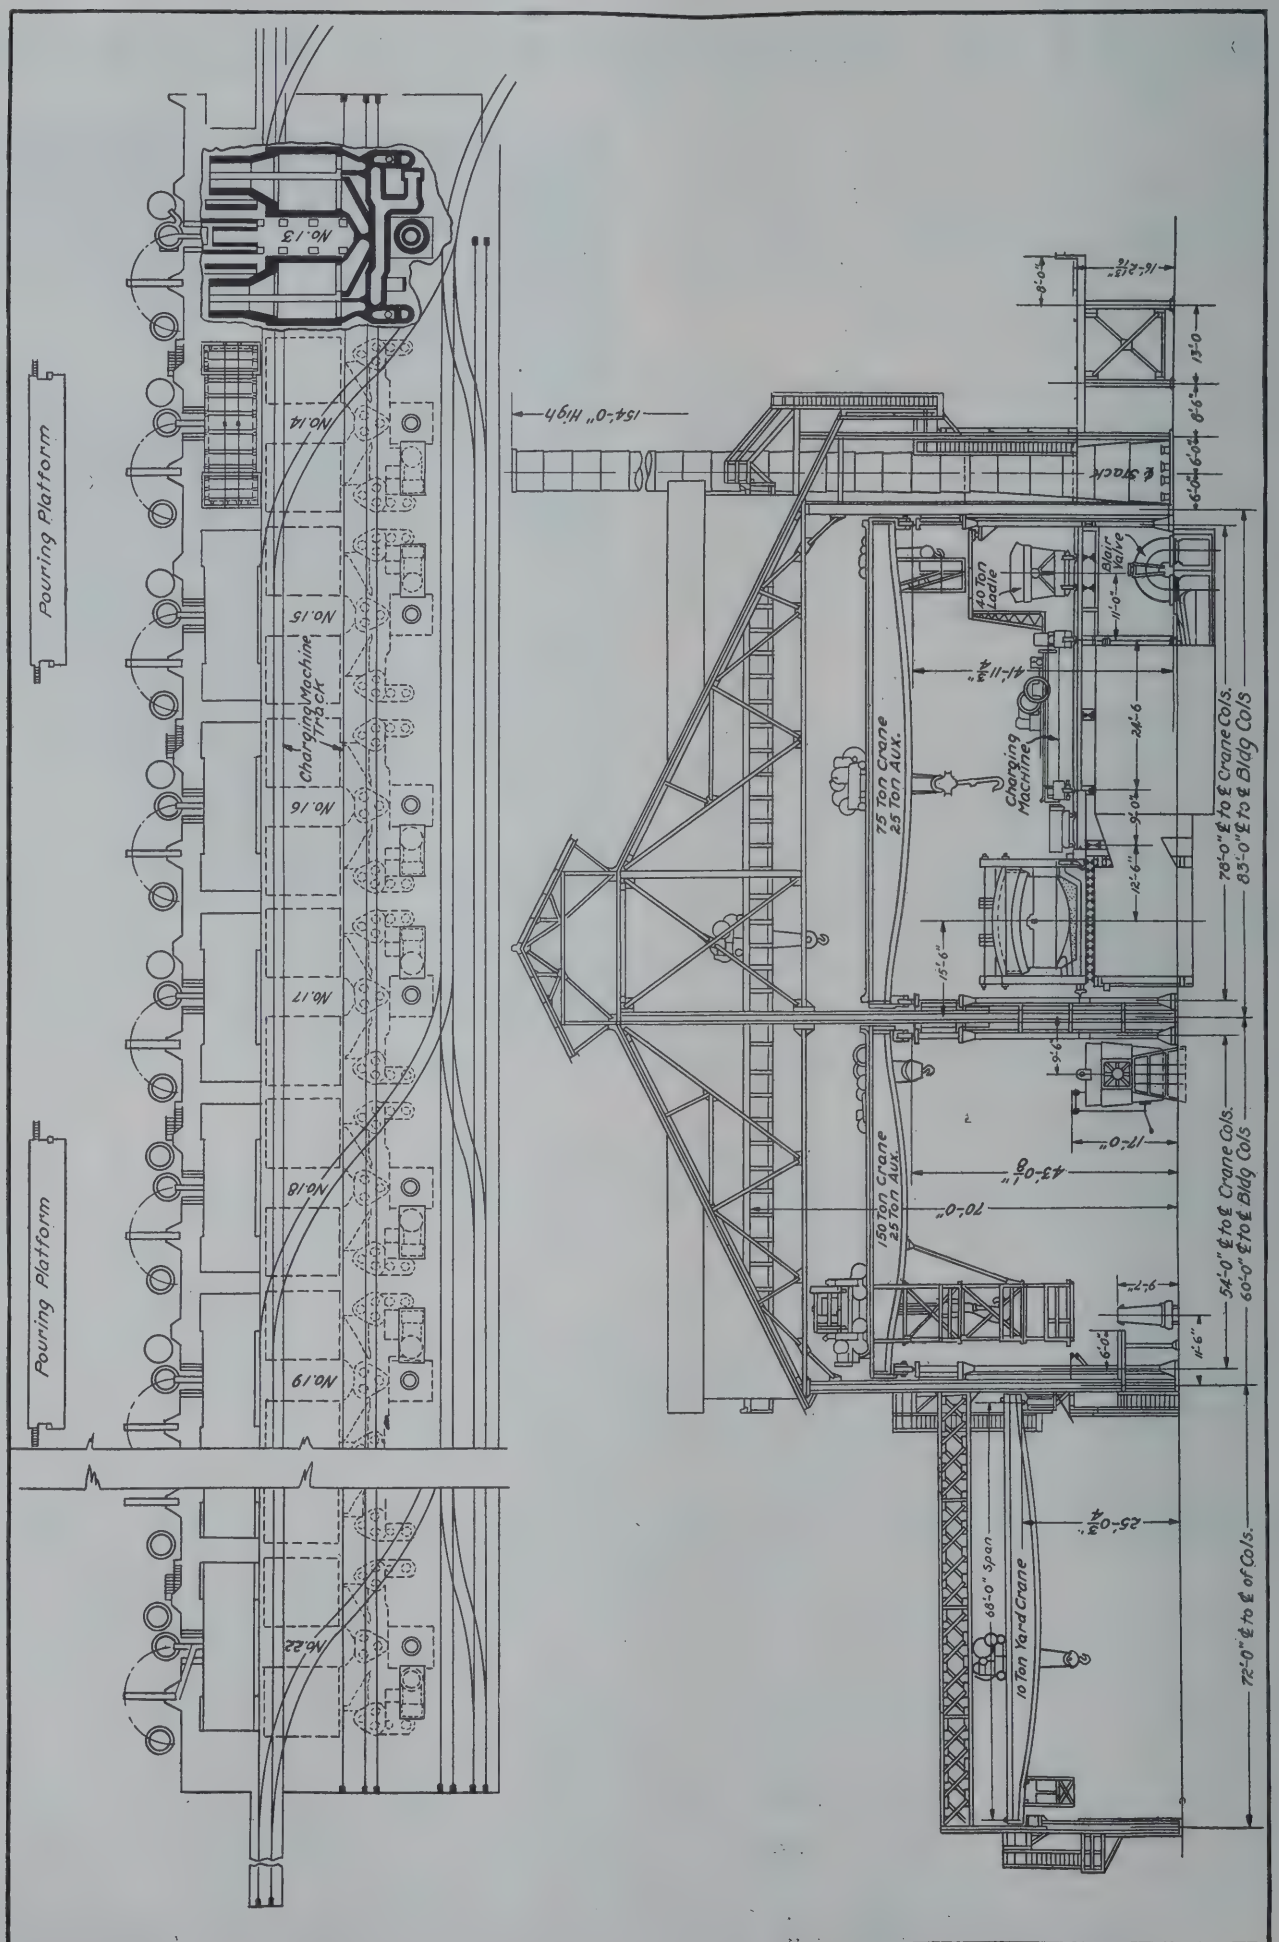

FIG. 3—PLAN AND ELEVATION OF THE TEN 60-TON OPEN-HEARTH FURNACES IN THE NEW PLANT OF THE INLAND STEEL CO.—HEAVY OIL OR TAR IS THE FUEL USED

for the new mills, and for watermains, sewers and tunnels. Blasting and steam shovels were used in preparing the ground for the new buildings. All excavations were made oversize and backfilled with lake sand to prevent the destructive action of slag on iron and steel pipe through the formation of dilute sulphuric acid. The total excavation was 200,000 cubic yards. The foundations contain a total of 80,000 cubic yards of concrete.

When work was started the existing plant consisted of 12 60-ton open-hearth furnaces, 36 Wellman-Seaver-Morgan gas producers, a 36-inch blooming mill, a 24-inch billet and sheet bar mill, a 24-inch structural shape mill, a 90-inch plate mill, several sheet mills and a continuous merchant mill. The new plant includes ten 60-ton Laughlin-type, open-hearth furnaces; a scrap yard; oil and tar storage; coal-storage and elevating plant; a 40-inch blooming mill with billet dock, soaking pits and gas producers; a 32-inch blooming mill; and, a 28-inch, three-stand, three-high finishing mill. It was necessary also to provide additional water supply to meet increased needs.

Description of Scrap Yard

The scrap supply, next to pig iron, is the first detail in the order of process in the production of steel. The plant has a new yard 1131 feet long, including a section for the breaking of pit scrap. It is spanned its full length by a craneway 100 feet wide and is served by a 10-ton combination scrap and bucket crane and two 10-ton bucket cranes, both built by the Morgan Engineering Co., Alliance, O. The motor-operated buckets were manufactured by the Hayward Co., New York, and the 60-inch magnets were made by the Cutler-Hammer Mfg. Co., Milwaukee.

The section devoted to scrap breaking is served by two 25-ton electric-traveling cranes, one built by the Cleveland Crane & Engineering Co., Wickliffe, O., and the other by the Alliance Machine Co., Alliance, O. Each is equipped with an auxiliary hoist and fitted with magnets. The scrap-breaking section is much higher than the runway of the main yard and is arranged so that cranes from the yard can operate over the pit. The scrap yard is 7 feet below the surrounding level, with a concrete retaining wall on each side. The drop ball for breaking scrap weighs 19,000 pounds and is dropped 108 feet from its greatest elevation. The speed of the hoist on the crane lifting this ball is 127 feet per minute, which has been claimed as a record. Between the scrap yard and the open-hearth building is a space reserved for future coal storage and gas producers for the open hearths when needed.

The new open-hearth plant, as has been mentioned, includes 10 furnaces, each 34 x 15 feet, designed originally for a capacity of 60 tons each. Each furnace was lengthened 4 feet and now produces 90 tons a heat. They are fired with heavy oil and tar but chambers are provided also for burning gas.

Tanks Have Large Capacity

Oil and tar for these furnaces are received in tank cars, unloaded by gravity into three 50,000-gallon storage tanks, and then pumped into three 300,000-gallon storage tanks from which the fuel is pumped to the furnaces. Blair-type reversing valves; Galvin-type removable slag pockets; and, water-cooled doors, operated by hydraulic pressure and furnished by the Blaw-Knox Co., Pittsburgh, are installed on all furnaces. The charging floor is served by two 75-ton cranes of 78-foot span, which deliver the hot metal to the furnaces. Scrap is delivered by three 7½-ton, Morgan-type floor chargers. The boxes are loaded in the yard and conveyed over an inclined trestle by a locomotive to the charging floor. The cars bearing these charging boxes were furnished by the Wheeling Mold & Foundry Co., Wheeling, W. Va. The charging boxes are cast of steel in a local plant from the company's own pattern.

On the pouring side of the open hearths are two 150-ton Morgan ladle cranes of 54 feet span. The ingot molds are arranged in front of the

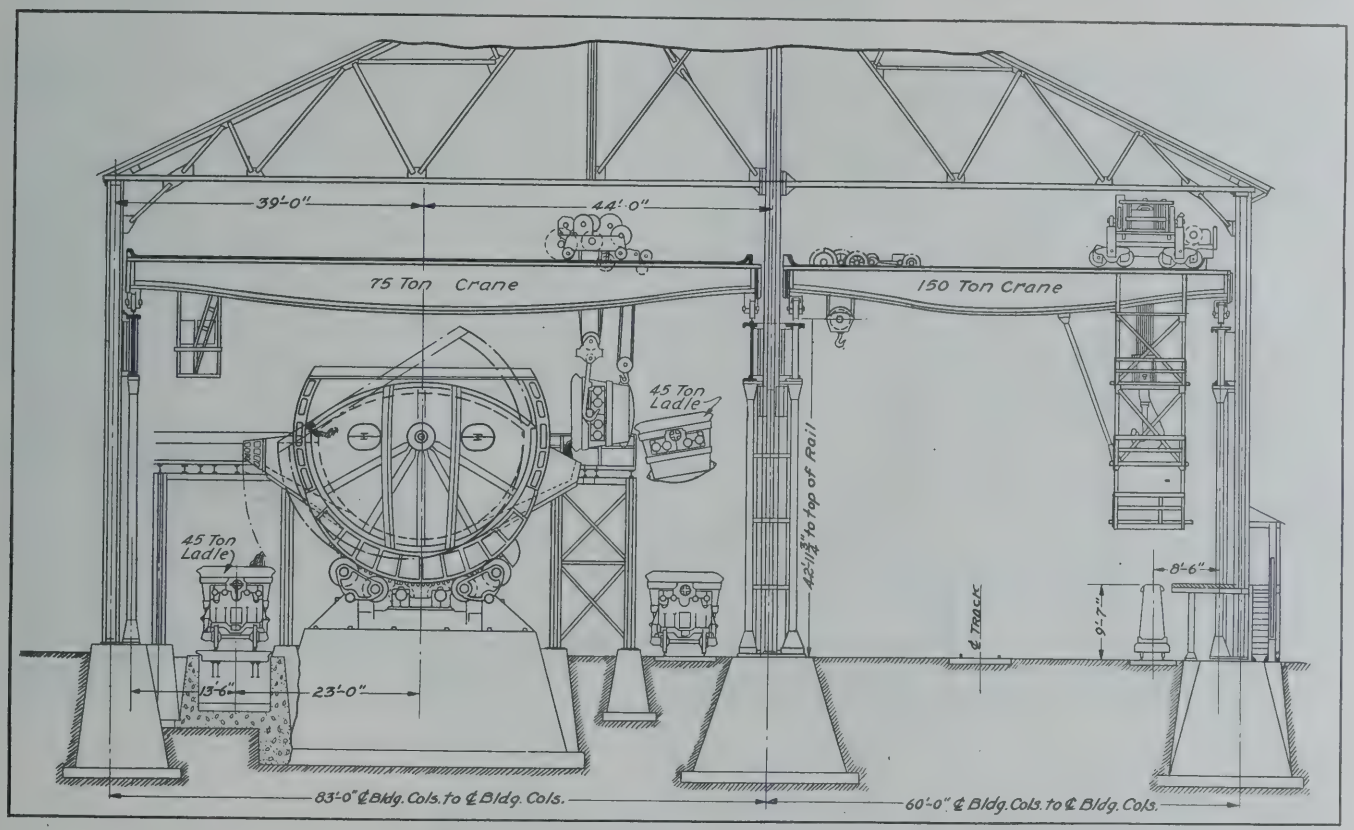

FIG. 4—ELEVATION OF THE 600-TON MIXER WHICH IS EQUIPPED WITH TWO COMPLETE DRIVING UNITS

pouring platforms, teeming being controlled by hand from these stands. Each furnace has a complement of ladles, including a 100-ton capacity steel ladle and a 300-cubic foot slag ladle. A jib crane of 6½ tons capacity is provided for each furnace for hoisting refractory material to the floor and for handling the furnace trough. A large brick-lined pit is located in this section for use in repairing ladles without interference with or from regular operations. A 5-ton trolley, which operates across the building, aids in crane repair, and in reducing the time necessary to make these repairs.

A waste-heat boiler is connected with each furnace. It is built between the furnace and stack, turbine-driven fans drawing the gas through the boilers to avoid loss of draft on the furnace. The boilers were installed by the Babcock & Wilcox Co., New York, and the radial-flow fans by the Green Fuel Economizer Co., New York. The turbines were built by the Terry Steam Turbine Co., Hartford, Conn., and the intermediate gearing by the Westinghouse Electric & Mfg. Co., Pittsburgh.

Install 600-Ton Mixer

One of the interesting devices in the open-hearth building is the 600-ton semicylindrical, hot-metal mixer which was built by John Mohr & Sons. The mixer is electrically driven through worm gearing. A special feature is a double drive, either unit of which is capable of tilting the mixer should the other be out of service. As a safety measure in case of failure of one drive, the other acts as a brake, stress from the weight of the mixer and contents being held by the worm gear so that back motion is impossible. Thus a sudden slip is prevented should the driving mechanism lose its hold. The Westinghouse motors are of 80-horsepower operating on 230-volt direct-current. The special control was built by the Electric Controller & Mfg. Co., Cleveland.

Hot metal reaches the mixer by the same route as that going direct to the open hearths, the same cranes which deliver it to the furnaces also lifting the ladles and pouring it into the mixer. To avoid confusion in the use of these cranes, a locomotive, which is operated by direct current from a conductor rail on the charging floor, transfers the car and ladle from the mixer to a point opposite the furnace to be charged.

The mixer is lined with 1½ inches of ganister and 18 inches of fire brick. The safety of workers about the mixer is enhanced by stairways and permits quick escape in case of a spill or fire. The platforms are of openwork design to allow spilled metal to drop through. The pouring nose is of cast iron, lined with refractory material, and is made in sections to facilitate replacement as it is worn away. The sections are held in place with keyed bolts which are removed readily.

A mold storage yard, 273 feet long, is located alongside the furnace building, and is served by a 10-ton Morgan crane of 68-foot span. A narrow-gage railroad is used in transferring the molds and cars. This has a spur for each pair of furnaces, allowing the molds from any furnace to be removed to the stripper building without disturbing cars at any other furnace. The ingot-stripping building, 50 x 64 feet, is between the open-hearth building and the mills. It is equipped with a 150-ton Morgan stripper crane. The practice is to strip the mold and place it on an empty car on a parallel track with one movement of the crane trolley. A three-track system in this building has been found most efficient.

Pit Covers Are Electrically Driven

A runway, 30 feet wide, separates the open-hearth mold yard and stripper building from the 40-inch blooming-mill building. This is utilized as a runway for trucks delivering material to the mills. Ingots from the stripper are delivered by the narrow-gage railroad to the soaking-pit section, which includes 20 units, arranged in five batteries of four pits each. The capacity of each pit is ten 22 x 24-inch ingots or equivalent. The covers are operated by 10-horsepower motors actuating worm gears, chains and wire rope. This system does away with damage to the usual rack and pinion control when an ingot is dropped. With the chain and cable the damage usually is slight. Limit switches control the electric motors which operate the doors and prevent overtravel in either direction. The motors are placed under cover between pairs of batteries to protect them from damage.

Two 10-ton cranes of 80-foot span handle the ingots. The latter are placed on an electric-driven buggy which carries them to the mill-approach table. Control of the cover

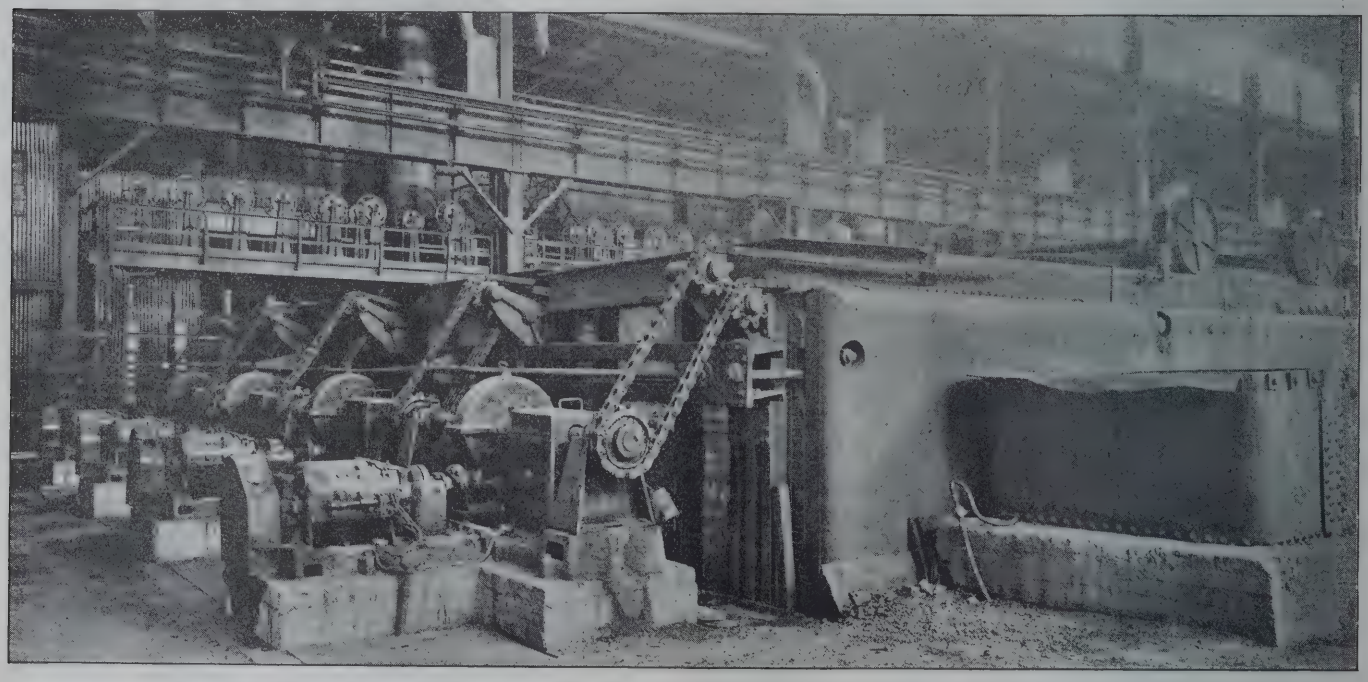

FIG. 5—VIEW OF APPARATUS WHICH MOVES COVERS OF SOAKING PITS—THE MOTORS ARE CONTROLLED FROM THE PULPIT SHOWN IN THE REAR

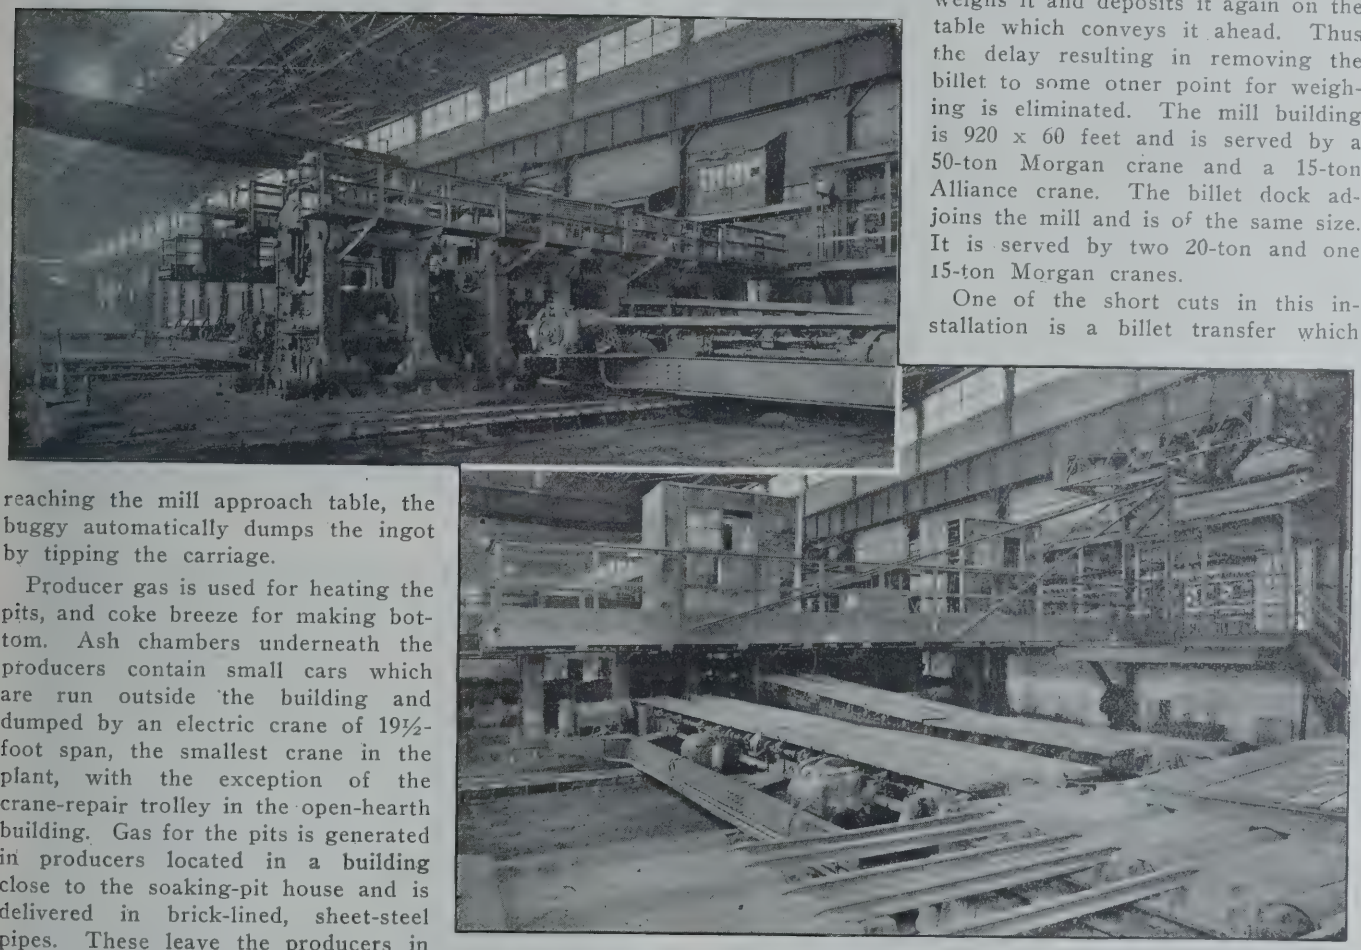
drives, ingot buggy and damper regulation is centered in pulpits along one side of the building. The buggy does not carry an operator, being entirely controlled from the pulpit. It travels about 360 feet from the pits to the approach table at a speed of approximately 300 feet per minute. The ingot buggy was built by the Mesta Machine Co., Pittsburgh, and the electrical equipment by the Westinghouse Electric & Mfg. Co. A complete spare buggy is ready to be set on the track without delay in case of accident. On reaching the mill approach table, the buggy automatically dumps the ingot by tipping the carriage.

Producer gas is used for heating the pits, and coke breeze for making bottom. Ash chambers underneath the producers contain small cars which are run outside the building and dumped by an electric crane of 19½-foot span, the smallest crane in the plant, with the exception of the crane-repair trolley in the open-hearth building. Gas for the pits is generated in producers located in a building close to the soaking-pit house and is delivered in brick-lined, sheet-steel pipes. These leave the producers in the form of a gooseneck and connect with a tapered main 66 and 54 inches diameter at the intake and exhaust ends. Downtakes and underground flues carry the gas to the point of consumption. Dust removers or baffles are located in the pipes to remove foreign matter. The latter is deposited in hoppers below the floor, elevated to a hopper and discharged into cars outside. Each battery of pits consumes the gas from one producer, although six of the latter are in service to give a spare in case of repair or breakdown.

Coal for the producers is handled by an elaborate plant. It is dumped into an underground track hopper and elevated 135 feet to a storage hopper. Chutes deliver it to cars in which it is weighed and then dumped into hoppers above each producer. The same coal-handling plant serves the steam boilers in connection with the electric installation.



The 40-inch blooming mill was built by the Mackintosh-Hemphill Co., Pittsburgh. The crop and outgoing billet conveyors were built by the M. H. Treadwell Co., and the incoming billet conveyor by the Mesta Machine Co. The electric equipment was supplied by the Westinghouse Electric & Mfg. Co. The mill tables are served on both sides of the mill by electrically-driven side guards and manipulators furnished by the Mackintosh-Hemphill Co. The mill bearings are ring oiled and the gears run in oil. All motors are air cooled. A steel-plate box under the housing collects the scale which is removed easily while the mill is in operation.

Ingots 22 x 24 inches are rolled to 8 x 8-inch billets at the rate of one a minute at capacity. At about the same rate a 24 x 24-inch ingot is rolled to a slab 39 x 6 or 8 inches.

The shear was designed to cut 36 x 8-inch slabs of soft open-hearth basic steel and has cut 17 x 17-inch blooms. The first three rollers on the runout table lift when the first cut is taken on the bloom and allow the crop to drop into a hopper whence it is carried by the crop conveyor to a car in the billet dock. The billet is moved from the table to the conveyor by means of a grasshopper type pusher. Just beyond the pusher is an electrically-operated billet scale, designed by Inland engineers for weighing certain billets in each heat, the necessity depending on the specifications covering the steel. This device saves much time as its cradle spans the table, picks up the billet, weighs it and deposits it again on the table which conveys it ahead. Thus the delay resulting in removing the billet to some otner point for weighing is eliminated. The mill building is 920 x 60 feet and is served by a 50-ton Morgan crane and a 15-ton Alliance crane. The billet dock adjoins the mill and is of the same size. It is served by two 20-ton and one 15-ton Morgan cranes.

One of the short cuts in this installation is a billet transfer which connects the 40-inch mill with the 32 and 28-inch mills. The latter mills are located on the other side of the motor room. The billet transfer, 120 x 28 feet, is of the rope-and-dog type. It connects the shear-runout table of the 40-inch mill with the approach tables of the other two mills. The roof and sides form practically a tunnel through the motor room. By means of this arrangement two routes are provided. The billets may be transferred directly from the 40-inch mill to the other mills for finishing, or they may be reheated in furnaces prior to their transference and then to either of the other mills.

The two reheating furnaces are of

FIG. 8—A PLEASING DEPARTURE FROM THE DUSTY POWER STATIONS OF THE PAST. FIG. 9—A VIEW IN ONE OF THE STOCK ROOMS. FIG. 10—THE LARGE MACHINE SHOP IS WELL EQUIPPED TO HANDLE REPAIR JOBS

the continuous type, 55 x 19 feet wide. They take billets direct from the 40-inch mill or cold stock from the billet dock. The billets are pushed through the furnace from the 40-inch mill or ingoing side. After heating they are lowered by gravity to the outgoing or 32-inch mill side. The incline has a drop of 5½ feet. From the furnace table the billet is carried to the 32-inch mill, broken down to proper size and delivered by means of tables to the 28-inch mill for finishing.

Routing of Metal is Flexible

The route of steel through this combination of mills and furnaces thus offers several alternatives which make for great flexibility. Ingots are broken down into slabs or billets in the 40-inch mill and proceed to the billet dock for storage, to the 32-inch or 28-inch mill for immediate finishing, by way of the transfer, or to the reheating furnace before being handled in the smaller mills. Cold stock from the billet dock is carried to the furnace and thence to the finishing mills. With this choice of routes it is possible to maintain continuous operation with any unit in case any part of the chain is out of commission temporarily, the continuous operation not depending on a series of links which cannot be varied.

The 32-inch mill is a typical blooming or breakdown mill, similar to the 40-inch unit. The tables and shear are electrically driven. The mill was built by the Mesta Machine Co., and the electric equipment by the Westinghouse Electric & Mfg. Co. The 28-inch mill is a three-high, three-stand unit, rolls I-beams up to 24-inch weighing 80 to 100 pounds to the foot. The passes are served by four shifting and tilting tables, two on each side, supplemented by one non-tilting-trailer table on the outgoing side for extra-long sections. These tables pass back and forth opposite each stand of rolls, and receive and deliver the steel from and to the proper set of rolls during the roughing, intermediate and finishing passes. In case of damage, any table can be pushed clear of the roll stands for repair while the remaining table on that side performs its work. These tables are controlled from the pulpit.

Pulpits Swing on Hinges

A pulpit is located each side of the mill and present an unusual feature, in that they are pivoted to the wall and can be swung back close to the wall. This allows roll changing in a short time, the crane simply picking up the entire housing containing a set of rolls and replacing it with another housing fitted with rolls in advance. This done, the pulpit is swung back to position, the entire operation taking only a fraction of the usual time for changing rolls. This mill was built by the Morgan Engineering Co., while the electrical equipment is Westinghouse.

The finished product is delivered from this mill by means of tables to a 115 x 145-foot hot bed, of the rope-and-dog type. It extends from the 32-inch and 28-inch mills to the warehouse. After cooling sufficiently, the product goes to straighteners and then over roller tables to shears, which will cut angles up to 8 x 8 inches and 1 inch thick. The shears are offset from the table in which the straighteners are placed so that sections not requiring shearing can pass direct to the bulldozers. Sections requiring shearing are shifted to the shear table by means of a rope-and-dog transfer. Two saws are available, one opposite the table which serves the hot bed and the other opposite the shear-runout table. An intermediate table between these two serves in emergencies. Beyond the saws are the bulldozers or gag straighteners, connected by roller tables. When straightened in the bulldozers, the material is ready to load.

The building containing the reheating furnaces is an extension of that containing the motor room and is between the two mill buildings. It is 64 x 240 feet. Jib cranes will be installed soon at the ingoing side. The building which houses the 32-inch and 28-inch mills is 920 x 80 feet, and is served by a 10-ton and 75-ton Morgan crane. In the south end of the mill building is a roll storage of unusual design. It has a capacity for 600 rolls which are arranged like a card catalog and easily accessible by a crane. The racks are built of steel, and rest on concrete foundations. This storage is to be enlarged eventually to accommodate 900 rolls.

The warehouse building, 920 x 90 feet, runs parallel to the mill buildings. It is equipped with two 10-ton Morgan cranes. Storage space of about 16,000 square feet is available in this building but this is insufficient and a duplicate building will be erected soon. All buildings are of steel construction, with concrete foundations. They are enclosed with galvanized corrugated roofing and siding rolled at the Inland mills, and with the exception of the open-hearth, which has wood sash and window frames, they are equipped with Fenestra-type steel sash.

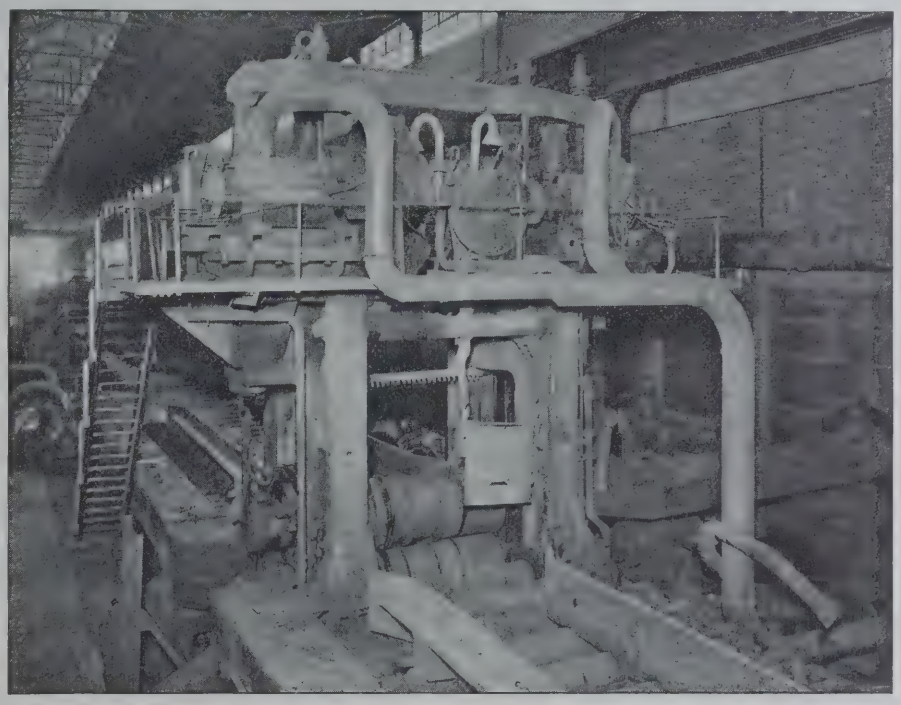

FIG. 11—STAND AND HOUSING OF THE 40-INCH BLOOMING MILL

All the mills are equipped with scale pits. The scale is collected in cars which can be removed without interfering with the operation of the mill. The scale is dumped from these cars into railroad cars by crane. A system of traffic tunnels allows passage through the mills without climbing over tables or stock piles. The tunnels are 8 feet diameter and have off-takes at convenient points, allowing ingress and egress in any building. Various accessory buildings are conveniently placed. One is a stock shed, about 800 x 50 feet, for storing refractory materials for furnaces and pits. A roll shop with sufficient equip-

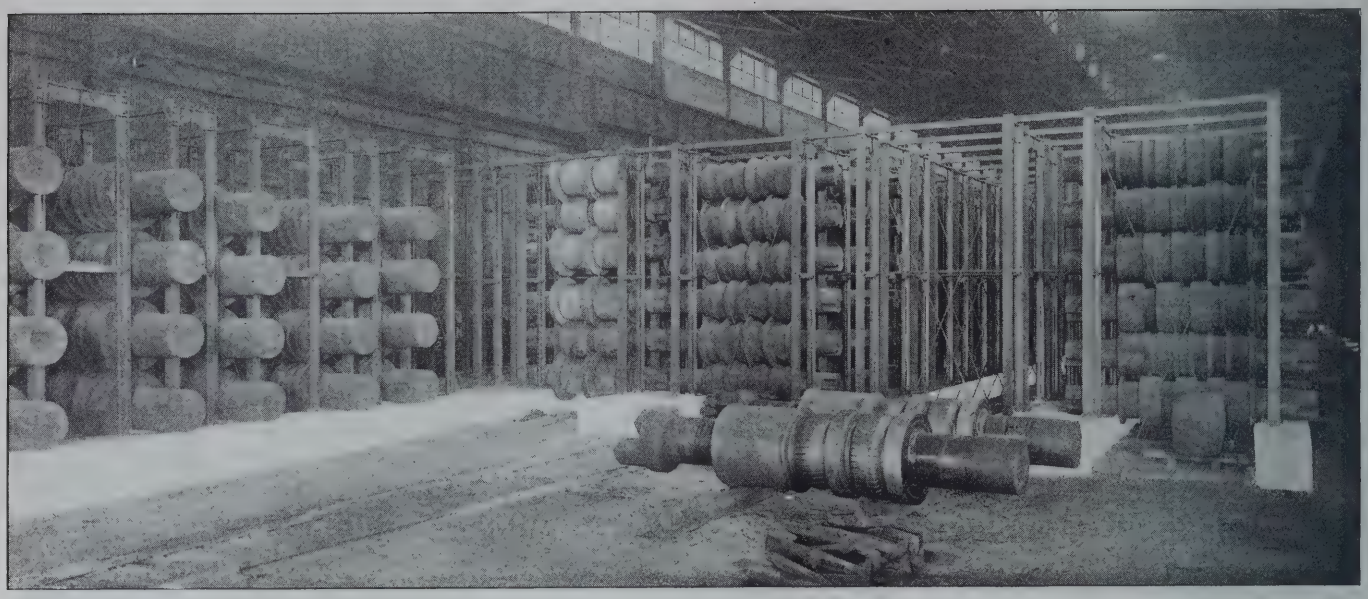

FIG. 12—STORAGE RACK FOR 600 ROLLS—THE ROLLS ARE EASILY HANDLED BY A CRANE WHICH TRAVERSES THE BUILDING

ment for present needs and room for additional machinery is built near the mills.

The steam plant which furnishes power for the turbines contains three 1076-horsepower, Springfield, water-tube boilers. These are equipped with superheaters and soot blowers. The superheaters are interconnected with the other high-pressure steam lines, and give great flexibility and economy in steam production. The boilers are housed in a brick and steel building, 45 x 170 feet, with wood and corrugated-steel roof. The building is placed in line with the producer building and is served by the same coal-handling plant. Taylor stokers made by the American Engineering Co. serve the boilers.

One of the most interesting portions of the new plant is the turbine and motor room. This is situated between the 40-inch mill building and that containing the other two new mills. With its tile and enamel-brick interior and filtered, cooled air, polished brass railings and immaculate neatness, it transports instantly the observer from the seeming disorder and grime of a steel plant into a new atmosphere utterly foreign to what has been experienced in gaining entrance through the remainder of the plant. This neatness and care is not a fussy idea but a most practical and economical measure, protecting the valuable and somewhat delicate machinery from dirt and keeping it cool, thereby promoting efficient operation.

In this room are installed two high-pressure steam turbo-generators, each with capacity of 5000-kilovolt-amperes and generating 2200 volts. The excitation for these generators is furnished at 250 volts, by a 100-kilowatt motor set. Two 1000-kilowatt, synchronous, motor-generator sets are connected with the turbo-generators. They are tied into the general plant supply lines and furnish direct current throughout the plant.

The unusual feature of the electric plan is the motor and motor generator for the 40-inch mill, which is placed in the center and on the ground level. This set consists of a 3000-horsepower induction motor with a 45-ton flywheel and two direct-current generators, each of 1450-kilowatt capacity. The set is 47 feet in length and operates at a synchronous speed of

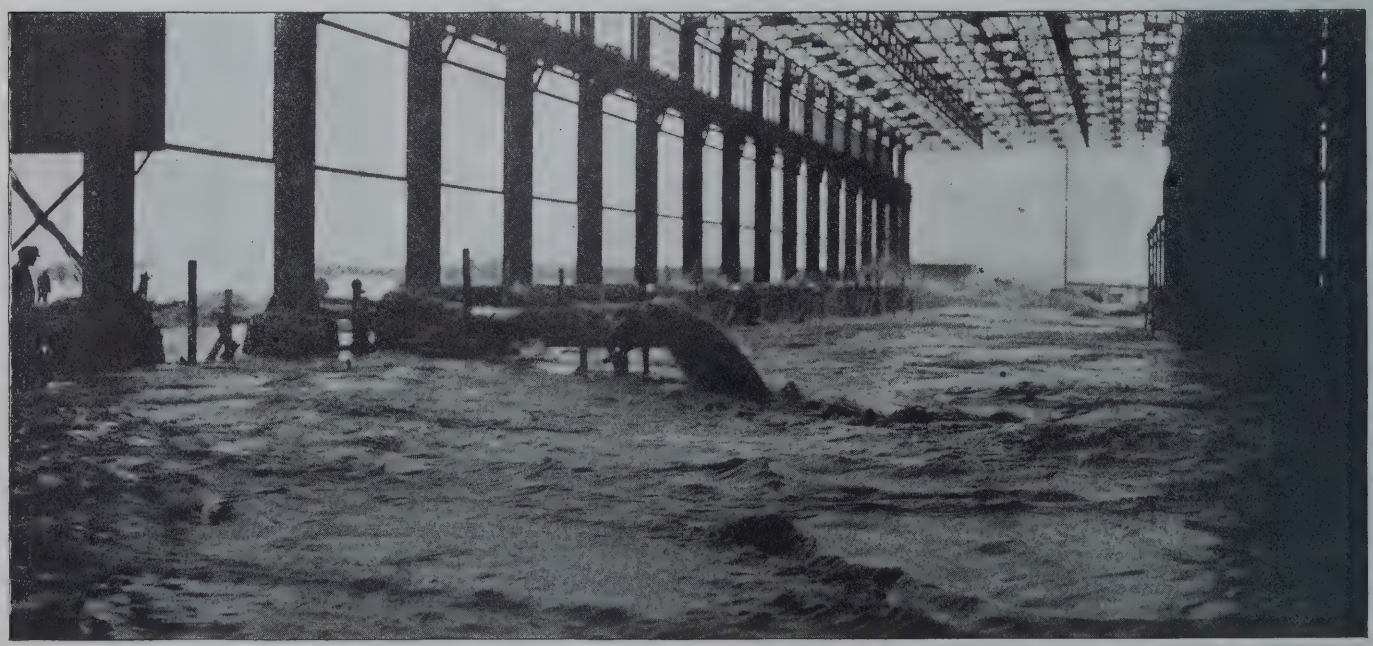

FIG. 13—THIS IS NOT A FLOOD SCENE—THE HYDRAULIC DREDGE IS BACKFILING IN THE BILLET YARD

375 revolutions per minute. The generators produce 600 volts and are connected in series, giving a total of 1200 volts. This set is served by an exciter set composed of an induction motor, constant-potential generator and variable-potential generator.

The motor for the 40-inch mill was one of the largest motors in the world at the time of its installation and is the largest in the Inland plant now. It has two separate and complete sets of winding and is, in fact, two motors on the same shaft, operated as one. The voltage across each is 600 volts and the two in series is double that. The combination operated as a unit is rated at 15,000 horsepower and will reverse from a speed of 40 revolutions per minute in one direction to the same speed in the opposite direction in 90 seconds. The motor weighs 268 tons and required ten cars for its shipment. The armature alone weighs 90 tons, the shafts being 28 inches in diameter.

Connection from motor to mill pinions is by a universal joint, a similar joint connecting the pinions and the mill. These are found to be unusually flexible couplings and much blacklash is eliminated. The motor is reversed by means of a drum-type controller which is placed in the mill pulpit.

The 28-inch mill is driven by an electric motor which operates in one direction on 700 volts. It may be reversed whenever the occasion arises. It is rated at 7500-horsepower. The 32-inch mill is operated by a reversing motor similar, though smaller, than the 40-inch mill motor, and is of the same capacity as the 28-inch mill unit. These motors are served by a separate motor-generator set, 48 inches long. Each set is equipped with a 5000-horsepower induction motor, a 45-ton flywheel and two 1950-kilowatt generators developing 700 volts. It is served by an exciter set which includes an induction motor, a constant-potential exciter and a variable-potential exciter for each of the two mill motors. This entire equipment was furnished by the Westinghouse Electric & Mfg. Co.

Windings Are Air-Cooled

Because of the heat created by the operation of this equipment, each set of apparatus is supplied with cooled air through the windings at the rate of 45,000 cubic feet per minute. The air is taken from the motor room, passed through washers and dryers and thence to the motor windings and into the room to be used again. The Carrier Air Conditioning Co. installed the washer and dryer, which is placed in the motor building basement. As a result of this installation, air in the motor room is maintained at 70 to 80 degrees Fahr., even on the hottest summer days. Without this the temperature would run high at all times, decreasing efficiency of the installation.

The motor building is 60 x 520 feet, with steel framework, brick walls and wood roof covered with corrugated metal galvanized and painted. The floors are laid in red tile and the walls to the crane runway are white-enamel brick. In the basement of this building four electrically-driven air compressors are installed, each having a capacity of 500 cubic feet per minute. Three are driven by Westinghouse motors, and one by a General Electric Co.'s motor. The air is used for various purposes about the mill.

In the general enlargement of the plant a third blast furnace with three stoves and all accessories was built in line with the former two, John Mohr & Sons, Chicago, being the builders. An additional pig-casting machine with a capacity of 2400 pigs per hour was erected. In connection with the blast furnaces, a skulling and ladle-repair building, 83 x 120 feet, was erected. It is served by a 40-ton Alliance crane. In this building the blast-furnace ladles are dried and repaired. The ore-handling equipment was increased by two Hoover & Mason unloaders of 7½ tons capacity each.

The new plant was placed in operation in sections as fast as completed. The first two open hearths were put in service before any of the mills, in July and August, 1916. This was done to relieve the open-hearth furnaces in plant No. 1, which were severely pressed for tonnage. Other furnaces were put in service as they were completed and when the 32-inch mill was ready, Dec. 30, 1918, eight open hearths were producing steel.

When the 32-inch mill was started the 40-inch mill was not ready and the former was used as a blooming mill. This was rather hard on the mill, particularly on the tables, which were not designed for such heavy ingots as were delivered direct from the soaking pits. The mill stood this punishment well and turned out considerable tonnage before the 40-inch mill was in service. Operation was inconvenient because it was necessary to transfer ingots to the aproach table of the 32-inch mill over a special track which passed over the site of the 28-inch mill. Part of latter was delayed in erection until the track could be removed. The round trip for the locomotive from the soaking pit until it had delivered the ingot and returned was about five minutes. The 40-inch mill was started March 24, 1917, and the 32-inch mill then was shut down for overhauling. The 28-inch mill was started in September, 1917.

How Impurities Affect Gun Metal

BY F. JOHNSON

THE literature on the influence of impurities on the mechanical properties of admiralty gun metal contains little actual information concerning definite results of tests. So far as the author has been able to ascertain no attempt appears to have been made to make up alloys of admiralty gun metal composition from pure metals under standardized conditions and to determine the alteration in mechanical properties which may be brought about by the addition of other metals. This is what the author, under adverse conditions as regards time, material and assistance, has attempted to do.

The choice of admiralty gun metal as the basis alloy may appear to some as requiring justification. The justification which the author offers is that this particular alloy finds greater favor among engineers than any other alloy composed mainly of copper and tin, if the extensive and highly important series of phosphor bronzes be excepted. The popularity of this alloy is based on no misconception. It is undoubtedly superior to its progenitor, zinc-free gun metal.

As a casting alloy it possesses few equals among the alloys rich in copper, while its range of mechanical properties may be enormously extended by heat treatment. Unannealed castings are used for journal bearings, water and steam fittings, etc., while annealed castings are probably better for fittings of pumps used for pumping mine water and other corrosive liquids.

Unannealed castings have a metast-

Abstracted from a paper presented at a meeting of the Institute of Metals, London. The author is a metallurgist of Birmingham, Eng.

able structure, the tin-rich eutectoid being present only on account of the relatively rapid rate of cooling. Thus one of the necessary conditions of a bearing metal is fulfilled, a uniformly distributed phase (delta) of great hardness possessing a low coefficient of friction in a relatively soft matrix (alpha phase) possessing good thermal conductivity.

Annealing, if sufficiently thorough, establishes equilibrium, the eutectoid reverting to the homogeneous beta phase, this in turn passing into solution in the alpha phase.

Thus an alloy consisting entirely of homogeneous alpha may be produced by annealing, and this should be more resistant to corrosion than the metastable alpha + eutectoid structure in the unannealed casting. There appears to be no experimental evidence on this point, but it seems reasonable to assume that the obliteration of an electronegative constituent by annealing should serve to reduce corrodibility.

One authority states that aluminum is never found in gun metal unless purposely added. He says the drawbacks to its use consist of the formation of a skin, alumina, on the skimmed surface of the molten metal, the increase in contraction and an increase in corrodibility. The author would point out, however, that the increase in contraction must be regarded, if unaccompanied by disadvantageous structural changes, as proof of strength and soundness. One has not to seek far for an analogous case. The addition of phosphorus to tough-pitch copper results in the formation of a depression at the surface of an ingot which would otherwise be level. Visual examination of the fracture or microscopic examination of a polished surface proves that the addition of phosphorus has eliminated gas cavities while chemical examination would show that the gases which caused those cavities had also been eliminated. Thus the condition which is opposing the natural property of the metal to become more dense, and therefore to occupy a smaller space when solid than when molten, is removed.

Use of Aluminum Urged

Physical and mechanical tests show that phosphorized copper is denser, stronger, and tougher than tough-pitch copper. Similar beneficial results accrue from the addition of small quantities of aluminum to admiralty gun metal. The author would plead for a reconsideration of the use of aluminum, believing that foundrymen could produce improved castings by efficient feeding, using adequate runners and risers. There is, however, the other, and possibly more serious, objection to its use, the formation of a tenacious film of alumina. This trouble is increased rather than mitigated by remelting. Possibly some efficient flux such as cryolite may be pressed into the service of foundrymen to obviate this drawback. The author has greater faith in the employment of some such specific as aluminum or phosphorus for the elimination of unsoundness than in merely controlling temperature, while not losing sight of the fact that control of temperature, either by pyrometer or by expert judgment, cannot fail to contribute towards the same end.

The author is not disposed to quarrel with the introduction of arsenic into admiralty gun metal as proposed by some authorities. More important than a slight lowering of tensile strength and elongation is an increase in soundness. It has been proved that arsenic can act beneficially on copper in reducing porosity. That it can act similarly in admiralty gun metal is not a rash assumption.

Effect of Impurities on Gun Metal

Impurity (not exceeding 1 per cent)	Effect on Mechanical Properties	Effect on Fluidity and Surface Appearance of Chill Castings
Aluminum	Hardening and embrittling	Good
Silicon	Hardening and embrittling	Good
Manganese	Inappreciable	Bad
Arsenic	Inappreciable	Good
Antimony	Inappreciable	Inappreciable
Iron	Strengthening without loss of ductility	Bad
Nickel	Toughening; increase of ductility	Inappreciable

Bismuth is rarely present in reputable brands of copper in amounts likely to be harmful. The presence of lead lowers the rate of wear when gun metal is used for bearings but increases the friction coefficient. None of the recent investigators has a good word for the presence of iron in the metal and little seems to be understood about the influence of nickel. One authority does not favor the addition of nickel owing to its alleged action of liberating occluded gas during cooling of the casting, thus causing porosity. A beneficial influence in aiding to form a dense close-grained structure and in lowering the rate of wear has been claimed for its use.

The practice of using silicon as a deoxidizing agent in preference to phosphorus for bronze for electrical purposes is old. Investigation would indicate that a small amount of silicon as a deoxidizer does not improve the mechanical properties of zinc bronze.

Aside from the chief results of the author's experiments as shown in the accompanying table the main feature of interest may be summarized as follows:

Lead does not appear seriously to affect the mechanical properties, although it is possible the resistance to shock is lessened.

Iron has a beneficial influence on mechanical properties, yield point, tensile stress, and elongation all being raised. Its effect on pouring qualities is bad, but much improvement is effected in this respect by the addition of a trace of aluminum.

The influence of manganese is bad in every way, the mechanical properties being adversely affected and the pouring qualities also. The surfaces of the castings were bad.

The annealing treatment goes far towards eleminating ill effects produced by undesirable additions, notably aluminum and silicon. The general improvement brought about by annealing is remarkable.

Oil From Shale Deposits

Attention is being paid to the oil-shale deposits in the United States, and the possibility of exploiting them to take the place of the present liquid oil supply. It is estimated that the latter source of supply will be exhausted in about 20 years. Oil-shale deposits are found in several parts of the United States, but those in Colorado and Utah are the most extensive and have so far received the greatest attention.

Oil-shale has no oily appearance to indicate that it contains free oil, but upon being subjected to heat, its organic materials are broken up, and, among other things, oil and gas are yielded. The yield varies from 6 to 90 gallons of crude oil per ton of shale. The crude oil when distilled may give 7 to 12 per cent gasoline, 28 to 49 per cent kerosene and 39 to 62 per cent residuum. Shale analysis indicates 0.5 to 3 per cent moisture, 20 to 52 per cent volatile matter and 45 to 80 per cent ash. The asphalt varies from 0.5 to 4 per cent and paraffin from 2 to 9 per cent.

The by-products of oil shale are valuable, and include gasoline, kerosene, lubricants, enamels, varnishes, paints, rubber substitutes, manufacturing products for glass, pottery and ornamental tiles, dyestuffs, ammonium sulphate, flotation oils and producer gas. The Colorado shale area covers more than 2500 square miles and the Utah area over 3000 square miles. The strata varies from a few inches to 80 feet thick. The yield is from 31½ to 80½ gallons per ton.

Fixing Building Factors in Costs

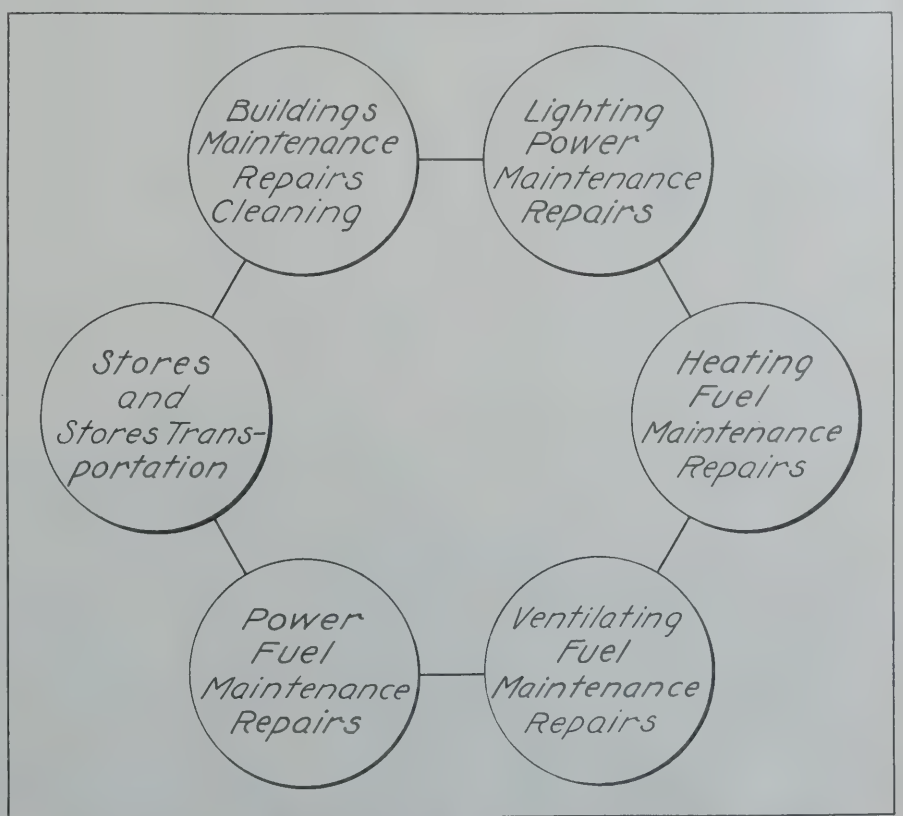
Division of Elements Entering into Indirect Production Charges Explained in Detail—System Shows That Items Considered of Minor Importance Sometimes Involve Largest Expense

BY M. H. POTTER

As nearly every manufacturing process is carried on in a building it will be readily understood that the land factor in cost accounting is merged into the building factor. However, the building factor includes more than the land factor; as, for instance, cost of maintaining, repairing and cleaning. Elements of the building factor will depend upon existing conditions, but the principle and application of the factor and its elements as related to production costs are the same as explained in the article relating to the computation of the land factor, published in a recent issue of THE IRON TRADE REVIEW.

In order to establish a standard which can be used for comparison the various elements for each building should be separated. It is only through such a system of division that unit values can be determined. In some instances, elements apparently of minor importance will be shown to have the most importance, or just the reverse. For this reason the ordinary methods of apportioning indirect expenses should be revised.

While certain expenses, such as cleaning and painting, are fixed and can be predetermined, other expenses such as repairing and maintenance can not be calculated so readily. In the latter case it is necessary to establish the expense through the groupings of such expenses as totaled for the past few years, to consider the construction and age of the building and to estimate accordingly. In this manner the annual cost of repair and maintenance can be determined for each building and this cost divided into its various elements.



Costs as Related to Space

When these elements have been determined the next step is to figure the actual amount of productive space in use. Productive space does not include stairways, landings, passages, etc. The figures representing various elements of each building are then divided by the number of square feet of productive area in each building to obtain the cost per square foot. The unit value can now be figured for each department, and this is important because it definitely fixes costs directly related to the department, and does not merely represent a percentage basis of indirect expenses.

It is through such a method of correct apportioning of expenses that more economical use of space can be studied, and steps taken to reduce the overhead in the departments where such expenses are the greatest. Also the work done in departments which call for high expenses in this factor can be charged to the purchaser accordingly, and not taken from the general profits, as often is the case.

The unit value of representing expenses also is applied to lighting and heating factors, which are in turn divided into elements and charged to each building or department as desired. Here again, repair and maintenance must be dealt with and considered on the same principles as previously outlined. The annual cost of lighting and heating for each building is divided by the productive area of the building, and the cost per square foot thus determined. In some industries ventilation must also be taken into account and determined as a factor, with various elements as related to each building or department. As to whether the unit values will be based upon the building as a whole, or divided into the departments, will depend upon the individual case, that is, a company manufacturing a completed article probably will not be interested in the subdivisions of departments while on the other hand a concern doing a general jobbing or similar business will be interested mainly in apportioning indirect expenses to each department.

The power factor likewise is divided into elements representing expenditures involved. In instances where the power is supplied under contract

HOW BUILDING AND ASSOCIATED FACTORS ARE APPORTIONED IN FIXING INDIRECT PRODUCTION COSTS

This is the fourth article in the series on cost accounting methods as applied to steel works, prepared for THE IRON TRADE REVIEW.

at a fixed rate the power factor is determined automatically. In the event the manufacturer generates his own power the elements must be divided and grouped to cover all repairs, maintenance, attendance and similar expenses.

Determining the Stores Factor

The stores factor is the next to be considered, and this includes expenses incurred in storing, handling and transportation of all materials directly related to production. The various elements will include all charges which are related directly to raw and semifinished material in course of manufacture. These elements, as regards transportation costs, are as follows: (A) To and from storage or stockroom; (B) from storage or stockroom to the shop or department where needed; (C) from one department to another. The costs chargeable to these elements are as follows: Interest, maintenance, and depreciation of handling apparatus, wages of cranemen, operators and laborers, and all power involved.

The costs chargeable to the stores (mechanical) factor are as follows: Interest, maintenance and depreciation of shelves and storage places; interest on reserve stock held in readiness, and wages of storekeepers and helpers. Through this method of division the stores and stores transportation costs are easily and accurately apportioned to the production costs, and afford valuable means of comparison and establishing figures for standardization.

In determining the stores and stores transportation costs chargeable to each department, the following methods of procedure should be followed: (1) Determine through the elements previously named the total cost; (2) determine the stores percentage of unit value taken by each department or similar class of machines, that is, drill presses, large and small lathes, etc.; (3) determine the percentage cost of transportation as specified under (2). It is obvious that material in process of manufacture will entail cost to store or transport in proportion to its size, and that one class of machines will handle only certain work. This also is true as to tools, fixtures, etc.

Accurate percentages can only be secured by careful study of the particular plant under consideration, after this factor has been divided into elements. The unit cost thus obtained definitely fixes one of the most important items of direct expenses in many industries and eliminates entirely the errors so often included in stores and stores transportation costs as computed by the usual accountancy methods. As a value of comparison and standardization, the unit values of this factor in most cases will not be great. At the same time these values will suggest the possibility of reducing such expenses. Many opportunities may present themselves for better means of simplified transportation and storage.

Many Opportunities Suggested

Thus it will be seen that not only does this method determine accurate values for indirect expenses, opportuning them to correct production costs, but also suggests opportunities for better and cheaper means of securing the same results. Such unit values also help the executives determine the advisability of increasing production in certain lines, by showing which particular lines or classes of work are most profitable.

Economic Metallurgy, Slogan in Britain

ISAAC LESTER, president of the Birmingham Metallurgical society of Birmingham, England, in his presidential address at a recent joint meeting of the Staffordshire Iron and Steel institute, the British Foundrymen's association, the Institute of Metals and other kindred societies recently, called attention to the recent statement of Sir Robert Hadfield that the total allied steel production amounted to 60,000,000 tons per annum. He declared that metallurgists and economists would have to face the problem of balancing this stupendous industrial expenditure and stabilizing industry on an economic basis by at least an equal production during peace time. He said post-war conditions restoring open competition in the world's markets will demand maximum output at lowest cost. Economical production must cover labor, fuel, refractories and all metallurgical and material resources and they must all be utilized and controlled in connection with reconstruction. The whole array of academical science, all the essentials of economic practice must be captured and swifty but securely harnessed. He recommended more facilities for technical education and referred to the practical man as the nation's valuable asset in the future. Assuming that a youth had inherited the practical instinct he should have a good general education, his reasoning faculties should be developed on sound scientific principles and his practical ability should have a proper direction. This kind of education should equip the youth with the means of thinking for himself and enable him to be observant, comparative, synthetic and analytic in his work and profession.

During the past four years, owing to irregular supply or no supply of the accustomed material, makes brands or specialties, there had been many instances in which trade or output had suffered in quantity or quality and in many cases had been held up owing to the lack of proper technical education of employers and employes alike. Only by the specialist or metallurgical expert had the real difficulty in diagnosing the trouble.

Mr. Lester proceeded to emphasize the imperative necessity of eliminating all waste, a word which he said should spell anathema. Waste, he said, betokened ignorance and did not conform to the principles of scientific production. It was to be deplored that all courses in metallurgy did not include a study of economics and the value of costs. He would like to read "Economic Metallurgy" written over the entrance to every metal works. Economy had converted the waste of one century into the wealth of another. Century-old slag heaps in India had been exploied as iron ore and used for the profitable production of wrought iron. Dud Dudley revolutionized the making of pig iron by using coal instead of charcoal, at the same time saving forest lands. Abraham Darby and George Milson heated the air of the blast, Henry Bessemer blew cold air into molten iron and obtained a steel-melting temperature. David Mouchet introduced ferromanganese and made the pneumatic steel process a success. Discarded steel pots, firebricks and other refractory materials were now utilized; spent foundry sands were reclaimed, pickling liquor from iron and steel sheets and galvanizing plants yielded excellent oxide paints. Undoubtedly the iron ores of the continent once considered unfit for steel-making by the acid process owing to their high phosphorus content had been made through the basic process a powerful factor in the world's greatest war.

Fig. 1—By-Product Building Containing Stills and Tanks for Recovering Alcohol and Lime Acetate. Furnace is Shown in Background

Builds Charcoal Furnace in Mid-West

IN the early days of the iron industry charcoal was used exclusively for melting the furnace charge. The charring of the wood was done in kilns which were built in the surrounding woods and the charcoal was hauled by wagon to the furnace. Because of the abundance of coal, the use of coke as fuel in blast furnaces gradually gained the ascendency and charcoal smelting practice became more and more restricted to the production of special irons. At the present time in this country but 38 of approximately 472 furnaces are users of charcoal as fuel. Some revival of charcoal practice was brought about by the war which greatly increased the demand for wood chemicals. The war department, anxious to secure these supplies, encouraged charcoal-iron makers financially to enlarge their chemical plants. This was the deciding factor which led to the organization of the Mid-Continent Iron Co., Kansas City, in 1917, and to the building of a modern wood-chemical plant and charcoal blast furnace in Carter county, Missouri, about 100 miles from St. Louis.

Ground was broken in November, 1917, and before the signing of the armistice, the plant was in limited operation. It is now producing up to capacity, the daily output approximating 100 tons of mild-blast charcoal pig iron, 2000 gallons of crude-wood alcohol and 40,000 pounds of acetate of lime per day. The chemical and furnace plants are built in the midst of the company's timber and native iron-ore holdings, four miles from the Frisco railroad in Carter county, covering approximately 30 acres. Two and one-half miles of railroad track are provided for interplant switching. The company owns a 16-mile, standard-gage, tram road which is used for logging purposes and operates four locomotives together with flat and dump cars. Over 400 modern houses, equipped with water and lighting facilities, were built for the employes.

The furnace is 64 feet high with a 13½-foot bosh, and a 9½-foot stock line. It is lined above the mantle with 28 inches of fire brick, a 4-inch packing space having been left between the lining and the shell. The hearth, which is 9 feet in diameter, is lined with 28-inch fire brick while the bosh is constructed of 13½-inch brick laid tight against a $\frac{3}{16}$-inch petticoat. Three sets of sprays are used for keeping the hearth jacket cool. Two cinder notches are provided.

Ore and limestone are brought to the furnace over a trestle and are unloaded either by means of a clam-shell bucket suspended from a boom of a locomotive crane or dumped directly into the trestle bins. The charcoal is brought from the retort plant over a separate track and trestle in trains of 10 cars each and is dumped into bins. These bins are housed in a separate building adjoining the ore trestle. From this point it is discharged over screens into buggies, the charcoal breeze being used for steam generation. The stock is taken to the top of the furnace by means of two elevators which operate alternately in a hoist tower. The furnace top is equipped with a single bell and a gas seal both of

FIG. 2—IRON IS CAST INTO SAND BEDS AND LOADED INTO CARS BY MEANS OF A MAGNET AND LOCOMOTIVE CRANE

FIG. 3—REAR VIEW OF FURNACE. CHARCOAL IS DUMPED INTO BINS HOUSED IN THE BUILDING TO THE LEFT

which appliances are steam operated.

The blast is preheated in two side-combustion, 2-pass stoves, 18½ x 74 feet. These are equipped with mushroom-type hot-blast and chimney valves. The waste gases are led into an underground flue and then discharged through a concrete chimney into the air. The chimney is 162 feet high, 14 feet diameter at the base, 8 feet diameter at the top and is lined with fire brick. The blast is provided by two horizontal Filer and Stowell-type blowing engines with air cylinders 38 inches diameter and a stroke of 4 feet. These are provided with Iverson-type valves. The warm blast is led from the stoves to the furnace through a 14-inch hot-blast main, a bustle pipe and six tuyeres. A mixer valve is provided on the hot-blast main for regulating the temperature of the blast. The temperature of the blast and top gases are recorded by pyrometers built by the Brown Instrument Co., Philadelphia.

Cooling water is supplied to the plant by gravity from a large standpipe built on the hillside. Water is pumped into this tank by two 1000-gallon pumps. A 1200-gallon pump is held in reserve for fire service. All three pumps may be operated in series whenever the occasion arises. Approximately 3,500,000 gallons of water are required per 24 hours, the supply being obtained from deep wells blown with air. The pumps, two blowing engines, two air compressors built by the Ingersoll-Rand Co., New York, and two 275-kilowatt generators are housed in a brick and steel building near the furnace. They are all driven

FIG. 5 — DISCHARGE SIDE OF RETORT PLANT SHOWING THE STEEL COOLERS IN THE FOREGROUND

by steam which is generated in stirling-type boilers of 2000-horsepower each. Six boilers are installed, provision having been made for burning either blast-furnace gas, coal, tar or oil.

The iron is cast into sand beds and is either piled in the storage yard to apply on orders or is loaded into cars which are switched into the plant over a depressed spur at the end of the cast house. The pigs are loaded or piled by means of an electric magnet and a locomotive crane. The slag is flushed on the ground, and, after cooling, is loaded into cars.

The wood for charcoal making is harvested mechanically by means of a Lidgerwood aerial skidder. The logs are loaded mechanically on cars, hauled by the company's locomotives

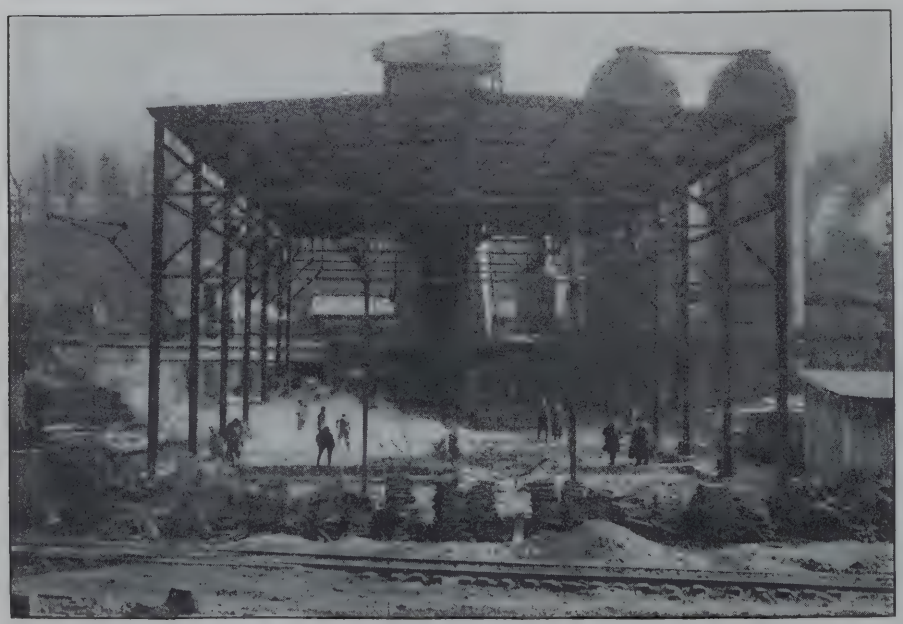


FIG. 4—BREAKING AND RACKING THE PIGS AFTER THE CAST

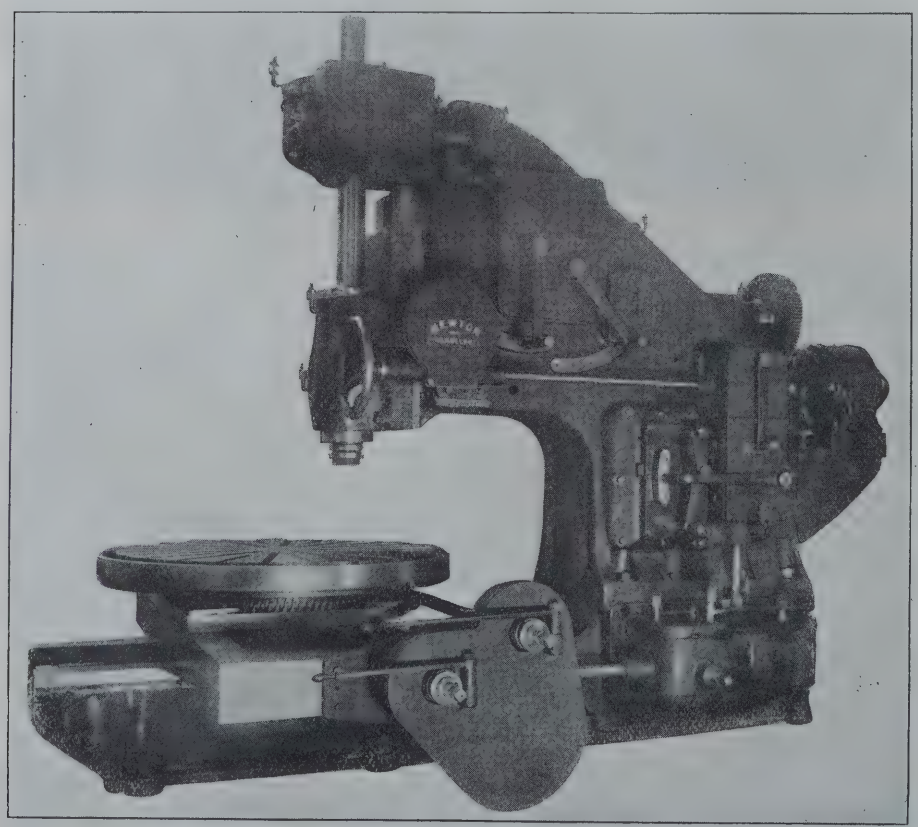
to the saw mill on the plant site, and dumped on a conveyor table. Here they are ripped with a double-cutting band-saw, the cants proceeding on live rollers to two slashing tables. The latter are equipped with 20 saws each which cut the cants into 8 x 4 x 6-inch blocks. These fall on a chute which directs them into steel baskets mounted on cars. The latter, when filled, are switched to the retort plant.

This plant includes 16 retorts which are supported by heavy settings and fired from both ends. Each retort holds five charcoal cars. This, as far as can be learned, represents a capacity for one car more than any retort heretofore built. Opposite the retorts are 32 steel coolers into which the charcoal cars are shifted after carburization. The charcoal is held in these coolers about 24 hours, which eliminates any danger of combustion. The cars are shoved into the retorts by means of a locomotive and are withdrawn from the retorts by means of a cable. Both the logs and charcoal are handled mechanically from the time the blocks of wood arrive at the saw mill until the charcoal is in the trestle bins.

Reclamation of By-Products

A battery of tile predryers is now under construction. These predryers will be heated by the exhaust gases from the retort chimneys. By means of this arrangement the temperature of the wood will be increased to nearly the carburization point and a considerable portion of the moisture driven off. The wood is brought into the retort comparatively dry thus decreasing the period of carburization from 30 to 24 hours and effecting considerable fuel economy. The vapors are drawn from the retort



FIGS. 6 AND 7—VIEWS OF BY-PRODUCT BUILDING. FIG. 8—PANORAMIC VIEW OF RETORT PLANT

through two condensers which consist of 201 copper pipes, 1¼-inch diameter. The resultant condensate, pyroligneous acid, is collected in two measuring tanks from which it is pumped through a 6-inch copper pipe to the storage tanks. After settling the raw liquors are passed into a Webre-Badger type evaporator where the combined tars are extracted. The tars are then neutralized and the alcohol is distilled off in a Barbet-type, continuous still. The remaining liquor, acetate of lime dissolved in water, is further evaporated almost to the point of crystallization in a Webre-Badger evaporator. It then passes to the dryer building where it is reduced to a sludge by means of drums which revolve slowly in a pan of liquor. The sludge is shaved off by knives, and drops on to a conveyor which transfers it to an open-mesh wire belt 24 inches wide. The exhaust gases which are drawn from the main stack through an underground conduit, 6 x 8 feet, are blown against the belt and the acetate of lime is thus dried. It is beaten off mechanically at the dry end and falls directly into the sacking hoppers. Exhaust steam is used throughout the process of evaporation and distillation, the condensed water from the exhaust steam being trapped and returned to the boiler feed-water heater.

Manual operations have been eliminated throughout the plant in ore and iron handling, logging, loading, charging of wood, handling of charcoal, drying of chemicals and firing of boilers. A considerable quantity of tar is produced which is fired in the same manner as fuel oil. The saw mill has its own fuel plant and burns the sawdust. The plant was designed by J. S. Ferguson, formerly of the Woodward Iron Co., and the Colorado Fuel & Iron Co., and now superintendent of the plant. The brick and concrete work was done by the Rust Engineering Co., Pittsburgh, and the structural work by the Gage Structural Steel Co., Chicago. The chemical apparatus was built by E. B. Badger & Sons, Boston.

Designs Vertical Miller

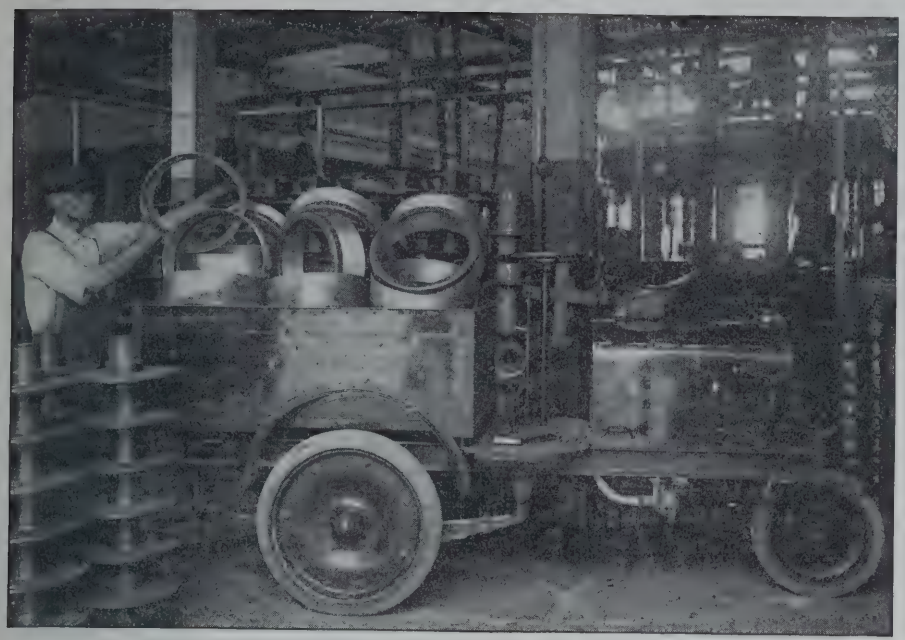
FOR the accurate milling of large, irregular pieces the vertical milling machine, shown in the accompanying illustration, is said to be especially adapted. It is a product of the Newton Machine Tool Works, Inc., Philadelphia, and was designed primarily for marine and railroad work. In the design of this tool, it is pointed out that many features have been incorporated that previously were found only on small, precision machines.

HEAVY DUTY VERTICAL MILLER WITH MULTIPLE CONTROL

The machine is equipped to handle continuous milling operations requiring face milling cutters, the finishing of surfaces requiring cylindrical cutters and for drilling and boring operations. An extensive range of spindle speeds is provided as well as power table feeds for circular, longitudinal and transverse directions.

The machine, it is pointed out, is carefully constructed so that all its parts align properly. The spindle revolves in bronze journal boxes in the spindle saddle and is equipped with a retaining drift key which is controlled through the medium of nuts threaded on the spindle nose.

The spindle saddle is provided with a side adjustment maintained through the medium of a taper shoe and is counterweighted to equalize its weight. It is equipped with a hand vertical adjustment in addition to the reversing feed and has a reversing fast-power traverse.



The platen is circular, of heavy construction, and is surrounded by an oil pan, made integral. The platen has a full bearing on its saddle to which it is held by four corner clamps.

The platen saddle has a narrow guide alignment on the cross slide and is fitted with a taper shoe, while the cross slide has square bearings on the base and is also fitted with a taper shoe. Some of the principal dimensions of this machine are: Diameter of spindle, 6⅜ inches; diameter of platen working surface, 60 inches; cross feed, 65 inches; in-and-out feed, 50 inches; vertical traverse of spindle, 24 inches; distance from the center of spindle to the frame, 50 inches.

Shop Tractor Has Wide Speed Range

A commercial tractor, designed for use in manufacturing plants but possessing a number of features of an automobile truck, is being manufactured by the Clark Tructractor Co., Chicago.

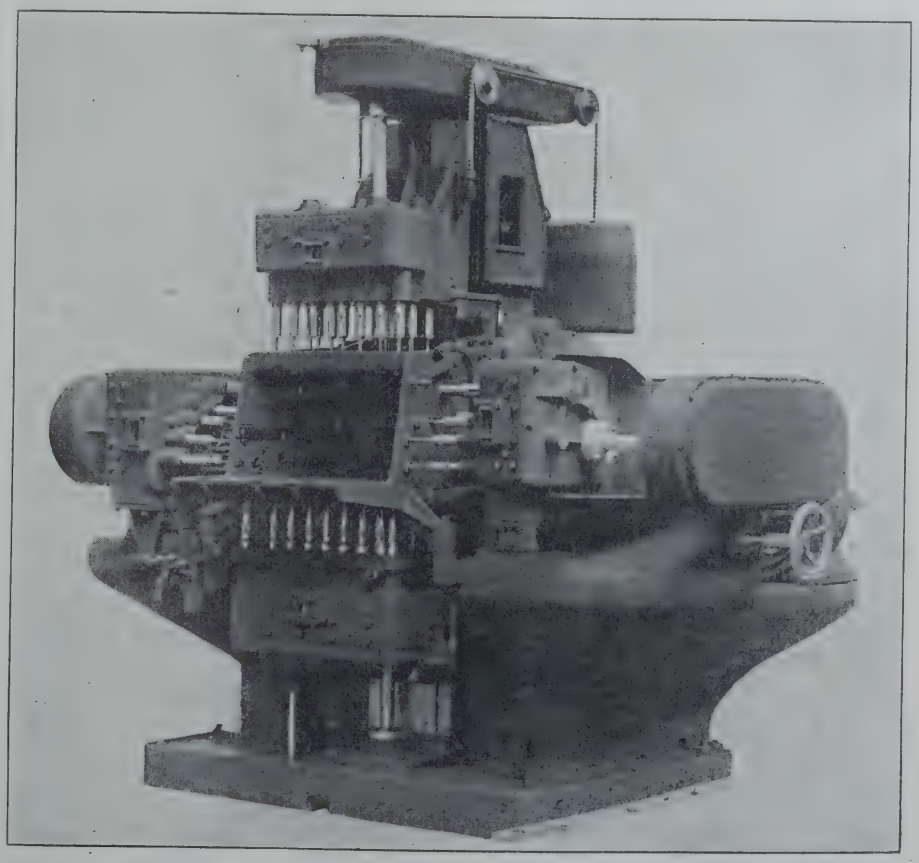
The truck, as shown in the accompanying illustration, has two driving wheels in front and one steering wheel in the rear to enable it to traverse narrow and crooked passages, to turn corners sharply and to deliver its load where desired with the minimum of maneuvering. The body of the tractor is in front, the load resting over the driving wheels and in full view of the driver. A ground clearance of 9½ inches enables the truck to operate over rough ground. Recently one of these

THE LOAD ON THIS TRACTOR IS DIRECTLY OVER THE DRIVING WHEELS

machines was run from the plant at Buchanan, Mich., to Chicago, a distance of 143 miles, in one day and was in good condition upon arrival.

The speeds of the truck vary from ¼ to 15 miles per hour. When necessary to operate in soft ground or in sandpiles of a foundry, large wheels with an 11-inch tread may be used to prevent the truck stalling. Several types of standard bodies are made, the regular cargo body for ordinary tractor work and shop hauling having a capacity of about ¾ yards or 1½ tons. Tractors may be equipped with an end-dump body which is operated by a special hand-operated hoisting mechanism. This is used in foundries and other places where materials can be dumped without breakage. Castings can be dumped directly into tumblers, avoiding extra handling. A gravity dump body of rocker type has been designed for handling coal and sand. In certain shops a platform type of body is useful in transporting heavy materials, such as spare rolls, electrical units and machine parts. One plant uses its tractor part of the day as a switch engine and the remainder of the time to haul trailers loaded with steel. Steel foundries are making use of the truck for hauling charging materials.

Publish New Magazine



Successful Methods, a magazine devoted to construction service has made its initial appearance. It is published by the Manufacturers Publicity Bureau, Inc., Chicago, which is an organization of about 15 manufacturers of construction equipment including road machinery, industrial railway track, steam shovels, hoisting equipment, shovels, wheelbarrows and other similar supplies for contractors.

The first issue of the publication, bearing the date of July, is an attractive magazine of fifty 9 x 12-inch pages, 20 of which are devoted to editorial and news matter. Several well illustrated articles on road building and contracting appear in this section of the magazine. A two-page series of illustrations shows a number of machines which have reduced labor costs in construction work.

Develops Four-Way Drill Without Oil Cups

A 60-spindle, 4-way, semiautomatic drilling machine embodying recent improvements in the method of lubrication, is shown in the accompanying illustration. The machine, which is manufactured by the Foote-Burt Co., Cleveland, has been designed so that all bearings are lubricated by a splash system. There is not an oil cup of any kind on the entire machine. The oil is pumped from a reservoir of 35-gallon capacity in the base of the machine, and after being used drains back into the reservoir through a wool filter. All bearings, except those of the spindles, are manufactured by the Hyatt Roller Bearing Co., New York.

The machine was designed to drill 60 holes in the top, bottom and two ends of castings for 4-cylinder automobile engines. The spindles revolve in fixed bearings, making it possible to drill a multiple layout of holes. The fixed center principle is advantageous in that larger spindles and gears may be used than would be possible if the spindles were adjustable. Special alloys have been used in the construction of spindles, gears and other parts whose dimensions are small because of the short distance between bearings. The machine is semiautomatic.

ALL BEARINGS OF THIS 60-SPINDLE DRILL ARE LUBRICATED BY SPLASH SYSTEM

Here and There in Industry

Live Information Which Records the Expansion of Various Lines of Productive Enterprise

INCREASED demands for hammered, pressed and drawn forgings has made it necessary for the Pollak Steel Co., Cincinnati, O., to work out plans for expansion both at Cincinnati and at Chicago. The new improvements consist of a merchant rolling mill at Cincinnati, to produce material which cannot be forged for farm implements, railroad work, etc., and a large drop forge plant at Chicago.

* * *

WM. MACCLEARY & CO., 2 Rector street, New York City, recently were appointed eastern sales and export representatives of the Hudson Sheet & Tin Plate Co., of Marietta, O.

* * *

REPRESENTING the Cleveland Milling Machine Co., Cleveland, the General Tool & Supply Co., Saginaw, Mich., has opened an office and store, carrying a stock of that company's milling machines and a large supply of cutters.

* * *

TO increase its nut, bolt and rivet manufacturing facilities, the Falls Rivet Co., Kent, O., will construct a new building this summer. Capital stock has been increased from $250,000 to $600,000, the new issue being absorbed by the present organization. New building and equipment will call for the addition of about 75 men to the force.

* * *

INCORPORATED under the laws of Maine the Gauld Supply Co. has taken over the business of the Gauld Co., Portland, Oreg. Directors of the new company are: William P. F. Ayer, Thomas Nickerson, G. A. Ricker, Theodore W. Little and Carl T. Keller, all of whom are prominently connected with the Walworth Mfg. Co., Boston, manufacturer of valves, fittings, etc.

* * *

SALES representatives of the Midvale Steel & Ordnance Co., and the Cambria Steel Co., from all over the United States, attended a convention at the company's headquarters in Philadelphia the last week in June. A feature of the occasion was an excursion in a special train to the plant of the Cambria Steel Co., Johnstown, Pa., where an old-fashioned picnic was held.

* * *

A BRANCH of the Baldwin Locomotive Works, Philadelphia, will be established in Buenos Aires in September in charge of Wallace R. Lee. H. P. Austin, a nephew of William L. Austin, until recently chairman of the board of Baldwins, will open a branch in Madrid, Spain, sometime in July. The Brazilian branch will be opened in August by Col. C. H. Crawford, until recently at the Eddystone munitions plant.

* * *

DESIGNED primarily for use in connection with machines and tools for cutting tool lubrication, force feed lubrication of bearings, etc., the line of pumps to be manufactured by the Michigan Machine Co., Detroit, will range in size from ⅛-inch to 2-inch intake and discharge. They also will be adaptable for oil circulation on tractors, marine engines, fuel systems of all kinds, brine circulation, etc.

* * *

FOR physical tests and research work along microscopic and hearth forging steel, tin plate, etc., is equipping a laboratory at its Cumberland, Md., steel plant. It will be in charge of Isaac Berman, under the direction of R. C. Drinker, the company's consulting metallurgist. This laboratory will supervise tests and experiments of the various grades of steel produced by the company for use in the manufacture of tin plate and heat-treated forgings.

* * *

WITH its organization complete, the Lake Erie Bolt & Nut Co., Cleveland, lessee and successor to the business of the Lake Erie Iron Works has organized with the election of officers as follows: President, Norris J. Clarke; vice president, Richard Inglis; secretary and treasurer, H. E. Volmer. These officers, with Chester C. Bolton, E. D. Rogers, Harold T. Clarke and Charles W. Schofield, comprise the board of directors.

* * *

AN order has been placed with the Electric Furnace Construction Co., Finance building, Philadelphia, for an electric furnace for the manufacture of ferroalloys in Spain, by the Sociedad Espanola de Construccion Naval, the advisory committee of which consists of the firms of Sir W. G. Armstrong Whitworth & Co., Vickers, Ltd., and John Brown & Co. This is said to be the first furnace of its kind to be erected in Spain for converting native ores into ferroalloys.

LICENSE has been granted to the Algoma Steel Corp., Sault Ste Marie, Ont., by Freyn, Brassert & Co., 645 Peoples Gas building, Chicago, engineers, to use three of the latter's gas washing and drying units on its blast furnaces. This brings Freyn and company's total installations to 72. They now are rebuilding No. 3 blast furnace of the Steel & Tube Co. of America, at its Iroquois plant, South Chicago. It is expected that this furnace will be ready for operation the latter part of this year.

* * *

THE Motor Castings Co., Milwaukee, has been organized with a capital stock of $100,000 to build, equip and operate a new foundry in West Allis for the manufacture of gray iron and semisteel castings for the gas engine, automobile, truck and tractor industries. The organizers include Gustave Anderson, formerly works manager of the Wisconsin Aluminum Foundry Co., Manitowoc, Wis.; John S. Wilson, Milwaukee, and Arthur C. Swallow, a Milwaukee capitalist. Ground was broken July 1 for the new foundry, which will be 111 x 180 feet, of brick and concrete. One cupola will be installed for the present, giving a capacity of 300 tons a month, but plans provide space for a second cupola. Mr. Anderson will be general manager. The new shop will be ready to begin production about Sept. 1.

British Pig Iron is Still on Rise

Further Wage Advances Bring About New Additions to Prices—American Pig Iron Dealers Courting British Market—American Billets Being Taken in Larger Quantities—Home Makers Indifferent to Competition

Bureau of THE IRON TRADE REVIEW,
Prince's Chambers, Corporation St.,
Birmingham, Eng., June 20.

ANOTHER upward movement has commenced in pig iron, stimulated by the advance in wages, following upon the wages returns under the Northern and Midland boards. There is little unanimity in these matters. Several of the Derbyshire smelting firms are grouped together for wages purposes, and they agreed, some weeks ago, to an advance to blast furnacemen, increasing the wages by about 8/– ($1.92) per week. In the Midland district, although, with trifling exceptions, such firms are not affiliated to the wages board, it is customary for the workmen to share in the advances. There is a good deal of irregularity in prices chiefly owing to the congested state of some order books but the general advances range between 2/6d. ($.60) to 5/– ($1.20) per ton for Northampton and Derbyshire firms. The Staffordshire furnaces are advancing the wages of their workpeople, but they do not propose formally to declare a rise until July, as they fixed their prices in May to cover sales made in May and June; but they are declining to accept new business for the rest of this month, at the same time hinting to their customers that they must look for a rise of something like 10/– ($2.40) per ton in July. A great complaint in the Midland district relates to the poor quality of ironstone from some of which they declare it was impossible to obtain good pig iron. The result of this is that foundry iron continues very scarce and the foundries could not get through without judicious mixing of brands.

The Middlesborough market shows a strong tone and the output has been somewhat increased, as the result of repairs carried through during the holidays. Makers, however, are selling very cautiously.

Resume Cumberland Ore Shipments

A gratifying feature is a certain amount of improvement in the output of ore which has enabled the sending of Cumberland ore to the East Coast. This is said to be the first delivery of the kind since the outbreak of war. At the same time, the supply is not considered either sufficiently plentiful or reliable to justify the bringing of new furnaces into commission, although the scarcity of hematite is very pronounced. The enlarged steel works, whenever they become really busy, must consume a great deal more hematite pig iron than sufficed for the pre-war period. The current rate for East Coast mixed numbers is 190/– ($45.60) for home consumption and 195/– ($46.80) for export, but with prices of raw material advancing, producers are predicting an early increase and new business is accepted strictly on the basis of the price ruling of the time of delivery.

A Sheffield correspondent has published the following circular from an iron, steel, coal, coke and ore firm in Philadelphia which has been endeavoring to cultivate a British market. The circular has been read with a good deal of interest here as illustrating the keenness of American dealers in looking after British business. It is said that great numbers of such circulars have been received in this country.

"We enclose herewith a booklet showing our pig iron list and our coal list. This has been arranged so that it shows all the grades of foundry pig iron, also all the hematite or bessemer pig iron that we handle, also the analyses of the various grades of ferrosilicon, open-hearth basic machine-cast iron, also Lake Superior charcoal iron, and southern charcoal iron. You will notice that the grading in this list is that which was universally adopted in the United States of America when the government took charge and controlled the iron and steel business. Our grading of foundry iron is, as you will see, very close, only allowing .50 in silicon between grades. No other country in the world, so far as we know, grades their pig iron so closely. Any iron which is purchased from us will be guaranteed to be within the limits of analysis shown on this folder and it gives the foundrymen the opportunity of making a very nice and close distinction in mixing this pig iron. It is impossible for us, in this letter, to quote prices, but if you are interested in the matter and, either by cable or by letter, will refer to the code word, you will see that you can indicate to us exactly what you want and we will be pleased to quote you promptly. In regard to coal, the same system has been carried out. Of course, the analyses of coal are necessarily approximate analyses."

While not greatly disturbed for the time being over this rise in price, the future is regarded with no little uneasiness, chiefly in view of the increasing success of American competition. It appears that the first cargo of American bars has not yet reached this country but the importing merchant claims to have sold it all in advance and to have received offers for much larger quantities. The American quoted price is £18.15s. ($92) c.i.f. Liverpool, and another £1 ($4.80) has to be added for the delivery of the material to the inland buyer, but as this price competes with the British basis of £21 ($100.80) delivered in the district, there is clearly a very good working margin both for the importer and the buyer. It stated that the bars are coming from American firms, whose deliveries in former periods of successful American competition were satisfactory to buyers generally, although these bars were required for a great variety of uses. There is clearly no lack of confidence as to the suitability of the American material for the purposes in view. British supplies are so deficient that the opening for America is not only obvious but urgent. There are numerous makers of nuts and bolts and chains on short time for lack of the bars. The competition will be greatly assisted by the further fall of $3. in freights, of which the importers have been advised this week.

Steel billets from America are also being bought in larger quantities and these can now be got to Liverpool at about £13.10s. ($64.80), competing rather closely with Welsh semifinished steel, quoted at the same price at works. It is assumed here that this competition has been made possible by very favorable quotations from the transatlantic lines. American rods have been quoted at £17.40s. ($84.00) as compared with £19.10s. ($93.60) the British price. Several steel rerollers in the district state that they have purchased on terms quite satisfactory to themselves substantial supplies of these billets.

British Makers Indifferent

A curious feature is the comparative indifference of British makers. While they do not relish the capture of their trade by Americans there is a very prevalent idea that a term of fairly successful American competition entailing a proportion of unemployment here might prove a convincing argument with which to confront what are regarded as the extravagant claims of British labor. All the same they would be much happier without it, realizing that it may be very much easier to admit American material than to get rid of it when it has served to reduce the cost of British production.

Employment Offices Cut In Half

Congress Allows Appropriation of $672,000 Against $4,600,000 Originally Asked—Private Funds Will Help in Maintaining Some Branches—Secretary Wilson Explains How Charge of Union Favoritism Came About

WASHINGTON, July 8.—Forces of the United States employment service, both field and office divisions, are to suffer a cut of practically one-half of the present number in accordance with the reduction made by congress in the sundry civil bill providing appropriations for the operation of the service. In the urgent deficiency bill the employment service is given $272,000 for expenses incurred up to June 30, 1919. The sundry civil bill allows $400,000 to the service to continue operations, which compares with the $4,600,000 originally asked by the service. Officials of the employment service state that no definite conclusions have been reached as to the number of offices that will remain open. It is expected, however, that the civic and business interests which have kept a large number of the present offices in operation will take over more of the branches and keep them going on private funds.

The sundry civil bill as it finally passed congress carried an item of $400,000 for the employment service for the fiscal year which began July 1. The house had cut the appropriation to $200,000 which provided for the work of the service to be confined to its main office in Washington, but the senate insisted on increasing the sum to $400,000 so as to permit the service to co-operate with state employment bureaus and to work through its own agents throughout the country. Previously congress passed the sundry civil bill which appropriated $272,000 for the employment service, to be expended for obligations already incurred. The $400,000 in the sundry civil bill was determined upon as a compromise, the senate at first having agreed to an appropriation of $950,000.

The number of offices in New York state will now be cut to less than ten or twelve, according to a report received from George R. Kirchway, state director of the federal service. Mr. Kirchway states that the appropriation of $400,000 is far inadequate for a nation-wide service and that New York's share of that amount would only keep two offices operating in New York city. With the present fund which is being supplied by J. P. Morgan & Co. and other private organizations, Mr. Kirchway expects to keep 12 offices open.

Placements of soldiers and civilian workers by the employment service during the week ended June 21 totaled 80,574, with reports from three states missing. This is the largest weekly placement total since the latter part of March when the service was forced to reduce its placement machinery through lack of funds. During the week 115,375 persons applied to the service for employment.

Wilson Denies Any Favoritism

Organization of both employers and employes into groups is upheld and advocated by the department of labor, states Secretary of Labor William B. Wilson, and yet it is vigorously denied that preference is shown to union bodies over the unorganized division of workers. Secretary Wilson declares the department of labor was created in the interest of the wage earners of the entire United States, this being expressly declared by the organic act.

Secretary Wilson explained that the case which was cited in congress, accusing the labor department and the United States employment service of giving preference to union labor, came about through a call by a shipyard in the state of Washington for union men. The employment service notified the workers on hand but confided to them that it would be of no use to apply unless they held union cards, as the yard employed no nonunion workmen. Through some channels this information got to members of congress and the labor department and its employment body were charged with favoritism.

English Plants Improve Working Conditions

(*Staff Correspondence*)

Birmingham, Eng., June 13.—The Sheffield Forge & Rolling Mills, Ltd., Sheffield, Eng., recently has purchased a house near to its works' gates for the use of employes. The place has been converted into a canteen and club where literature, billiards and various games are provided. For outdoor sports the firm has placed at the men's service a large piece of ground at Owlerton. Clubs have been formed for cricket, football, swimming, cycling, rambling and so on. The scheme is said to have made a good start.

The great firm of Alfred Hickman, Ltd., Sheffield, recently has evolved a profit sharing scheme which has been laid before the employes by Edward Hickman, chairman of the company. Mr. Hickman informed the men that, with a view to increasing the interest of the employes in the concern, it proposed to offer for subscription preferred shares in the company. So far there had been no preferred shares and it is proposed to make them pay 6½ per cent. A decided advantage over the ordinary shareholder is to be given inasmuch as the dividend is to be cumulative, no exception being made even in the case of the occurrence of a great railway or coal strike. It is proposed to issue 50,000 shares at £1 each. No one person would be allowed to hold more than £1000 worth of shares.

Common Labor Higher

New York, July 8.—Wages of common labor all over the east again are showing a rising tendency. Shortly after the signing of the armistice, there was a general expectation of a lowering in wages of laborers, and in some districts, particularly in New Jersey, some decreases actually were made. In the Perth Amboy district, laborers and road workers who had been getting 40 and 42 cents an hour, in many cases were reduced to as low as 30 cents. The trend now again is the other way, and a number of companies have reinstituted old rates. Large firebrick interests at Woodbridge, N. J., which reduced their rates of labor from 42 cents to 30 and 35 cents per hour now have gone back to 42 cents. There is a general shortage of labor in the east, and the only way in which manufacturers who are busy can get men, is to compete for them against other employers. The result is increasing wages. In the Newark, N. J. district the foundries are having difficulty in getting laborers. They now are paying $4 per day of nine hours for ordinary labor. One cause of the shortage in the northern New Jersey district is the fact that great numbers of foreign laborers have returned to their native countries since the beginning of the armistice. The opinion prevails that these men will not find conditions abroad desirable, and that many of them will return.

Obituaries

HIRAM SWANK, pioneer manufacturer of fire clay refractories and founder of the firm of Hiram Swank's Sons, Johnstown, Pa., 63 years ago, died at his home in that city, recently, after a four months' illness, aged 85. He decided to learn the pottery trade at the works owned by his brothers at Davidsville, Pa. In 1854 the plant was removed to Johnstown. At that time Hiram bought out his brother Josiah and shortly after commenced the manufacture of fire clay products. The plant was again removed to larger quarters where it has since been in operation under the firm name of Hiram Swank's Sons, with works also at Irvona, Pa., and at Clymer, Pa. These plants now have an annual capacity of 50,000,000 refractories. In 1870, Mr. Swank was requested by D. J. Morrell and George Fritz, officials of the Cambria Iron Co., to endeavor to make a nozzle to replace those then imported at high cost. He succeeded in making several by hand which produced better results than the imported ones. After a few weeks he developed dies and began to produce by machinery. In a short time he was furnishing nozzles, the first manufactured in the United States, to practically every steel manufacturer.

William P. Roberts, president of the Quakertown Stove Works, Quakertown, Pa., died June 27.

John Farrell, one of the founders and president of the Bailey-Farrell Mfg. Co., Pittsburgh, and long identified with the industrial and business life of that city, died at his home there June 28. He was born in Ireland in 1835, coming to this country and locating in Pittsburgh in 1844.

Frederick Dunham Somers, died recently at Montclair, N. J., after a long illness. For 30 years he was connected with Adriance, Platt & Co., manufacturers of harvesting machinery, and at the time of his retirement was secretary of the corporation.

Frederick Robinson Pettit, vice president and general manager of the J. I. Case Plow Co., Racine, Wis., and one of the best known of the younger generation of industrial executives in the Middle West, died of pneumonia recently after a week's illness. He was 35 years of age and a son-in-law of H. M. Wallis, president of the Case company.

Frank C. LaMarche, general superintendent of the Chicago Ship Building Co., South Chicago, died recently, at his home in Chicago, after an illness of six months. He was first taken ill during the pressure of war work. He was 57 years old, and had been in the shipbuilding business since he was 12 years of age. He had been with the Chicago Ship Building Co. for 10 years. He started his work in Cleveland.

Frank S. Bissell, organizer and for several years head of Bissell & Co., Pittsburgh, stove manufacturers, and latterly connected with the Stove & Range Co. of Pittsburgh, with which the firm of Bissell & Co. some years ago was consolidated, died at his home in Pittsburgh, July 4. He was 87 years old and was born and resided all his life in Pittsburgh. He was a graduate of Williams college.

William Thum, president of the U. S. Metals Refining Co., East Chicago, Ind., died at his home in Hammond, Ind., June 28, of pneumonia. He was connected with the Balbach metals refinery at Newark, N. J., for 20 years and built the plant at East Chicago. During the war he perfected a process for safety in handling explosives which was adopted by the government.

William H. Colcord, for the past 16 years outside sales manager for the Clinton Iron & Steel Co., Pittsburgh, Pa., died recently at the home of his brother, Capt. J. E. Colcord, in Chicago. Mr. Colcord, who was 71 years of age, was a native of St. Louis, and before joining the Clinton Iron & Steel Co. had been connected with one of the western harvester companies, and also had been in business with his father.

William Holmes Black, secretary of the Standard Scale & Supply Co., Pittsburgh, died at his home in Pittsburgh, June 30, at the age of 57. He was a graduate of Harvard University, class of 1887, and was a member of the Harvard Clubs of New York and Boston. Mr. Black has been associated with the Standard Scale & Supply Co. for more than 20 years and took a prominent part in building up the sales organization of the company.

Charles K. Totten, of Edgar M. Moore & Co., Pittsburgh, and previously connected with the Fort Pitt Foundry of which his father was one of the founders, died at the Presbyterian hospital, Pittsburgh, June 24. He was born in Pittsburgh 70 years ago and was the son of William J. Totten, who was prominently identified with the early iron business of Pittsburgh, being a member of the firm of Knap & Totten, afterwards known as the Fort Pitt Foundry.

George A. Farrall, vice president and general manager of the Massey-Harris Harvester Co., Batavia, N. Y., died at Batavia hospital, that city, recently, as a result of injuries received in an automobile accident that day. Mr. Farrall was born at Hamil, Monroe county, N. Y., on Nov. 4, 1856. In June, 1884, Mr. Farrall became identified with the Johnston Harvester Co., in its experimental department and soon advanced to the position of foreman of the wood shop and later to that of foreman of the binder-erecting department. He later became superintendent of the shop and subsequently was elected to the board of directors. In 1899, he was elected vice president and following the death of E. W. Atwater, was made president. He served as president from September, 1910, to February, 1911, when the company was taken over by the Massey-Harris Co., Ltd., Toronto, Ont. In the reorganization, Mr. Farrall was elected vice president and general manager.

Edwin J. Sherwin, who died recently at his home in Providence, R. I., was a member of the American Foundrymen's association since its inception. During his active career in iron and steel manufacturing lines he was foundry superintendent for the following firms: Platt Iron Works, Dayton, O.; Fairbanks, Morse & Co., Beloit, Wis.; Vulcan Iron Works, San Francisco; Fall River Machine Co., Cuyahoga Falls, O.; Wellman-Seaver-Morgan Co., Akron, O.; General Fire Extinguisher Co., Providence, R. I.; General Electric Co., Pittsfield, Mass.; Blakes & Knowles, Cambridge, Mass.; Fore River Shipbuilding Co., Quincy, Mass.; and more recently the Textile Finishing Machinery Co., Providence, R. I. He was also owner of the Enterprise Foundry Co., Muskegon, Mich. Mr. Sherwin is survived by two sons, one of whom is connected with Brown & Sharpe Co., Providence, R. I., and the other is superintendent of the Wheland Machine Co., Chattanooga, Tenn.

Question Naval Commandeering

Justice of Clause in Appropriation Act Permitting Department to Requisition Steel and Other Supplies Six Months After Peace Under Fire—Could Stock Materials For Years Ahead at Own Price

WASHINGTON, July 8.—Manufactures and producers furnishing the navy its supplies are beginning to question seriously the justice of a clause in the naval appropriation act of July 1, 1918, which gives Secretary Daniels authority to exercise the President's commandeering powers until six months after the proclamation of peace with Germany. The navy's requisition upon the Carnegie Steel Co. for 14,000 tons of plates and shapes, its subsequent summary ordering of 5,000,000 tons of coal for the Atlantic fleet and its more recent commandeering of vast quantities of fuel oil and gasoline for the Pacific fleet, all because of the department's dissatisfaction with the prices bid, are examples of wartime powers being used virtually in time of peace.

Under the provisions of the appropriation act, which may extend the power for a period of at least six months, depending upon the length of time it takes the senate to ratify the peace treaty, the secretary of the navy has authority to stock his bureaus with materials sufficient to last a number of years at prices he can make himself. In each of the three cases where he has used his authority the bidders insist his action was unnecessary and, in the case of the Carnegie company, the price subsequently fixed was that originally bid by the company and other manufacturers. The clause in the law which allows this application of authority is as follows:

"That all authority granted to the President herein or by him delegated shall cease six months after a final treaty of peace shall be proclaimed between this government and the German empire."

If the ratification by the senate of the treaty of peace takes as long as the present attitude of the senators indicates, months likely will pass before the President can issue the proclamation of peace, after which another six months must ensue before this power of the act is terminated. Skeptics point out that Secretary Daniels could do much in the meanwhile to embarrass industries and load upon manufacturers and others orders for materials and supplies at prices which may not be at all commensurate with market conditions at the time such requisitions may be made. It is this situation which is causing some concern among navy contractors and it has been intimated some steps may be taken to have congress rescind the secretary's power.

Test Case Being Fought

While these after-the-war acts of Secretary Daniels are engaging the immediate attention of producers, the navy is preparing to wage a fight against the Atlantic Refining Co. which has a suit for $2,200,000 pending against the department in the United States district court in Philadelphia. A motion has already been entered by the navy to have jurisdiction established in the court of claims instead of the district court.

The amount sought by the Atlantic company is the difference between prices paid by the navy as tentative prices during the war for gasoline, fuel oil and similar commodities and the current market prices in Philadelphia during the war. The navy has tendered the refining company approximately $600,000 more than it has already received in the form of partial payments, the amount offered being, according to navy officials, in accord with a scale of prices fixed by the navy after a study by the federal trade commission of the cost of production. The price-fixing committee of the war industries board was to have reviewed the prices, but the signing of the armistice came before the work could be undertaken and the committee asked to be relieved.

The navy's position in the pending suit is that the price it fixed was a fair one considering the cost of production in the oil industry as a whole and allowed a fair margin of profit. The navy claims the Atlantic company practically controlled the market price in Philadelphia and that war conditions kept the price from being normal. Navy officials are said to be worried over the fact that if the refining company wins the suit the government will be confronted with the question of whether the companies which have accepted payments on the basis of the navy's prices would be entitled to additional payments in order to equalize the returns of the Atlantic company. An official of the navy said the amount involved should such a contingency arise "would be enormous."

War Council to Resume Peace Basis

WASHINGTON, July 8.—The council of national defense, according to a statement of Director Grosvenor B. Clarkson, is maturing plans to return to its peacetime functions under the congressional act creating it, and will probably submit these plans to congress on or before the regular session in December. These plans are made possible by reason of the fact that under the sundry civil act there has been reappropriated to it its unexpended balance for the fiscal year 1918.

The act charges the council, which was created as a peacetime body nearly a year before the United States entered the war, with the co-ordination of industries and resources for the national security and welfare and with "the creation of relations that will render possible in time of need the immediate concentration and utilization of resources of the nation." With the closing of the work of the capital issues committee, the committee on public information, the food administration, the fuel administration, the war industries board, which the council organized and which remained under its organization for a year, and the war trade board, the council remains the single interdepartmental unit which can centralize the study of the records established by these war agencies. It is claimed

that the council will become in effect the residuary legatee of these war agencies to the extent that their records are not allocated to the executive departments.

The council is composed of the secretaries of war, navy, interior, agriculture, commerce and labor. With it throughout the war acted an advisory commission of seven members, composed of Daniel Willard, Samuel Gompers, Bernard M. Baruch, Howard E. Coffin, Julius Rosenwald, Dr. Franklin Martin and Dr. Hollis Godfrey. In the first year of the war the council and advisory commission, acting jointly, made the major part of the industrial mobilization. The council created such agencies as the general munitions board, the war industries board, the commercial economy board, the aircraft production board, and the committee on coal production.

Utilizing the best experts in all fields as dollar-a-year men, the council was able to make the preliminary mobilization of industry up to July 1, 1917, at a cost of but $127,000. Its entire expenses up to May 1, 1919, have been but $1,500,000, this having included the operations of the war industries board for nearly a year and the expenditure of $225,000 for erecting the council of national defense building. The committee on supplies of the council alone arranged for the purchase of $800,000,000 worth of goods for the quartermaster department of the army, at an expenditure of but $20,000 by the council, this committee handling 45,000 contracts in 200 days. It is estimated by the council that more than $3,000,000,000 was saved to the government by the prices which its experts on raw materials, minerals and metals made in the procurement of iron and steel products.

In the early part of the war the council, aside from its activity in industrial and scientific fields, initiated the system of state councils of defense; and at the war's close its field machinery consisted of nearly 185,000 units composed of the state, county, community, and municipal councils of defense. It has been the council's policy since the armistice to decentralize this machinery and to recommend that the great system of community councils particularly be established as a permanent nonpartisan basis under local rather than federal direction, in the belief that there can be best preserved to the nation the lessons of co-operation and unity born of war.

Among the subordinate bodies of the council dealing with matters separate from the co-ordination of industries as such for the national defense are the reconstruction research division; the highways transport committee, with its 46 state committees and approximately 400 units throughout the country; the emergency employment committee for soldiers and sailors, of which Col. Arthur Woods is chairman; the committee on labor headed by Samuel Gompers; national research council, which is the council's department of science and research, and the naval consulting board, which acts as the council's bureau of inventions. Contacts are also being maintained where necessary with the state, county, community, and municipal councils of defense or with the agencies which have succeeded these bodies since the armistice. The same holds true with the state divisions of the woman's committee of the council.

Apparently timed to offset the statement of Director Clarkson regarding plans of the council of national defense to return to a peacetime basis, Representative William J. Graham, chairman of the select committee on war expenditures, made public yesterday a statement condemning the advisory commission of the council. Incidentally, the statement by Mr. Graham, which charges the council and the commission with a violation of the law, makes reference to the foresight shown by Judge E. H. Gary, chairman of the United States Steel Corp., who, as chairman of the committee on steel and steel production of the advisory commission, called the attention of the commission to violation of the law in permitting committees of the council to direct purchases from their own companies. It will be recalled that steel manufacturers and others who were associated with the advisory commission resigned their memberships because of the attitude taken that they were serving the council in violation of the law. The attorney general said such violations were "matters of national policy" rather than of legal consequence." The letter of Judge Gary calling attention to the alleged violation was written on June 2, 1917. The result of the resignations of manufacturers and others from the advisory commission was to organize the war industries board, and committees for it named by the chamber of commerce of the United States. This was done, Mr. Graham said, so that the letter of the law might be complied with, "but by which scheme no part of the method of buying was changed in the slightest degree, so far as I can see."

Mr. Graham's statement speaks of the advisory commission as "the secret government of the United States" and at some length alleges that it exercised autocratic power both before and during the war. It is charged that the President "not only ignored, but reversed, the intent of congress, making the advisory commission the real executives, clothing them with unprecedented and almost illimitable powers. These powers they used in such manner as at times seriously to embarrass the cabinet, as is shown by the minutes, the members of the cabinet being compelled to protest the abuse."

It is claimed that the commission allowed interested parties to fix the prices of war supplies and "that it put the people of the country to incalculable unnecessary expense, and carried things with a high hand." In one instance, it is claimed one man, Maj. Gen. George W. Goethals, repudiated and practically defied the commission according to current gossip in Washington.

Basing Cases May Raise Questions

WASHINGTON, July 7.—E. H. Gary, chairman of the United States Steel corporation, and John S. Miller, the Chicago counsel retained by Western Association of Rolled Steel Consumers, are expected to come to Washington this week to meet William B. Colver, chairman, and other members of the federal trade commission for a preliminary discussion of an investigation which will weigh the equity of the trade custom of freight equalization on Pittsburgh base in iron and steel prices as applied especially to the Chicago district. Upon suggestion of Judge Gary and Attorney Miller officials of the commission have selected Wednesday for the meeting although it may not be determined until that time whether the session will be executive or public. If the conference results in a determination by the commission to go into the full subject it is expected the subsequent hearings will be public.

In this connection the reported filing

with the federal trade commission by the Superior Commercial club of Duluth, of charges against the United States Steel Corp. to restrain continued application of the trade custom of freight equalization, may open up a question more far-reaching than that which arose when Comptroller Warwick of the treasury ruled that the government would not pay freight differentials, or, as he expressed it, "for service not rendered." While the comptroller later reversed himself under plea that the contracts called to his attention had been entered into in good faith by manufacturers under the war industries board's acceptance of the trade practice, the question now arising may not be settled so easily.

The federal trade commission, before which it is reported the complaint has been lodged, will not admit the case has been called to its attention. This is in accord with the commission's policy to keep secret its activities until at such times, as in this particular case, it has investigated the complaint and finds the charges worth prosecuting. While the case may have been filed, as reported from Duluth, so far there is nothing here to indicate what the actual complaint may be or what course the commission may take in the matter. It does, however, recall the comptroller's decisions, although it is doubtful if the commission's findings in any event would be retroactive.

The Duluth complaint is another chapter of that community's efforts to have Duluth made a steel basing point the same as Pittsburgh. According to the report, the charge is that by following the trade custom of adding the freight from Pittsburgh to Duluth to the base price, the Steel corporation, through its subsidiary, the Minnesota Steel Co., has driven away industries which otherwise would have located in this territory.

Comptroller Warwick last year first began to disapprove the trade custom as applied to government contracts because, due to the haste and excitement in meeting the war's demands, contracts frequently were made in which it was stated the price would be determined later. Then when the time came for computing the price the freight differentials on the respective shipments were figured out and added to the base price, showing to the comptroller that the government was paying "for services not rendered." He went so far in his decision as to suggest that the trade practice might be the result of a combination of manufacturers in violation of law.

Later certified copies of the war industries board's interpretation of "f.o.b. Pittsburgh," which was identical with the trade custom of freight equalization, were presented to him, along with typical contracts covering the point. After a series of decisions which tended more and more to reverse his original position, he finally agreed disbursing officers could pay the differential, but specifically stated that any responsibility would rest with the price-fixing committee of the war industries board. The decisions against the custom were not based on the comptroller's personal views, but were in accord with the statutes of the United States. His reversal of his opinions was due largely to enactment by congress of a law legalizing informal war contracts under which moral if not legal obligations of the government could be settled.

The comptroller's ruling specifically applied to government contracts so drawn as to indicate the computing of rates and prices. Other contracts in which freight differentials were included in a flat price, as the price for steel delivered at an arsenal or a navy yard, were passed without question. The price, in this case, was the bid price in accord with the practice of the steel and other industries, while in the informal contracts the prices were more or less as he outlined and opposed. His decisions may not have weight in any consideration the federal trade commission may give the Duluth complaint, and the commission's action may not guide him. Interest, nevertheless, will be shown in the case not only by the steel industry generally and other industries where the custom is practiced but in government departments as well.

Structural Steel Tenders at Full Prices

Washington, July 8.—Bids on approximately 3600 tons of plates, shapes and bars for a structural shop to be built at the Puget sound navy yard, opened last Tuesday by the bureau of supplies and accounts, navy department, all were made on the basis of the prevailing market base prices of 2.65c, 2.45c and 2.35c, respectively, f.o.b. Pittsburgh. Additions are provided for extras and for inspection. The bidders included the Bethlehem Steel Co., the Youngstown Sheet & Tube Co., the Otis Steel Co., the Midvale Steel & Ordnance Co., the Inland Steel Co., the Jones & Laughlin Steel Co., the Donner Steel Co., the Carnegie Steel Co., and the Brier Hill Steel Co.

Bids also were opened last Tuesday for 102,600 pounds of tool steel for the naval ordnance plant at Charleston, W. Va., the rounds under one class ranging from ¾-inch to 3 inches, and the squares from $\frac{5}{16}$-inch to 1¼ x 2½ inches. In the other class the rounds range from ¼-inch to 1¾ inches, the squares from ¼-inch to 1¼ inches, and the flats from ½-inch x 1 inch to 1 x 2 inches. L. C. Blancke Co., maker for L. C. Blancke, Heller Bros., or the Atlas Crucible Steel Co., was the lowest bidder on the first class, involving 73,100 pounds at 1.11 cents on all except 11 of the 32 items, the figures on the 11 items ranging from 1.13 cents to 1.17 cents. The Hammond Steel Co. was the lowest bidder on the second class, involving 29,500 pounds, at prices ranging from 14 cents to 17 cents.

Charter Spar Mines

Washington, July 8.—Edward B. McLean and the American Security & Trust Co. have been authorized as trustees of the estate of John R. McLean to proceed with the proposed incorporation of a company to operate the Roseclaire fluorspar mines in Harding county, Illinois. The authorization was given last week by Justice Bailey in the district supreme court here. A company is to be formed in Delaware under the title of the Roseclaire Lead & Fluorspar Mining Co., with a capital stock of $1,800,000. The McLean estate recently compromised two suits with reference to the title to these mines that have been pending since the death of John R. McLean. Mrs. George Dewey, sister of Mr. McLean, and Frederick H. Bugher of New York, his nephew, were each given a one-fourth interest in the property and a suit of Hopkins Louden, of Nashville, Tenn., claiming a half interest in the mines, was settled by the payment of $325,000 by the McLean interest.

Features Honor Roll

The Independence day issue of a semimonthly house organ published by the Cutler-Hammer Mfg. Co., Milwaukee, Wis., was devoted largely to the employes of the company who had been in government service during the war. An honor roll as complete as it could be made included nearly 300 names. A feature of the issue was the great number of halftones of the men in uniform arranged in conjunction with the honor roll.

The Wadsworth Mfg. Co., Detroit, has adopted the so-called "Ford profit-sharing plan," including a 47-hour week and $6-a-day minimum wage.

Britain Fettered by Labor Rule

Highly-Unionized Character of Country and Fundamental Policy of Labor to Restrict Output, Seriously Handicap Employers—Out-of-Work Allowances Cost Government Millions Weekly—Iron and Steel Wages Fixed by Sliding Scale

BY A. O. BACKERT

"IN England it is not a problem of capital and labor, but of labor and labor," is how an official of one of the largest and most powerful unions in Great Britain summed up the labor situation of the United Kingdom. He meant to infer that jurisdictional disputes are the cause of more misunderstandings and strikes than the refusal of the employers to meet the demands of their employes. Practically every worker in Great Britain is a member of some union and it is claimed that those who were not affiliated with labor organizations prior to the war, practically were forced into unions of their craft during the period of hostilities. The Lloyd George regime is characterized as a union labor administration and many of the troubles and labor problems that now are besetting the employers of the United Kingdom are attributed to the policy of Great Britain's premier.

Iron and Steel Workers Organized

The iron and steel crafts, unlike those of the United States, are among the most highly organized in the Kingdom. The union is known as the Iron and Steel Trades Federation, with a membership of about 100,000, and its officials point with pride to the fact that not in 30 years has there been a serious strike in the iron and steel industry. Another powerful union is known as the Blast Furnace Men's Federation, with a membership of about 30,000, which includes practically all of the men employed at the blast furnaces and in the iron mines of England, Scotland and Wales. This organization by including iron ore miners in its membership, overlaps the Iron and Steel Miners' union, thereby affording many opportunities for jurisdictional disputes between the unions such as referred to by the labor leader as quoted. To eliminate collateral labor disputes at iron and steel plants brought about by strikes of bricklayers, machinists, engineers, cranemen, etc., an effort is being made to bring them into the Iron and Steel Trades Federation thereby creating one organization which alone will be responsible to the employers for all of the employes in the iron and steel works of the United Kingdom. In other words, every employe of the iron and steel plants would be affiliated with the Iron and Steel Trades Federation whether or not he is engaged directly in the manufacture of iron and steel.

Europe's Labor Problem

THIS is the second article written by Mr. Backert covering important aspects of commercial conditions abroad as developed during a several months' study by the author in Great Britain and France. In the previous article Mr. Backert discussed the transformation which has taken place in the nationality of the European iron and steel industry and the probable effect in the way of competition upon this country. In this article the labor situation, particularly in Great Britain is described and thoroughly analyzed. The war has saddled upon British industry some onerous burdens discriminatory to labor which in addition to the already severe restrictions upon production imposed by the unions for some years past have confronted the British employer with some very hard problems. Mr. Backert, who is vice president of The Penton Publishing Co. and editor of THE FOUNDRY, *points out these questions and discusses their practical, commercial importance.*

The wages of iron and steel workers are based upon the selling price of the material, quarterly examination of the books of the iron and steel manufacturers being made by expert accountants and adjustments in wages are determined accordingly. English steel manufacturers and labor leaders are unanimous in declaring this system to be preferable to that pursued in the United States where wages are controlled solely by the producers. In England the wages of iron and steel workers are on a par with those prevailing in the United States, due to the high selling prices of iron and steel throughout the period of the war. Today the quotations on most of these products in England are from $10 to $20 per ton higher than those prevailing in the United States and by basing the wages on the selling prices of material it is evident that wages are still on a war-time basis. By this sliding scale arrangement it was not necessary to grant wage advances, bonuses, premiums, etc., during the war period, since the sliding scale method of wage adjustment automatically granted the workmen the necessary increases to compensate for the mounting cost of living. On the other hand, as the selling prices of iron and steel products decline, the proportionate reductions in wages will be effected automatically.

Wages of Steel Smelters Increased

Indicative of the advances in steel smelters' wages during the period of the war is the percentage above the wage basis now paid as compared with the June settlement in 1914. At that time the total percentage above the basis was 11¼, whereas for the quarterly period ending April this year, the percentage above the basis for basic furnace operators was 28½, and 57½ per cent for acid furnace workmen. The settlement of the latter for June, 1914, in contrast was 13¾ per cent below the basis. Indicative of the advances above the basis now paid steel works operators in the United Kingdom, the following figures are quoted:

	Per cent above basis
Northeastern steel works operatives	159
Midland wages board	122½
North of England iron and steel mill men	107½
South Wales and Monmouthshire and blast furnace men and iron and steel workers	106
Scotland puddlers and iron mill men	115
Consent mill men and engine men	82½
Jarroll mill men and engine men	82½
Newburn heaters	70
Newburn engine men	70
Cleveland blast furnace men	107¾
North of England smelters	83¾

The sliding scale for blast furnace workers is based on a net quarterly selling price of No. 3 Cleveland pig

iron and the standard or basis upon which wages are computed is a selling price of 34 shillings for this grade of iron. For each 2.40 penny increase or decrease in the selling price of Cleveland No. 3 pig iron, there is a proportionate increase or decrease of 0.25 per cent above or below the standard. When this iron was selling at 29 shillings, which was incorporated in the agreement entered into on Dec. 16, 1897, the deduction from the standard or basis was 6.25 per cent. The schedule drawn up at that time carried the selling price of No. 3 pig iron to 60 shillings only, which provides for an increase of 35 per cent above the standard. When this agreement was made in 1897, it is apparent that the war prices were not considered possible and for this reason the maximum was placed at 60 shillings, equivalent to $13.80 per ton at our present rate of exchange. It will be noted also that the basis upon which to compute wages for No. 3 pig iron was placed at 34 shillings per ton or slightly less than $8 per ton. Today Cleveland pig iron is selling at 160 shillings or $36.80 per ton, which carries with it an advance above the standard of 107¾ per cent.

Eight-hour Day Inaugurated

By an agreement entered into on Feb. 9, this year, it was decided to inaugurate the 8-hour day by March 30 in all of the iron and steel plants of the United Kingdom, and where it was not feasible to make the change on that date the workmen were to be paid time and one-quarter, or tonnage and one-quarter, until June 29, when time and a half, or tonnage and a half, will apply on the four hours in excess of the eight hours prescribed. The arrangement of working shifts at blast furnaces and iron and steel works generally is from 6 a. m. to 2 p. m.; 2 p. m. to 10 p. m. and 10 p. m. to 6 a. m. At blast furnace plants the first shift or long turn on Sundays, is from 6 a. m. to 10 p. m. and the second shift from 10 p. m. to 6 a. m. In the agreement entered into between the blast furnace operators and their employes is a clause relative to the restriction of output which provides that "all men shall at all times do their best to obtain the maximum output of pig iron from the furnaces. There should be no holding back under the plea that enough work has been done. If from any cause whatever a furnace has been allowed to get down, it shall be the endeavor of every man to get the same filled up as soon as possible."

Since the inauguration of the 8-hour day the output of the blast furnaces, steel works and rolling mills of Great Britain has declined considerably due to the fact that a sufficient number of skilled men is not available to make up the 50 per cent increase in number of employes required to make the change from the 12-hour to the 8-hour day. Many of the works are operating shorthanded and the output necessarily has declined.

Ingenious Plan for Wage Division

For the purpose of providing for the wages of the increased number of employes essential for effecting the change from the 12 to the 8-hour basis, an exceedingly ingenious plan was adopted whereby a part of the wages of the third man is borne by the two employes working the other 16 hours of the day and the remainder is shared by the company. The sliding scale adopted starts with base earnings of 50 shillings per week and since this is considered to be the lowest possible wage that should be earned by an employe in these plants even on an 8-hour basis, the new rate of pay for eight hours' work remains at 50 shillings and no contribution toward the payment of the wage of the man for the third shift is made by the men on the other two shifts, the firm carrying the entire burden of this increased cost of labor. However, for every increase of one shilling in the base earnings per week, namely 50 shillings, the employes contribute 3 pence toward the wages of the man for the third shift and the company the remainder. For example, a man having base earnings of 85 shillings per week on the 12-hour basis, now receives 70 shillings and 10 pence for an 8-hour day and he contributes 14 shillings and 2 pence toward the wages of the man for the third shift. The firm on the other hand contributes 42 shillings and 6 pence. Since two of the employes contribute toward the wages of the third employe working the third shift of the 24-hour day, their combined share is 28 shillings and 4 pence; this amount, added to the firm's contribution, makes the total for the man on the third shift, namely, 70 shillings and 10 pence per week.

As the earnings of the men increase, the contribution of the firm decreases, as shown in the accompanying table, until the base earnings are 120 shillings per week, when the new rate for the 8-hour day is reduced to 80 shillings; the two employes formerly on the 12-hour shift each contributes 40 shillings of his weekly wage, making 80 shillings for the third man while the firm makes no contribution toward the wages of the third man engaged.

As previously pointed out, all the employes in the iron and steel trade are paid on a tonnage basis and therefore they did not participate in the war bonus which now constitutes a part of all of the wages of former employes of munition plants and allied factories, and amounts to 28 shillings 6 pence per week, equal to about $6.55. In addition to this, day workers are being paid a further advance of 12½ per cent which originally was intended only for overseers in machine shops who were not participating in war bonuses, but this additional advance of 12½ per cent had to be paid to the other employes of the shop to prevent strikes and walkouts within a few days after it was paid to the overseers. Aside from the iron and steel trades, the entire wage payment system in practically all of the metal working plants of the United Kingdom is so involved by war bonuses and advances authorized by the government that the workers themselves are unable to figure out their rate of pay.

The 8-hour day has not yet been legalized by parliament although such a measure providing for a maximum 48-hour week is being considered by some members of the house of Commons. However, the draft of a bill of this kind involves many difficulties because of the exceptions that must be incorporated. For example, one exception would have to provide for the long turns in steel plants on Sunday and in addition some trades are working only 44 hours and exceptions would have to be noted also in these cases. This measure is being opposed alike by manufacturers and some labor leaders, although it is probable that a law of some kind legalizing the 8-hour day ultimately will be passed.

Out-of-Work Donations Adopted

For the purpose of aiding workers temporarily thrown out of employment by the readjustment from a war to a peace basis, the government adopted an out-of-work donation plan which provides 29 shillings per week for three weeks unemployment to men and 25 shillings per week for women. In addition, 6 shillings is allowed for the first dependent child under five years and 3 shillings for each additional dependent child. Fourteen shillings 6 pence is donated for boys 15 to 18 years of age, and 12 shillings 6 pence for girls of the same age. Manufacturers consider this one of the most iniquitous measures yet adopted by the government to coddle the working class

since it places a premium on idleness and has so proved to be the case. It is impossible to operate the blast furnaces, steel plants and rolling mills at capacity since the adoption of the 8-hour shift and in London many small industries dependent upon women are unable to get help, yet in spite of this situation, according to figures issued by the government, a total of 1,093,400 men and women were receiving out-of-work donations from the government on May 2 as compared with 1,060,245 on March 28, an increase of 33,155. This total includes 402,105 men and 1316 women demobilized from the army and navy and 689,933 civilians. Of the latter 452,132 were women and girls. These donations are costing the British government more than $5,000,000 per week and while tremendous pressure has been brought to bear on the administration to eliminate this pauperizing feature, nevertheless, it is evident that the wrath of these idle workpeople is feared if their source of charity were suddenly withdrawn. Promises have been made from time to time by the administration to curtail and gradually eliminate this out-of-work donation feature, but nothing has yet been done.

In the iron industry employment is satisfactory, 269 blast furnaces having been in operation on May 1, as compared with 267 in March and 297 a year ago. More furnaces would be in operation today, but for the fact that many are out for relining and much needed repairs because of continuous high-pressure operations throughout the war. Steel works and rolling mills report an actual scarcity of skilled help and in the engineering trades machinists are in good demand although a slight surplus of common labor is reported. In the tin plate trade the state of employment in April showed an increase of 38 per cent, compared with the same month last year. The changes in rates of wages, including war bonuses reported to the labor department of the board of trade which came into operation in April resulted in an increase of nearly $3,000,000 in the weekly wages of approximately 1,300,000 workpeople. The principal change was that affecting the coal miners who obtained an increase under the award of the coal industry commission amounting to 2 shillings per shift or day, for those 16 years of age and 1 shilling per shift or day, for those under 16 years of age.

The wages of common labor throughout the United Kingdom for eight hours' work varies from $2.25 to $2.50 per day. In the foundry trade molders on day work are receiving about $5 per day, but on piece work their wages are in excess of this amount. While there is apparently no restriction of output in the casting plants and machine shops, nevertheless the production per man per day is less than production in the United States at the present time. With the constantly mounting cost of labor throughout Great Britain, employers are being forced to turn toward the more general installation of labor-saving equipment. The same condition also applies to France where the 8-hour day in practically all industrial lines became operative on

Workmen Help to Pay for 8-Hour Day

AN ingenious scheme was evolved in the United Kingdom when effecting the change from the 12-hour to 8-hour day whereby the employes shared with the employer the wages paid to the third man necessitated by this change and which involved an increase in the number of employes at iron and steel plants of 50 per cent. The accompanying table was devised, which on a sliding scale basis, provides for constantly increasing contributions to the wages of the third man by the other two men on the shift and the constantly declining contribution of the firm from base earnings of 50 shillings per week to 120 shillings per week. Figuring the shilling at an exchange value of 23.4 cents, then the earnings of an employe receiving 50 shillings are only $11.70 per week. This is the minimum amount from which the two employes on the 8-hour shifts make no contribution to the wages of the third man while the firm contributes the entire amount. On the other hand, when the earnings reach 120 shillings per week, or $28.08, then each one of the employes on the 8-hour shift contributes 40 shillings from his base earnings to the wages of the third man on the job and the firm makes no contribution as indicated by the table. The new rate of pay for the men on the 8-hour shift then is 80 shillings per week, equivalent to $18.72, carrying with it a reduction of $9.36 per week for each one of the employes. With base earnings in excess of 120 shillings per week the entire wage of the third man on the 8-hour shift is paid by the other two employes on the job.

June 1. In machine shops and foundries the employes now receive the same rate of wages for eight hours' work as was paid previously for 10 hours, and in the iron and steel industry the 8-hour shift has replaced the 12-hour turn insofar as it has been possible to effect this change. The workmen engaged in the iron, steel and foundry industries of France are not highly organized, although in recent months active steps have been taken to effect stronger unions in the metal working lines. In the iron and steel industries the workers are paid on the tonnage basis, similar to that prevailing in England. In the foundries where molding machines are installed, the piecework system largely prevails and in many plants poorly equipped, the workers are demanding labor-saving machinery so that they can increase their earnings by enlarged production. The average wage for unskilled labor in France is from $2 to $2.25 per day and the scale for molders is approximately $5 per day.

When the armistice was signed Great Britain had approximately 5,000,000 men in her army and navy, of which 101,969 officers and 2,688,486 men had been demobilized on May 29. Demobilization continues at a high rate, but in France the return of soldiers and sailors to civil life is not being hastened. To a large extent, however, this is due to the necessity for keeping a large number of men in the service in the occupied territories of Germany and also in Alsace-Lorraine.

Restriction of Output to be Restored

British manufacturers are alarmed over the bill now pending before parliament for the restoration of prewar practices among labor unions, involving the restriction of output provisions which greatly curtailed production per man in England prior to the war and threatened Britain's very industrial existence. For the purpose of speeding-up the production of munitions of war, an agreement was entered into with the government on March 17, 1915, which provided that all labor union regulations that would impede output were to be waived for the period of the war. However, this was done with the understanding that these practices were to be restored after the cessation of hostilities. The labor unions are now clamoring for the restoration of restriction of output provisions, and the measure is being opposed by all the English manufacturers and their associations. The latter contend that if Great Britain is to maintain her position in competition with other industrial nations of the world, it is absolutely necessary for them to operate their manufacturing plants without reference to limit of production.

Coal Production Declines

Probably in no industry of Great Britain is the restriction of output more apparent and effecting more serious results than in that of coal mining. In the report recently submitted by the coal controller to the coal commission, it is stated that the output per man at the mines has been reduced from 19.8 tons per week per man in 1913, to 16.8 tons for the first 20 weeks of this year. At this rate of production it is estimated that the coal output will be reduced to 242,000,000 tons this year as compared with 287,000 tons six years ago. The average number of men employed today in the coal mines of the United Kingdom is 1,111,000, which is the same as for the prewar year. The percentage of absence due to sickness, injuries, etc., increased from an average of 10.7 per cent to 13 per cent during the first 20 weeks of this year. On July 16 the 6-hour day will become operative in these coal mines, when a still further decline in production is expected and it is estimated that the total tonnage mined per annum after July 16 will fall to 214,000,000 tons. For the six weeks ending March 5 the output per man was 4.5 tons and for the four weeks ending May 24 the output had declined to 4.3 tons.

The declining coal production of the United Kingdom and the average output per man per four weeks are given in the following table:

	Average number of persons employed	Output, tons	Average output per man per four weeks, tons
1913.....	1,111,000	287,412,000	19.8
1914.....	1,117,000	265,643,000	18.3
1915.....	952,000	253,179,000	20.4
1916.....	956,000	255,846,000	20.4
1917.....	993,000	248,041,000	19.2
1918.....	961,000	226,557,000	18.1
Estd. output based on 1st 20 weeks of 1919.....	1,111,000	242,000,000	16.8
Estd. annual output aft. July 16		214,000,000	....

The percentage of absenteeism also has grown steadily, as follows:

	Percentage of absenteeism
1913.....	10.7
1914.....	10.3
1915.....	9.9
1916.....	9.7
1917.....	8.9
1918.....	11.0
1919*.....	13.0

*First 20 weeks.

Coal exports also have fallen off from more than 77,000,000 tons in 1913 to 28,000,000 tons last year. The United Kingdom requires about 200,000,000 tons of coal for domestic purposes, so that little will be available for export this year. Domestic consumption and export figures are given below:

	Output, tons	Inland consumption and bunkers, tons	Export, tons
1913.....	287,412,000	210,105,000	77,307,000
1914.....	265,643,000	203,185,000	62,458,000
1915.....	253,179,000	206,857,000	46,322,000
1916.....	255,846,000	213,917,000	41,929,000
1917.....	248,041,000	209,607,000	38,434,000
1918.....	226,557,000	195,937,000	34,420,000
1919 (estd).	230,606,000	198,806,000	28,000,000
July 16, 1919 to July 16, 1920, (estd.)...	217,588,000	194,588,000	23,000,000

On the basis of an average output of 4.3 tons per man per week, the average production at the British mines is 220.6 tons per man per year, compared with 680 tons in the United States and 240 tons in Japan.

Government Control of Coal Mines

The nationalization or government control of the coal mines of Great Britain has been the subject of an investigation by a commission for several months. Mine owners, operators, miners and labor leaders have been examined and a tremendous amount of the testimony has been submitted for and against government operation.

Manufacturers throughout Great Britain and France are convinced that wages permanently will continue on a high level and probably further advances will have to be made because of the constantly increasing cost of food as compared with the prewar levels. In November, 1918, the increase in the cost of food in the United Kingdom as compared with July, 1916, was 133 per cent and in May this had declined only 26 per cent to an increase of 107 per cent. Since 1910 the increase in the cost of food in France is 290 per cent and since the armistice there has been no noticeable decline. The high cost of living in the large industrial centers of France is the basic reason for the feeling of unrest in the ranks of labor. By those who have studied the food situation in Great Britain and France it is the prevailing belief that prices of meats, fats, etc., will continue to advance until the central powers have been supplied. The lifting of the blockade will result in the purchase of a tremendous tonnage of meats and fats from the United States, Australia and Argentine and this will further curtail the available supply for the allied countries which heretofore have divided these available foods.

Men of the Iron Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

THOMAS P. DAVIES has assumed his duties as chief engineer of the Duquesne works of the Carnegie Steel Co., having been named to succeed William Ahlen, who resigned and has returned to his former home in Sweden. Albert Cummins is the successor of Carl Cedarlund as electrical engineer of the Duquesne works. Mr. Cedarlund, who had been with the Carnegie company for the past 15 years, resigned recently to become electrical engineer of the General Electric Co., of Sweden, and recently left this country to assume his new duties.

H. A. Brassert recently was elected chairman of the board of directors of Freyn, Brassert & Co., 645 People's Gas building, Chicago, engineers.

A. B. Seelig, vice president and general manager of the Bristol Brass Corp., Bristol, Conn., has tendered his resignation and it has been accepted. His successor has not been named.

John M. Watson Jr., who has been associated with the Cannonsburg Sheet & Tinplate Co., Cannonsburg, Pa., for the past year, has been appointed assistant general manager of that company.

D. B. Coey has been appointed representative in the Chicago district for the Mansfield Sheet & Tin Plate Co., Mansfield, O. His headquarters will be at 29 South La Salle street, Chicago.

George L. Norris, metallurgical engineer of the American Vanadium Co., Pittsburgh, for many years, has been transferred to the sales department of that company with headquarters at the New York office, 120 Broadway.

G. S. Alston, who for the past three years has been auditor of the Sharon, Pa., plant of the American Steel Foundries, has been transferred to the Alliance, O., plant of that company. A. C. James succeeds Mr. Alston at Sharon.

L. Edward Lortz was elected first vice president of the Fulton Iron Works Co., St. Louis, manufacturer of engines, sugar mills, crushers, etc., at a recent meeting of the board of directors. The following also were elected vice presidents: Henry Hurter, chief engineer; A. J. Thompson, manager for Cuba; F. Edward O'Neil, manager for New York; and O. W. Black, works manager.

A. W. Ransome, formerly of the New York office of the Blaw-Knox Co., Pittsburgh, has been made New England manager in the recently-established office in the Little building, Boylston and Tremont streets, Boston. H. J. Desson has been transferred from Pittsburgh to Detroit to become Michigan district manager, with headquarters in the Owen building.

JOHN A. CAPP
Recently elected president of the American Society for Testing Materials

C. H. Emerick has assumed his duties as general sales agent of the Adrian Furnace Co., Du Bois, Pa., succeeding W. W. Kerr, who resigned a short time ago to accept a position with Reed, Fears & Miller, Inc., pig iron and coke brokers, in the Philadelphia office of the latter company. Mr. Emerick has been connected with the Adrian Furnace Co. for the past 12 years.

Bert H. McCreath, late assistant manager of the *Toronto Star,* has resigned that position to become vice president of the recently-organized Lake Huron Steel Corp., Goderich, Ont. Mr. McCreath was prominent in connection with patriotic movements during the war, being president of the 50,000 club which raised over a million dollars for the patriotic fund.

George W. Way, formerly connected with the Carnegie Steel Co. in the Detroit district, has been appointed Michigan representative for the Erie Crucible Steel Co., Erie, Pa., with offices at 858 Penobscot building, Detroit. Prior to accepting his position in the sales department of the Carnegie Steel Co., Mr. Way was superintendent of the forge and machine shop of the Union Switch & Signal Co., with whom he was connected 14 years.

Sir Charles E. Eillis, G. B. E., K. C. B., who resigned his position as managing director of John Brown & Co., Ltd., Sheffield, England, to take an important position with the ministry of munitions, has been honorably discharged from service and has resumed his former duties with the company. Sir William H. Ellis and Sir Thomas Bell, who have been directors for several years, have been appointed managing directors.

E. C. Douglas, president of the W. & B. Douglas Pump Co., Middletown, Conn., has resigned to accept the superintendency of the foundry department of the Chalmers Motor Co., Detroit. Mr. Douglas has been with the Middletown company since 1897 and has during this time worked in all departments, becoming successively, superintendent, director, vice president and president. He assumed his new duties July 7.

Thomas E. Farrell, who has been in exclusive charge of the metals department of the Ohio Corrugating Co., Warren, O., has resigned to become president and treasurer of the Sheet Metal Mfg. Co., Youngstown, O., a recently-organized corporation which will manufacture and wholesale sheet metals of all description. The company contemplates erecting a large warehouse at Youngstown, which will be completed Aug. 1.

Men of the Machinery Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

F. S. EGGLESTON Jr. has been appointed manager of the New England branch of the Keller Pneumatic Tool Co., Chicago, with offices located at 259 Franklin street, Boston. For 14 years, Mr. Eggleston has represented the Chicago Pneumatic Tool Co., in New England, the last four years as manager of that company's branch office in Boston. Mr. Eggleston will also represent the Cincinnati Electric Tool Co., the Gardner Governor Co., the Electro-Magnetic Tool Co., and the Detroit Hoist & Machine Co.

William F. Pollock, manager of the Victor Saw Works, Springfield, Mass., has sailed for England on a business mission.

S. W. Hilt has been appointed by the Camden Forge Co., Camden, N. J., to take charge of its recently-opened district sales office in New York.

H. E. Henry, formerly sales manager for the Fulflo Pump Co., Blanchester, O., has become sales manager for the Michigan Machine Co., Detroit.

W. B. Harris, owner of the Millbury Machine Co. and the Millbury Dobby Chain Co., both of Millbury, Mass., has been elected a director of the Millbury National bank. He recently was elected a trustee of the Millbury Savings bank.

R. S. Hammond, formerly with the American Steel Foundries, has been appointed Pittsburgh representative for the Whiting Foundry Equipment Co., Harvey, Ill. Mr. Hammond, who succeeds F. J. Page, will open an office at 1224 Fulton building.

Samuel F. Joor has become sales engineer for the American Steam Conveyor Corp., Chicago. He has been practicing as consulting engineer in that city, but at one time was western manager and sales engineer of the Jeffrey Mfg. Co., and prior to that was affiliated with the Link Belt Co.

C. A. La Fevre, formerly vice president in charge of the engineering department of the Charles C. Kawin Co., has resigned that position and has become connected with the Troy Laundry Machinery Co., Chicago, as assistant to the president in charge of manufacturing.

Christian Girl, president of the Standard Parts Co., Cleveland, who assembled the standard motor truck for the army while a member of the motor production department of the Motor Transport corporation, has been awarded the distinguished service medal by the war department.

Arthur B. Thorne, who for the past three years has been with the Pratt & Whitney Co., Hartford, Conn., as the representative of Vickers, Ltd., England, in connection with British, Servian and Russian arsenal contracts, returned recently to the home office, after a three-month trip to England.

L. C. Sprague has been made manager of the railroad department of the Chicago Pneumatic Tool Co., Chicago, and C. W. Cross, has been made his assistant. Mr. Sprague has been district manager at New York and Mr. Cross has been acting as special railroad representative at Chicago.

Arthur M. Watkins, New York City, has opened offices at 25 Church street, where he will deal in machine tools. Mr. Watkins formerly served as secretary and treasurer of the Inter-Continental Machine Corp., for three years, and prior to that time was with Manning, Maxwell & Moore for 17 years.

Forrest E. Alexander of the sales department of the Graton & Knight Mfg. Co., Worcester, Mass., has resigned to accept a similar position with the Warren Belting Co. in the same city. Mr. Alexander, who was with the company seven years, served as a lieutenant in the ordnance department during the war.

G. G. Going, superintendent of the Noiseless Typewriter Co., Middletown, Conn., has been made works engineer, and Arthur Jenner, formerly foreman of the tool department, will succeed him in the former position. Mr. Jenner of late has been connected with the Marlin-Rockwell Corp. and the American Can Co., Bridgeport, Conn.

William L. Neilson, Leicester, Eng., European representative of the Norton Co., Worcester, Mass.; Maurice Schmeder, Paris, France, representative, and Otto J. Lof, representative in Germany of the same company, attended the annual sales conference of the Norton Co. and the Norton Grinding Co. at the home office recently.

Franklin G. Smith, president and general manager of the Cleveland Osborn Mfg. Co., Cleveland, manufacturer of molding machines, etc., has been elected president of the Cleveland Y. M. C. A. Mr. Smith previously had served as vice president. Fred W. Ramsey, president of the Cleveland Metal Products Co., Cleveland, was elected vice president of the Y. M. C. A., to succeed Mr. Smith.

Bert Reeves, formerly foreman for the American Machine & Mfg. Co., Atlanta, Ga., and for the past two years connected with the National Steel Casting Co., Montpelier, Ind., has been made superintendent of the steel department of the Lucy Mfg. Corp. of Texas, Houston, Tex., manufacturer of oil-field machinery and equipment. Mr. Reeves' foundry experience covers the past 20 years.

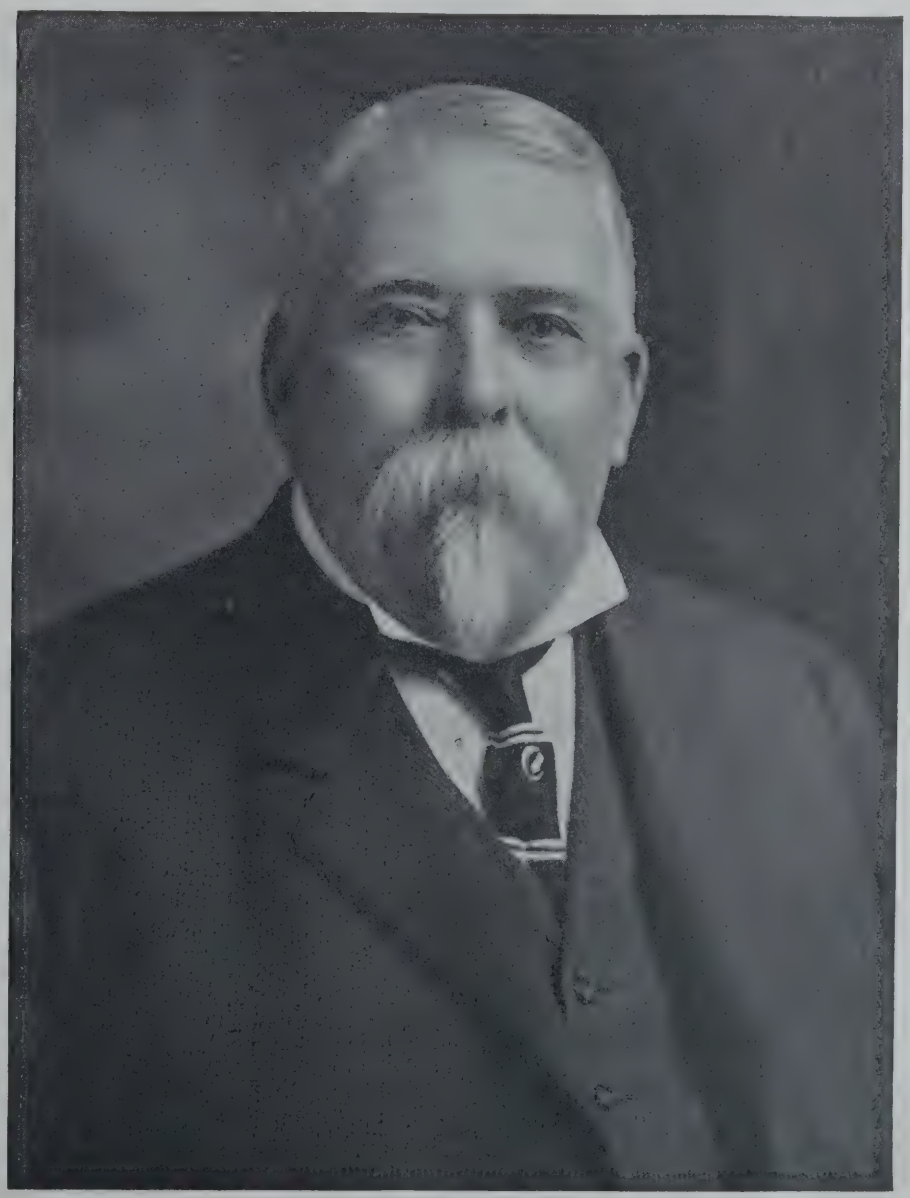
Albert H. Drury, captain in the 161st field artillery, has joined the sales force of the Stanley Works, New Britain, Conn., and has been assigned to the Ohio territory. William A. Schroedel has been assigned as a salesman to New York state territory. The annual conference of the sales force of the Stanley Works will be held the week of July 14 at the home office.

C. C. Hanch has been appointed general manager of all Maxwell-Chalmers interests, according to a recent announcement of the Maxwell Motor Co., recently. Mr. Hanch resigns from the Studebaker Corp. as treasurer, having been affiliated with it since 1915. Prior to that time he was for 19 years treasurer of the Nordyke-Marmon Co., Indianapolis. During the war, he served as chief of the automobile products section of the war industries board. Since the signing of the armistice Mr. Hanch has been in Europe, investigating export conditions for the national automobile chamber of commerce.

Sees Steel Become Giant Industry

Willis L. King, Vice President of Jones & Laughlin Steel Co., Celebrates Fiftieth Anniversary of Notable Business Career

YES, IT is 50 years since I came here as a clerk in the commercial office of this company but the time has sped by so quickly that it does not seem half that long," said Willis L. King, vice president of the Jones & Laughlin Steel Co., when reminded that the fiftieth anniversary of his connection with the company, in whose success he has been a potent factor, was near at hand.

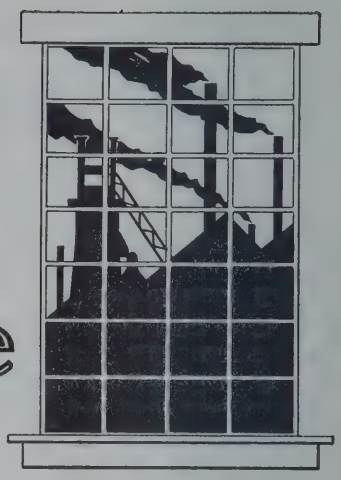


"There were six of us in the office then, and the boss, B. F. Jones Sr., worked just as hard as the rest of us. We all got to work at 7 o'clock in the morning, and quitting time was marked by the completion of our duties and not by the clock. We had 50 puddling furnaces in those days, yielding about two tons of iron each, or a total of 100 tons a day. At present the daily production of the company is about 7000 tons of steel. This is a gain of 7000 per cent, which I think is quite a creditable measure of expansion.

"B. F. Jones Sr. the founder and directing head of the company up until his death in 1903, was a remarkable man, and laid the foundation of the business so wisely and securely that those associated with him found it easy to build a superstructure as fast as the increasing necessities of the country required. In fact, what measure of success I have had I ascribe largely to my good fortune in having had him as a preceptor.

"In this connection, I would like to say a word regarding the old time ironmasters in Pittsburgh. Although quite young, it was my privilege to know such men as William M. Lyon, James I. Bennett, John Graff, A. M. Byers, Henry W. Oliver, and many others. They were a fine type of business men, active, industrious, and capable; but those were the days of unreasonable competition and the results were so disastrous that only two companies bearing the names of Byers and Oliver are in existence today. Certainly in their case unreasonable competition was the death of trade."

Approaching his sixty-ninth year, Mr. King today is mentally and physically vigorous as many younger men, and this notwithstanding that early this year he underwent a severe major operation. His recovery from this operation is a source of great pleasure and gratification to his many friends in the steel industry. "To know him is to love him" might truly have been written of Willis L. King, for, despite the prominent place he has reached in the iron and steel industry, and success that might have turned the head of others, he is quite as approachable and affable as he must have been on July 12, 1869, the day he joined the company as an order clerk. Strangers do not remain strangers after meeting Mr. King for friendliness gleams out of a pair of clear blue eyes. He is a big man in stature and in vision; modest and of simple tastes, and what is better still, enjoys the esteem and affection of every one in the organization, as well as the respect and confidence of his competitors and purchasers of steel products.



He is vice president of the American Iron and Steel institute and a charter member.

WILLIS L. KING

Little Stories of Business Life

Brightening Business Days

THAT which lies closest to the heart of a man sometimes finds strange and incongruous expression. In the center of Chicago's warehouse district there is a machine tool dealer's building with these unusual features: A dove cote on the roof, a ventilated vault for the storage of trophies of the hunt on the main floor, and a Persian rug lays under a plate glass cover on the general manager's desk.

The district is noisy, dusty and drab but step inside the building and there is the evidence of man's natural desires to get far, far away. The building is that of the Marshall & Husehart Machinery Co., 18 South Jefferson street. A. H. Marshall, the former president who recently retired, has visited more out-of-the-way places of the globe and hunted in further parts, it is said, than the late Colonel Roosevelt. The vault contains a great part of his collection of hides, relics and accoutrement of the hunter and woodsman, according to business acquaintances.

His love of birds led him to have a dove cote placed on the roof of the building, and it is well tenanted, although in that district a dove cote might seem as much out of place as if it were in the desert. The rug was the gift to Mr. Marshall of John Foote, of the Foote Bros. Gear Works, Chicago. Of fine silken texture, it lay on the floor but a few feet from ponderous machines, until it showed evidence of wear, when it was placed beneath a sheet of plate glass on the desk now used by John Roy Porter, the general manager. It is so long that part of it extends over the edge of the desk nearly to the floor. The part beneath the glass is clean and has a glorious glint, while the other part is black with soot, representing the lights and shadows of Chicago.

Speedy Work

THAT not all the speed in getting material ready for export was done in the days of war stress is proved by a recent achievement by a southern producer of pig iron. The Republic Iron & Steel Co. recently was given an order for iron to be shipped to Italy and five days were stipulated in which to deliver it to the ship at New Orleans. Everybody got behind the order and in three days a solid trainload of 37 cars of pig iron was on its way to the lower end of the Mississippi river. The distance was covered in record time and the iron was loaded and on its way without an hour's delay to the ship.

Pig Iron and Shoes

WHERE does all the pig iron go?" asked one man when told that nearly 100,000 tons went to New England consumers during June. And the answer if it could be given in detail would surprise nearly everyone. One large order went to a manufacturer of leather-making machinery which is an industry little thought of by the average man for he seldom comes in direct contact with the machines or with the product of the mainches in the tanneries and leather finishing plants.

When a man buys a new pair of shoes he little thinks that he is helping the sale of pig iron in New England, yet very likely he is doing that for machinery for the leather manufacturer is behind the great shoe industry of Massachusetts and pig iron is behind this machinery.

Zinc Now Zinc

PROSPECTS are that soon the sheet mills may be unable to buy spelter for their galvanizing departments. Now the reader need not be alarmed, this is not a bullish market prediction. The fact is, the members of the zinc producing industry, at their annual meeting in St. Louis recently, decided to do away with the name spelter and call zinc zinc. Heretofore zinc has been concealed under a variety of disguises. The ores have been called jack, blende, mineral, etc.; the smelted product, spelter; the terms galvanizing, sherardizing, etc., have submerged the process of protective coating with zinc. But the institute is going to make a drive to replace these terms with the word zinc and endeavor to get for that material its proper recognition in the family of metals.

X-Reas to Dine

FOR several years past, it has been the custom of Charles S. Rea, vice president of the Ralston Steel Car Co., Columbus, O., on the occasion of his birthday to give a dinner to his friends and business associates, but henceforth he is going to be the guest of his friends instead of the host at such observances. At the last birthday dinner that Mr. Rea tendered at Pittsburgh, an organization which

takes the name of the X-Rea association, was formed and the dinner to Mr. Rea will be given by this association which includes many iron and steel men as well as several professional men in its membership.

To Honor Bessemer

A bust of Sir Henry Bessemer, inventor of the bessemer process, representing the gift of prominent American iron and steel men is to be placed in the McKinley Memorial building at Niles, O., and plans to that end are being made by the National McKinley Birthplace Memorial association of which J. A. Butler Jr. of Youngstown, O., is president. The court of honor in this building contains a marble statue of the martyred president, and surrounding it are various members of his cabinet. In the museum room and corridors of the second floor, are bronze busts of a number of prominent men who were contemporaries of McKinley and who were engaged in the iron and steel industry.

Plans now being formed call for placing the bust of Sir Henry Bessemer among this group which includes Andrew Carnegie, David Tod, C. H. Andrews, Col. John Gordon Battelle, Henry W. Oliver, Judge Elbert H. Gary and others. It is felt that this would be a fitting recognition of the man whose discovery did so much toward promoting the progress of the American iron and steel industry.

Hardware Men to Meet

The twenty-fifth annual convention of the National Hardware Association of the United States will be held at the Marlborough-Blenheim, Atlantic City, N. J., Oct. 14, 15, 16 and 17. The first day of the meeting will be devoted to sessions of the automobile accessories branch. The regular sessions of the convention will open Oct. 15. The metal branch will hold its session Oct. 16.

Entertains Forge Men

A get-together of the leading forge men of the country under the auspices of the Sizer Forge Co., of Buffalo, July 1 was attended by close to 300 representative men of the industry. Following an informal discussion of business in the morning, the guests inspected the new Sizer plant and met in the evening for one of the biggest celebrations any industrial plant in Buffalo has ever given. The entire second floor of the Hotel Iroquois had been leased for the occasion. No one but forge men and their friends were permitted on that floor during that time.

The trip of inspection in the morning completely covered the new plant of the company. The new plant covers six or seven acres and employs 600 men. Its capacity for output is ten times that of the old plant.

"The celebration," said Sales Manager V. B. Schupp, "was in the nature of a get-together for all the big forge men and larger machinery manufacturers of the country. It was designed to create a better feeling among forge men, and to introduce them to our new plant. It was entirely successful."

Among the well-known steel men present were C. W. Heppenstall, president of the Heppenstall Forge & Knife Co., Pittsburgh; R. A. Harmon, Cleveland City Forge; R. E. Christie, Bethlehem Steel Co.; H. N. Taylor, Philadelphia, and others.

To Enlarge Wire Plant

Plans have been completed for the erection of steel capacity at the wire plant of the Black Steel & Wire Co., Kansas City, Mo. The plant will be equipped with two furnaces for the making of steel ingots, together with electrically-driven rolling mills and will have a daily capacity of 100 tons. W. E. Moore & Co., Pittsburgh, are engineers in charge of the project. In connection with the enlarging of the company's plant, it is stated the firm will extend its line of production. Heretofore only steel wire and wire rope was manufactured, but now machinery will be added for the manufacture of woven wire and barbed wire fence. The manufacture of nails also will be taken up. Harry W. Black is president of the company.

Manganese Ore Shipments Set Record

The domestic production of manganese ore in 1918, according to statistics compiled by D. F. Hewett, of the United States geological survey, department of the interior, was greater than in any preceding year. The total shipments of high-grade ore for the year amounted to 304,366 tons, or two and a half times that for 1917, which was the highest previously recorded. The shipments of low-grade material amounted to 898,332 tons containing from 10 to 35 per cent of manganese and 242,585 tons containing from 5 to 10 per cent of manganese. A summary of shipments by states follows:

State	Ore containing manganese as follows: 35 per cent or more gross tons	10 to 35 per cent gross tons	5 to 10 per cent gross tons
Alabama	709	443	.....
Arizona	17,654	6,758	6,082
Arkansas	7,731	9,173	.....
California	24,067	68	.....
Colorado	3,276	*94,603	*
Georgia	6,679	9,430	1,266
Michigan	.....	22,673	.....
Minnesota	.....	630,827	229,869
Montana	199,932	.....	.....
Nevada	19,872	80,354	.....
New Jersey	64	‡146,796	.....
New Mexico	3,126	32,907	400
North Carolina	315	30	.....
Oregon	198	.....	.....
South Carolina	100	850	.....
South Dakota	31	.....	.....
Tennessee	4,162	2,307	51
Texas	380	.....	.....
Utah	5,100	.....	.....
Virginia	10,928	7,859	4,917
Wisconsin	.....	.....	†215,839
Wyoming	42	50	.....
	304,366	898,332	242,585

*Colorado fluxing ore not reported.

†Ore from Wisconsin containing approximately 5 per cent manganese not included in totals.

‡Residuum not included in totals.

Reports received from makers of ferromanganese and spiegeleisen indicate that 35 per cent of the metallic manganese used in the alloys made and imported during 1918 was derived from ores mined in the United States. As the proportion of domestic manganese in such alloys was only 4 per cent in 1913 and 16 per cent in 1916 the domestic miners of manganese made a notable contribution to the nation's independence in mineral supplies in war time. Had the war continued for another year domestic ores would probably have supplied half the manganese in the manganese alloys needed by the country.

Plow Plant Merged

Effective July 1, the Grand Detour Plow Co., Dixon, Ill., has been merged with the J. I. Case Threshing Machine Co., Racine, Wis. The product of the former company has been handled by the Case company for many years, and by the transaction it acquires the Grand Detour company's entire property and assets. No change in the personnel of the Grand Detour company will take place. Col. W. B. Brinton, who has been its head for many years, will remain as president and his son, Maj. Bradford Brinton, and Alfred W. Leland will continue in the manufacturing end of the business at Dixon, in the same capacity as heretofore. Plans for expansion and improvement of the Dixon works are being worked out and it is announced that they will go forward as rapidly as possible.

Readjustment is Passed Easily

First Half of 1919 Closes With None of Drastic Developments in Sight Which Were Foreshadowed Six Months Ago—Important Records Show Fundamental Strength of Country's Business—General Financial News

BY JOHN W. HILL, FINANCIAL EDITOR

LAST week witnessed the closing of the first half of what history will describe as a most momentous year. To business these initial six months have been replete with surprises. At the beginning of January it will be recalled that the country was in the first throes of reconstruction and the succeeding months were expected to be critical in the extreme. With the passing of the stimulus of war's demand and with the government out of the market as the predominant buyer, it was anticipated that prices would suffer drastic declines, while business failure records mounted, unemployment increased and industry made its way shakily over the thin ice of the readjustment period to the solid ground of peace prosperity.

So certain was the department of commerce that the readjustment of business and prices was going to be severe that it formed the ill-fated industrial board with the sole object of stabilizing prices by artificial means. The immediate cause of its failure was the attitude of the railroad administration, but it would have expired in any event without great delay. It was a remedy designed for an epidemic that never appeared. There have been no price declines. On the contrary prices are moving upward. Business has not been disrupted by the lack of war demand. Instead one by one industries have swung into line, stimulated by peace requirements. The steel industry lagged a little but it is coming back now encouragingly.

Indeed the solemn prophets of six months ago who saw disaster spread before them may well rub their eyes in wonder as they awake to the realization of how easily, and with what lack of disturbance, the country was able to bridge the readjustment period. They may dwell upon the unbelievable wheat crop of 1,250,000,000 bushels in prospect; the great demand for materials to rebuild Europe which doubtless will appear; the huge labor surplus that is threatening already to turn into a labor shortage; and the complete acceptance of the peace terms by Germany with the resumption of international commercial relations, war-bound for five years, in immediate prospect.

The great turn in the tide came with the awakening of the public to the fact that it was futile to expect price declines, in view of the tremendous shortage of goods the world over, creating a "scarcity demand," the huge inflation in currency and circulating credit, occasioned by government financing and the prevailing high wages.

The record of the last six months, suggesting the fundamental strength of conditions and indicating the existing abundance of confidence in the country's future, is vividly pictured by important statistics that came to light last week coincident with the close of the first half of 1919. Possibly most significant of all are the figures showing the number of new charters filed and the aggregate of authorized capital. This record, compiled by the *Journal of Commerce*, New York, shows 708 charters capitalized for over $100,000 were filed involving the enormous total of $1,255,427,500.

The remarkableness of this record is emphasized when it is seen that it is the best since April, 1901, when incorporations amounted to $1,619,650,000, of which $1,100,000,000 was furnished by the United States Steel Corp. The total since January has reached the tremendous sum of $3,706,361,000 or 153 per cent more than for the corresponding period one year ago. The compilation represents not only many new enterprises but a number of large consolidations of separate companies, while other concerns have taken out charters and increased their capitalization to meet steadily expanding business. This exhibit plainly reflects the confidence of organizers in active industrial conditions and forecasts increased competitive conditions in practically every line of industry. This should create a situation tending to satisfy the great need for goods and making eventually for price declines.

Hand in hand with the record of new charters is that of stock and bond listing upon the New York stock exchange, which for the first six months of 1919 aggregated $797,071,920, a large increase over the $133,151,835 for the same period in 1918. The record for listings, however, is held by the first half year of 1917, with the total of $1,965,443,850.

Scarcely less remarkable and significant than the picture of new company organizations is that of business failures for the half year, which in point of number of failures, is the best for the period in 40 years. Of commercial defaults there were only 3463, involving $68,710,886 of liabilities, the numerical showing being the best since 1881 and the indebtedness the best since 1906. Compared with 1915, the showing represents reductions of 72.8 per cent in number and 63.6 per cent in liabilities. Compared with the 5889 defaults for $87,793,562 of the first half of 1918, decreases of 41.2 per cent and 21.7 per cent respectively appear. This record, so radically opposed to what the professional economists predicted, is the direct result of the maintenance of prices. Had prices fallen as many expected, the failure exhibit would have been different, because slumping prices always are accompanied by an increasing volume of bankruptcies.

To Wall street must be given the credit for first foreseeing improvement in industrial conditions. Its six months' record, therefore, is peculiarly interesting. June 30 brought to a close what in many respects was the most amazing period ever witnessed on the stock exchange. Starting on April 7 sales exceeded a million shares for 45 days, excluding Saturdays. Twice the volume of trading went above 2,000,000,000 shares. This was the high record for the exchange. In 1901 there were 44 million-share days in succession. Stock prices soared and soared and enthusiasm ran wild, until it came counter of the edict of the federal reserve board that speculation must not be permitted to lap up the country's credit resources, in preference to the more vital needs of government, export and legitimate domestic

financing. The money stringency prevalent for the last week or so thus far seems to have effectually curbed the unreasonable flight of stocks.

Announces Road Equipment Financing Plan

Thomas DeWitt Cuyler, chairman of the association of railway executives, has announced that the plan for reimbursing the railroad administration for approximately $400,000,000 worth of railroad equipment it purchased and partially allocated to the railroads, calls for the creation of a National Equipment Corp. whose capital stock of $148,000,000 will be all subscribed for by the United States railroad administration and which will issue $280,000,000 of equipment plus certificates for public sale.

The $148,000,000 is to be invested in 4½ per cent cumulative stock while the $280,000,000 in equipment trust certificates, will bear a rate of interest to be determined later, and will mature in equal installments over the 15-year period during which the $148,000,000 worth of 4½ per cent cumulative stock is to be liquidated. The railroad equipment purchased by the railroad administration, involving approximately $400,000,000 will be acquired by the federal corporation and sold conditionally by it to the railroads to whom it had been allocated, at the purchase price, which will be paid in 15 equal installments together with 6 per cent a year, payable semiannually, on the unpaid balance. At the end of the 15-year period the equipment will become the property of the railroads, and the federal corporation will be liquidated.

The $280,000,000 equipment trust certificate will be a direct obligation of the National Equipment Corp., a federal corporation, and it is proposed that they be secured by pledge under a trust agreement with a trustee of the sales agreements of the railroad, and by a reserve fund to be created out of the proceeds of the sale of the federal company's capital stock. The plan has been submitted to the railroad administration for approval. Some action by congress may be necessary.

Welsh Tin Mills Merge

With a view of establishing a central selling agency for the entire Welsh tinplate trade to control sales, distribute orders effectively, and maintain more uniform prices a number of leading producers have begun the creation of a great amalgamation, according to information from that country. As a nucleus, the biggest steel and tinplate deal for many years in that country has been completed, Messrs. Lewis & Sons' Sheet & Tinplate Works, Gorseinon; Bryngwyn Steel Works, Gorseinon; and Cambria Tinplate Works, Pontadulas, passing over to Grovesend Steel & Tinplate Co. at a cost of just under £500,000. This combination comprises 20 per cent of the tin mills, and it is understood that other plants will later be acquired. Reports of Welsh companies show that they are maintaining a good share of their war prosperity. The Tredegar Iron & Coal Co., Ltd., pay 15 per cent in dividend and bonus, and Messrs. William Cooke & Co., Ltd., distribute 10 per cent, both being free from income taxes.

Shows Reduced Profits

Hamilton, Ont.—Lower earnings were made by the Steel Co., of Canada, in 1918 but the annual statement shows the company to be in a strong financial position. Gross profits for the year were $5,363,120 as compared with $6,040,318 for 1917. After deductions for fire insurance reserve, pension fund, etc., there remains available for dividends on $11,500,000 of common stock outstanding the sum of $1,815,017. "After the signing of the armistice," says President Robert Hobson, "there was a decided slump in the value of raw material and manufactured products, and at the date of writing this report the United States government is further regulating prices. It is needless to say that the effects of any drop in prices in the United States are immediately reflected in Canada. We are, therefore, compelled to carefully scrutinize every sale, and we have placed what we consider a sound and proper value on each item of our inventory." The company's assets now stand at over $45,652,831. Current assets amount to $15,928,368 and current liabilities to $3,706,154.

Motor Companies Merge

A new corporation shortly is to be organized under the laws of Delaware with an authorized capital of 130,000 shares of no par value to take over all issues and outstanding stock of the Bethlehem Motors Corp., of Allentown, Pa., and the North American Motors Co., Pottstown, Pa. The name of the new company has not been made public. Officers are to be: President, A. T. Murray; vice presidents, D. G. Dery, S. C. Potter and H. B. Hall; treasurer, Martin E. Kern; secretary, M. H. Beary. Among the directors are George R. Bidwell, Allan A. Ryan, D. A. Holmes, Charles S. Martin and Robert E. J. Corcoran.

Lower Price

In Naphthalin is Probable—Sulphate of Ammonia Also Weak

New York, July 7.—Naphthalin is tending downward and it is likely a reduction will go into effect within the near future. With the drug trade displaying little interest, demand is now relatively dull, with the result that the market is weak. At the present time, prices are around 8½ and 9½ cents per pound in flakes, and 10½ to 11½ cents in balls, applying to either spot or contract business.

Weakness also continues in sulphate of ammonia, and there is so little domestic trading that the market is nominal. In the foreign market, there is also little activity, although prices are better defined. Export orders are being booked at approximately $4.60 for material in double bags at the seaboard. This price is well under the level quoted recently. Despite this situation, however, sentiment remains fairly strong, as it is believed the fertilizer industry will again be in the market shortly.

Motor benzol remains active, with spot material practically out of the question. The heavy movement of this material is a big factor for strength in pure benzol, toluol and solvent naphtha, although there is a good demand for virtually all of these latter products also. Pure benzol, on either spot or contract basis, is holding at 24 to 28 cents per gallon and 90 per cent benzol is being quoted at 23½ to 27 cents. Toluol is quoted at 25 to 35 cents, and solvent naphtha at 23 to 27 cents. The market on phenol continues tight, there being little spot material available. The spot and contract market nominally is 10½ cents.

Coke Oven By-Products

Spot

Per Gallon at Producers' Plant

Pure benzol	$0.24 to .28
Toluol	.25 to .35

Per 100 Pounds Producers' Plants

Sulphate of ammonia	nominal

Machine Tool Outlook is Good

Present Orders Are Small But Dealers Believe They Indicate a Growing Volume of Business—Sale of Army Tools in Belgium is Reported—Shapes Prices Are Advanced—Large Lists Lacking

ALTHOUGH the sale of machine tools throughout the various districts during the past week was not extensive, and no large lists have appeared, dealers are marking time and gathering in a considerable number of small orders. The large manufacturers are not buying in any quantity, only purchasing such machinery as they must have to fill their immediate requirements. Despite this dealers state that when manufacturers are convinced there will be no lowering of prices, larger lists will be issued, and the market will be filled with orders.

Of especial interest to the trade is the report from Brussels, stating that La Construction Metallieue de Belgique has purchased from the United States army all the machine tools it used in France. The tools will be sold at a 55-per cent increase over those for 1914. The buyers will have credit for three years at a moderate rate of interest, but these terms will apply only to goods used to replace equipment taken by the Germans.

In the eastern market, a fair amount of used equipment continued to be offered, and it is understood that the outfit of one large plant has been sold. During the war this plant was engaged in the manufacture of time-fuses for 75-millimeter shells. The market for cranes in the east appears to be fair, a number of large inquiries being received by dealers in the district.

Of especial significance is the report from Chicago, which states that a leading maker of shapers has issued a new list in which prices are marked up 8 per cent. Another report of interest is that a manufacturer of boring machines, who several weeks ago offered immediate delivery, now states that delivery cannot be made short of 30 or 60 days.

Small orders in the Pittsburgh district have been coming in steadily and dealers there expect large users of tools will open with large lists shortly. The past week has not been marked by anything of especial significance.

In the Cleveland district the situation remains unchanged, dealers reporting they are doing a fair amount of business, while indications are promising. Meanwhile building projects in the district are on the increase and many large orders are expected to be developed through these. The automobile trade is still actively purchasing necessary equipment here and there, while indications point to a much larger demand from this source before the end of the summer. An increase in price is expected by several dealers shortly. Therefore they are warning manufacturers to buy necessary machinery now. As yet no large lists have appeared from the railroads.

Business Dull in Eastern Tool Market

THE holiday spirit which prevailed throughout the eastern machine tool market during the past week did much to accentuate the dullness that recently has existed. Virtually no business of consequence has been placed, and only a relatively few new inquiries have been current. Indicative of the character of present trading, is the order of the American Can Co., Newark, N. J., calling for a few tools, including one or two lathes, and that of the Singer Mfg. Co., Elizabeth, N. J., which is said to have also closed a small list of tools. Included in the run of new business is the inquiry of the International Petroleum Co. Ltd., 26 Broadway, New York, calling for one screw cutting lathe and one well drill grinder.

The eastern machine tool trade has been interested in the recent Brussels dispatch, stating that La Construction Metallieue de Belgique has bought from the United States army all the machine tools it used in France. The prices will be sold at a 55 per cent increase over those for 1914. The buyers, it is stated, will have credit for three years at a moderate rate of interest. However, these terms will apply only to goods used to replace those taken by the Germans during their occupation of the country.

A fair amount of second-hand machine tools continues to be placed on the market, and it is now understood that the plant of the International Arms & Fuse Co., of Bloomfield, N. J., will be placed on sale by Joseph P. Day, New York City. Some of the equipment of this plant has already been sold through Carpenter & Woodward, Woolworth building, New York City. During the war the company was engaged principally in the manufacture of time fuses for 75-millimeter shells.

Perhaps the largest inquiry before the eastern crane market at this time is that of the Wern Machinery & Engineering Co., 30 Church street, New York City, which is in the market for 10 overhead cranes for the Swedish Royal railways. It is expected that bids will be closed shortly and will then be sent to Stockholm for approval. The list calls for two 5-ton cranes, 55-foot span; one 5-ton crane, 54-foot span; one 5-ton crane, 39-foot span; one 6-ton crane, 46-foot span; one 6-ton crane, 17-foot span; one 25-foot crane, 19-foot span; one 40-ton crane, 59-foot span; one 30-ton crane, 63-foot span; and one 8-ton crane, 59-foot span. Double trolleys will be required for the two largest cranes. Anthony Gibbs, 61 Broadway, New York, is inquiring for one 30-ton and two 10-ton

gantry cranes and two special cranes for French railroads.

Another large export inquiry now pending is that of Viele, Blackwell & Buck, 49 Wall street, New York City, this latter list involving seven 5-ton gantry cranes and one 10-ton crane. Of interest to eastern crane trade is the request of the Pan-American Terminal & Dock Co. for the city of New York to build two double-deck cargo handling piers on Staten island. Monberg & Thursen, Woolworth building, New York City, have completed plans for this project, for which a number of gantry cranes will be required. H. J. Horner & Son, Newark, N. J., have placed a 5-ton electric crane, with 60-foot span, with Pawling & Harnischfeger. Day & Zimmerman, Philadelphia, are expected to close shortly on one 5-ton and two 3-ton electric cranes for a plant in West Virginia. The Humble Iron Co., a subsidiary of the Standard Oil Co., is in the market for a 5-ton hand power crane, with 13-foot span.

The Bethlehem Steel Co. has again come into the market with a large list of overhead cranes. This inquiry calls for one 40-ton crane with 10-ton auxiliary and a 66½-foot span; one 40-ton with a 10-ton auxiliary and a 76-foot span; two 15-ton cranes, with a 77-foot span; one 15-ton crane, 86½foot span; one 10-ton, 27-foot span, and one 10-ton crane, with 19-foot span. The Bethlehem Steel Co.'s previous inquiry called for four 10-ton cranes, with 84-foot span; one 15-ton crane, with 100-foot span, and one 10-ton crane, with a 26-foot span. It is not clear whether the inquiry just issued has involved any of the cranes noted in the earlier list. The general belief prevails, however, that it is an entirely new and separate inquiry. Another list on which bids will likely be closed shortly is that of the American Tube & Stamping Co., Bridgeport, Conn., calling for two 5-ton overhead cranes.

Prices Marked Up in Chicago

A LEADING maker of shapers has just issued a new list in which prices are marked up approximately 8 per cent, while a manufacturer of boring machines, who six weeks ago offered immediate delivery now announces that shipments cannot be made short of 30 or 60 days. The advance in the price of shapers is expected to be put in effect by most manufacturers by Sept. 1. It represents about one-half the reduction made several months ago, and indicates the proportionate strength of present demand.

Radial tool manufacturers say they are booking many orders and are notifying dealers to act promptly to insure early delivery. Dealers report an excellent demand for turret lathes and at present there is in Chicago an unusual demand for punch presses. A metal gasket manufacturer who last week purchased 10 presses has doubled his order. The Whitman & Barnes Mfg. Co., Chicago, is in the market for eight 6000 to 8000-pound steam forge hammers. Bids of the Rock Island arsenal equipment have been opened, but awards have not yet been made. Ernst Bros. Co., Ltd., Mount Forest, Ont., is in the market for one 2-ton cupola, punch shears, milling machine, lathes, planer and woodworking equipment.

Business continues good, but consists mostly of sales of small numbers to individual buyers, the total amounting to more than at any previous period this year. The Liberty Planer Co., Hamilton, O., is now working on three shifts

Extensive Building Operations Planned

WHILE business in tools is fairly active and reaches rather generous proportions in the aggregate, no particularly large lists are being placed in the Pittsburgh district. In heavy lines, a great number of inquiries still remain to be closed. Most of the steel manufacturers in this district are figuring on plant extensions, involving the addition of much machinery or at least the replacement of old equipment. If all the inquiries against which manufacturers have quoted were to be placed, it would mean several months' capacity operations, but apparently, buyers want to be positive that lower prices than have been named will not be reached before awarding the business. It is understood that the Weirton Steel Co., Weirton, W.

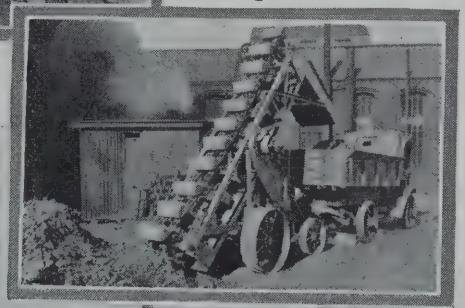
Emergency Fleet to Offer Millions in Equipment

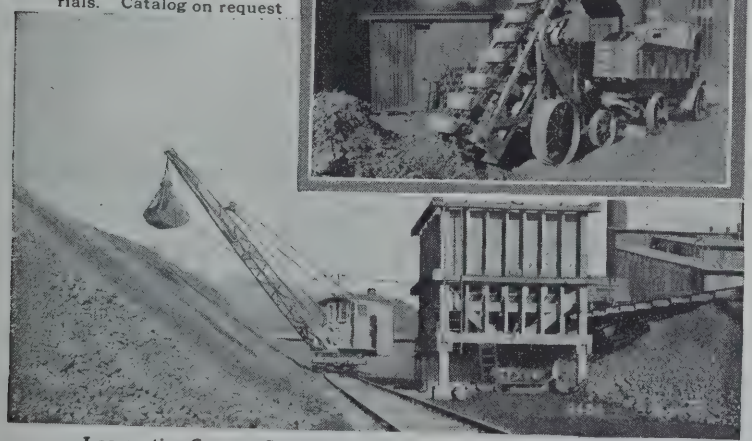
WASHINGTON, July 8.—Heavy lots of steel, machinery, machine tools, and general marine equipment are included in the sales of surplus and salvage material to be made by the United States Shipping Board Emergency Fleet Corp., according to its announced policy, made public yesterday. Manufacturing plants, shipyards, drydocks, ships, complete, or half built, and all other items down to scrap metal, represent units and items to be sold, their value running into many millions of dollars. Surplus and salvage material, such as steel, scrap, marine boilers, machinery and machine tools, according to testimony given recently before the senate committee on commerce by Chairman Edward N. Hurley of the shipping board, will represent a value of approximately $50,000,000. The sales are to be public and will be conducted with a view not to unload the material on either the local or general market. Foreign sales will be handled until Sept. 1 by the American Steel Exports Co., New York.

The determination of the Fleet corporation to engage in the wholesale disposal of this property is said to be due to the restricted shipbuilding program. No specific statement has been made as to just what manufacturing plants and shipyards are to be sold, but it is assumed they will include those which will be of no use to the shipping board in times of peace, even if it continues in the shipbuilding business, and which have not proven to be "going" concerns. Other yards, it is understood, will be maintained at least until congress defines a merchant marine program.

The sales are to be made at such times and at such places and in such manner as may be deemed to be the best interests of the corporation and the nation. Materials to be sold, it is announced, comprise an accumulation as a result of extensive war activities, and are to be disposed of now only because of the adoption of the restricted shipbuilding program. Industries which may be especially interested in the sales are chiefly the shipbuilding, steel, railroad, structural and general manufacturing concerns.

Upon the sales list are marine railroads, housing and transportation projects, numerous allotments of machinery, equipment, and supplies, including woodworking machinery, machine tools and fixtures, electrical machinery, boiler and forge shop equipment, marine equipment and accessories, air compressor equipment, contractors' equipment and supplies, bridge and gantry cranes, steel plates, shapes, and bars, pumping machinery, scrap metals, lumber, deck equipment, galley equipment, hospital and commissary supplies, etc.





Link-Belt Electric Hoists. An indispensable machine in any plant. Catalog No. 246

Portable Loader. Handles any loose material, a ton a minute. Catalog No. 350

Elevator-Conveyor. Link-Belt Elevators and Conveyors are made in many types to handle all materials. Catalog on request

Locomotive Crane. Can do the work of from 20 to 40 men. Handles anything. Catalog No. 370

Meet High Costs With High Efficiency

WHENEVER you permit a crew of men to handle material that could be better handled by machinery, you are robbing yourself of profits that should be yours.

Not only is the time of the men wasted, but also the time of the operator and machine which is waiting for the work.

Link-Belt Labor Saving Equipment has increased the efficiency of manufacturing plants in nearly every industry.

Our line of elevators and conveyors, electric hoists, telpher systems, wagon and truck loaders, locomotive cranes, etc., have released thousands of men for more productive work, enabling them to make themselves more valuable to their employers as well as themselves.

Let our engineers show you how Link-Belt equipment will increase the efficiency of your entire plant. Write us.

Tool Market Future Looks Bright

DESPITE the fact large users of machine tools are not inquiring for machinery in large lots, dealers in the Cleveland district are viewing the situation with optimism, feeling that the usual dull summer months experienced in other years, will not be repeated this year, due to number of inquiries coming for single machines. Dealers point out that inquiries in small lots show users are in need of machine tools, but are purchasing only those which they must have. This no doubt is due to the uncertainty in prices, buyers feeling they will drop, despite advice from dealers that there will be no drop in prices.

Many manufacturers according to dealers are purchasing used machinery for temporary use, all of which probably will have to eventually be replaced with new equipment. On the other hand some manufacturers are disposing of their old equipment and purchasing new, but this is being done on a small scale. An instance is that of the Peerless Motor Car Co., Cleveland, which sold a 4-spindle used boring machine to a Cleveland dealer, who subsequently disposed of it in Chicago.

The automobile trade is still active. A great many of the inquiries come from this line of business, which not only includes the automobile but also the accessory trade. The Torbensen Axle Co., Cleveland, and the Firestone Steel Products Co., Akron, O., are still reported in the market for equipment, as is the Dow Chemical Co., Midland, Mich., which wants boiler plate rolls and plate bending rolls. The Menasha Boiler Works, Menasha, Wis., is reported in the market for a traveling crane, ranging from 3 to 5-ton capacity. Williams & Williams, Ltd., 248 Elgin street, Ottawa, Ont., is inquiring in the district for horizontal boring mills, drilling and milling machines. It will consider used equipment. The Cumberland & Manchester railroad, Barbourville, Ky., has issued an inquiry for a number of lathes. The Defiance Screw Machine Products Co., Defiance, O., which issued an inquiry for an all-geared drill, more than a week ago, has not closed on its inquiry as yet. An inquiry for a 14-inch Gisholt turret lathe has been received by a Cleveland dealer from the D. Nast Machinery Co., Philadelphia. The Bower Products Co., Detroit, wants a ¾ to 1¼-inch Gridley automatic screw machine, says one dealer.

Building operations in the district are on the increase and are expected to develop a demand for a large amount of equipment. Among the companies building is the Allen Motor Co., which recently moved its plant from Fostoria, O., to Columbus, O. This company has increased its capital from $1,500,000 to $3,000,000 and plans to enlarge its plant. It has already purchased upwards of $50,000 worth of machinery, but states it will shortly purchase about the same amount. The Standard Steel Corp., Milwaukee, is about to let a contract for the erection of a 6-story building, and is in the market for a complete line of sheet metalworking machines, end flanging machines, etc., as well as a complete line of machinery equipment.

Other building projects in the district include the Timken-Detroit Axle Co., which has let a contract to the Austin Co., Cleveland, for a building, 60 x 120 feet, to be used for heat treating purposes. It is expected the company will be in the market for equipment shortly. The Van Auken Machine Co., Pontiac, Mich., has let a contract to the Austin Co. for a building, and is also expected to issue a list. The Cuyahoga Spring Co., Cleveland, which has let a contract for a building to be devoted to the manufacture of springs, as yet has not issued a list, but is expected to shortly. The Colson Co., Elyria, O., has started on the erection of a $100,000 addition to its metalworking plant. The Hamilton Caster & Mfg. Co., Hamilton, O., metal specialties, will erect a building 54 x 200 feet. The Linograph Co., Davenport, Iowa, will build a plant, 60 x 150 feet, which will be equipped chiefly with medium sized or light metal working machinery.

Construction and Equipment

Concise and Timely Business Building Opportunities from the Field of Industry

Among New England Plants

CALAIS, ME.—The International Power Co. has been incorporated with $100,000 capital by George A. Curran and Ben Y. Curran.

PORTLAND, ME.—The Portland Iron & Metal Co. has been incorporated with $10,000 capital by Harris Shimelovich and Augustus F. Moulton.

PORTLAND, ME.—The American Can Co., 120 Broadway, New York, is reported contemplating a plant at an estimated cost of $300,000.

BOSTON.—Levering & Garrigues, New York, are low bidders for the erection of additions and alterations to the structural shop at the navy yard.

BOSTON.—The Monarch Can Mfg. Co. has been incorporated with $235,000 capital by Harry Sebell, Leon Mitchell and E. D. Mackenzie.

BOSTON.—The Standard Saw & Tool Mfg. Co. Inc., has been incorporated with $50,000 capital by Harry E. Richards, D. F. W. Douglas and J. Edward Fuller, Worcester, Mass.

BOSTON.—The George H. Adams Co. has been incorporated to make knitting needles with $350,000 capital by David J. Donahue, Charles Leroy Boyer, Cambridge, Mass., and Fred C. Fernald.

BOSTON.—The Keystone Mfg. Co. has been incorporated to build machines, etc., with $20,000 capital by Edward M. Swartz, J. M. Weisman, Isidore Marks and Benjamin Marks.

CAMBRIDGE, MASS.—Bids have closed for a 1-story machine shop for the F. S. Payne Co., manufacturer of elevators and elevator fixtures.

CAMBRIDGE, MASS.—Bids have closed for a 1-story, 100 x 100-foot factory for Dewey & Almy, chemicals, in North Cambridge, Mass.

EVERETT, MASS.—Plans are being drawn for a $1,250,000 oil plant for the Beacon Oil Co., Boston, to include an office building, reinforced concrete tanks, railroad tracks, power house, garage and machine shop.

FALMOUTH, MASS.—The Bay State Airplane Co. has been incorporated with $2000 capital by James D. Howard, Franklin N. Smith, Boston, and T. L. Bronkhorst.

LEXINGTON, MASS.—The Jefferson Union Co. has been incorporated to make pipe fittings, etc., with $275,000 capital by Charles H. Stebbins, Arthur W. Freeman and Daniel T. Groff.

LOWELL, MASS.—The Churchill Mfg. Co. has been incorporated with $40,000 capital by Charles N. Dyer, Charles W. Churchill and H. W. Coburn.

LYNN, MASS.—The Graywood Mfg. Co. has been incorporated to build machinery with $25,000 capital

—The Wood Block Floor Without a Substitute

You can never substitute a counterfeit or "just-as-good" article for the real thing—however extravagant the claims may be for it—and receive the 100% service you would naturally expect from the original.

This rule holds good all along the line in manufactured products.

It is certainly true in flooring material.

The original, perfected wood block floor was KREODONE and today it is the acknowledged leader in the field—**showing conclusively that wood blocks for floors must be of long leaf yellow pine, treated with pure unadulterated creosote oil.**

KREODONE floors after years of hard service show no signs of the beginnings of disintegration.

Set in pitch to make *one unit*, a KREODONE Wood Block Floor will outlast any man's lifetime.

It does not bleed, is not smudgy, is waterproof, and oils or acids will not impair it. It outwears steel. It is the ideal factory floor and has no satisfactory substitute.

For 20 years KREODONE floor blocks have been made from nothing but selected long leaf yellow pine timber and treated with pure, unadulterated creosote oil—an unbeatable combination.

Let us send you our specifications for any floor space you wish to cover. Send us the figures.

Get the *Genuine KREODONE* Blocks. Watch that Spelling—it means Service

CENTRALIA, WASH.—Plans for the foundry and machine shop for the Kane Pneumatic Shock Absorber Co. have been completed.

KELSO, WASH.—The Kelso Machine Works recently was organized by Woods & Wells. A plant will be equipped shortly.

OLYMPIA, WASH.—Bids will be taken at the office of the Washington State Highway Commission, until July 7, for the erection of a steel bridge across the Chehalis river.

OROVILLE, WASH.—The Okanogan Valley Power Co. is reported planning to build a power plant at an estimated cost of $150,000.

SEATTLE.—The American Can Co. is reported planning to enlarge its plant.

SEATTLE.—The Universal Tractor Attachment Co. has been incorporated with $500,000 capital, by Samuel Glenn and others.

Business in Canada

BEAVER RIVER, N. S.—Construction has been started on the erection of a pulp mill, sawmill, machine shop, etc., for Clarke Bros., Ltd.

MONTREAL, QUE.—The Booth-Coulter Coppersmithing Co., Ltd., has been incorporated to carry on a general foundry and machine shop business, with $100,000 capital, by Gerald A. Coughlin, Francis G. Bush, George R. Drennan and others.

SOREL, QUE.—The Leclair Shipbuilding Co. will start work immediately on the construction of a floating drydock to have a capacity for vessels up to 7000 tons.

ST. COLOMB DE SILLERY, QUE.—Plans have been prepared for the waterworks system for the municipal council. Edouard Hamel Co., 51 St. Peter street, Quebec, Que., is engineer.

ST. HONORE, QUE.—The municipal council is having plans prepared for a waterworks system. J. F. Brenon, Chicoutimi, Que., is engineer.

MONTREAL, QUE.—Theophile Constantine, 2332 St. Denis street, will build an auto repair shop.

ACTION, ONT.—Plans are being prepared by James, Loudon & Hertzberg, Excelsior Life building, Toronto, Ont., for water and sewage systems for the town council.

ARNPRIOR, ONT.—The Arnprior Cabinet Co., Ltd., Havey street, will build an addition at a cost of $40,000 and new machinery will be installed.

BRANTFORD, ONT.—The Electric Tin Products Co., operating under a Dominion charter has a site here and will start work on the erection of a smelter.

COLLINGWOOD, ONT.—The plant of the Imperial Steel & Wire Co., which was recently damaged by fire will be rebuilt immediately. The new plant will include buildings for the manufacture of cold drawn steel, wire rods, fine and coarse wire, wire nails, wire netting, staples, fencing, etc. A galvanizing plant, tinning plant and annealing plants will also be included.

GUELPH, ONT.—The Lang Mfg. Co., Ltd., has been incorporated to manufacture iron, steel, machinery, tools, etc., with $40,000 capital by Charles L. Dunbar, Leo W. Goetz, John Sutherland and others.

GUELPH, ONT.—The National Standard Co. of Canada, Ltd., has been incorporated to manufacture metals, wire, nails, cables, machinery, etc., with $30,000 capital by Charles H. C. Leggott, 116 Arundel avenue, Walter W. Perry, Scarboro Junction and others.

LONDON, ONT.—Plans are being prepared for a plant here for the Republic Motor Co., Alma, Mich., to cost $500,000. A. C. Smith, 1502 Royal Bank building, Toronto, Ont., is general manager.

NIAGARA FALLS, ONT.—The city proposes to make improvements and additions to the electric light plant and system to cost $18,000.

NIAGARA FALLS, ONT.—The Niagara Wire Weaving Co., Ltd., has been incorporated to manufacture wire, machinery, tools, etc., with $220,000 capital, by Hamilton Lindsay, Alexander Winton, George H. Brown and others of Cleveland.

OSHAWA, ONT.—The Ontario Steel Products Co. has completed arrangements to establish a new motor spring plant here, the main building to be 80 x 360 feet. The works will be known as the Central Spring Co.

PORT COLBORNE, ONT.—The town council is making arrangements for the construction of waterworks plant to cost $100,000. David A. Lair is clerk.

SARNIA, ONT.—The Pressed Metals Co., Ltd., 112 Adelaide street, Toronto, Ont., will erect a manufacturing plant here.

SARNIA, ONT.—C. Harold Wills, care of the Chamber of Commerce, is making arrangements for an automobile factory here to cost $200,000.

STRATFORD, ONT.—The Kindel Bed Co., 552 Ontario street, is having plans prepared for a plant addition to cost $100,000. James Russell, Downie street, is architect.

TORONTO, ONT.—The Anthracite Briquette Co. has a site here and will erect a plant for the manufacture of compressed anthracite briquettes.

Business Changes Recently Announced

EFFECTIVE Aug. 1, the Oliver Iron & Steel Co., Pittsburgh, will establish a Pacific coast sales office in the Monadock building, San Francisco, in charge of E. W. Kratzer. On and after that date, all business in Pacific coast territory will be handled through that office which is being established to give the trade more prompt and efficient service.

* * *

The Camden Forge Co., Camden, N. J., has opened district sales offices in New York and Pittsburgh, in charge of S. W. Hilt and John H. Schuler, respectively.

* * *

General offices of the Bull Tractor Co. are being moved from Minneapolis to Anderson, Ind., and will become a part of the Bull Tractor-Madison Motor Corp., Anderson.

* * *

The corporate name of Lewis F. Shoemaker & Co., Pottstown, Pa., fabricators and erectors of steel bridges and buildings, was changed, effective July 1. The new name will be the Shoemaker-Satterthwait Bridge Co. The change is made only in the title, the management and personnel remaining the same, Lewis F. Shoemaker being president and Thomas C. Satterthwait secretary and treasurer. The company carries on a structural steel and fabrication business with a plant at Pottstown, with offices at No. 2 South Fifteenth street, Philadelphia, and No. 256 Broadway, New York.

* * *

The Thomas H. Hart Co., 364 Atlantic avenue, Boston builder of special machinery, tools, dies, gages, stamping and specialties, has changed ownership and will hereafter be known as the Hart Machine & Tool Co. R. S. Diaz is manager.

The Norton Co., Worcester, Mass., has opened an office and salesroom at 73-75 West Congress street, Detroit, in charge of Charles W. Jinnette, district manager.

* * *

The Ideal Machine Co., Plainville, Conn., is the new name of the Ideal Switch & Machinery Co.

* * *

The Metal Production Equipment Co., Springfield, Mass., has been purchased by the Baush Machine Tool Co. of that city, and the business will be continued under the name of the Baush Machine Tool Co., metals division.

* * *

The Massachusetts Machine Shop, Inc., Worcester, Mass., sheet metal stampings and metal small wares, has removed to 817 Albany street, Boston, where enlarged quarters and equipment have been provided.

* * *

The Blaw-Knox Co., Pittsburgh, structural steel, etc., has opened branch offices in the Little building, Boston, and the Owen building, Detroit, in charge of A. W. Ransome and H. J. Desson, respectively.

* * *

The Niagara Brass Mfg. Co., Inc., founders and machinists, has announced the removal of its foundry and machine shop from Buffalo to Lockport, N. Y.

Hold Back on Price Advances

Conservative Policies Prevail With Mills as Rush of Shipping Demands Brings Growing Congestion in Some Lines—Action of One Producer in Raising Pipe Not Followed—Labor is Factor—Market Generally Active

AS steel tonnage accumulates more rapidly on mill books, there is increasing talk of price advances in certain lines but producers are adhering to a very conservative course in adopting higher schedules. The action of one independent interest this week in raising tubular products $5 to $10 per ton has not been followed by other manufacturers of this material. This attitude of producers is influenced considerably by the spotty character of the demand which leaves some of the heavier products still lagging behind and militates against well-balanced operations. It is indicated also that labor considerations are a factor of restraint. The price situation in steel offers a considerable contrast to the action of the copper market. That metal under the most vigorous domestic and foreign buying in many months has risen almost 2 cents per pound within the week and 4 cents within the month.

Production in some finished steel lines appears to be nearing the maximum point permitted by the supply of labor. As there is a rush of shipping demands, mill books are becoming increasingly congested and deliveries are lengthening. This is notably the case in sheets, wire and lapweld pipe. Liquid tonnage in sheets placed with the American Sheet & Tin Plate Co. in the week of July 12 broke all records. Total orders entered in sheets and tin plate were exceeded by only one similar period in history, or in April, 1918, and in that instance heavy tin plate specifications were the cause. Inquiries for oil and gas pipe are heavy and not a little of this business virtually is going begging. Wire producers are picking new business with care. Some of the heavy tonnages representing 12 months' requirements of prominent automobile builders in the central west, virtually have been closed.

Armor Plate Awarded

The navy department has awarded to the Bethlehem, Carnegie and Midvale companies equal portions of a combined requirement of 50,000 tons of armor plate for six battleships now under construction. The price of $520 per ton for Class A armor, represents a modification of the bids submitted privately by the makers. The price as finally determined is really an agreed one.

Big Tonnage In Sight

Now that the trade ban on Germany is being lifted, there is much interest to see what she may be able to do as a contender for international business in iron and steel. This is especially pertinent for American producers, in view of the tremendous ship steel requirements that are looming up for France and Italy. In some well-informed quarters, these demands for the construction work which these countries have in mind, are estimated as high as 1,000,000 tons, and depending upon the financing arrangements, some action is expected in 30 to 60 days. The position of the British mills for export competition is growing progressively worse as new advances are being made. A higher schedule inaugurated this month puts ship plates at $88.60 Scotch ports as against the American price of $53 Pittsburgh. Other products for both foreign and domestic delivery have been raised accordingly, the amount ranging from $2.40 to $7.20 per ton. The Canadian government has renewed a war contract for 250,000 tons of ship plates with the Dominion Steel Corp. at a reduction in the price from 4.15c to 3.65c.

Iron Prices Stronger

Though in considerably smaller amount than in June, pig iron sales continue to aggregate a very comfortable tonnage. At the same time shipments are increasing. The inquiry for 1920 delivery is growing but the uncertainty of costs makes the producers reluctant at this time to obligate themselves for that period. The General Motors Corp. has closed for 11,000 tons of foundry and malleable for Flint, Mich., for last half.

Export bookings by American mills are on the increase. France placed 535 tons of ship plates with an eastern mill at 2.55c. Pittsburgh and 5000 tons were recently sold at 2.60c Pittsburgh. Sales to England this week include 1000 tons of pipe, 1000 tons of steel bars, 1000 tons of iron bars, 500 tons of hoops, some light rails and miscellaneous orders.

Where is That Co-operative Spirit?

RECENT developments in the American metal markets seem to prove that the great movement of co-operation and co-ordination, built up during the war and out of which such a great change in business methods during peace was expected to result, is not functioning in the way it had been hoped. Furthermore it is apparent that these commodities are more intrenched in international trade than ever before and the actions and reactions of international politics are being reflected in their market movements.

Our market is reflective of political conditions throughout the world. There is the instance of copper which has advanced 20 cents. This advance is due to strong domestic demand and the heavy purchases of Japan. Already an important English journal is asking whether such foreign purchases suggests the possibility of another war. Japan not only has been a heavy purchaser of copper but of other metals needed for munitions.

The French government lifts her import embargo, we receive a flood of inquiries and immediately the price concessions which have been allowed exporters are withdrawn. Only recently it was advertised to the world that the railroad administration had settled its differences with the steel producers and would purchase rails. Immediately substantial orders from abroad are received but when the railroad administration fails to make its rail purchases the foreign sales of that commodity cease. Now with the peace treaty signed and commercial intercourse with Germany restored, a great many of the inquiries which recently were presented on this side are repeated in Germany, and this country is faced with the prospect of relinquishing much potential business in Europe.

All this goes to show that trade largely is a matter of price and its course, while it may be influenced, cannot be controlled either by sentiment or co-operative agreement. Just now conditions of exchange and the premium of the dollar is another factor tending to favor foreign competitors of this country. As events are portending, an early resumption of iron and steel trading between France and Germany is more than likely. The busy world is prone to quickly forget many things where questions of commercial advantage are involved.

Immigration and Living Prices

THE passage of a resolution at the recent convention of the American Federation of Labor at Atlantic City, calling for the prohibition of immigration from Europe and Mexico for four years, nearly resulted in a serious disagreement between the delegates at the Pan-American Federation of Labor just held in New York. The resolution of the American Federation of Labor was regarded by the Mexican labor delegate as an unjust discrimination. The reply of Samuel Gompers, president of the American federation, to the complaint served to mollify the Mexican, and, incidentally, revealed that the American Federation of Labor has no intention of fostering a return to conditions which will permit a resumption of immigration to this country in volume sufficient to relieve the present scarcity of labor.

The whole point of Mr. Gompers reply was embodied in this excerpt: "The standards which we have raised and established for the American workers are high and we are not going to give them up to the greed and rapacity of the employing class and we are not going to have them undermined by large immigration which would wipe them out."

It is to be hoped that Mr. Gompers and some other people who have advocated the prohibition of immigration for a period of years will remember that the scarcity of labor is just as bad for the laborer as for the employer, and, consequently, for the country as a whole. The price of the food, clothing, etc., which the workman consumes, and the general expenses of living, are determined by the cost. That cost bears a very exact ratio to the wages paid the workers producing and transporting

these materials. The continuous scarcity of labor undoubtedly will lead to a sustained upward tendency in wages and Mr. Gompers should remember that the burden of paying the resulting higher prices for the necessities of life will react upon the workers as well as upon employers throughout the country. In the end, it is doubtful whether they will be better off in the matter of savings.

Making Violators Pay the Bill

A DECISION of far-reaching importance dealing with legal liability of a labor union for the destructive acts of its members has been rendered in the United States circuit court of appeals for the eighth district. The court in its finding held that the defendant, the United Mine Workers of America, was answerable for damages under the Sherman anti-trust law where its members had been guilty of injury to or destruction of property of another. It was declared that the organization is charged with responsibility as a principal for any lawlessness on the part of its district and local branches, their officers and members, and especially so where it takes no steps to control or discipline its officers or members for overt acts. Damages to the amount of $625,000 representing treble the amount of the destruction were assessed.

This decision represents a forward step of enlightened justice. If its doctrine is sustained by the higher courts, it should take rank in the principles of equity laid down, with the famous Danbury hatters' case which has had a chastening effect upon the use of the boycott by labor unions. If the organized heads of labor organizations can be impelled to use adequate methods to limit violence as a weapon in disputes, under penalty of damages against the whole organization, it should materially help to bring about an end most to be desired. Finally the just cause of labor would be benefited, by assuring itself of the weight of public opinion.

Demand Keeps Up With Capacity

INGOT production statistics now available further demonstrate the fact that June was the pivotal month in the recovery of iron and steel operations after a period of successive monthly declines. The steel output in June is shown to have been substantially 20 per cent heavier than in May and to have run at the annual rate of approximately 32,430,000 tons. How far down the steel works activities had slipped during the past six or seven months of retarded buying is indicated by the spread between June and the record month of output, October, 1918, when production was on the scale of 45,359,000 tons annually. Taking October as the month of highest practical operating capacity, the steel industry in June was 71.6 per cent of normal. Expressed on the favorable side, the June rate of output was more than 5,000,000 tons annually in excess of that of May.

There is every reason to believe that July will make an even better showing than June, notwithstanding the usual disturbances of the weather. This is because specifications with the mills have been coming along in an increased volume, permitting a better scheduling of finished mill operations and providing a heavier demand upon steel works. It is reasonable to expect that the present month will show a rate of output around 75 per cent or more of the practical maximum yield of last October. When it is taken into account that railroad buying, the largest single item of a normal steel market, is at minimum proportions, this showing is exceedingly favorable and it suggests that the increased steelmaking capacity provided during the war period is not much out of line with the regular demands of an industrial situation that is readjusting itself after several years of abnormal conditions.

Call Them By Their Right Names

IN Gary, Ind., recently evidence of considerable labor unrest came to the surface. "Bolshevists are busy!" cried the daily press, insisting from the start that the commotion among the working men was caused by fanatics of the Russian type. But the company which controls the fortunes of the great mills and furnaces of that industrial city knew better. It knew that bolshevists had nothing to do with the trouble but that it was being fostered by trades union agitators. A large share of the public in Gary and elsewhere, however, got the mistaken impression that bolshevists had begun a campaign of disorder in that city, when, as a matter of fact, it was the followers of Mr. Gompers and not those of Lenine and Trotzky who were seeking to create discord.

This little lesson from Gary suggests that there is danger in confusing the work of trade unionist propagandists and that of bolshevists. It is a common practice to refer to all labor agitators as bolshevists. As a consequence the public has received the impression that only bolshevists are to blame for acts of injustice and violence, while the federation of labor and its allied branches are something wholly apart, holy and righteous.

Americans should keep the identification in mind. If trades union agitators under cover attempt to put on a little show of their own they should be identified and exposed. The haphazard, meaningless reference to all agitators as "bolshevists" is helping the cause of those federation of labor agitators who would not hesitate to seize any advantage to promote their aims.

Iron Prices Show Stronger Trend

Southern Makers Less Willing to Absorb Freight and Various Eastern Furnaces Are Quoting Higher—New Selling Keeps to Fair Volume—General Motors Corp. Buys 11,000 Tons—10,000 Ton Basic Inquiry at St. Louis

Pittsburgh, July 15.—While demands for pig iron from nonintegrated steel plants still are extremely limited, other consumers quietly are covering their requirements for the remainder of this year. Excluding basic, some business has been done in all grades with the total making a fairly good comparison with that of last week. Total sales for the week reached an aggregate of approximately 20,000 tons and all was done at full market prices. It is reported that 500 tons of bessemer recently changed hands at $28 delivered, Pittsburgh, but no confirmation is obtainable and some doubt exists that it was made in view of the fact that brokers have been carefully canvassing producers in the hope of picking up some tonnage of this grade. The foundries using bessemer iron have been pretty good buyers recently and sales aggregating 5000 tons in lots of from a carload to 1000 tons have been made at the full market price of $27.95 furnace. An inquiry for 1000 tons of bessemer is before makers from a Pittsburgh district consumer. Several good sized lots of forge iron have been sold recently, among them one for 3000 tons, all at $27.15, Pittsburgh. In addition to small sales there was one transfer of 2000 tons of No. 2 foundry (1.75 to 2.25 silicon), all business being at $26.75 furnace, while one inquiry for 1500 tons of No. 2 foundry and another for 1000 tons of the same grade are before makers. Although nothing beyond carload sales of basic have been made, the market is firm at $25.75 furnace on this grade. Producing costs are no less and in view of the growing scarcity of labor, a strong possibility exists for an increase. Little hope now prevails among blast furnace interests that ore will be bought at any lower prices and while the spot market for coke is rather weak, the signs are against the possibility of materially lower prices for the remainder of the year. Steel manufacturers making their own iron are increasing production. The Carnegie Steel Co. has added two furnaces to its active list, making 36 in blast and expects to blow in two more at its Columbus, O., works next week. It is expected that more than 40 of the 59 stacks of this company will be active by Aug. 1. The Jones & Laughlin Steel Co. will blow in an additional stack this week. The new stack at the Weirton Steel Co., Weirton, W. Va., which for a time will be a merchant stack, goes in next Monday and the stack of M. A. Hanna & Co., Canal Dover, O., will be blown in Aug. 1. It is expected that the Alice furnace of the Valley Mold & Iron Corp., Sharpsville, Pa., soon will be started but the Clinton stack and the Cherry Valley furnace of the M. A. Hanna soon will go out for relining.

Small Sales Are Rule

Boston, July 14.—The lull in pig iron trading continued throughout the past week with all sales small but with the aggregate about equal to that of the previous week. Prices from all districts are reported firm with a tendency toward a higher level for fourth quarter. Nearly all furnaces seem reluctant to place any but immediate business—several have refused to quote beyond 60 days and no quotation for next year has been reported. The Virginia Iron, Coal & Coke Co. is still out of the market for 1919 business, except in some limited stocks of high silicon iron. A Pennsylvania furnace in changing from low phosphorus to foundry iron is reported to have made some unusual concessions in order to obtain back log orders. Sales by this furnace have not been large however. Connecticut foundries have been the heaviest buyers during the past week and business among textile machine and machine toolmakers appears to be decidedly active. One foundry which had placed orders two weeks ago covering last half now has made additional purchases of sizable lots. In spite of the high freight rates southern iron is holding its own in the local market and good orders for last week and also for this week are reported by one agent. The prices on some southern grades has advanced about $1 and a similar advance is reported for one northern furnace. Most sales of northern iron have been made on the basis of $30.90 delivered for 2.25 to 2.75 silicon. It is estimated that the aggregate of sales in New England including Connecticut during the past week, was 6500 tons. Few inquiries are out and none for large tonnages. A Massachusetts manufacturer of machinery wants 400 tons of No. 2X Virginia (2.25 to 2.75 silicon) and 200 tons of northern of the same content for fourth quarter. Another inquiry from a local foundry is for 500 tons for last half.

Sell Iron for 1920

New York, July 14.—Growing improvement in the outlook for export business, and an increasing demand for the first half of 1920, featured the pig-iron market in this district during the past week. Inquiries from abroad are more numerous and there now seems to be more disposition to close them. Among sales actually consummated during the

past week was one of 3000 tons of Alabama foundry for a European destination. Incidentally, it is learned that delivered prices on American basic for England do not compare unfavorably with the prices quoted by Luxemburg furnaces. Sales of iron to domestic consumers for 1920 so far involve several thousand tons. A Buffalo stack sold 600 tons of No. 2 (2.25 to 2.75 per cent silicon) for first half at $28, Buffalo. Approximately 2500 tons of central Pennsylvania foundry iron have been sold at prices varying from $28.50 to $29.50, furnace, for 2.25 to 2.75 per cent silicon for first quarter and first half delivery. Several lots of malleable also have been sold for first quarter and first half delivery, but the prices are not known. Business during the past week for this year's delivery to domestic consumers has not been especially heavy. It embraced mainly foundry tonnages of moderate size. The only notable inquiry which is out for foundry at this time is for several hundred tons for last quarter. Approximately 1200 tons of basic were sold in this district during the past week for nearby shipment around $26.25 eastern Pennsylvania furnace, equivalent to approximately $27 delivered in eastern Pennsylvania. This same figure was done on two other sales of about the same size made in this district during the past two weeks. An inquiry is now out for about 1000 tons of spot basic. Witherbee, Sherman & Co. are expected to blow in their furnace at Port Henry, N. Y., on foundry iron about the end of July.

Sellers Avoid New Bookings

Buffalo, July 15.—Two pig iron selling interests here are practically out of the market for the rest of this year. One furnace definitely has withdrawn from the market and the other is not interested in taking on any more bookings until it is ready to quote on 1920 delivery. No interest is shown by makers at this time in 1920 business, as they prefer to wait in selling so far ahead. Melters are displaying a rather belated activity, many of them now clamoring for tonnage to carry them over to Jan. 1. The tonnage could very easily have been secured a month ago but at this time, it is difficult to obtain. There is considerable inquiry for special irons. There is a good specification against contracts recently made, indicating that business with melters is good. Many buyers have specified rush shipments. The iron sold in the district during the week has not been heavy. It is believed that 30,000 tons would cover it easily. One interest reports sales of 6000 tons of malleable and 6000 tons of foundry in several sales at the regular schedule. There is an inquiry out for 5500 tons of foundry and one for between 2000 and 3000 tons of malleable. One interest sold a small tonnage of high sulphur off-iron at a 50 cent reduction, but has done no other price cutting.

Auto Plant Buys 11,000 Tons

Cleveland, July 15.—New sales of pig iron have run in lighter volume the past week and the inquiry also has dropped off with most producers though some interests report it is still lively. It is pointed out that a good proportion of the consuming trade now is under contract for its requirements up to Jan. 1 and producers are not willing to sell freely for 1920 for which there is some inquiry coming out. Furthermore while consumption is increasing, it has been more marked in some lines than others and certain melters have on hand or under contract considerable iron originally purchased for the first half which will carry them through for an indefinite period in the second half. At the same time some fair sales continue to be made, the largest of which is 11,000 tons, including 7000 tons of foundry and 4000 tons of malleable for the Buick Motor plant at Flint, Mich., for last half which went to lake furnaces. Another sale of 5000 tons of foundry iron for last half was closed. The bookings of one large Cleveland seller in the week amounted to about 20,000 tons and of another to about 27,000 tons. There is still a lack of interest in steelmaking irons. The J. C. Cromwell Steel Co. which is resuming operations at its open-hearth plant at Lorain, O., may be a buyer of basic shortly although it has some stock on hand. This consumer has been figuring in the market for some time. The general report of the furnaces is that they are now shipping more than their current output and the result is a moderate reduction of the stocks which they had been piling over a period of some weeks. The C stack of the Buffalo-Union Furnace Co., Buffalo, has gone out for repairs. The McKinney Steel Co. has blown in a third furnace in this city.

Southern Makers Drop Concessions

Chicago, July 15.—Southern furnaces have discontinued meeting the northern freight differential, and are now selling at full schedule price, f.o.b. Birmingham. In some instances, the southern interests absorbed as much as $4.50 of the freight charge to Chicago, making the price $30.25, delivered in the Chicago territory, and netting the furnaces $25.25 a ton. Business has so far improved, however, that they are now quoting $29.75 on No. 1 southern (silicon 2.75 to 3.25) f.o.b. Birmingham. As the freight charge to Chicago is $5, buyers in this territory would now be required to pay $34.75 a ton for this grade which removes the southern interests from this market. These interests have been reducing the amount of the freight absorption as business has improved, and the Republic Iron & Steel Co. practically ceased to allow the concession some few days ago. Now, however, both the Republic company and the Woodward Iron Co. announce no allowances whatever will be made. Sales continue on the upgrade, those in this district approximating 90,000 tons of foundry and malleable during the first half of July. Basic is still quiet, but there are many inquiries for 500 and 1000-ton lots of foundry and malleable for last-half delivery and business is speedily closed. One inquiry is out for 4000 tons of foundry iron, and another for 500 tons of foundry for delivery in 1920, but furnaces are not quoting. Selling agencies report that in the face of increased demand production is not as good as it might be, shipments are beginning to get slow, and these circumstances indicate a shortage of pig iron in the near future. Only one furnace is quoting on silveries. The Jackson county, O., furnaces are still affected by a strike, and the only Tennessee furnace quoting is asking the full schedule price, f.o.b. Birmingham.

Prices Become Firmer

Cincinnati, July 15.—Low-priced iron for third quarter shipment both in the South and in southern Ohio appears to have been absorbed almost in its entirety. Southern furnaces which have been taking orders around $25 to $25.50, Birmingham basis, for iron analyzing 2.25 to 2.75 per cent silicon, evidently have sold all of this metal that they care to dispose of at the present time. Southern iron containing 1.75 to 2.25 silicon now is quoted at $26 Birmingham. Two furnaces located in the southern Ohio district, have sold all of their prospective output of foundry iron. No. 2 foundry (1.75 to 2.25 silicon) is held at $26.75 Ironton by all of the furnaces in the Hanging Rock district. Reports that Virginia iron were invading this territory are without any foundation, but a small tonnage of foundry was sold to a nearby point.

Books for 1919 Well Filled

St. Louis, July 12.—A fair volume of scattering inquiries and actual orders marked trading in pig iron here during the week. The slowing down at the moment is attributed to the fact that users needing iron have covered on their requirements. Another factor is that furnace interests have their books fairly well filled for the balance of this year, and are not willing to take on any business for delivery after Dec. 31. It is undoubtedly a fact that melters in this region are pretty well supplied for the balance of this year, and buying of a big scale, and of a permanent character, can hardly be expected before the makers open their books for 1920 business. Shipments from all directions are coming along with regularity, and in goodly tonnages, with the industries willingly accepting their several quotas. A feature during the past few days has been the relative activity of irons with higher silicon content, though a large number of small lots of other grades have also been placed. One sale of No. 2 Southern foundry, 1.75 to 2.25 per cent silicon, of 500 tons to an east side melter for prompt delivery was reported today. The most important inquiry before the market is for 10,000 tons of basic by a steelmaking interest in the St. Louis district.

Prices Taking on Strength

Birmingham, Ala., July 15.—Pig iron prices in the South continue to take on strength and the furnaces are not willing to sell for fourth quarter delivery except at their own prices. Iron of 1.75 to 2.25 per cent silicon is being held for $26.75. If shading is being done, to absorb freight, very little is being said about it. Two or three makers are out of the market completely for the third quarter and one of the larger com-

panies has announced it is out of the market for last half. Sales have been consummated for iron of 2.25 to 2.75 per cent silicon as high as $28 Birmingham. Production will have to be increased shortly, if the demand is going to be met. Southern furnace companies have not sold yet for 1920 delivery, so far as can be learned. A number of inquiries have come out for next year but reiteration is heard of the belief among producers that higher prices will have to be paid by consumers. Until a considerable advance is obtainable, makers are reluctant to sell for next year. Some export business is looked for shortly, ship room being the principal difficulty.

Eastern Prices Moving Up

Philadelphia, July 15.—Sellers of pig iron in this district declare that their sales so far this month equal their total business in June. While sales of foundry iron continue to be made at $27 and $28 eastern Pennsylvania furnaces for No. 2 plain (1.75 to 2.25 silicon) and No. 2 X (2.25 to 2.75 silicon) respectively, there is a pronounced tendency for prices to move upward. In fact the range indicated is exceptionally low and most furnaces are 50 cents to $1.50 higher. A large portion of the week's business was done at the higher prices. Most furnaces now are well fortified with orders and are in the position to better enforce their asking prices. A Virginia maker who has been selling at $25.50, $26.50 and $27.50 now is quoting $26.50 on No. 2 plain (1.75 to 2.25 silicon) as well as on No 2 X (2.25 to 2.75 silicon). The estimated week's business here in foundry iron was at least 20,000 tons. Basic orders were comprised of 1200 tons at $26 furnace but it is unlikely that this price could be repeated. Current inquiry includes 2000 tons of this grade. Some malleable tonnage has been taken at $28 eastern Pennsylvania furnace. Sales of the week included 1000 tons of forge at $28.50 delivered. The only development in low phosphorus is the award of the tonnage at Burnham, Pa., by the government to F. R. Phillips and Frank Samuel.

Sales Lag

Iron Ore Selling Shows Little Increase in Volume

Cleveland, July 15.—Ore buyers continue to follow the policy of conservative purchases. Some sales of iron ore have been made during the past few days, but the total volume is small. This condition has prevailed for weeks and reflects the slowness which has marked the ore-buying movement so far this year.

Difficulty is found in estimating the approximate degree to which ore consumers are covered by purchase on their requirements up to the opening of the 1920 navigation season. The tonnage sold has been comparatively light contrasted with previous years and ore sellers expect a heightened demand toward the close of the year when most of the lake fleet will be busy handling the heavy grain movement.

Supply Exceeds Demand

Week's Coke Sales Show Furnace Not Above $4 Connellsville—Increased Output in Expectation of Short Supply Produces Weakness

Pittsburgh, July 15.—No basis in sales exists for a price of higher than $4 ovens for standard Connellsville coke on spot this week. In fact, supplies are considerably in excess of demand and it is possible that with as little shopping, consumers might be able even to better that price. A producer located outside of the Connellsville region, reported sales involving about 4000 tons at $4.25 ovens. It is understood that this tonnage was for shipment east and since the producer in question has a freight advantage of 20 cents a ton over the Connellsville operators, this makes a price equivalent to $4.05 Connellsville. The blast furnaces now in operation are so well protected against their fuel requirements by contract that they have no occasion to seek spot lots. This coupled with the fact that several of the Connellsville operators lighted their ovens recently in expectation of a short and strong market over the Fourth of July and produced coke for which no demand developed, has brought about the weakness in the current market. While several merchant blast furnaces are likely to be blown in within the next 30 days, these owners are not seeking coke supplies. Consequently, little new contract business has been completed recently and the market may still be quoted at from $4.12 to $4.50 ovens, including both sliding scale and fixed price contracts. The spot demand for foundry fuel is no more active than that for furnace coke but producers quite generally are comfortably fixed with last half contracts and consequently are indifferent about spot sales except at rather stiff prices. Most of them are quoting $5.50 against current inquiries and it is claimed that sales have been made at that figure. All operators, however, are not so well off and those having free supplies and are seeking to place them are not doing much better than $5 ovens. Foundry coke is moving on contracts at from $5 to $5.50 ovens. Most of the business has been booked at from $5 to $5.25 ovens. Production of coke from the Connellsville region for the week ending July 5 is estimated by the *Connellsville Courier* at 130,790 tons as compared with 138,633 tons the previous week.

Far-West Figures in Market

St. Louis, July 12.—Producers and selling agencies report fairly active conditions and steady to firm prices on coke. Some good inquiries have appeared, and the volume of minor transactions since the holidays has been quite heavy. Inquiries from the west and southwest have picked up, and some actual sales have been made to that general region. California purchased a fair tonnage from a leading interest here, and there have been heavy shipments to water gas companies of the northwest. One sale of 5000 tons of furnace coke to a St. Louis interest was reported, delivery through last half. The Pioneer Coal & Coke Co. reported the sale of 400 tons of selected 72-hour foundry coke to an interest in the Hawaiian islands. This coke will be loaded on vessel at San Francisco. The leading by-product interest is still running at capacity, and reports an easy disposition of its entire product, except small tonnages of domestic grades, which usually accumulate at this season.

Sales Active in New England

Boston, July 14.—The large pig iron sales throughout New England during June are now being reflected in the activity in foundry coke. Most of the larger foundries are covering for the balance of year, and it is probable that the coke sold in New England during the past week equaled that of any previous week during the year. The New England Coal & Coke Co. is running the greater portion of its 400 ovens on foundry coke and is shipping the entire product. The Providence Gas Co., though forced to shut down last week as the result of the walkout of practically all of its employes, reports excellent business prospects. Its labor difficulties are expected to be adjusted soon. One producer says that New England already is independent of Connellsville in its coke price fixing and that the new contracts are worded without reference to Southern interests. Foundry coke is expected to be $10.40 in August and one contract is known to have been placed already at that figure covering last half delivery.

Prices Take Sharp Advance

Cincinnati, July 15.—A selling agency for Wise county coke reports a booking of some foundry coke business for this year's shipment at $7.50 ovens. Some New River foundry coke has been sold at $8. There is an increasing demand for both furnace and foundry coke. Connellsville furnace coke is now quoted at $4.25 minimum for nearby shipment, but some of the operators will not accept business below $4.50. Foundry coke averages around $5.50. Pocahontas foundry coke remains around $6.50 to $7, ovens.

Foundry Coke in Strong Demand

Birmingham, Ala., July 15.—Coke producers are enjoying a better demand for their product, foundry coke in particular being sought. Prospects are good for furnace coke. There is some accumulation of coke by the furnace companies. Coal production in Alabama is far from being satisfactory. The demand for domestic coal continues good but there is need of orders for steam and bunker coal. Shipments of bunker coal are being made down the Warrior river.

The National Acme Co., Cleveland, reports for the quarter ended March 31 sales of $2,700,684 compared with $3,483,788 the previous year. Net profits were $756,620 and dividends paid amounted to $375,000.

Scrap Users in Market

Consumers Are More Important Factor in Stimulating Further Price Advance—Steel Brings $20.50 in Valleys and at Pittsburgh

FOR COMPLETE SCRAP PRICES SEE PAGE 202

Chicago, July 15.—Practically all grades of scrap have been marked up from 50 cents to $2 per ton, the market being exceptionally strong. Even at the advanced prices, dealers declare they are not anxious to sell and look for further rises within the next few weeks. A feature of the market is the demand for all grades, the steel mills coming in during the past week with larger orders. Malleable and cast iron scrap also are now being bought freely. Miscellaneous steel rails which were selling at $18.50 to $19, rerolling rails which were $22 and $23, railroad malleable which was quoted at $19.50 and $20, and agricultural malleable which carried a price of $18.50 and $19, all have been advanced $2 while steel angle bars, compressed scrap, shoveling steel, steel rails, stove plate, low phos billet and bloom butts, cut forge, iron angle bars, machine shop turnings, shafting and No. 1 cast have been marked up $1. Boiler punchings were sent up $1.50. All of the other grades were marked up 50 cents. Railroads are offering some large tonnages. The Chicago, Milwaukee & St. Paul has issued a list of 16 carloads of cast iron borings, steel turnings, heavy wrought and steel forgings and wheels. The railroad administration is offering a miscellaneous list at the plant of the Pullman Co., Pullman, Ill., including approximately 5000 tons. It is offering three carloads at the Lenoir Car Works, Lenoir, Tenn., and five carloads at Kansas City. The Southern railroad is offering 500 tons and the Chicago & St. Paul also is out with a sizable list. The Chicago district salvage board is offering 550 tons.

Prices Moving Upward

New York, July 14.—The continued hesitancy of the yardmen and other collectors of scrap to part with their supplies is forcing the local market upward. No material advance, however, has been noted in heavy melting steel. The prices of machine-shop turnings, No. 1 cast, stove plate and grate bars, have advanced. The tonnage now moving is not large.

New England Market Quieter

Boston, June 14.—Stove foundries are continuing to buy the usual quantities of scrap and their business at this time of the year is always active. As a result there is a local demand for this class of scrap. The scrap market generally, however, is dull. Prices of all grades have remained practically stationary. Heavy melting steel has sold in small lots as high as $16 delivered to dealers' yards; but this is considered the exception rather than the market. Machine tool interests have been the largest local purchasers of scrap during the past week with stove foundries next. For many weeks western steel plants have been out of the market, only buying small quantities for special purposes. The local dealers, howeevr, have kept up good buying for speculative purposes, but now for some reason, even this has fallen off. Some No. 1 cast scrap is moving and while slight concessions in this grade are reported by one dealer, others declare there is a scarcity.

Eastern Prices Still Rising

Philadelphia, July 15.—Activity in the scrap market in the eastern Pennsylvania district during the past week has been restricted to small sales. Prices continue to mount. The Cambria Steel Co. paid $13, Johnstown, for blast furnace turnings. Eastern dealers have been selling heavy cast scrap to plants in the Pittsburgh district. Heavy melting steel delivered eastern Pennsylvania now is quoted at $19 to $20 and guaranteed low phosphorus at $24 to $25.

Prices Still Tend Upward

Pittsburgh, July 15.—Steel manufacturers are coming into the scrap iron and steel market and making fairly large and frequent purchases with the result that the trend of prices still is toward higher levels. One sale of 3000 tons of heavy melting steel recently was made to a Pittsburgh steel manufacturer at $20 delivered and another steel manufacturer this week paid $20.50 for a moderate-sized tonnage. The market on this grade now is quotable from $20 to $20.50 delivered with dealers generally asking $21. Compressed sheets are bringing $16 freely while the market has been established by sales at $15 to $16 on bundled sheet scrap. Sheet scrap reflects the trend in heavy melting steel as the users are practically the same. Heavy turnings recently have brought from $15.50 to $16 and better than $13 has ben paid on some fair-sized sales of machine shop turnings. Foundry scrap relatively is not active. Offerings of all kinds of scrap steel are moderate, although consumers report that the recent appreciation in prices has resulted in somewhat larger offerings. A marked scarcity of rerolling rails still is noted and it is reported some users of this grade seriously are considering turning to shell steel. Although the latter grade commands considerable premium over the former, it is claimed that loss in rerolling is less. A great number of rejections are reported at steel plants on recent shipments of scrap. At one Pittsburgh district plant, no less than 28 cars shipped in as heavy melting steel, were rejected because they were not up to specification.

Consumers More Interested

Buffalo, July 15.—With local steel mills now 75 per cent active, the demand for heavy melting steel is picking up. Local mills are showing a greater degree of interest than last week and it is believed this is the logical sequence of low stocks coupled with the fact that the scrap market is growing stronger each day. A local steelmaker is understood to have bought a small tonnage at $18 and a valley plant is said to have purchased here at $20.50 delivered equivalent to $18.10 or $18.15 Buffalo. Dealers are declining to sell heavy melting steel in quantity. At the same time dealers' stocks are not as large as they would like them to be. They are selling just enough to keep the market lively. There is a good dmand for all grades this week. Cast scrap is as strong as other grades. Foundries appear to have stocked heavily or else believe the market will not rise.

Crops Take Advance

Youngstown, O., July 15.—An inquiry for 300 tons of crops, which has been before a dealer here for several days, has been satisfied between $24 and $25 per ton. This is an advance of $3 over last week's quotation for this grade of scrap.

Rejects $21 for Steel

Cleveland, July 15.—A local scrap dealer has turned down an offer of $21, delivered, for a fair sized tonnage of heavy melting steel, made by a consumer in central Ohio. This indicates the strength of the market, a strength that appears to be growing daily, while most consumers hold off buying. Consumers appear to be following dealers' prices on the uptrend, but at a distance of $1 to $1.50 to the rear. Dealers, short on odd lots, find they must pay $3 and $4 more a ton for material than they contracted to sell it. One big yard interest is reported ready to sell at $25 the heavy melting steel it has thrown down. A shortage of scrap is looked for by dealers, as some of the larger melters have bare yards, and material is by no means plentiful. Prices on most grades have advanced, and not a great deal of scrap is to be had at the present level.

Certain Grades Take Advance

Cincinnati, July 14.—Yard stocks are being diminished because of the steady drain on them from melters of scrap. However, there is comparatively little contracting for material to be shipped beyond Dec. 31. The supply of some grades of scrap is low. Dealers are making an effort to replenish their stocks. Prices have advanced from 25 cents to $1 a ton on some grades. Cast borings and steel turnings have been marked up 50 cents. The demand for this class of scrap is increasing.

St. Louis Dealers Lay in Stocks

St. Louis, July 12.—Since the holidays the market for iron and steel scrap has experienced activity of boom dimensions. Dealers have joined in a veritable scramble to acquire everything and anything offered. Prices throughout the entire list have been marked up from $1.50 to $2 a ton, and further advances before the end of the month are confidently looked for. For the most part the material acquired is being unloaded in yards, there to await higher prices. This flurry of buying, however, has failed utterly to interest

consumers, who continue to display the greatest indifference toward the market.

Offerings are not particularly large. The Frisco railroad offered 16 cars and the Missouri, Kansas & Texas 22 cars during the week. The Mobile & Ohio sold 1700 tons, for all of which top prices were secured. The 1300 wheels recently sold by the Wabash brought $25 a ton, East St. Louis. On July 17 the St. Louis district ordnance office will sell 382 tons of ingots for forging 9.5-inch steel shells, located at the American Steel Foundries plant in East St. Louis.

For the second time in the history of this center, agricultural malleable is selling higher than railroad malleable. Heavy melting steel is up $1 to $19, while a range of $17.50 to $18 is quoted on heavy shoveling steel. The most drastic marking up of the week was on old steel rails, long, which were advanced from $17.50 to $18 to $21 to $21.50.

Southern Market Erratic

Birmingham, Ala., July 15.—Scrap dealers in the Birmingham district report both active and inactive days for the market. Inquiries are coming in steadily and consumers looking to this district for their needs in scrap, are indicating a need for a large tonnage before long. Cast and soil pipe foundries are all becoming more active. Quotations show no important changes. Heavy melting steel consumers are still willing to buy at their prices.

Weighing Orders

In Wire Products Because of Demand —Specifications Exceed Output

Pittsburgh, July 15.—So heavily committed are some of the manufacturers of wire and wire products that they have sent instructions to branch sales offices that further business is not to be accepted without first being submitted. These companies are refusing as much business as they are accepting. While some manufacturers are not averse to making contracts covering the remainder of the year, the more general disposition is to accept business only to the end of the third quarter. Those confining their bookings to that period practically are sold up and such tonnage as is available they are inclined to hold for the protection of their regular customers. Prices are firmly maintained and it is reported one company which recently marked up its export quotations on wire and nails could have obtained the advance if it had the tonange available.

Jobbers Placing Orders

CHICAGO, July 14.—Jobbers are placing heavy orders for wire and nails and all indications point to a large fall trade. Only in barb wire is there noticed any particular slackness in demand. This is but natural for this season of the year, since the agricultural districts are the largest consumers, and the farmers are engaged at present in harvesting crops. No increase in prices has been announced.

Sheet Buyers Rushing In

Specifications With Largest Producers Are at High Record Point—Deliveries Are Lengthening—Later Prorating of Tonnage May Result

Pittsburgh, July 15.—The first two weeks of July have been marked by a continuation of the activity in sheets which began to develop early in June. Business during this period actually has been heavier than it was last month and it probably is no exaggeration to say that specifications and orders during the past week have averaged well above 20,000 tons a day. The week ending July 12, established a record for the American Sheet & Tin Plate Co. whose liquid business in sheets and tin plate only once before was exceeded in any one week. In April, 1918, specifications by the American Can Co., the Continental Can Co. and the Standard Oil Co. for tin plate brought that week's business to the highest total in the history of the company. That week, however, included only a small tonnage of sheets while last week the specifications and orders were about equally divided between the two products of the company. Users of sheets now are sending in orders which should have been placed during the second quarter and they also are seeking to cover for the third and fourth quarters. Because of the warm weather and the none-too-generous supply of labor, it has not been possible for all plants to materially increase operating schedules. As a result of those conditions, coupled with the rush of orders, manufacturers generally are even further behind in deliveries. For an average they are from six to eight weeks behind as compared with about three to four weeks at the beginning of the month. The danger looms that manufacturers of sheets later in the year may be obliged to resort to a prorating of shipments for with most of them heavily committed on specialties, such as automobile sheets, it is manifestly impossible without new capacity to bring up the production of other kinds of stock. It is stated buyers may consider themselves fortunate if they get 100 per cent shipments on recent commitments.

Buying is Good

New York, July 14.—Demand for sheets in this district has been brisk lately. There has been good contracting for third quarter and considerable buying for spot and nearby.

Mills Are Well Booked

Youngstown, O., July 15.—Practically a one month's rolling schedule is assured the majority of sheet plants in this territory operations of which at present are on an 80 per cent basis. A good volume of business for all grades of sheets is coming out right along and this is being taken on at prevailing market prices. Export inquiries are increasing in volume somewhat and many makers here have bookings from this source. Several of these inquiries call for 30-gage black. Most makers are booked with specifications which are easier handled at this time of the year than this inquiry calls for and hence are not anxious to quote. One maker states, however, that he intends to take on some 30-gage business about Aug. 1. Domestic inquiry is strong for all grades of sheets.

Demand Urgent in West

Chicago, July 14.—Leading interests here report that among all finished steel products sheets are in the most urgent demand. Bookings are so heavy, that with a shortage of skilled labor and a spell of hot weather to interfere with mill operations, the mills are far behind their orders.

Some Shading in East

Philadelphia, July 15.—Shading again has become a fact in the eastern sheet markets. Ohio makers are taking black, blue annealed and galvanized tonnage at concessions of $2 and $3 per ton. While such shading has been done in a number of cases most of the current business has been going at the full price. Sheet demand is good but somewhat less than in recent weeks. Eastern production is at about 70 per cent.

Heavy Orders

Continue to Run in Tin Plate—Export Concessions Persist

Pittsburgh, July 15.—Demands upon the tin plate manufacturers still are on a large scale and the mills maintain operating schedules averaging close to 90 per cent of capacity. It seems likely that the belated and hurried demands made by the container manufacturers serving the Pacific coast packers will be met, but in doing so the tin plate mills must be kept going at a heavy rate for the next few weeks at least. Export demands for tin plate bulk fairly large, although only a few large individual orders are being placed. As low as $6.50, base Pittsburgh, was done on tin plate for export a short time ago but it is doubtful if makers would consider that price today, although the export quotation is not yet back to the domestic level of $7 per base box, Pittsburgh. Stock items still are selling at 25 to 50 cents per base box below the base quotation.

Tin Mill By-Product Offered

Youngstown, O., July 15.—Operation of the tin plate mills in this territory is close to 80 per cent. Plenty of business is booked to warrant an operating schedule on this basis for several weeks. The Weirton Steel Co. is offering one mixed carload of coke tin-plate clippings and cobbles, bundled; one carload of coke tin-plate strips, boxed, 1½ to 2½ inches wide, and 10,000 to 20,000 pounds of cold-rolled tin-plate cobbles, boxed and unassorted as to sizes and base weights.

Big Bar Orders Pending

Automobile and Implement Interests Actively in Market—15,000 Tons Placed at Chicago—Rerolled Steel Sells Higher

Pittsburgh, July 15.—Heavy demands from the automobile manufacturers are providing bar mills with a large amount of business at present. Not only has the General Motors Corp. closed for its requirements for the year ending July 1, 1920, but an Ohio manufacturer of medium and low price cars, has virtually closed for a year's tonnage. The Ford Motor Co. is expected shortly to conclude negotiations for its steel requirements for the year ending July 1, next. Not much business is coming from makers of agricultural implements but some big orders are anticipated as soon as stock taking now is progress, is completed. The price of merchant steel bars is firmer in that there is practically no shading of 2.35c Pittsburgh. Reinforcing concrete bars are being freely inquired for and while sales as a rule are small individually, the aggregate is much more satisfactory. Prices on both bars rolled from new billets and from old rails are stronger. There are as many prices for iron bars as there are makers, and reports as to the demand also show considerable variation. Those manufacturers catering to the railroads are finding material extremely flat, but those doing a diversified business are fairly busy. Muck bars are in good demand from pipe interests. A base of 2.50c is quoted on common bar by one On refined iron 2.75c is quoted by one company while another names 3.75c. It is probable that the maker naming 2.75c will this week raise his quotation.

Best Orders Since Armistice

Philadelphia, July 15.—New business in finished steel of the past week is reported by large eastern producers to have been the best sinc the armistice and this is particularly true of steel bars. Specifications for bars are coming in heavily from the manufacturing trade and particularly from the cold rolled interests. In addition there are a number of good orders for spot shipment. For iron business continues at a minimum due in some measure to the strike of puddlers which keeps the mills out of the market. The demand for nuts, bolts and rivets is slowing down.

Big Negotiations Continue

Cleveland, July 15.—Active specifications against steel bar contracts are reported by all selling agencies in this district. Further contracts for the last half are being made. Some large negotiations of this character, the most prominent of which are with leading automobile interests in this territory are under way. These involve a heavy tonnage for 12 months delivery. Makers of rerolled bars generally have adopted the 2.35c mill price which was quoted by one or two makers a week ago.

Implement Tonnage is Large

Chicago, July 14.—Leading steel bar makers in the Chicago terrtiory report a surprisingly large demand from agricultural implement and automobile manufacturers. While structural shapes continue as a weak feature of the finished steel market in this district, heavy buying of reinforcing bars for building purposes continues. A few contracts for bar iron aggregating 15,000 tons have been placed by implement manufacturers for third and fourth quarter delivery, and makers report a volume of inquiries from the same source.

Rolling Schedules Tightening

Youngstown, O., July 15.—Producers in this territory report buyers are extremely active in the steel bar market. Toward the last of June deliveries could be had in three or four days but at present practically no shipments under four weeks are available. Several good sized orders for rerolled bars from implement makers were booked recently. An inquiry from New York for 300 tons of hot-forging iron bars is current. The specifications call for ½ to 1½-inch stock.

Mills Are Quite Busy

Philadelphia, July 15.—As the result of large sales of bands to the makers of automobile accesories and parts, in addition to the fact that cotton ties now are being rolled freely and also a good demand for narrow widths hoop and band mills in this district are quite busy. Cooperage interests are not especially heavy buyers. Some uncertainty exists as to the real price of hoops and bands for while the published quotation is 3.05c Pittsburgh, it is reported some mills have resorted to the prewar plan of using the bar base and adding the rolling charges.

Bookings Gain Steadily

Pittsburgh, July 15.—Makers of cold-rolled shafting here report a further expansion in both specifications and orders and while the principal demand still is coming from the automobile manufacturers, it is noted that demand for screw stock shows as marked improvement as in the larger sizes. Not only are buyers ordering and specifying quite freely but most of them are seeking contracts covering the third and fourth quarters. Mill operations, which recently were close to 40 per cent, now are averaging better than 50 per cent. The quotation of 28 per cent off list is being more uniformly observed.

Advance Brings Rush of Orders

Pittsburgh, July 15.—Announcement last week of an increase of 5 per cent in prices of nuts, bolts and rivets by the leading manufacturers has been followed by a veritable flood of orders from both consumers and jobbers anxious to be covered before the advance becomes fully effective. The new list of discounts shows no change in the prices of structural and boiler rivets but small rivets, previously quoted at a discount of 65-10-5 off, now are rated at 60-10-5 off with a few of the makers quoting 65-5 off. Machine and carriage bolts run 5 per cent higher but the former discounts on cold pressed semifinished hexagon nuts are retained in the new list.

Larger Inquiries Appearing

Cleveland, July 15.—Indications of greatly improved conditions shortly is forecasted by the number of inquiries for nuts, bolts and rivets, received in this district during the past week. Although the automobile trade has not slackened on its demand for these products, the major inquiries are not coming from this industry, as manufacturers of other products are now appearing freely in the market. Foreign inquiries are on the increase. Despite the advance in price which went into effect a week ago, the domestic market is getting stronger. Manufacturers report that both dealers and jobbers are ordering much larger tonnages than they have been for the past few months.

Ferro at $115

Sales Show Market Around That Figure—First Russian Ore Here

New York, July 14.—Ferromanganese of 80 per cent quality has been offered by domestic producers during the past week at $115, delivered. It is said that this now is the firm minimum but it is known that no less than a week ago 80 per cent ferromanganese still was obtainable at $110 and it is considered as not improbable that this figure still might be done. On 80 per cent metal from England, the asking price still is $115 c.i.f. Atlantic tidewater, but no sales are reported, and in some cases consumers have advised the importers that in order to be attractive they must offer lower prices than the domestic makers are willing to accept.

The spiegeleisen market was characterized by more activity during the past week. About 2000 tons of 18 to 22 per cent metal have been sold at $30, furnace. This price now is the minimum on large quantities. Sales of carloads have been made during the past week at $35, furnace.

Some 50 per cent ferrosilicon was turned over at resale last week at a shade under $80 a ton delivered. Makers generally are quoting above this price, some asking $90 to $95. Inquiry remains light.

English ferrotungsten has been offering for prompt shipment at $1.05 a pound contained 80 per cent alloy, c.i.f. New York, duty paid. This compares with quotations of American makers ranging from $1.15 to $1.30, there being one seller at the lower level. Despite the English competition sales of American ferrotungsten have been made both in Scandinavian countries and Japan within recent weeks.

Ferrovanadium is lower, due to the cautious attitude of buyers. Both spot and future business has been done recently at $6.50 to $7 a pound contained, 35 to 40 per cent alloy.

The demand for ferrochrome for tool steel purposes continues slack. Makers of automobile steels are tak-

ing some lots and prices are being maintained at 32c a pound contained for large lots, based on 6 to 8 per cent carbon.

Russian Ore Arrives

New York, July 14.—The first direct shipment of Caucasion manganese ore since the war began has arrived in New York. This ore amounted to between 500 and 600 tons and analyzed 80 per cent manganese dioxide with less than 1 per cent iron, thus being suitable for chemical purposes. The ore was sold at about $80 a ton. Some Nova Scotian manganese dioxide ore is enroute to this country.

Price Still Uncertain

Pittsburgh, July 15.—Considerable uncertainty has existed among agents here of the domestic makers of ferromanganese as to the actual price of that material. Although publicly quoting 80 per cent material in New York and Philadelphia at $115 to $120, delivered, during the early part of last week, it was not until late Friday afternoon local sales offices were notified to make any change from the previous quotation of $125. On an inquiry from a local steel manufacturer for two carloads it was discovered that $115 had been quoted. It is understood that the lot was placed at $115, delivered. The English quotation of $115 c.i.f. Atlantic ports, or about $119, delivered Pittsburgh, for 80 per cent material, apparently has rendered it impossible for domestic consumers to make sales at $125, the price they recently sought. An inquiry for 250 tons of 80 per cent ferromanganese is before makers.

The Crucible Steel Co. has closed on its recent inquiry for 500 tons of 50 per cent ferrosilicon. While the price has not been made public, it is understood to have been not less than $80, furnace, freight allowed. This business appears to have cleaned up the low-priced offerings and while no basis exists for a price of more than $85 on sales, it is doubtful if any maker would accept less than that today. Some are quoting $90 to $100.

Want Round Tonnage

Philadelphia, July 15.—The Midvale Steel Ordnance Co. has out an inquiry for 5000 of 80 per cent ferromanganese of which 400 tons is for August, 600 tons for September and 1000 tons each for October, November, December and January. Other inquiries are small. The market now is at $115 delivered. Current spiegeleisen inquiry includes one lot of 1000 tons. Spiegeleisen is strong and the price is tending toward $35 furnace for 18 to 22 per cent stock.

Some Sales at Chicago

Chicago, July 15.—The price of ferromanganese, which recently was advanced to $125, has gone back again to $115 for 78 to 82 per cent ferromanganese, freight allowed. Fair-size tonnages have been booked at the reduced figure, and furnaces again are establishing a backlog. Spiegeleisen is quoted all the way from $30 to $35, f..ob. eastern furnace, and a number of sales of 500 and 1000-ton lots have been made at this figure.

Plate Inquiry is Better

Export Demand More Liberal and Sales Made at 2.55 and 2.60—Chicago Car Builders in Market—Price Shading Continues

New York, July 14.—Of the various plate inquiries mentioned in last week's report only one has been closed, this involving 535 tons of ship steel for France, which are to be furnished by an eastern mill at 2.55c, Pittsburgh. The mill granted a 10 days' extension of credit and put itself under bond to make shipment within seven days. Many new export inquiries now are out and a few are regarded as sure to be placed in the near future. The most promising call for 7000 tons of ship plates for Norway, 5000 tons for Italy, 2300 tons—which may be doubled to 4600 tons—for France, and several hundred tons for China. Recent sales of ship plates include a lot of 5000 tons for export at 2.60c, Pittsburgh. An eastern platemaker about 10 days ago booked several hundred tons for export at 2.50c, Pittsburgh. As shown by these transactions, the market on plates for export may be quoted at 2.50c to 2.60c, Pittsburgh.

One large domestic consumer has bought a round tonnage of ship plates at 2.50c, Pittsburgh. How generally this quotation might be done is not known. One large user says he could buy from no fewer than four mills at 2.50c but admits that he has not yet made any purchases on this basis. In some cases, sellers say that they have no doubt that if a good-sized plate tonnage were offered, it could be placed at 2.50c. Small transactions which comprise the current domestic business, however, appear to be going mostly at 2.65c. One eastern mill is quoting nothing less than 2.75c, and is getting small tonnages at this figure. The biggest single lot in sight is approximately 7000 tons for section 2 of the Jersey City pipe line, but there is nothing definite as to when this order will be placed. Included in current inquiries are a number from eastern railroads for third quarter shipment but definite tonnages have not been given. It is not believed these requirements will be heavy.

Shaded Prices Are Reported

Cleveland, July 15.—Consumers of plates in this and nearby territory are repeating declarations to the effect that they can buy this product from certain mills on an attractive specification as low as 2.50c, Pittsburgh. The larger producers, however, seem to be holding the 2.65c price firmly. The principal activity in plates appears to be in tank work for oil field purposes. Local fabricators are figuring on a number of gas coolers which will require 400 to 500 tons of plates and 6350 boiler tubes representing about 250 tons.

Demand Somewhat Better

Pittsburgh, July 15.—Although domestic demands for plates do not amount to much outside of the tonnages for oil tanks and for the larger sizes of line pipe, a little more interest is apparent upon the part of the ship and car builders. Quite a few export inquiries also lately have been received for ship plates. Among the latter was one for 5100 tons for Japan and 6000 tons for Italy. Although the mills are not heavily crowded with orders, at least one company here did not quote on the Japanese inquiry on the ground that improvement is not far off in the general demand for plates and does not want to be too heavily committed. As a general rule prices are firm at 2.65c, Pittsburgh, for tank plates but less is being accepted by a few of the smaller companies.

Car Builders Seek Tonnage

Chicago, July 14.—Three car building companies in the Chicago territory have inquiries out for large tonnages of plates. The Ryan Car Co. is asking for prices on approximately 3000 tons, while the Liberty Car & Equipment Co. is in the market for about 2000 tons. Another interest is seeking several hundred tons. These are the largest inquiries to have developed here during the past week. Tank and ship builders are continuing to take large tonnages.

Little Better in East

Phildelphia, July 15.—Plate orders are better but they still are not sufficient to sustain the operations of eastern makers at more than 30 to 40 per cent capacity. Some fair orders are originating in the requirements of the oil districts. One consumer placed the plates for 115 boilers for operating oil drills. The largest order said to have been placed here was for more than 400 tons for the Chester shipyard. Reports of shading in other districts have an echo here. An Ohio maker weighed the scrap extra on a recent sale to the government. Export inquiries include the steel for 25 locomotives each requiring 40 tons of plates.

Adopt New Schedule

New York, July 14.—Effective today, leading warehouse interests in the east have adopted a price equalization schedule, similar to that now employed in the middle west. By this schedule, the jobbers will equalize their prices with the different warehouse centers located on the Atlantic seaboard, consisting of New York, Boston, Philadelphia and Baltimore. This change will enable consumers located outside of these districts to have the advantage of using these markets on an equality basis. Trading in warehouse materials throughout the east continues somewhat restricted. Jobbers report that demand still is rather light, and that the mills, with their prevailing good deliveries, are affording formidable competition.

Shape Outlook Brightens

Miscellaneous Building Work Appears in Steady Volume—Moderate Sized Jobs Numerous at Chicago and in East

Chicago, July 15.—A large number of small structural tonnages are being placed or figured in the Chicago territory, but business in the aggregate does not seem to be improving to any great degree. The general run of fabricating shops are operating around 50 per cent of capacity and while prices are strengthening and healthy improvement is in sight, the market continues comparatively dull. The Ryan Car Co., the Liberty Car & Equipment Co., and another car company in this territory are in the market for several thousand tons of shapes for car construction. In the building line, the largest inquiries before the local market come from Massachusetts, the Nelson Corp., Cambridge, taking bids on 2600 tons for a new manufacturing plant, while the Leonard Construction Co., of Chicago, is taking bids on 420 tons for a 500,000-cubic foot gas tank for the Beacon Oil Co., Everett, Mass. A great amount of construction work is under way at the latter plant, including the building of agitators, stills and vats, which will require in the aggregate 3000 tons of structural steel.

Eastern Busines Unsatisfactory

Philadelphia, July 15.—Although there is some improvement in the shape demand here it is considered far from satisfactory and producers are beginning to view somewhat pessimistically the outlook for the rest of the year. Not one sizable, structural job was let the past week and no early developments are promised in the large number of projects of which bids have been taken. Sears-Roebuck & Co. will build a large warehouse here but it is not known whether it will be of steel or concrete.

Situation is Looking Better

Pittsburgh, July 15.—Although the shape mills in this district are not crowded with business, inquiries are coming along more freely. In view of the more cheerful reports as to building activities and the possibilities of a greater demand at no distant date from the shipyards, in connection with the reconstruction work in France and Belgium, the trade is more optimistic. Structural lettings are fairly frequent and are running into fair sized tonnages, with the fabricating shops busier now than they have been in some time.

Fair Activity Continues

Cleveland, July 15.—Although the award has not been made on the fabricated steel for the Hanna building in this city, it is reported that the Fort Pitt Bridge Co. is the low bidder. The tonnage involved is about 7500 tons. It is also reported that the contract may not be placed immediately as material costs for the building are running higher than anticipated by the builders. Structural business continues active with numerous inquiries coming into the market and a satisfactory number of awards being made. Some company representatives report that they have sufficient business on hand to make them disinclined to press for further contracts at present prices. The Detroit-Edison Co., Detroit, is inquiring for 2000 tons for a service station.

Miscellaneous Work Increases

New York, July 15.—Activity in the local structural market is steadily increasing. At the moment no particularly large tonnages are up but there are numerous miscellaneous projects afloat requiring sizable lots. A number of school buildings are being figured upon involving from 100 to 200 tons each. In addition there are various commercial buildings and also several new theaters. At least two theaters are projected for Brooklyn.

CONTRACTS AWARDED

Plant extension, Edison Electric Appliance Co., Chicago, 454 tons; to Milwaukee Bridge Co.

Forge shop, Whitman & Barnes Mfg. Co., West Pullman, Ill., 601 tons; to American Bridge Co.

Building for U. S. Food Products Corp., Peoria, Ill., 400 tons; to Lucas Iron Works, Peoria.

Building for National Improvement Co., Kansas City, Mo., 162 tons; to American Bridge Co.

Building for Northwestern Telephone Exchange Co., Minneapolis, Minn., 1214 tons; to Minneapolis Steel & Machinery Co.

Building for Eggers Veneer Seating Co., Two Rivers, Wis., 175 tons; to Milwaukee Structural Steel Company.

Machine shop Colborne Machine Co., Cleveland, 450 tons to the McClintic-Marshall Co.

Building for the Vlchek Tool Co., Cleveland, 200 tons for the McClintic-Marshall Co.

Building for the Wyckoff Steel Co., Economy, Pa., 300 tons with the McClintic-Marshall Co.

Extension to plant of Alberger Pump & Condenser Co., Newburg, N. Y., 100 tons to the John W. Cowper Construction Co.

Rudolph Wurlitzer Co. building, Thirty-first street, New York City, 2700 tons, to Levering & Garrigues.

Stables for B. Altman & Co., New York City, 900 tons, to Post & McCord, and expected to be fabricated by American Bridge Co.

Marlan-Rockwell office building, New York City, 900 tons, to Hedden Iron Construction Co.

Two garages, Fifty-fourth street, New York City, 300 tons each, to Hay Foundry & Iron Works.

Office building for American Law Book Co., Brooklyn, 200 tons, to Hay Foundry & Iron Works.

Addition to stock exchange, New York City, 500 tons, to Levering & Garrigues.

Government warehouse, at Quantico, Va., 500 tons, to McClintic-Marshall Co.

Addition to Vanity Fair Silk Mills, Reading, Pa., 400 tons, to Shoemaker-Satterthwait Bridge Co.

Loft building in New York City, 650 tons, awarded to the George A. Just Co.

CONTRACTS PENDING

Machine shop for George B. Lambert, East Chicago, Ind., 350 tons, bids being taken.

Manufacturing plant for Nelson Corp., Cambridge, Mass., 2600 tons, bids being taken.

Factory building for Hill Pump & Valve Co., Chicago, 300 tons, bids being taken.

Building for Montgomery, Ward & Co., Springfield, Ill., 400 tons, bids being taken.

Shop building for Vitrolite Co., Parkersburg, W. Va., 450 tons, bids being taken.

Boiler house for Whitman & Barnes Mfg. Co., West Pullman, Ill., 310tons, bids being taken.

Truss and girder spans for Missouri, Pacific railroad, 310 tons, bids being taken.

Grain elevator for Southwestern Milling Co., Kansas City, Mo., 461 tons, bids being taken.

Gas tank for Beacon Oil Co., Everett, Mass., 420 tons, bids being taken.

Service building for Detroit-Edison Co., Detroit, 2000 tons. Award soon.

Addition to factory, Maumee Malleable Castings Co., Maumee, O., 200 tons. Bids asked.

Keith's Theater, Bronx, New York City, 500 tons. Bids being taken.

Addition to Warren Cotton Mills, Massachusetts, 500 tons, bids being taken.

Y. M. C. A. at Bayonne, N. J., 500 tons, bids being taken.

Theater building at Philadelphia, 450 tons, bids being asked.

Light Rails

In Better Demand and Low Seller Withdraws—Other Buying Slow

Chicago, July 14.—Demand for light rails is improving a few contracts having been placed with one mill in the Chicago terrtiory from three to six months ahead. Coal mines are taking most of the rails in anticipation of heavier operations this fall. Quotations are unchanged, although leading interests intimate higher prices may be expected in the near future, and some rerolling mills already are understood to be asking more. A few sales of small tonnages of heavy rails have been made but business in this line is still of an inconsequential nature.

More Demand for Light Sections

Pittsburgh, July 15.—One of the interesting developments in the market for track material is a decided improvement in the demand for light sections and a slight firming up in prices. Coal mine development is being prosecuted on a heavier scale and greater industrial activity also accounts in part for the larger demand. Quite a few export inquiries also have been received lately. One sale of 80 tons of 40-pound rails for a coal operation at the full price of 2.45c, Pittsburgh, is noted. It is doubtful if this price now would be shaded on rails running 20 pounds and over and the lower quotation even elsewhere refers to sections below 20 pounds. Makers of standard rails still are looking forward to additional orders from the railroad administration before the roads are turned back to private ownership. Such domestic orders as now are coming in are chiefly in small lots for repair work. A fair amount of export business in standard rails is coming to the Carnegie Steel Co. but details as to tonnages are not available here. Small spikes are being ordered quite freely by the jobbers but not much activity is observed in standard spikes.

Withdraws Low Rail Price

Cleveland, July 15.—Some producers of light rails who were selling this product rolled from shell steel as low as 2.05c, Pittsburgh, for 45-pound sections, now have withdrawn this low price. It is understood, however, some mills still will accept business at 2.25c, mill.

Pipe Orders Go Begging

Buyers Split up Tonnages of Lapweld in Effort to Get Mill Position—Wheeling Advances Prices—Cast Product Improving

Pittsburgh, July 15.—No material let down is observed in the demand upon pipe manufacturers for lapweld sizes. As a matter of fact, several 100 miles of line pipe still are seeking the manufacturers. Pipe line companies having failed to get makers to bid on their individual requirements in many cases have split the tonnages into small parts in an effort to get these placed. Even this means of placing business has not succeeded for manufacturers without exception are booked as far ahead as they care to be. The Wheeling Steel & Iron Co. has announced an increase recently of 2½ points on buttweld and 5 points on lapweld pipe which in the failure of other companies to follow, merely amounts to a withdrawal from the market of that company. Demands for buttweld pipe steadily are gaining and as has been the case recently, shipments are running considerably in excess of production which would point to an early increase in buttweld furnace operations. The National Tube Co. has not yet put its Riverside plant, Benwood, W. Va., in operation, but it is understood that these works are ready for resumption at short notice. Further expansion of the merchant pipe demand is likely to be followed at the reopening of the works. Demand for boiler tubes has increased considerably and some makers are not promising shipments at better than three weeks.

Advance Not Yet Followed

New York, July 14.—The Wheeling Steel & Iron Co.'s issuance of a new card July 11, advancing lapweld pipe by 5 points, or $10 a ton, and buttweld pipe by 2½ points, or $5 a ton, effective immediately, has not yet brought forth any action on the part of other makers. No decided views favoring the general adoption of the advance are heard, and one maker thinks that a general advance to the higher level at this time would be premature. In the meantime, the pipe market continues very satisfactory. Demand for lapweld for the various oil districts continues active but the mills have so much of this business on their books that they are chary about adding more. Demand for buttweld, which for some time showed a lagging tendency, has been improving greatly of late. In fact, it now is considered likely that unfilled tonnage within another month will have reached such proportions as to make it difficult to place orders for prompt shipment.

Eastern Market is Dull

New York, July 14.—Municipal inquiry is still lacking in the eastern cast iron pipe market. There are a few tonnages afloat, but all are relatively small. Included in the small municipal lots to be placed of late is that of the city of Providence, R. I., involving about 90 tons of 4 and 6-inch pipe. This business went to the United States Cast Iron Pipe & Foundry Co. on a bid of $58.10 for the 6-inch and $61.10 for the 4-inch. Private inquiry continues to hold up well, with the result that a fairly good amount of business is being done.

Mills Running Heavily

Youngstown, O., July 15.—A maker of lapweld pipe in this district is refusing to quote on further business. Most shipments from this territory are going into the oil country. Standard size pipe is opening up and a good business is being done.

Demand Continues Strong

Chicago, July 15.—Continued strong demand is noted in the cast-iron pipe trade. The leading interest reports that demand at present is in excess of production. This producer is unable to obtain sufficient number of men to operate at capacity, owing to the hot weather. No price changes have been made, competition in a number of fairly large jobs being keen. The United States Cast Iron Pipe & Foundry Co. has been awarded 1200 tons of 24-inch by Springfield, Ill. Denver, Col. will take bids July 22 on 3070 tons, ranging from 6 to 8 inches and specials. Among other inquiries out are the following: Minneapolis, 500 tons of 6, 8 and 12-inch; Lakewood, O., 250 tons of 10-inch; Ashland, 650 tons of 16 and 24-inch; Ashland, O., 650 tons of 16 and 24-inch; Ash-Clarinda, Iowa, 212 tons of 4 and 10-inch; Great Falls, Mont., 150 tons of 6 and 12-inch, and Sandusky, O., 75 tons of 6 and 8-inch.

Southern Plants More Active

Birmingham, Ala., July 15.—All kinds of cast iron pipe is in demand now and soil pipe plants in particular are working to full capacity with some tightness appearing in the labor situation. Purchase of pig iron and scrap by local manufacturers of cast iron pipe indicate a stronger faith in the future.

Tie Specifications Good

Pittsburgh, July 15.—Makers of cotton ties are getting good specifications against sales which were largely concluded last month on a basis of $1.70 per bundle of 45 pounds in lots of 3000 bundles or more. The carrying charge of 1½ cents per bundle per month added on to the June price means $1.71½ for July shipments. Production of ties is based on a probable cotton crop of between 12,500,000 and 13,000,000 bales of cotton and as there is a possibility of a larger yield, additional bookings may be necessary.

The Nonferrous Metals

	Copper	Future Straits N. Y.*	‡Lead, New York basis	Zinc St. Louis basis	Aluminum	Spot antimony

‡American Smelting & Refining Co.'s price.
*July shipment from Singapore, c.i.f. New York.

NEW YORK, JULY 15.—Having overdiscounted after war transition to peace conditions, the metal markets have been hurrying to put back metal prices in their proper position relative to other commodity values. The recent rising markets in copper, lead and zinc have been accompanied by a good demand, both domestic and export. Japan has been a heavy buyer of copper, zinc and lead. Her copper purchases are estimated to exceed 16,000 tons, while she has also taken thousands of tons of lead, zinc and other metals. The copper market has advanced to about 22c for spot and nearby delivery, as compared with prices of below 15c done a few months ago. Zinc has advanced from 6c to 7.65c; lead from 5c to 5.50c. Labor troubles and unrest at mines and smelters are one cause for the rising market. Another cause is the German ratification of the peace treaty, which is expected to be followed by negotiations for raw materials shortly, although Germany has not been a direct buyer in this market yet.

Wire mills and brass makers have been buying copper, covering August and September requirements, although the large producers generally are not taking orders for September. Copper and brass products prices were advanced one cent a pound last week, bringing the total advance to 4c a pound in about two weeks. Sheet copper at 29.50c a pound base is based on 20.50c electrolytic copper, whereas the copper market passed 21c on Monday, leading to expectation of a further advance in products prices quickly.

Although it had been expected that the lifting of restrictions on trading in tin, consumers having tin for resale would unload some of this metal, it develops such consumers do not feel disposed to do so, not having more than a comfortable surplus on hand. The disparity between the American and world markets continues, spot Straits tin being quoted 71c in this market, as against 52c in London and 52.25c for July shipment from the Straits; domestic 99 per cent tin is quoted 68c, as against 52c quoted on English Lamb & Flagg tin quoted for August arrival in this country.

The antimony market is higher with better demand, business having been done at 8.50c, duty paid, New York, both on spot and future shipment.

The American Smelting & Refining Co. July 14 increased its lead price $2 a ton, to 5.50c a pound, New York. Demand for lead has been good and outside sellers have been obtaining substantial premiums over the leading interest.

British Steel Prices Still Rising

English and Scotch Makers Put up Schedules $2.40 to $7.20 Further—Propose Boycott of Supplies to Buyers of American Material—Belgian Offers Suspected of German Origin—Pig Iron Also Higher

Bureau of THE IRON TRADE REVIEW,
Prince's Chambers, Corporation St.,
Birmingham, Eng., June 27.

IN spite of the concern as to foreign competition British steel prices are rapidly rising. Several advances have been declared this week, as steelmakers have been in conference and have decided to put up prices. Steel plates, angles and sections have been advanced 15s ($3.60), joists 10s ($2.40) and heavy steel rails £1 ($4.80). It has already been pointed out that a foreign railway has bought American steel rails at $47 or under £10 ($48) per ton, and the obvious inference is that the extensive appropriation of the foreign rail business by America will receive a new impetus. As the result of several meetings held last week, Scotch steelmakers have issued new price lists showing an advance of from 15s ($3.60) to 30s ($7.20) for materials for delivery in July. This makes boiler plates £21 ($100.80), ship plates £18 5s ($87.60), angles, etc., £17 15s ($85.20), small flats, rounds and squares £20 5s ($97.20), and forging blooms and slabs £19 15s ($94.80), all net for Clyde delivery. Export prices for July are as follows: Boiler plates £21 ($100.80), ship plates £18 10s ($88.80), angles, etc. £17 15s ($85.20) and small rounds, flats and squares £20 5s ($97.20), net cash f.o.b. Scottish port and subject to revised list of extras on the basis of May 1. There is a strong demand for steel plates for home use and export, and the mills are behind in their deliveries. The case, however, is rather different with steel sheets, orders for which are keenly sought.

American Competition Not Liked

The formidable American competition is naturally attracting a good deal of attention, and has provoked some little resentment. The British makers are not very well pleased that our allies in the war should have so quickly become strenuous competitors for the world's business, and especially in the home market. The iron and steel trades now are better organized than they have ever been, and they are not inclined to take this competition lying down. A policy which has been introduced and which appears to find favor is that of imposing a boycott on all who buy foreign steel. It is suggested that purchasers of American or other foreign material shall be warned that if they buy abroad they must look to the foreigner for the whole of their supplies.

Germany Seeks British Orders?

Among the most remarkable of foreign offers which has reached a well known Birmingham merchant is a letter received this week from a Belgian exporter, who did an active business in prewar times in shipping to this country continental steel, both finished and unfinished. The writer signified his ability to supply bars, rods, hoops, galvanized wire, rods in coils and steel joists. For bars delivered in the district £18 19s ($91) was quoted, and for thin hoops ½ up to 3 inches in width by $\frac{1}{18}$-inch in thickness a general quotation of £24 17s 6d ($107.40) was given. In view of the extensive destruction of Belgian works and the enormous requirements of that country for some time to come this quotation, to put it mildly, was unexpected, and is regarded with no little suspicion because this exporter, before the war, sent here a large quantity of German as well as Belgian material. Very little doubt is entertained by the recipient of the offer that the steel for which quotation is given has its origin in Germany.

A well-known Birmingham ironmaster who has just returned from Brussels states that a number of the Belgian works have restarted and the restoration of others is being pushed forward as rapidly as possible. He was informed that a lot of steel had been ordered from America but, like British buyers, the Belgians are finding American deliveries very slow.

Labor troubles here are not quite so serious as they were. The ironworkers appear to be in a somewhat more reasonable frame of mind and at one large works where they had given notice to cease work, in direct defiance of the well known rules of the wages board, they have now expressed their willingness to accept the ruling of the board and a compromise is in course of arrangement.

All pig irons are dearer this week, the most important advance being a rise of £1 ($4.80) in hematites which brings the East coast hematite up to £10 10s ($50.40) for home consumption. This followed an important advance in finished steel prices. The supply of steelmaking irons is so deficient that the steel works can only maintain their output by the extensive use of scrap, which is fairly plentiful. Makers are very careful about accepting orders for forward delivery. The position has been eased a little by a better supply of rolling stock and an improved output of ore, but the latter still is not up to requirements. At the Barrow furnaces the pressure is very great for low phosphorous qualities, and it is believed that the production of half a dozen more furnaces could be readily absorbed if they could be started. Efforts are being made to speed up ore production by improving the wages of the men, but unfortunately high wages for all work connected with mines have usually had the opposite effect. It is possible that the demand for high qualities may be partially met by reducing the make of ordinary irons but this would be a very defective remedy, since all the ordinary grades now produced is urgently wanted.

Pig Iron Prices Higher

The Midland irons sold on the Birmingham market are all dearer with increases ranging from 2s 6d (60c) to 5s ($1.20) per ton. The makers justify this by the important increase in the cost of production resulting from higher wages and by the keenness of the demand from all their customers. It is quite likely that a definite advance possibly of a substantial character would be declared between now and quarter day, which is due on July 10.

The shortage of foundry iron is becoming serious in view of the enormous demand for engineering of all kinds, the navy and mercantile marine still being very good customers. Prices of ore are advancing largely on account of freight increases. The general expectation is that further advances are to be looked for when coal prices are definitely fixed for the autumn. There is every probability that coal will be scarce and dear for the next 12 months.

Exporters Make Sales to Europe

Increased Interest Shown in France as Many New Inquiries are Received — Business With Occident Rivals Trade With Orient—South American Opportunities Are Decreasing—Large Credits are Arranged

NEW YORK, July 14.—Exporters now are finding it difficult to obtain any of the concessions in iron and steel prices which were granted readily during the past few months. This is the first tangible indication of a strengthening of prices. Ever since the signing of the peace treaty price concessions have been gradually diminishing. While this shift in quotations is in progress it is increasingly difficult to sign up foreign business. By the time cables under prevailing delays are exchanged the prices are altered, thereby necessitating the reopening of the negotiations.

Inquiries are being received from nearly all markets and for products of all descriptions. With the abandonment of the import prohibitions, new French inquiries appear to predominate. It is too early, however, to forecast the probable outcome of these. France has purchased 535 tons of ship plates and has made inquiry for 2300 tons more. The French inquiries, which have been released, are for the most part in small tonnages, but they cover nearly all materials. One inquiry calls for 500 tons of plates, 500 tons of sheets, 200 tons of pipe, 100 tons of boiler tubes, 100 tons of galvanized wire, 50 tons of bolts and nuts and 100 tons of angles. A sale of 5000 tons of rails to France was probably the largest order recently obtained. Exporters are of the opinion that the opportunities for selling electrical goods in France are excellent. Some electrical material has been sold to England. A sale of 3000 tons of Alabama foundry pig iron was made during the past week for European destination.

English sales are in greater tonnage than the French prospects. Among the sales made to England in the past week were 1000 tons of pipe, 1000 tons of steel bars, 1000 tons of iron bars, 500 tons of hoops and many small orders for miscellaneous material. England also purchased 300 tons of light rails.

Italy has purchased 2000 tons of billets and has inquired for 500 tons of ship plates. Norway has sent in an inquiry for 700 tons of the latter material. Various small orders are being filled with North Africa. Greece is inquiring for bars, etc. Sales to the Leviant are matters for the future. North Africa has recently sent in an inquiry for nails.

Large Trade With Orient

American business is still able to reach out into what was formerly British markets. Some bars and semifinished material have been sold to India, and Australia has purchased structural steel. A sale of 30 tons of copper sheets to Australia was reported by one house. India has purchased 1000 tons of bars, and is now inquiring for various quantities of rivets, bolts, nuts, and structurals. A sale of approximately 3000 tons of material was made to Japan within the past week. This included plates, bars, sheets, and wire. The largest of the individual orders was around 500 tons. An inquiry from Japan calls for 100 tons of copper ingots. One house now is closing with Japan on 15,000 cases of tin plate. Several sales in lots of 1000 cases were reported. Japan also purchased approximately 1000 tons of rails, and has let a number of orders for plates in tonnages not exceeding 200 tons each. There are many Japanese inquiries for shipbuilding material in the market but these are not new by any means.

That China has developed into a good customer of American iron and steel is attested to by the compilation of imports for the year 1918. These figures show that China purchased 31 per cent of her galvanized sheets from the United States, 38.5 per cent of her iron and milled steel, 45.5 per cent of her nails and rivets, 15 per cent of her railway material, 54 per cent of her sheets and plates, and 61 per cent of her tinned plates. There was a temporary check to foreign orders following the armistice, but the purchasing movement has been reinitiated in China. Some semifinished steel was sold to China during the past week. That country also purchased 3500 cases of tin plate, 2000 kegs of nails, 100 tons of shafting and a small lot of sheets. Several orders of 1000 cases each of tin plate were filled. There has been other scattering business. Among the new Chinese inquiries are noted 500 tons of copper ingots, 500 tons of foundry pig iron and several hundred tons of ship plates.

Probably the most important rail business signed up during the past few days was a sale of 2500 tons to the Philippine islands. Included in this order was 50 tons of spikes and 300 tons of accessories. One house received an inquiry from the Philippines for 750 tons of rails.

South America appears to be selling off, but the reason for this is not generally understood. In the opinion of some this has been caused by the hope of the Latin-Americans for more aggressive competition from Europe, although it is believed that the necessities for financing has something to do with it. A number of South American inquiries, however, are in the market for railroad material, rolling stock, and for various iron and steel products. A sale of 100 tons of galvanized sheets was consummated by one agent. Brazil has purchased galvanized sheets, galvanized wire, plain sheets and tin plate. A sale of 200 tons of shapes was made to Uruguay. Colombia has purchased barbed wire, staples and horseshoe nails.

One house sold approximately 1000 tons of concrete bars to the Dutch East Indies during the past month and is in receipt of more inquiries from the same source.

Mexico has made inquiry for 15,000 tons of rails, a number of standard gage locomotives and narrow gage cars. The inquiry is not creating any great interest owing to the political unrest in that country.

Other producers are now said to be following the lead of Jones & Laughlin Steel Co. and quoting an advance of 10 cents on wire and 25 cents on nails, making the Pittsburgh base price $3.80 on galvanized wire, $3.10 on plain wire, and $3.50 on nails. In addition to the tightening up of prices exporters now declare that it is difficult to obtain prompt deliveries. Another indication of the growth of business is found in the refusal of the mills to ship nails in packages. They insist that orders must be filled in standard kegs only. Heretofore they have been

willing to pack as the purchaser wished.

A bankers' credit of $10,000,000 has been extended to Czechoslovakia. It is understood that this is to bear 7 per cent interest. Applications are pending in the market for credits and loans to a number of other European countries which in the aggregate amount to approximately $100,000,000. These include a number of French industrial credits and loans to Denmark, Finland, Poland and other countries. American bankers are endeavoring to embrace all these loan applications in some general scheme of financing.

The continued high costs abroad coupled with the scarcity of supplies are the direct cause of the breaking down of many of the projected rehabilitation plans of the European governments. The impatience of the Italian public has already made a public demonstration and the French have been compelled to remove most of their import prohibitions in order to let in foreign supplies and thereby reduce the cost of living.

Open All Basing Prices

Action On Pittsburgh Base Against Steelmakers by Western Consumers Before Federal Trade Commission Will be Far-reaching

WASHINGTON, July 15.—Whether the trade custom of freight equalization on Pittsburgh is warranted from a material economic point of view is to be determined by the federal trade commission in acting upon an application for a complaint to be made against the United States Steel corporation by the Western Association of Rolled Steel Consumers. This case is expected to be one of the most far-reaching and important ever before the commission and it is estimated fully a year will pass before the commission will be in a position to settle the matter finally.

While the case which is to be filed at any time now by John S. Miller, attorney for the association, will ask for establishment of a Chicago basing point on all rolled products it actually will apply to every steel producer, consumer and interested community in the country. It is even contemplated the question will be handled in such a broad manner as to take in all metals and other products sold on the freight equalization principle. The association's application will have the form of a regular federal trade commission suit but in reality it will be a friendly test case, this being the understanding of Mr. Miller, his clients, the commission and steel officials.

The test case is the result of a conference here last Wednesday when E. H. Gary, chairman of the United States Steel Corp., appeared with Mr. Miller before the members of the commission to arrange for the full consideration of the subject of which the Chicago, Duluth and other complaints form only integral parts. The meeting was entirely informal and the minutes were kept solely for the purpose of guiding the commissioners, Judge Gary and Mr. Miller in getting the actual case under way.

Mr. Miller, upon invitation of Victor Murdock, acting chairman of the commission, opened the discussion by stating briefly the case of the fabricators in the association he represented. He was accompanied by H. A. Wagner, president of the Wisconsin Bridge & Iron Co., who, at times, gave specific instances how he and his associates are discriminated against in competition with eastern fabricators.

Judge Gary insisted before the commission that when the Chicago complaint reached it, the case should be so handled as to permit all producers, consumers and communities to take part in it and have equal opportunity to be heard and to present their views and arguments. Mr. Miller stated his only interest was to have his clients satisfied, but agreed to not force the issue until, as Judge Gary stated, the question could be settled once and for all.

Will File This Week

Chicago, July 14.—John S. Miller, attorney for the Western Association of Rolled Steel Consumers, announced today that a formal complaint will be filed with the federal trade commission this week alleging that steel producers are dealing unfairly with steel users in the west by insisting on selling material produced at South Chicago and Gary, Ind., on the Pittsburgh base plan.

Will Erect Furnace

New York, July 15.—Plans are being developed it is learned, for the erection of a new blast furnace in the eastern part of New York state. Full details are not yet ready for announcement.

War Orders

Allocated by Institute Are Being Reviewed by Contract Board

Washington, July 15.—The system used by the war industries board and the American Iron and Steel institute in the allocation of steel and of pig iron for the production of steel during the war is being reviewed by the board of contract adjustment of the war department before which are now pending many claims of contractors who seek damages for steel or pig iron manufactured on contracted for informally under the operations of the allocation method. To help clear up the point the adjustment board last week heard J. Leonard Replogle, director of steel supply of the war industries board; W. J. Gruss, assistant to H. G. Dalton, chairman of the institutes subcommittee on pig iron, iron ore and lake transportation and Maj. W. W. MacCleary, representing the army ordnance department in the steel commodities section of the war industries board. Today's witnesses included James B. Bonner, vice chairman of the subcommittee on steel distribution and the institute's representative here during the war.

The contract adjustment board has not reached a decision in the matter but may soon and will use its findings as a guide to the settlement of pending cases.

To Add Sheet Mills

The American Rolling Mill Co. has decided to build additional sheet and jobbing mills to take care of the increased business along this line. The mills will be installed in the Middletown, O., plant at an expenditure of approximately $5,000,000. This expansion reflects the renewed activity in sheet and jobbing mill business which has shown a decided expansion during the last two months.

Report Band Concessions

Pittsburgh, July 16.—It is reported that a number of manufacturers have resorted to the old 1916 bar card in quoting prices for hoops and bands. Although this practice involves only material of No. 12 gauge and lighter, its effect is considerable, inasmuch as it means a concession of from $10 to $11 per ton under current prices. However, the rate of 3.05c, Pittsburgh, has not yet felt the influence of the reported price cutting.

Making High-Grade Tool Steel

Extreme Care is Exercised in Cooling the Ingots After They Are Stripped—Large Steam-Hydraulic Press Kneads the Steel Into Billets—Importance of the Annealing and Hardening Processes

BY JOHN D. KNOX

HIGH-GRADE tool and alloy steelmaking demands accurate control of each operation through which the steel passes, and at every step advantage should be taken of the latest scientific methods. Even with this control, a large personal factor is involved, the steel seeming almost to absorb the personality of the workman through whose hands it passes. This can probably be accounted for by the old saying, "It is the mastery of details that makes perfection." Fully realizing these vital points, which are the result of long experience and high development of the art, many tool and alloy-steel makers, including the Hammond Steel Co., Syracuse, N. Y., have carefully developed their shop and metallurgical personnel. As an incentive for maintaining the workman's interest in company affairs, the policy followed by the officials of the Hammond company is to make the employe a stockholder as soon as he becomes efficient at his occupation.

Since the establishment of the Hammond Steel Co., in 1911, when the plant consisted of a shed and one steam hammer, the policy has been to manufacture various grades of steel on a quality basis. The alloy steels made at this plant include chrome-bearing nickel, chrome-nickel and chrome vanadium. The high-carbon chrome steel is used for making ball, roller and thrust bearings; a steel containing from 3.35 to 5 per cent nickel is used for making transmission and driving shafts, cap screws, piston rods, rams, axles, etc.; chrome-nickel steel is used for making gears and driving shafts; and the chrome-vanadium grade is used for making clash gears, axles, steering knuckles, etc.

Adheres to Electric Practice

The officials of this company are firm believers that steel made in the electric furnace will be freer from inclusions, have a wider hardening range and still give the proper grain refinement with a minimum of brittleness and consequently a maximum of toughness, than steels made by any other process. Consequently the electric furnace is used to make the steel at this plant. The furnace is located on the western end of the melting building which also houses the pressing and tempering departments.

Scrap and pig iron are brought into the plant at the western end and are weighed on a platform scale prior to unloading into concrete bins. Six bins are installed and these afford a storage capacity of approximately 600 tons. They are located near the electric furnace. The material is transferred from the bins to the charging floor by means of an electric magnet which is suspended from a 10-ton crane. The latter was built by the Pawling & Harnischfeger Co., Milwaukee. The furnace charge usually includes Swedish or American iron or both and the best quality of scrap. These materials are weighed on a platform scale prior to being charged into the furnace.

The electric furnace has a capacity

FIG. 1—1000-TON PRESS WHICH IS USED FOR COGGING THE INGOTS INTO BILLETS OR FOR PRESSING INGOTS INTO SPECIAL SHAPES. IN THIS INSTANCE A LARGE SHAFT IS BEING FORMED

FIG. 2—TAPPING A HEAT OF STEEL FROM A 10-TON ELECTRIC FURNACE

for melting 10 tons per heat. Throughout the melting operation, samples of the metal are taken to the chemical laboratory which is housed in a lean-to just off the melting department, and analyzed. When the steel is brought up to the desired analysis it is tapped from the furnace either into a 10-ton or two 5-ton ladles. Fig. 2 shows a heat of steel being tapped. An oil blast is used for drying the newly-lined ladles and for preheating all ladles prior to their being put into service. When the heat of steel has been tapped from the furnace, the ladle and its contents are hoisted by means of a crane and placed on a ladle carriage. The latter is similar to those used in crucible plants. It consists of a cradle mounted on four wheels which operate on steel rails. The ingot molds are set in a pit between the rails and by positioning the tap hole of the ladle over the various molds, the entire heat of steel is poured into ingots. The pouring operation is shown in Fig. 3.

FIG. 3—POURING A HEAT OF STEEL FROM A LADLE INTO A CAST-IRON MOLD

Various sizes of ingots, from 9 x 9-inch, weighing 800 pounds, to 30 x 30-inch and 30-inch fluted weighing 4 to 5 tons, are molded, hot tops being provided on all molds for the purpose of eliminating pipes. The practice followed at this plant is to pour the steel into the molds which are placed with the small end down. By means of this arrangement the solidification of the ingot is from the bottom up. If the metal contains any impurities they will gradually work their way up to the top of the ingot where the metal remains molten the longest. After solidification is completed, the molds are removed and the ingots are allowed to stand in the air until almost black. They are then placed in a pit equipped with a cover where they remain until cold. Considerable care is exercised in cooling the ingots slowly because much depends upon this particular stage of steelmaking in cases where quality production is desired.

Ingots Cogged Under Press

Practically all the ingots made at this plant are worked under a press, the Hammond officials contending that the structure of the metal is more thoroughly kneaded than by other methods. Prior to breaking down, the ingots are charged cold into a coal-fired furnace which is practically cold itself. Four double-door furnaces are provided. Heating the ingot slowly tends to prevent any uneven expansion and consequently internal bursts. When the ingot is brought up to the desired temperature, it is balanced on a heavy steel bar suspended from a crane and transferred to a 1000-ton steam-hydraulic press. The latter, which is shown in Fig. 1, was built by the United Engineering & Foundry Co., Pittsburgh. The crane which serves the press, is equipped with a 10-ton hoist and a 3-ton auxiliary. Suspended from the latter is a manipulator which was built by the Brown Hoisting Machinery Co., Cleveland. During the process of breaking down, the scale is blown from the surface of the steel by means of compressed air, this being the sole duty of one workman.

After the ingot is broken down sufficiently, the resultant bloom or billet, as the case may be, is transferred to the chipping department where any surface imperfections, such as seams, scale pits, etc., are removed by means of air-operated hammers. Just off from this department is the grinding department which is equipped with six electrically-driven grinders

of the swing type. Where a highly-finished material is specified, such as high-carbon chrome steel, the billets, before being ground, are pickled in a 7 per cent solution of sulphuric acid and washed in order to remove any scale. The pickling process brings out any scratches on the surface of the steel, which in some cases are only 0.064-inch deep. The billets or ingots, after the grinding and chipping operation, either are removed to the stock yard to apply on orders or they are taken to the hammer shop for further working.

The stock yard, as shown in Fig. 7, is equipped with two industrial tracks and hand-operated cranes. These tracks connect the steel-melting and hammer shops and are a combination of the industrial track system installed throughout the works. This system is used extensively as a means of transferring the steel, during the process of manufacture, from one department to the other. Prior to forging the steel into the shape desired, the ingots or billets are reheated in coal-fired furnaces near the hammers. A monorail system built by the Shepard Electric Crane & Hoist Co., Montour Falls, N. Y., is used for transferring the coal from the storage pile to the individual hammer furnaces and boiler house, and for transporting steel through the plant at several points. The plant was built under the direct supervision of the T. W. Price Engineering Co., New York. It covers about 14 acres.

In reheating tool-steel billets prior to forging, the policy of the Hammond company is to maintain a clean, even-burning fire in order that the steel may be heated uniformly inside and outside. If the interior is cold the metal is liable to crack during the forging process or at least to have severe strains set up, while if the metal is cold on the surface, small cracks are liable to develop. When the forging temperature is reached, the steel is not allowed to soak but is removed from the furnace, because at this temperature a large grain structure forms and surface decarbonization increases. The steel is then placed under a hammer and reduced to the shape and size specified. Eight steam-operated hammers, ranging from 500 pounds to 4 tons capacity, are installed in the forge department. The 4-ton hammer is shown in Fig. 4. Rounds up to 8 inches are finished under the hammer while larger sizes are finished under the press.

Soft Texture is Given Steel

Adjoining the hammer shop in a separate building is the annealing department. Four double-door, coal-fired annealing furnaces are provided. The temperature of each furnace is controlled by means of pyrometers. The object of annealing is to remove all strains imparted to the steel during the forging process and to give the metal free machining qualities and the correct grain structure for hardening. The correct annealing temperature for steels is slightly in excess of their respective critical points. To obtain the best results, the steel should be heated slowly to just above its critical point, afterward burying the steel in fine ashes, sawdust, charcoal or dry lime. The annealing department of the Hammond Steel Co. is laid out for either box or pipe annealing. The bars, rings, disks, etc., are packed in the boxes or pipes filled with charcoal, and the covers tightly sealed. They are placed inside the furnace and heated to the desired annealing temperature for the particular grade of steel, held at that temperature for the proper length of time and cooled in the furnace. This removes the scale from the steel, reduces surface carburization to a minimum and gives good machining qualities. From 6 to 12 tons of steel are annealed at one charge, depending on the size, the time required for the anneal being from four to seven days.

After the anneal, the bars or other products are either transferred to the stockroom, to apply on orders, or to the heat-treating department for further treatment. The latter department is located in the melting building near the press. It is equipped with three car-type, heat-treating and hardening furnaces which are gas fired. These are shown in Fig. 5. The products made by the Hammond company are too diversified to warrant a description of each hardening procedure. In general, however, the

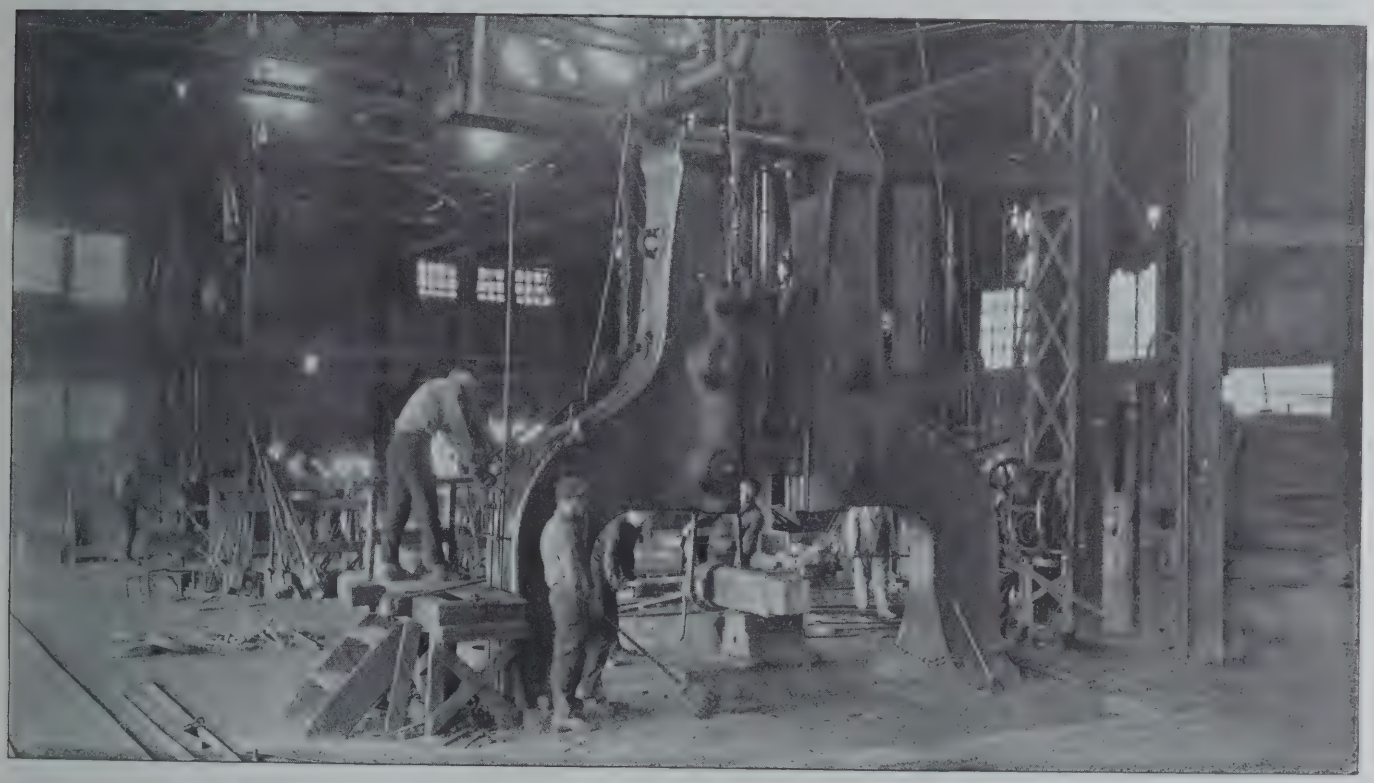

FIG. 4—THIS HAMMER IS USED FOR FORGING HEAVY PIECES OF STEEL. THE HAMMER SHOP OF THE HAMMOND STEEL CO. INCLUDES EIGHT UNITS

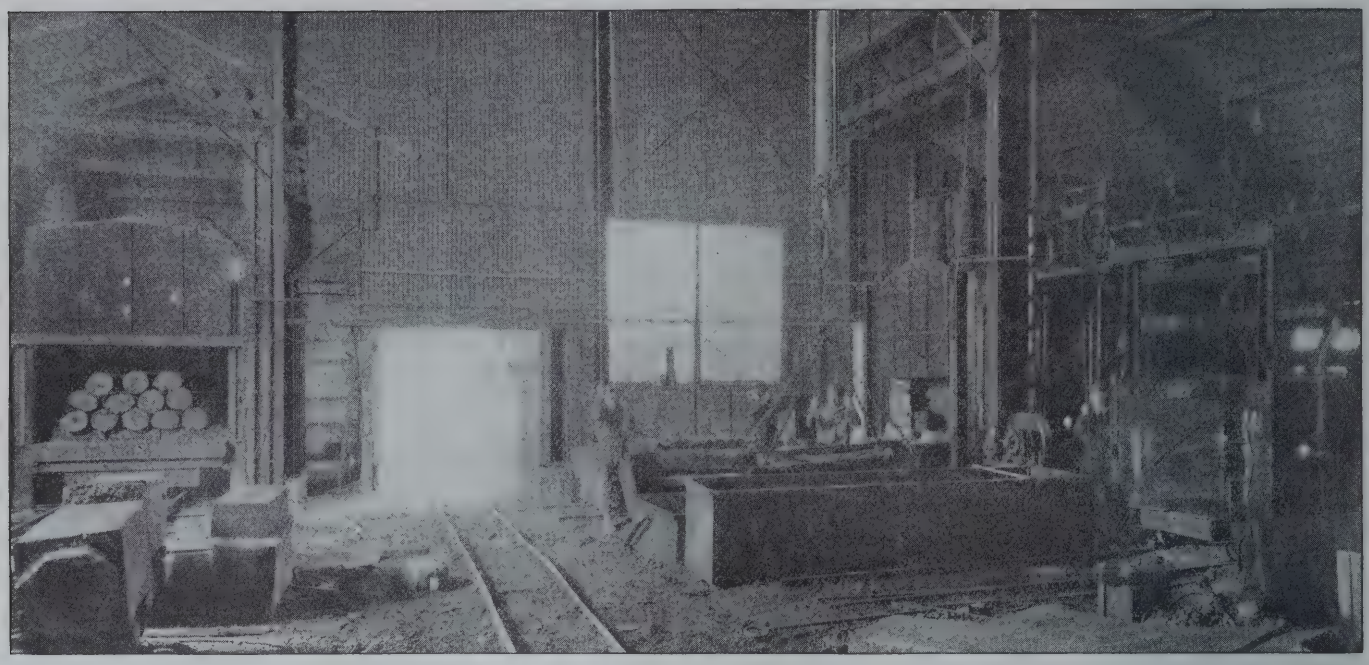

FIG. 5—HEAT-TREATING FURNACES IN THE HARDENING DEPARTMENT. THE INGOT SHOWN AT THE RIGHT BEARS THE MARKS OF THE CHIPPING HAMMERS

steel to be hardened is preliminarily heated. The temperature to which the steel is heated is the lowest temperature at which the piece has the power to harden. This temperature gives the greatest toughness, the maximum grain refinement and a minimum of bursting strains. It has been found that increasing this quenching temperature does not increase the hardness materially, but tends to increase brittleness and grain growth to a dangerous degree. Individual problems, which called for special attention, arose so often that the Hammond company recently installed a fully equipped physical laboratory. Competent metallurgists are in charge. They supervise the hardening of the steel.

Precautions in Hardening

Carefully conducted experiments reveal that pieces with considerable variation in section are best quenched in cottonseed or any good quality of light oil. In order to prevent a sharp junction of the hard and soft sections, steels, which are hardened partially, are kept in motion in the quenching bath. The quench at this plant is made always on the up heat, the steel being heated carefully and slowly in order that the corners of the piece will not be heated too rapidly. After the steel is removed from the quenching medium, the steel is drawn immediately, either by comparison with standard colors or in hot oil to a temperature which will give the properties most suited to the particular grade of steel. The

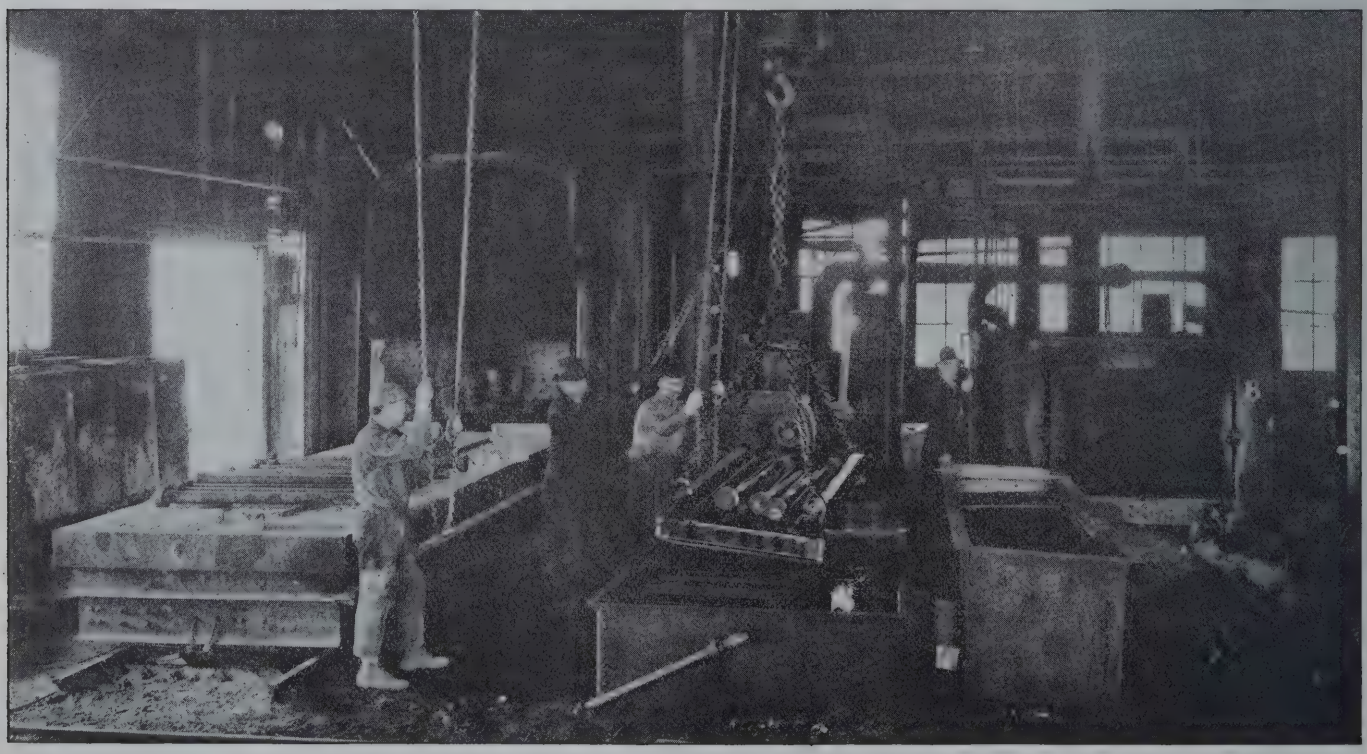

FIG. 6—CAR-TYPE, GAS-FIRED, HEAT-TREATING FURNACES USED TO HEAT STEEL FORGINGS TO THE PROPER TEMPERATURE FOR QUENCHING

quenching tanks are shown in Fig. 6.

The urgent demand made by users of die blocks aroused the company's interest some years ago, and with the co-operation of several users, the company set out to manufacture steels specially for drop-forge dies. A special department is given over to die-block making. In preparing the die blocks for the trade, the ingot is first cogged under the 1000-ton press into a billet. The latter is chipped to remove any surface imperfections and then forged to specifications either under the press or hammers, depending upon the size of the block. The blocks are annealed and then are either shipped or transferred to the heat-treating department for hardening according to the customer's desires.

Other grades of steel made by the Hammond company are used for making shear blades, chisels, spindles, hammers, drills, dies, reamers, knives, punches, taps, milling cutters, piston rods, axles, rams, drive shafts, gear, cap screws, automobile springs, etc. The company is also in a position to forge arbors, axles, shafts, connecting rods, crank pins, spindles, gear and pinion blanks, rolls, etc.

The officials of the Hammond Steel Co. are as follows: F. B. Scott, president; Alexander MacInnes, vice president and sales manager; W. W. Scott, treasurer and general manager; Maxwell Grace, secretary and production manager; Henry Thompson, mill superintendent, and Russell Gebert, chief metallurgist.

New Types of Tanks Are Built By Americans

Two new types of tanks were developed during the war by American engineers, while a third on which production was the largest, was worked out in conjunction with British designers, according to the war department's review of what this nation accomplished in the manufacture of tanks. An outlay of $175,000,000 was contemplated in the tank program but this was greatly reduced on the signing of the armistice. The war department says:

"The large British tank had been successful in its operations on the battle front, but its very decided limitations, recognized by British authorities, caused our officers to think it best to redesign the large tank in preference to copying.

"General 'fighting' specifications for the big tank were laid down by the British general staff at the conference at British headquarters, at which American officers were present. It was agreed that this big tank, known as the Mark VIII, would be of Anglo-American design and construction. Arrangements were made for producing 1500 of this type. To do this, Great Britain and the United States entered into a working agreement that provided for England to furnish the hulls, guns, and ammunition, while the United States was to furnish the power plant and driving details of the monster. Roughly speaking, the tank would cost about $35,000, of which $15,000 represented the American part of the job, on which some 72 contractors were at once engaged. About 50 per cent of the work on these tanks had been completed when the armistice was signed, and the first units were undergoing trials.

"While these Anglo-American tanks were in the process of construction there were also being built here 1450 all-American tanks of the large English type, and for this all-American tank 50 per cent of the work had also been done at the signing of the armistice.

"During the summer and fall of 1918 our tank program had been augmented by the development of two entirely new types of tanks. One was a two-man tank weighing three tons, costing in the neighborhood of $4000 each. This tank, mounting one machine gun, has a speed of about eight miles an hour. Of this type 15 had been built and, up to Jan. 1, 1919, 500 were to have been finished, after which they were to have been turned out at the rate of 100 a day.

The cement industry in California consumes 1,700,000 barrels of fuel oil per annum. If California low-grade lignites and subbituminous coals were pulverized and utilized as fuel to serve this industry, approximately 350,000 tons of coal in the pulverized state, would release for vessel fuel 1,700,000 barrels of fuel oil now being burned.

Treaty Strips Huns of Plants

Germany Loses 74 Per Cent of Her Iron Ore Output, 32 Per Cent of Her Coal, 118 Blast Furnaces and 141 Foundries, According to Official British Figures—Raise Doubt as to Her Ability to Pay

BY JOSEPH HORTON

British Correspondent of The Iron Trade Review

FIGURES emanating from a member of the British financial commission relative to the effect of the blow inflicted upon Germany by her loss of territory under the peace treaty will be of great interest to American industry. The loss of Alsace and Lorraine involves a deprivation out of all proportion to the geographical area and must have a great effect on Germany's position in the future as an exporter of iron, steel and machinery.

By losing Upper Silesia and Alsace-Lorraine, Germany loses 32.7 per cent of her coal output as it was in 1912; 72.4 per cent of her iron ore output as of 1912; 74.7 of her zinc, and 37.8 of her blast furnaces. It has been estimated that the cession of territory in France, apart from the loss of Upper Silesia, will reduce Germany's annual prewar productions of steel ingots from 20,000,000 to 14,000,000 tons, and increase France's capacity from 5,000,000 to 11,000,000 tons.

Out of a total output of zinc of 301,521 tons in 1912, 225,175 tons came from Upper Silesia, and this loss is equally important from the point of view of manufacturers. The number of blast furnaces in Saar and Lorraine in 1911 was 81, and in Upper Silesia, 37, the total representing a loss of 118 out of 312 in the former empire. The loss of iron and steel foundries will be 141 lost out of 1489. In 1913 the German export of iron products, including tinplates, etc., was over £66,000,000 ($316,800,000), equal to 13.2 per cent of her total exports; and the export of machinery and parts, including motor cars, was over £37,500,000 ($180,000,000), equal to 7.5 per cent of her total exports. Coal, coke and briquettes formed 7 per cent of her exports, woolen goods about 3.9, and cotton goods, 5.6 per cent.

Germany will still be able to import iron ore from Alsace-Lorraine and Upper Silesia, but her position will be very different. In addition to her own supplies she imported for manufacture in 1913 over £11,000,000 ($52,800,000) worth of iron ore, equal to 2.1 per cent of her total imports, and it was from Great Britain she obtained the largest share of her imports.

The figures relating to British exports and imports in 1913 follow: To Germany, £43,750,000 ($210,000,000), from Germany, £71,800,000 ($344,640,000). Great Britain was both the largest exporter and the largest importer. Her exports to Germany amounted to 8.1 per cent of her total, and her imports from Germany 14.2 per cent of the total. Germany's exports to the British Empire amounted to 18 per cent of the total.

Naturally there will be a great deal of curiosity to see how this balance of trade is affected, and reports which are expected soon to be made public, may give some indication of the relative position of the two countries in the future. There will be many gaps left by Germany in the world's markets to be filled up, and it seems likely that America must take a large share of this business.

Germany's overseas trade would have to be expanded to not less than two or three times its previous scale to obtain an annual payment of, say, £500,000,000 ($2,400,000,000), proposed as a peace condition, and it is impossible to name the commodities in which this large trade expansion could take place without including those in which there is competition with Great Britain.

The accompanying table shows in detail the losses in coal and iron ore and of blast furnaces and iron foundries which Germany will suffer under the peace treaty.

Losses in Output Germany Will Suffer Under Treaty

	Alsace-Lorraine	Silesia	German empire	Percentage lost by Germany
Iron ore (tons, 1912)	20,083,236	188,286	27,199,944	74.5
Metallic iron content	6,076,629	57,832	8,474,360	72.4
Blast furnaces (1911)	81*	37	312	37.8
Iron and steel foundries (1911)	38	103	1,489	9.5
Hard coal (tons, 1912)	16,173,013†	41,074,632	174,875,297	32.7

*In Saar and Lorraine. †In Saar.

France May Deny Material to Germans

BY FRANCIS MILTOUN

Paris Correspondent of The Iron Trade Review

HAS France bitten off more than she can digest? That is what many economists in industrial France are asking today. Alsace and Lorraine were bound to become French again, but with the reincorporation of Alsace into the French fold has arisen a remarkable state of economics which was quite unforeseen.

Alsace, with Mulhouse as the head center, will practically dominate certain of the lines most prominent in the cotton trade, and this to the detriment of the manufacturers of the northern, invaded provinces. To be sure the factories do not exist today, but they did exist, and in former days the cottonades of Alsace, the famous *toile d'Alsace,* paid a duty to come into France. The cotton industry of northern France was thus protected. It is

so no longer. And not being protected, will it be possible to reconstruct it? This is one of the grave questions in regard to Alsace.

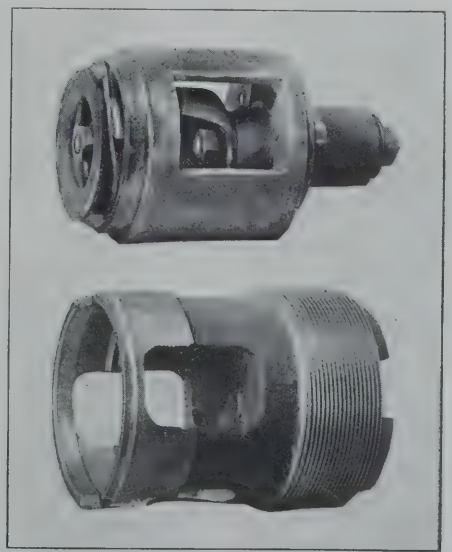
With respect to Lorraine it is a question of iron and steel. With the absorption of the iron fields of Lorraine, France is destined to become the greatest of iron and steel producing countries of Europe. This will be possible by reason of her control over the basin of the Saar, which is contiguous and can furnish the necessary coal for coking. This is a great advantage, for the supply of coal is practically unlimited, although it is said that it is not of the best for the purpose, and by no means the equal of that of the Westphalian fields, which still remain German, while guarded by the army of occupation for a period of five years from the signing of peace. At all events, France now has an abundance of raw materials.

There also is the labor question. France has taken over unseen difficulties in her occupation of the Saar. Not only is a question of labor involved, but one of politics. This is a formidable combination to deal with in a time of reconstruction, but Europe will be working under similar circumstances for the next decade or generation.

France May Withhold Ore

Here is the situation as it focuses itself at Bons in the Saar, where the famous Manessmann brothers have their steel works. It is commonly said that a complete customs reciprocity between the Saar valley and France will entail complete ruin for the former. Its situation up to the present has been highly favored, with its raw material as a medium of exchange, both with the German metropole and with France. Coal is almost on the surface, and scarce 20 miles away are the Minette fields of Lorraine. Today France is master of the coal fields of the Saar and the product will be used entirely for French account, that shipped to Lorraine paying no export tax and that going to Alsace also being exempt from duty to the detriment of the Saar producer. France, in case of need for her own industries of Lorraine, North France and Alsace, may refuse to furnish any coal or iron ore to the contiguous industries of Westphalia, the Palitinate or the German steel works of the same districts, particularly those of the valley of the Ruhr. Without this ore the German iron and steel industry of the bordering regions will dwindle. It is for this reason that the people of the Saar, the operators and manufacturers at least, refuse to accept the idea of annexation with good grace.

The indifference among the workmen of the Saar is nearly universal. Many care little for France or the French. They do not hate them; they ignore them. But they hate the Prussians and the Prussian regime. And the greatest of this undisguised hate for a regime which has ever oppressed them is among the demobilized soldiery.



Politics enter into the situation still further. The Saar region has ever been exploited under a regime far less favorable than that which was extended to the Ruhr, and production in the Saar was curtailed to the point that it might remain at a stationary figure, thereby curtailing the workers' wage. Between 1905 and 1912 production might well have been increased 40 per cent. In 1913 it was 13,000,000 tons when it could easily have approached 18,000,000.

It is for the reasons just cited that it appears that the people of the Saar are by no means disposed to quarrel with the new regime, as compared with that under which they lived since Rochambeau recruited his famous Regiment des Deux Ponts, sent to the aid of the struggling American colonies a century and a quarter ago.

The Saar is to play an important part in the revival of industrial France. Without it, and a free hand, France would be doomed. She has the free hand and the people, barring only the get-rich-quick operators and financiers, who are all for France or at least against Germany; although it is an axiom that all nations, big or little, are egoist nations. This is something that the peace negotiators seem to have ignored.

New Compressor Valve Is Light and Compact

A new air compressor air valve recently designed by the Sullivan Machinery Co., at Claremont, N. H., is small, compact and light in weight. The valve seats in a cage arranged radially to the cylinder axis and close to the cylinder ends, the inlet at the bottom and the discharge at the top. As shown in the accompanying illustration, the valve is held in its seat by a flat annular spring of tempered spring steel, the same material of which the valve is made. To give a wide port opening with a minimum of clearance volume without restricting the passage of air to or from the cylinder, the valve opens against a specially designed guard plate. This guard as well as the spring is accessible after the removal of a screw plug.

VALVE SHOWING THE ANNULAR SEATING SPRING AND THE GUARD PLATE

The construction allows this valve to be placed close to the bore of the cylinder, thus resulting in a corresponding reduction of clearance loss. It is claimed that the light weight and the material used in the valve tends to give a long life. Repair work is simplified by the feature that the same type and size of guards and springs are used for the inlet and discharge valves.

Unloading with this style of valve is essentially the same as with the automatic poppet valve. An air pipe connection from the receiver is controlled by a pilot valve at the side of the cylinder which admits air at the unloading limit to small plunger pistons in the valve plugs. The other end of the piston carries a three-pronged extension which raises the inlet valve from its seat until the pressure in the receiver is reduced and the plunger piston falls, the compressor resuming its operation with the valve seated. When the valve is raised and the unloader is in action, no air is compressed for the piston is simply forcing air through the cylinder and open valves at atmospheric pressure.

A valve of this type has been in use for some time on high-pressure compressors furnished by the Sullivan Machinery Co. to the navy for charging torpedoes up to 2500 pounds per square inch.

The smallest mineral output since 1914 was recorded from Alaska for 1918. The total mineral output for the year was valued at $28,900,000, a decrease of about $12,000,000 compared with 1917. The decrease was chiefly in copper and gold and was due, according to a bulletin of the United States geological survey, to the shortage of labor and ships, and to the high cost of mining. There was an increase of almost 60 per cent in the production of mineral fuels, and a slight increase in the production of chrome ore. The only new item among Alaskan mineral products in 1918 is palladium.

Need World Control of Minerals

Peace League May Require System of International Allocations of Minerals for Effectiveness, But United States' Interests Do Not Demand it— Government Expert Reviews Important Proposal

BY DR. C. K. LEITH

THE annual world production of minerals approximates 1,700,000,000 tons, over 90 per cent of which consists of coal and iron. Of this amount about two-thirds is used within the countries where the minerals are produced and one-third is shipped to other countries. The mineral production of the United States amounts to about one-third of the total.

In the discussion of mineral resources in their international aspects we are concerned primarily with the 33 per cent of the mineral output which moves between countries. It may be assumed that the consumption within the countries of origin is a matter of national rather than international concern.

One of the several interesting facts in this world movement of minerals is that the movement of most of them shows a rather remarkable concentration. For instance, manganese moves from three principal sources and converges at four or five consuming centers. Chromite moves from two principal sources; tungsten also from two.

Even for certain commodities which are widely distributed and move in large amounts the concentration of movements is rather marked. For instance, the world movement of coal is controlled by the United States, England and Germany. In other words, although the world movement of mineral commodities is widespread and exhibits many complex features, most of the individual minerals follow two or three salient lines of movement. This means in general that for each mineral there are certain sources of limited geographic extent, which, because of location, grade, relation to transportation, cost, in short, all the factors that enter into availability, are drawn upon heavily for the world's chief demands. The convergence of these materials toward a few consuming centers indicates generally concentration of coal production necessary to smelting, high development of manufacturing, large per capita use, concentration of facilities, strong financial control and a large element of enterprise which has taken advantage of more or less favorable conditions.

Another significant fact which emphasizes the interdependence of nations and the importance of international considerations is that no country is entirely self-sustaining in its mineral requirements.

Reasons for International Control

We face the immediate and pressing question whether the centralized international control required by the war shall be retained or extended as a means of furthering the aims of a league of nations. When such a league was first proposed emphasis was placed mainly on political and military considerations. It now seems to be recognized that these are so closely interlocked with economic considerations that any league of nations, to be effective as a means of minimizing future international discord, must make provision for some degree of international or supernational control of business. Recent statements by officials of Great Britain and France seem to indicate a definite purpose to urge such control.

Some of the reasons which have been urged for the international control of the movements of minerals are as follows:

To insure equitable distribution of certain minerals, such as tungsten, vanadium, platinum and gold, of which there may be a world shortage.

To mitigate a world shortage of ships by international allocation of ship space, which would entail limitations on the movement of minerals.

To prevent nations which are more advantageously situated in regard to finance, location and general control of trade from monopolizing the business in any commodity at the expense of other nations, in other words, to insure equality of opportunity in regard to basic raw materials. The control of many mineral commodities now approaches national monopoly.

To reach some agreement as to division of markets for commodities such as iron, steel and coal, which are available in so great abundance that several of the larger nations have considerable exportable surplus, in order to prevent international difficulties due to unrestricted competition.

To maintain equilibrium of price.

To insure common and equitable contribution of supplies for rehabilitation of the devastated countries.

To serve as a means of disciplining any nation that will not conform to any code or control established by a league of nations.

In general to prevent economic friction that might vitiate any world political agreements.

To replace the crude and cumbersome arrangements for international control through complex treaties and tariffs by a more centralized system.

The foregoing is merely a list of suggestions that have been made; it is not a unit statement of the requirements of the situation.

The United States is more nearly self-sustaining in regard to mineral commodities as a whole than any other country on the globe. The following statement summarizes qualitatively our position:

FIRST:—Minerals of which there is an adequate supply or exportable surplus in the United States: (A) Minerals of which our exportable surplus dominates the world situation: Copper, petroleum. (B) Minerals of which our exportable surplus constitutes an important but not a dominant factor in the world trade: Sulphur, phosphates, silver, iron and steel, coal, cement, uranium and radium. (C) Minerals of which our exportable surplus is not an important factor in world trade. Small amounts of most of these minerals have been and will doubtless continue to be imported because of special grades, backhaul, or cheaper sources of foreign supply, but these imports are for the most part incidental: Lead, zinc, aluminum and bauxite, gold, tungsten, molybdenum, asphalt and bitumen, pyrite, barite, fluorspar, building stone (except Italian marble), cadmium, gypsum, lime, tripoli and diatomaceous earth, mineral paints (except umber, sienna, and ocher from France and Spain), pumice, garnet, salt (except special classes), talc, arsenic, bismuth, bro-

---

The author of this paper, C. K. Leith, is associated with the United States geological survey and was mineral adviser to the war industries and shipping boards. Dr. Leith, for years connected with the University of Wisconsin and associated with the firm of Longyear & Bennett, Minneapolis, is one of the most widely known iron ore experts in the world.

mine, artificial abrasives, corundum and emery (except Naxos emery), fuller's earth, mercury.

SECOND:—Minerals for which the United States demand must continue to be met by imports: (A) Minerals for which the United States must depend almost entirely on other countries: Tin, nickel, platinum and metals of the platinum group. (B) Minerals for which the United States will depend on foreign sources for a considerable fraction of the supply: Antimony, vanadium, zirconium, mica, monazite, graphite, asbestos, ball clay and kaolin, chalk, cobalt, naxos emery, grinding pebbles.

THIRD:—Minerals normally imported into the United States which in future can be largely produced from domestic sources if it seems desirable: Nitrates (except potassium nitrate), potash, manganese, chromite, magnesite.

Little Advantage for This Country

It is clear that a league of nations offers but little advantage as a means of insuring adequate supplies for the United States and that the limitations on the distribution of exportable mineral supplies would probably weigh more heavily on the United States than on any other country. The few minerals for which the United States is dependent on foreign countries are offset by so many in which we have a dominance of supply, and our financial position is so strong that it appears certain that the United States does not need the aid of a league of nations to insure adequate supplies even of those few minerals. In short, in this respect our entrance into a league of nations would not be based on self-interest. We would sacrifice to some extent an independent and dominant position.

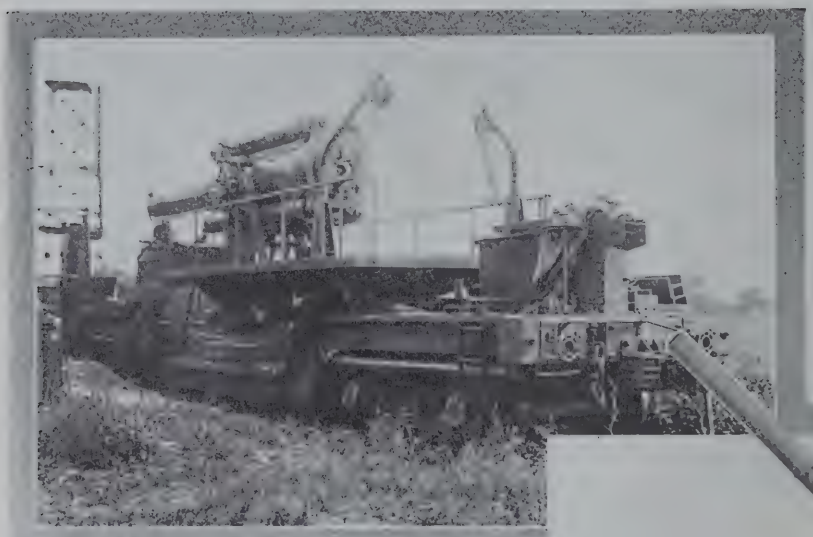
In our dealings with other nations this fact should give weight to whatever emphasis the United States may wish to put on the desirability of international control of minerals. At the same time it imposes a hard task on the United States to arouse the mineral interests to the support of a measure that involves so much self-sacrifice. The value of our annual potential exportable surplus of minerals approximates a billion dollars; that of our necessary mineral imports about $175,000,000. Our active allies, Great Britain, France and Italy, together have a maximum annual exportable surplus worth perhaps $325,000,000, and their necessary imports amount to $265,000,000.

It seems clear that our effort to make this country entirely self-sustaining in regard to raw materials, which has been especially marked during the war, will need to be modified if we are to adapt ourselves to conditions of international control. Although we may be able to become self-sustaining in respect to essential commodities like manganese, chromite and potash, by so doing we are cutting off the export market of other countries where these commodities exist in such quantities and grades that they would be, under conditions of free trade, our principal sources of supply. By drawing on such sources we not only get a cheaper and higher grade of product, but we develop a return market for the products in respect to which our natural advantages entitle us to a share in the export trade.

The potash situation will illustrate the problem. The war cut off German supplies. We made every possible effort to meet the deficiency. Prices rose tenfold. Now, are we to continue this effort at high cost?

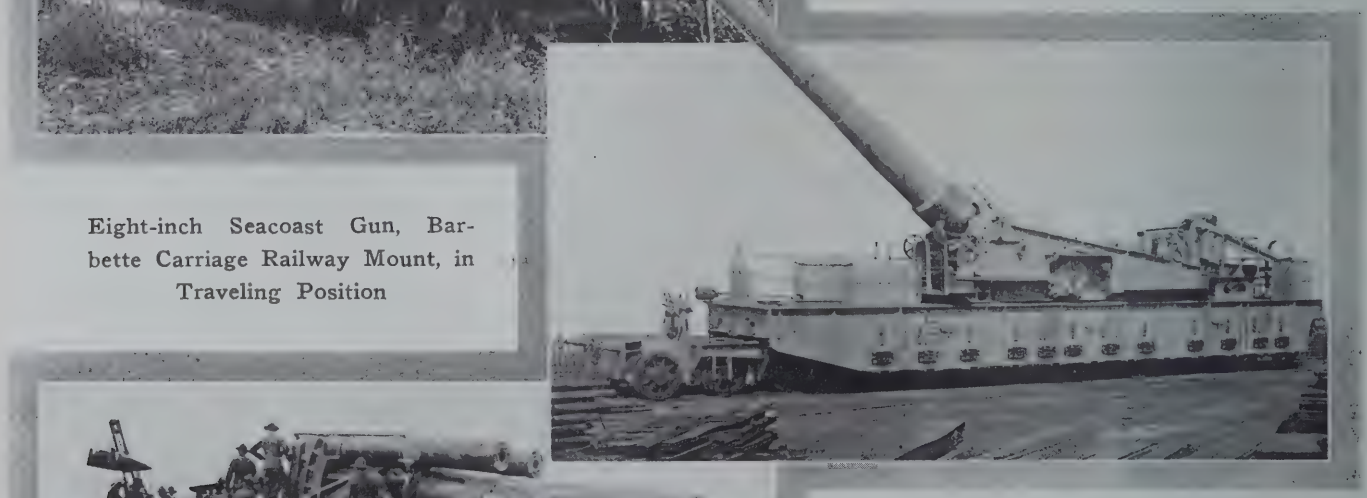
If all countries take the stand that they must be self-sustaining in regard to natural resources, they can accomplish their purpose only by high artificial barriers to offset inequalities in the factors which determine the availability of the several commodities, with the result that the world movement of raw materials will be greatly lessened. Instead of free circulation of essential basic commodities vitalizing any world agreement there will be a series of compartments in which trade is maintained at different levels, under different pressures and conditions, a situation difficult to maintain and inimical to world agreements based on mutual concessions. It is clear that if each of the states of the United States should adopt the principle of making the state self-sustaining in minerals so far as possible, the result would be to increase largely the chances of interstate friction and to lower efficiency in the United States.

The interests of conservation clearly call for an international viewpoint in the handling of our mineral resources. The deposits of most minerals are so highly concentrated in their distribution and general availability that the principal sources for the world are in comparatively few places. When all factors of conservation are taken into consideration, including labor and efficient use of the product, it would seem that the minerals should be drawn from those natural sources of supply.



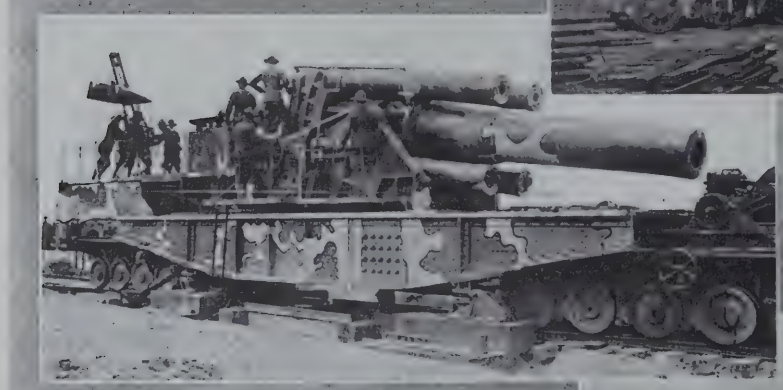
There is, perhaps, as much need of specializing in mineral output as there is of specializing in manufacturing. The thought that every country on the globe should be self-sustaining in regard to mineral supplies is of somewhat the same order as the thought that every family should produce all its own raw materials rather than take advantage of the more favorable conditions existing elsewhere, and so specialize in human effort. If for a certain amount of capital and labor we can produce copper more cheaply than any other country and thus dominate the world's markets, it is not economy to divert this capital and labor to the production of ores of manganese or chromite, which, because of natural conditions can be produced much more cheaply elsewhere.

Extension of international control of minerals seems to offer possibilities of loss and gain, loss through a considerable sacrifice of national trade and a narrowing of the field for private initiative in trade; gain through the possibility of attaining certain ends which are attainable only by international agreement, such as an allocation of supplies which will be to the advantage of the greater number of nations rather than to the advantage of the few that are strong enough to dominate the situation and which will in general prevent economic friction from endangering a league of nations based on political and policing considerations.

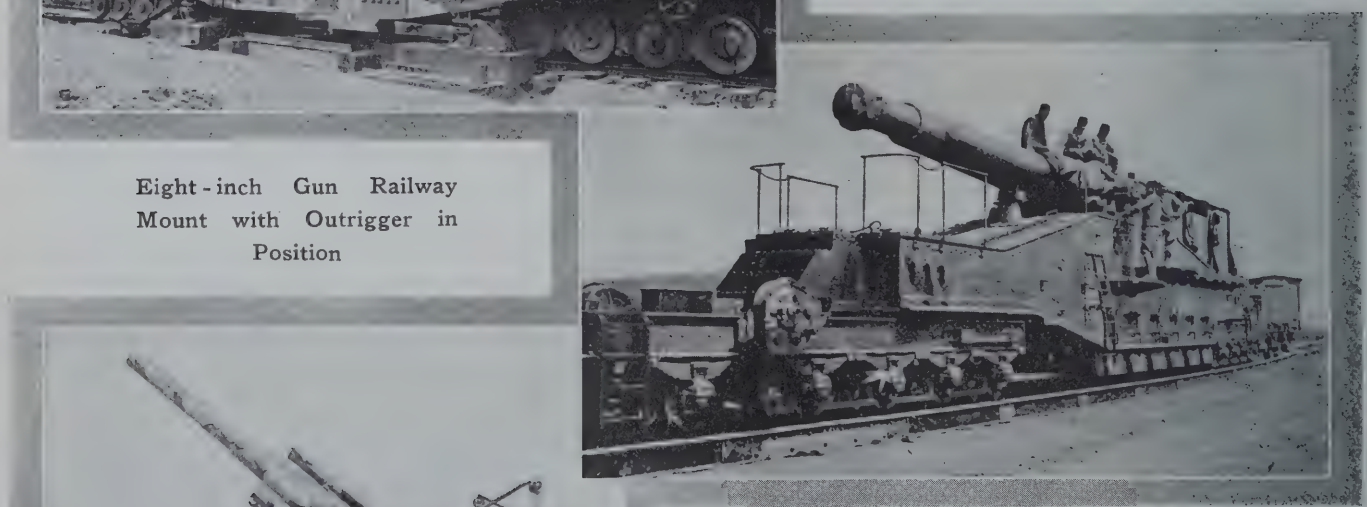


In a world governed by good will the effective internationalization of trade might well be gained by leaving trade unrestricted. In proportion as the actual condition may depart from this ideal condition some sort of international agreement as to control seems justified. Such control would by no means eliminate international rivalries and jealousies; it would transfer them to the international governing body. The duties of such a body would be onerous and perplexing. It might even be supposed that nationalistic aspirations might be so strenuously presented and so firmly backed by national steps in the way of embargoes and protective tariffs that the international control would amount to little. But it may be further supposed that a league of nations whose members enter into it voluntarily and with mutual good faith might control the situation sufficiently to bring recalcitrant members into line.

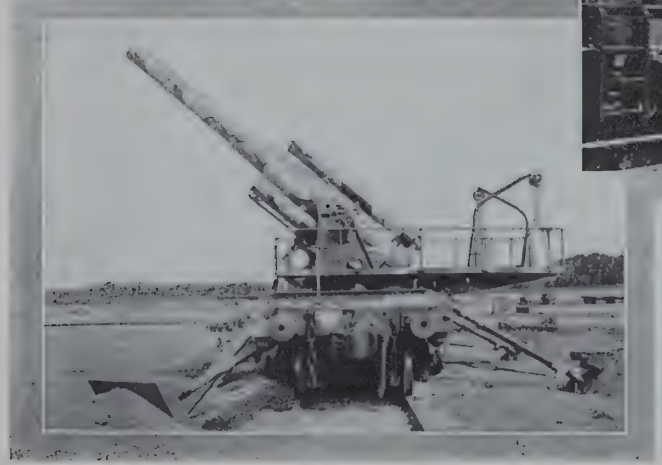
The demobilizing department of the German government has a subdepartment, known as the chemistry group, to look after the interests of the large number of practical chemists called up for war work at home and in the field. In the work of this section, which is under the direction of Dr. Fritz Haber, the replacing of these men, so necessary to the re-establishing of the great industries of Germany, will be made the first care.



Modern Railway Batteries Used in France

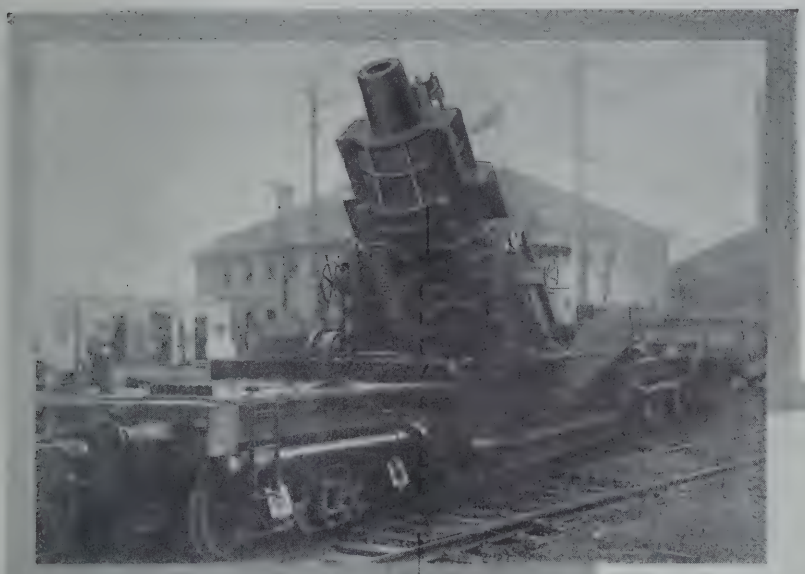


Railway Mount, Model 1918, for 10 and 12-inch Guns. Gun is Shown in Firing Position

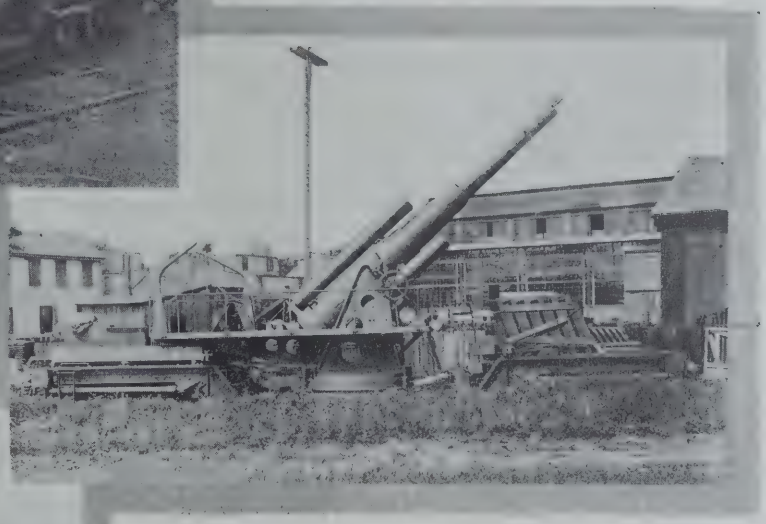


Eight-inch Seacoast Gun, Barbette Carriage Railway Mount, in Traveling Position

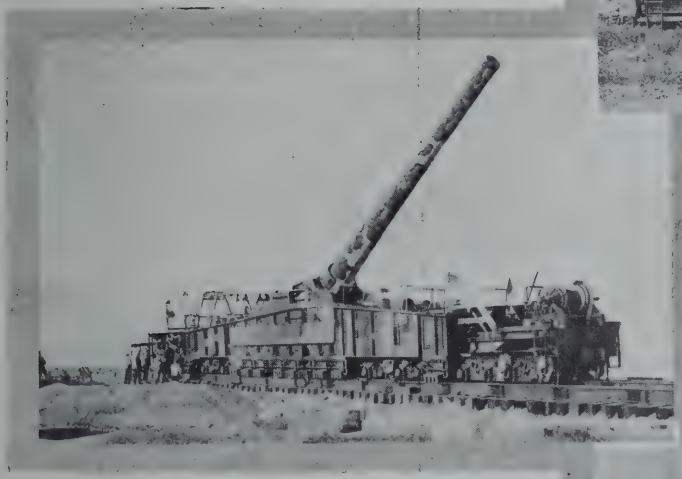
Loading 16-inch Howitzer, Railway Mount on Emplacement



Eight-inch Gun Railway Mount with Outrigger in Position



305-Millimeter Schneider Railway Mount, French Type of Railway Mount Used for 10-inch Guns Made in United States



U. S. Engineers Developed Mobile Mounts

Eight-inch Seacoast Gun, Barbette Carriage Railway Mount, at Maximum Elevation

Twelve-inch Mortar on Railway Mount

Eight-inch Gun Car, Model 1918, on Narrow-gage Trucks, with 200-Horsepower Locomotives

Twelve and 14-inch Sliding Railway Mount, Model 1918, with 12-inch Gun, Model 1918, Made in United States

Sixteen howitzer railway mount. Practically all of the railway batteries used in France were camouflaged.

Time is Factor in Tests on Steel

Experiments on Medium-Carbon Steel Show That Factors of Time and Temperature Influence Physical Properties—Ductility as Expressed by Elongation is Increased by Resting Test Bars

BY G. A. REINHARDT AND H. L. CUTLER

EXPERIMENTAL work carried on in the laboratories of the Youngstown Sheet & Tube Co., Youngstown, has indicated that specimens of medium-carbon steel show widely varying tensile strengths which are influenced by the temperature of the material when tested and the time elapsing between the moment the metal is tested and the time it is machined. That the physical properties are affected by these factors was discovered while the company was making a large tonnage of forging steel containing from 0.35 to 0.45 carbon, the acceptance of which was based on the physical properties of test specimens obtained by forging the original 5¾-inch square bloom to a ¾-inch round. The test bars were annealed by heating from 900 to 950 degrees Cent. and slowly cooling in mica, and were tempered by heating to from 825 to 875 degrees Cent., quenching in water, and drawing to from 515 to 535 degrees Cent. Immediately after heat treatment, the test pieces were machined to a diameter of 0.534 inches and tested. No difficulty was experienced in meeting the specifications which called for an ultimate strength of from 78,230 to 92,450 pounds per square inch in the case of the annealed specimen, and 120,000 to 149,350 per square inch in the case of the tempered specimen.

Met Specifications With Difficulty

Later the company began to make a slightly higher carbon forging steel. In testing this material the test blooms were either normalized or annealed. The normalizing consisted in heating to from 850 to 900 degrees Cent. and cooling in still air; the annealing in heating to from 850 to 900 degrees Cent. and cooling in the furnace or in mica. The test pieces were taken from the treated bloom either by core drilling or by sawing from points midway between the edges and the intersection of the diagonals. The cores or blocks were turned to a standard 2-inch test piece with a diameter of 0.564 inches and tested without further treatment. Considerable difficulty was encountered in meeting the physical requirements of the test pieces which called for a minimum yield point of 44,800 pounds per square inch; an ultimate strength of 89,600 to 112,000 pounds per square inch, and an elongation in 2 inches of not less than 17 per cent.

Tests Varied Considerably

Steel of very good chemical analysis was produced and great care was taken during the heating and rolling. A muffle furnace was equipped with rare-metal pyrometers to secure accurate heat treatment. The test pieces were turned with care so that in testing a straight pull was obtained. None of these precautions seemed to produce the desired results, although occasionally the results were very good. A careful examination disclosed the fact that invariably these occasional results were obtained from test pieces that had been machined the day before they were tested.

I. C. Mackie, chief chemist of the Dominion Iron & Steel Co., said that he had encountered similar conditions with rail steel so that a practice had been developed to rest all rail steel test specimens for a period of at least 12 hours before testing. An employe of the metallurgical department of the Youngstown Sheet & Tube Co., who previously had been in charge of a rail mill, reported a similar experience with rail steel. As a result of these experiences and suggestions, all test pieces were rested over night and tested the following day. With this practice no difficulty was experienced in meeting the elongation requirement of the specification. Frequently it was not convenient to hold a shipment long enough to afford a 24-hour rest for the test pieces; consequently experiments were made which led to the discovery that a rest of a few hours at about 120 degrees Cent. was equal to a rest of 24 hours at room temperature.

A series of tests was then made to determine the cause for the great difference in elongation and reduction of area shown by core tests made directly after drilling and machining, and core tests made on material that had rested after drilling and machining. This cause was not found, but interesting data was collected before it was necessary to discontinue the investigation.

In the first series of tests, four cores were drilled from each of six untreated blooms. Two cores from each bloom, after machining were rested two days at room temperature before testing. The two duplicate cores after machining were rested two days on top of a Hoskins hairpin-type electric furnace where the temperature was about 120 degrees Cent. The physical properties of a core from an adjacent piece of the same bloom which had received the heat treatment shown also is reported. The machined test piece rested approximately 12 hours on top of the furnace. The results are given in Table IV.

A second series of tests was made in identically the same manner except that, after machining, a rest of four days was given the test pieces before testing. The results are given in Table III.

These two series of tests showed that a slight increase in temperature resulted in a great improvement of elongation and reduction of area. There is a general increase in the tensile strength, which, however, was greater in the case of a two days' rest than in the case of a four days' rest.

Rate of Machining is Not Factor

From adjacent blocks of one bloom, eight core tests were taken and machined at different rates to determine the effect of the speed of machining. Four of the cores were machined at the usual rate and four with very light cuts and very low speed. Two of the cores machined as usual and two of the cores machined very slowly were pulled im-

---

From a paper to be presented at the annual meeting of the American Institute of Mining and Metallurgical Engineers to be held at Chicago Sept. 22-26, 1919. The authors, G. A. Reinhardt and H. L. Cutler, are metallurgist and assistant metallurgist, respectively, of the Youngstown Sheet & Tube Co., Youngstown.

mediately after the machining operation. The four other cores were rested 24 hours on top of the electric furnace and then tested. The results, given in Table V, show no difference in elongation, reduction of area, and tensile strength, between the pieces that were machined as usual and those that were very slowly machined. This indicates that the rate of machining exerts practically no influence on the physical properties.

Sixteen core tests were taken from four adjacent blocks of one bloom. Six cores were machined immediately after core drilling. Two of these six cores were tested immediately after machining; two were rested on the furnace 24 hours before testing, and two were rested 100 hours on the furnace before testing. Two rough cores were held four days, then heated for 2 hours in a tin bath at from 490 to 500 degrees Cent. They were then machined and tested immediately after machining. Four rough cores were held at room temperature for 16 days. Two of the cores were then machined and tested immediately after machining. The other two cores were heated in the tin bath at 595 to 605 degrees Cent. for 2 hours and then machined and tested immediately after machining. Four rough cores were heated to 900 degrees Cent., held 45 minutes, cooled in thin mica, and then machined. Two were tested immediately after machining and the other two

53,720	94,540	22.0	62	94,040	14.5

were rested 25 hours on the furnace before testing.

The results of the tests made on these 16 cores, given in Table I, show that the elongation increased with increased length of rest at the temperature of the top of the furnace. A rest of 16 days at room temperature increased the elongation and reduction of area about the same extent as a rest of 25 hours on the electric furnace. This comparison is not entirely accurate, for the tests that were rested 16 days were machined after the rest while the tests that were rested 25 hours had been machined before the rest. Previously reported tests have indicated, however, that the effect of the machining operation is slight, so the comparison is justified. The tests that were heated to 500 and 600 degrees Cent. after rests of 4 and 16 days, respectively, and then tested immediately after machining, gave lower elongation and reduction of area values than tests that had been rested at lower temperatures. This is difficult to explain, as it is not considered that stresses are induced in the test piece by the air-cooling from temperatures as low as 500 and 600 degrees Cent. The tests on the annealed cores that were rested on the furnace for 25 hours after machining gave slightly better elongation values than the tests pulled immediately after machining.

Five cores that had remained in the laboratory for 207 and 208 days at normal room temperature were machined and tested immediately after machining. The results obtained from these tests are compared with the results obtained on cores from the same blooms that had been tested soon after core drilling and machining. These results, given in Table II, show a decided improvement in elongation and reduction of area.

A number of machined test pieces had remained in the laboratory from 36 to 68 days. These test pieces were tested and the results were compared with the results of tests from the same blooms that had been tested soon after the drilling and machining operations. The exact data on earlier tests were not available, as the tests were a part of the routine testing and the times drilled, machined, and pulled were not recorded. These results given in Table VI also indicatee a considerable improvement in the elongation for the rested test pieces.

Ingots of the same size and chemical composition as those used in the foregoing tests were rolled on the blooming mill and immediately rolled on the continuous mill to 1⅞-inch square billets. From these billets standard test pieces were turned. Some specimens were tested immediately after machining operation, others were tested after resting for different lengths of time at room temperature, still other duplicate sets were tested after resting at slightly elevated temperatures for the same lengths of time as those at room temperature. Identical results were obtained from the three sets of tests. The average result of tests pulled immediately after machining, the average result of tests pulled after different lengths of rest at room temperature, and the average result of tests pulled after different lengths of rests of slightly elevated temperatures were in close agreement.

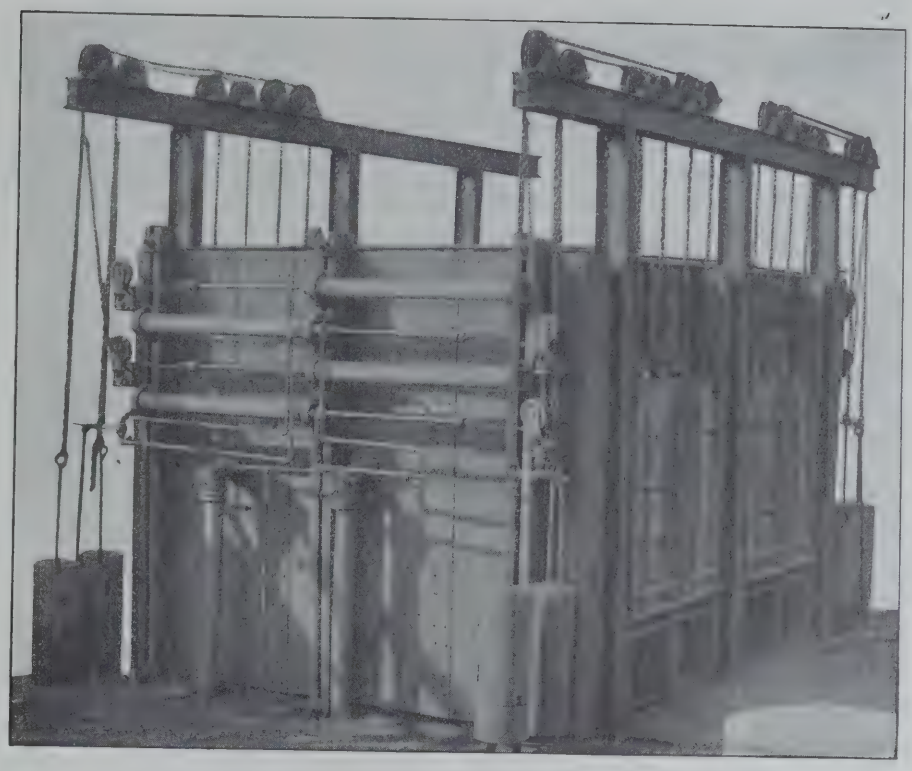
Anneals Tool Steel By Special Packing

A UNIQUE method of annealing tool steel is employed by the Ludlum Steel Co., Watervliet, N. Y., with results which are claimed to be better than those obtained from former methods. The method offers ample facility for heat treatment of any duration and at the same time prevents scale from forming on the rods due to the treatment.

Special steel pipes about 14 inches in diameter and approximately 10 feet in length are used as containers for the tool steel to be annealed. These pipes, as shown in the accompanying illustration, are placed in a trench arrangement built into the floor of the shop so that they stand on an angle of

TOOL STEEL RODS TO BE ANNEALED ARE PLACED IN TUBES AND A PACKING FILLED AROUND THEM

about 45 degrees, extending about four feet above the floor level. This position permits the workmen to place the bars and rods of tools steel into the containers with comparative ease and at the same time permits the eye to direct the placing of each piece. A special packing material is then carefully packed in the tubes around the steel before sending the tubes to the furnace.



The annealing furnace is so designed that the hearth is removable, thus an entire lot of steel may be placed in the furnace at one operation. With the packing process completed, the pipes are arranged on the hearth and pushed into the furnace. By this means heat is not wasted and the destruction on the furnace arches is minimized due to the bricks remaining hot and partially expanded from the preceding annealing heat. When the furnaces are allowed to cool down entirely, fallen arches frequently result due to the contraction of the bricks. Upon the completion of the heat treatment, the hearth is removed and another hearth with a fresh charge is introduced.

The usual practice of annealing is by the coal-fired furnace, which although it gives a very soft heat, gives also an oxidizing heat. In this type of furnace, heat control is difficult, thereby making it undesirable for annealing purposes. After a number of experiments with under-fired and over-fired furnaces, the Ludlum company found the oil-burning furnace to give the best results and consequently has installed six of this type. Each furnace contains eight burners and has a capacity of 10 to 15 tons depending upon the size of the bars. The temperature may be regulated to within 10 degrees of any desired value.

Builds Heating Furnace For Navy Yard

A billet-heating furnace recently was built for the United States navy yard at Pearl Harbor, Hawaii, by the Denver Fire Clay Co., Denver, Col. The furnace was designed for use in connection with a 500-ton hydraulic forging press and 6000-pound steam forging hammer.

The heating chamber is 8 x 12 feet and 40 inches high at the spring of the arch. Fuel oil is conducted to the burners at a pressure of from 30 to 50 pounds and mixes with air supplied at a pressure of 10 ounces. The burners can handle Mexican oil as heavy as 15 degrees Be. at 60 degrees Fahr. The flame enters through the side walls and is distributed evenly over the surface of the arch by means of baffles. The blower is electrically driven by a 3-phase, 60-cycle, alternating current motor using current at 220 volts.

OIL-FIRED BILLET-HEATING FURNACE FOR PEARL HARBOR NAVY YARD

There are four working openings on the front and back of the furnace. The doors are divided into sections, each of which can be opened independently to allow passage of smaller material. Each section is separately counterbalanced and is raised or lowered by a small air cylinder and piston. The furnace has vents at the sides connecting into cross flues under the hearth leading to the top of the furnace. This arrangement eliminates the use of dampers and a stack. The walls are 18 inches thick; the arch is 13½ inches thick; and the hearth 17½ inches thick. One course of insulating brick lies between the fire brick and steel plate casing. The furnace is divided in the middle by a wall 13½ inches thick and 20 inches high which minimizes the cooling on one side when a door on the other side is open.

Foundry Costs Increase

While it is difficult to quote the market due to lack of definite classifications, it can be said that quotations on heavy and medium weight machinery castings in the northern New Jersey district range, on the average, from 5c to 8c a pound. From the standpoint of costs, 5c is regarded as the minimum for machinery castings, while for lighter machinery castings, and for castings having special requirements, the prices now current run all the way up to 15c and 20c.

An investigation of books shows that it now costs 75 to 100 per cent more to produce castings in this district than it did in the first half of 1914. The minimum rate for molders and coremakers now is $5.80 for an 8-hour day, or 72½ cents an hour. However, this basis is strictly minimum, and as a matter of fact, molders are being paid considerably higher. They are averaging $35 to $40 a week, while in numerous instances the men are getting $45 and $50. In 1914 the minimum rate for molders and coremakers was $3.50 for a nine-hour day or 38 8/9 cents an hour; thus, the increase since that time has been not much less than 100 per cent. The increase in the cost of unskilled labor has been greater; in 1914, the common foundry laborers were being paid 17½ cents an hour and now they are getting $4 a day of nine hours, or 44 4/9 cents an hour.

Sharp competition for business is being waged by some foundrymen in this district and in some cases it is believed figures slightly below cost of production have been quoted. It is reported that one foundry took an order for castings at 3c a pound.

It is reported that the Sinai Mining Co., with mines southwest of the peninsula of Sinai, about 15 miles from the Gulf of Suez, which was compelled to cease operations during the war, is resuming the production of manganese ore.

Disease and Accident Liability

Courts Hold Employer Must Pay Damages When Disease Results From Injury, Also When Injury Hastens Fatal Consequence of Disease—Occupational Diseases Only Compensable Where Statute So Provides

BY CHESLA C. SHERLOCK

THE employer is charged with the payment of compensation under the workmen's compensation acts for incapacity caused by accidents arising out of and in the course of the employment. It will be seen that the liability is expressly limited, first, to accidental injury, and, second, to injuries caused by accidents in the course of employment. The latter situation has already been discussed in these columns.

The basis of all compensation liability resting as it does upon accidental injuries causing incapacity, it is necessary to determine in the first instance just what occurrences are "accidents" within the meaning of the law. If the employer is acquainted with this phase of compensation liability he will be fairly well versed in the entire field of compensation law.

The Indiana court has said that an accident "is generally defined as any unlooked for mishap or untoward event, not expected or designed, and is not to be taken in any technical sense, but is to be given a popular meaning."

This is the general meaning given by the courts and commissions as to the term "accidents." It simply means that the term does not have a technical legal meaning but that an accident within the meaning of the compensation acts is anything that would be considered an accident in ordinary, everyday language.

If it were possible to stop here such matters would be easy of disposal, but unfortunately many cases arise in the average relations of business and industrial life every day which cannot be classified so readily. For instance, a matter which has troubled the courts and employers for a long time is whether or not disease is an accident such as would entitle to compensation a workman who has been incapacitated and rendered unable to continue his work.

Thousands of cases have been litigated on this subject in both the United States and the British empire and out of them have grown a rule of law which is universal in its application with one or two exceptions.

It is held by the weight of legal authority that an ordinary disease is not an accident such as to entitle a workman to compensation under ordinary circumstances. While a disease may properly be considered an accident in some sense, it does not rise out of the employment if contracted in a perfectly natural way. But there are exceptions to this rule and they should be carefully considered by employers.

The same courts say that if a disease is the result of an accidental injury that the employer is liable for the payment of compensation, not for the disease, but because it is a natural result or outgrowth of the original accident.

So it has come to be a settled rule of the compensation practice that if a disease is the result of trauma, or if it is what is called a traumatic disease it is compensable and the employer will be liable. In order to make the matter clear, traumatic diseases are those which have their origin in a physical hurt or injury. For instance, the Wisconsin court has said:

"A finding that pneumonia resulted from an accident will be sustained, where the accident itself was admitted and there was evidence in addition to expert testimony of doctors tending to show discoloration on parts of the employe's body, pain and suffering, headache and restlessness, indicating that the trauma caused by the fall was likely to result in pneumonia."

In Michigan it was shown that diabetes resulted from an injury, and although the incapacity was caused only indirectly by the accidental injury the court said that compensation should be paid.

It is impossible to consider all of the cases cited as authority upon this or any other specific point but a few are given to illustrate the rules announced. Suffice it to say that each rule announced herein is authoritative, subject to the exceptions or limitations noted.

Another question arising and closely akin to whether or not diseases are compensable as accidents is whether or not an accident causing an aggravation of a pre-existing disease is to be considered as a compensable injury under the compensation acts.

All workmen are not able-bodied and in perfect health. Many men are employed who are suffering from some incurable disease, and which sooner or later will cause death. Should these men be entitled to the same relief in case an accident aggravates their pre-existing condition to such an extent that it causes incapacity?

An accident not sufficient to injure an able-bodied man so as to cause incapacity may be sufficient to cause the death of a man suffering from a pre existing disease. This is frequently the case in heart failure.

The courts have said that the test is not whether the man was able-bodied or not at the time of the injury, but whether or not he was capable of carrying on the duties of his employment. If he was able to do this to a degree sufficient to meet his employer's requirements, then there is no ground at law to take his pre-existing condition into consideration. Said one court:

"The fact that an employe injured in performing services arising out of and incidental to his employment, in the course of his employers' occupation, was already afflicted with a dormant disease that might some day have produced physical disability, is no reason why the employe should not be allowed compensation for the injury which, added to the disease, superinduced physical disability."

Therefore, it is not possible for the employer to escape payment of compensation for an injury aggravating a pre-existing disease or condition. The New York court has said:

"If an employe has a disease, and having the same, receives an injury 'arising out of and in the course of the employment,' which accelerates the disease and causes his death, such death results from such injury, and the right to compensation is secured even though the disease itself may not have resulted from the injury."

In Indiana, the court said: "Assuming that decedent was afflicted with a fatal malady certain to result in his decease sooner or later and that such malady was a cause of the decedent's death here, these facts alone are not sufficient to defeat the appellee's claim. Such result would follow only in case his disease was the result of his ailment, progressing naturally, and dissociated from any injury that he may have suffered by accident arising out of and in the course of his employment. If there was such an injury, and it occurred with the ailment in hastening the latter to a fatal conclusion, then the right to an award exists."

This rule is supported by such a long list of authoritative cases that it seems to be universally recognized in its application.

Still another question arising as to what are compensable accidents is found in cases where two accidents follow each other close enough to raise some doubt

as to which one is to be considered as the compensable one. One authority solves this problem in the following manner:

"Incapacity which is caused or aggravated by a second injury, received while employe is suffering from another injury which he had received in his employment, is the result of the first injury, according to a great weight of authority, and consequently compensation may be recovered therefor."

It seems, then, that an employer cannot escape liability for the payment of compensation by saying that the second accident was responsible for the incapacity when the workman was still suffering from the effect of a prior accident occurring in the employment.

Occupational diseases have also called for a great deal of consideration at the hands of the courts as to whether they may be treated as accidents. The weight of authority is to the effect that no employer is liable for the payment of compensation for occupational diseases, unless the statute expressly places this obligation upon him.

An occupational disease is one peculiar to the employment, such as lead poisoning, copper poisoning, and the like. They are not accidents in the opinion of the majority of the courts althought they are compensable in those states allowing compensation for "personal injuries" rather than for accidental injuries. The Michigan court has said:

"If the injury to the claimant occurred by reason of the character of his work he is precluded from recovery because the act does not provide compensation for those suffering injury from occupational diseases. The testimony seems to indicate that those engaged in dyeing furniture with mahogany stain frequently suffer with sore hands. If, however, the claimant's injury is due not to the general character of his occupation but to some accidental occurrence then the record is entirely barren of any evidence of an accident. If the claimant suffered a scratch or abrasion through which the germ entered the record is silent as to when and how he sustained the accident."

The question of whether or not hernia is an accident has also called for some difference of opinion. Formerly, it was held by practically all of the courts that hernia was an accident, but this finding is coming to be changed. Indeed, even the medical profession has not agreed as to just what hernia is, as to whether it is the result of an accidental injury, or whether it is a disease. Many authorities among medical men contend that hernia is not and never can be the result of an injury except under inconceivable circumstances, but that it is the result of a disease. If this latter belief is true then it is obvious that hernia is not an accident and hence employers would not be liable for the payment of compensation where injuries of this kind result. The courts are divided and a great many of them are "on the fence." It is, however, quite uniformly held that in order for a hernia to be compensable as an accident it is necessary to show that it was the result of an accidental injury, some authorities saying, of traumatic origin.

The claimant must show the time, place and origin of the hernia and there must be evidence tending to show that it had a traumatic origin. The mere presence of a hernia which was not there before and which was noticed only at the close of the day's work will not be a sufficient showing to entitle the workman to compensation.

The question also arises sooner or later as to whether infections are to be treated as accidents within the meaning of the compensation acts. The Kansas court has said, in this connection:

"The infection of an existing wound by contact with foreign matter seems to be within the ordinary meaning of the term 'an unlooked for and untoward event which is not expected or designed.'"

But this caution must be observed in connection with infections: They should be established as coming out of the employment and not from other sources. No employer should be made to pay for infections incurred at home or in other places, but where there is a doubt it is generally resolved in favor of the workman.

A Word With the Editor

Editor, The Iron Trade Review:

We have before us literature sent out by a society which again is advocating the adoption of the metric system, asking us to use our influence to help bring about legislation to this effect. We have written them stating that we are heartily in favor of a decimal system, but cannot endorse the old metric system in full and particularly the meter, the metric unit of lineal measurement, on account of its inadaptability to a vast number of applications.

We suggested the taking of our standard inch and decimalizing it, the fractional parts of which are already decimalized, viz.: 0.1, 0.01, 0.001 and for which we have measuring instruments; such as micrometers and gages also flat scales and rules that are graduated with tenths and hundredths.

Since the fractional parts are decimally established, why not establish divisions above 1 inch also on a decimal basis. This easily could be done by having 10 inches equal a certain named length and 10 of these lengths equal another named length, etc. By doing this our present measuring system would not be greatly revolutionized and would not affect lead screws and graduations on our many machine tools and small tools.

In the United States, in Great Britain and in other countries there are perhaps billions of dollars worth of machine tools and gages built and graduated on the inch basis, and millions of dollars worth more of jigs and special fixtures in machine tool and tool builders factories used to build standard tools which are all made to the inch standard. It would mean a tremendous loss and cost to manufacturers to abandon all these tools and build up a new standard. It would be a most impractical thing to do. By decimalizing our inch we could quickly arrive at a decimal basis with little cost and inconvenience and obtain a more practical lineal measuring system than the meter system would be.

The great opposition which the majority of manufacturers have against the metric system is not against the principle of decimalization but against the "meter unit" which is so difficult to change into inches. There is no great hesitancy in abandoning our feet, yards, rods, etc., but we must not, dare not, and cannot abandon our inches.

The inch seems to be one of the most ancient units of lineal measurements. According to various authorities it is claimed that the unit of measurement used in the construction of the great pyramid, the oldest of the pyramids in Egypt was a unit one thousandth of an inch longer than our present English inch. However, be this as it may, we manufacturers look at this from a practical and commonsense viewpoint and are desirous of getting the greatest convenience with the least cost and inconvenience.

To decimalize the standard inch would revolutionize present measuring instruments but little and it would not affect lead screws and graduations on machine tools. It would only mean the abandonment of present ¼ths, ⅛ths, 1/16ths, 1/32nds and

1/64ths and to this we feel sure few would object.

To use the metric nomenclature we would suggest a table of lineal measurements as follows, the names of which, however, may be simplified or changed altogether.

10 micrin (mon) equals 1 milin equals	.001
10 milin (mn) equals 1 centin equals	.01
10 centin (cn) equals 1 decin equals	.1
10 decin (dn) equals 1 inch	1.
10 inches (in) equals 1 dekin equals	10.
10 dekin (dkn) equals 1 hectin equals	100.
10 hectin (hn) equals 1 kiloin equals	1000.
10 kiloin (kn) equals 1 myrin equals	10000.
10 myrin (myn) equals 1 tele equals	100000.

We submit the foregoing in the hope that it may help to prevent any serious movement to legalize the meter as a standard unit of lineal measurement.

Very truly yours,

MUMMERT-DIXON Co.,

E. S. Mummert, President and General Manager.

Hanover, Pa.

Iron Supply

Assured Otis Steel Co. by Merger With Cleveland Furnace Co.

Because of the interests involved an event of unusual significance in the iron and steel trade in the Cleveland district was terminated late last week in the consolidation of the Otis Steel Co. and the Cleveland Furnace Co., with total combined assets of $25,000,000. The merger unites a raw material maker with a finished steel producer and brings to a close weeks of negotiations begun last spring when William Salomon & Co., New York investment bankers, representing Cleveland and New York financial interests, arranged the purchase of the controlling interest of the Otis Steel Co. from British holders.

Substantial oversubscription for the interim certificates representing new common stock to be issued, was reported within 24 hours after the offering last Friday. About half of the total proposed issue of 411,668 shares, or 227,000 shares were offered at $39.50.

The new company will have as its president, George Bartol, president of the existing Otis Steel Co. William G. Mather, president of the Cleveland Cliffs Co., will be chairman of the board of directors. Other officials will be announced following the formal organization later. John Sherwin, president of the First National bank, was active in the syndicate which financed the purchase of the controlling interest of the Otis Steel Co. from English owners and he will be one of the directors. Other members of the board will be D. T. Croxton, president of the Cleveland Furnace Co.; H. F. Deverell, secretary of the Otis Steel Co.; S. Livingston Mather, secretary of the Cleveland Cliffs Co.; H. A. Raymond, of the Cleveland Cliffs Co.; William B. Sanders, of Squire, Sanders & Dempsey, Cleveland attorneys; Elisha Walker, of William Salomon & Co.; and E. R. Tinker, vice president of the Chase National bank, New York.

The capital stock of the new company will consist of $4,850,000 of 7 per cent cumulative preferred shares, besides the common issue. The Otis Steel Co. proposes to retire its existing $2,373,000 outstanding preferred stock; to create a new issue of preferred; to readjust its outstanding common stock and to enlarge its manufacturing facilities by acquiring the assets and business or not less than 75 per cent of the capital stock of the Cleveland Furnace Co. The shares of the new company will be exchanged for the outstanding shares of the present companies.

The new company will be free of funded or mortgage debts. The exhibit of the combined financial position shows fixed assets of $13,654,981; investments in other companies of $599,347; current assets $10,872,394; and deferred assets of $40,369, making total assets of $25,167,091. The excess of assets over liabilities is $19,920,714.

The Otis Steel Co. has had plants in operation since 1873. Since 1889 its control was in the hands of British stockholders. The company has two plants in Cleveland, one with an annual capacity of 20,000 tons of acid and 90,000 tons of open-hearth ingots, 25,000 tons of steel castings, 70,000 tons of sheared plates and 5000 tons of forgings and the other with annual capacity of 65,000 tons of light plates and 35,000 tons of sheets. The company heretofore has bought its pig iron in the open market.

Baldwins, Ltd., one of the most important European steel firms, have arranged for the purchase of the plant of the British Forgings, Ltd., whose extensive works on Ashbridges bay, Toronto, were erected by the imperial munitions board of Canada for the production of high grade steel. The plant of the British Forgings was one of the largest electric steel plants in America.

Production Recovers

Ingot Output Reaches 71.6 Per Cent of the 1918 Record

Steel ingot production recovered in June after the decided decline during the previous month. According to the figures of the American Iron and Steel institute 30 companies which in 1918 made 84.03 per cent of the total steel of the country, produced in June, 2,219,219 gross tons, an increase of 290,195 tons over the May total of 1,929,024 tons. Open-hearth steel totaled 1,692,257 tons compared with 1,506,015 tons in May, an increase of 186,242 tons. Bessemer steel with a total of 521,634 tons represented an increase of 107,242 tons over the 414,392-ton output of May. Production of all other steel, however, fell from 8617 tons in May to 5328 tons in June.

Following are the institute's production figures from January, 1918, to June, 1919:

Months	Open hearth, gross tons	Bessemer, gross tons	All other, gross tons	Total, gross tons
Jan., 1918	1,763,356	429,588	10,901	2,203,845
Feb.	1,805,233	454,457	14,051	2,273,741
Mar.	2,331,048	763,255	16,078	3,110,381
Apr.	2,377,974	769,249	16,187	3,163,410
May	2,475,131	796,244	15,858	3,287,233
June	2,281,718	786,380	15,348	3,083,446
July	2,311,545	784,997	17,093	3,113,635
Aug.	2,299,177	766,860	17,643	3,083,680
Sep.	2,407,993	772,863	16,802	3,197,658
Oct.	2,527,776	807,043	17,377	3,352,196
Nov.	2,291,720	753,409	15,631	3,060,760
Dec.	2,273,189	706,844	12,273	2,992,306
Total 1918.	27,145,860	8,591,189	185,242	35,922,291
Jan., 1919	2,351,153	749,346	7,279	3,107,778
February	2,043,635	655,206	5,842	2,704,683
March	2,100,528	555,332	6,405	2,662,265
April	1,732,447	500,770	6,494	2,239,711
May	1,506,015	414,392	8,617	1,928,024
June	1,692,257	521,634	5,328	2,219,219
Total for 6 months	10,426,035	3,396,590	39,965	14,862,680

The total daily average for the 30 companies during June was 88,768 tons or 105,638 tons for the whole industry. The corresponding figures for the previous month were 74,193 tons and 88,293 tons. At the rate of the daily production, June production was at the scale of 32,430,866 tons annually. May production was at the rate of only 27,106,094 tons annually. Since July, 1917, when the institute started to compile the figures, the highest production was in October, 1918, when the output was at the rate of 45,359,250 annually. Thus compared to this figure as a high point in production, the June rate amounted to 71.6 per cent. June, ending the first half of the year, the production amounted to 14,862,680 tons, or 2,259,376 tons behind the total of 17,122,056 tons for the same period last year. The production so far this year is 86.8 per cent of that for last year.

Here and There in Industry

Live Information Which Records the Expansion of Various Lines of Productive Enterprise

THE oldest continuous partnership in the city of Buffalo, that of Beals, McCarthy & Rogers, iron, steel and hardware, went out of existence several days ago, when the company was incorporated with $1,000,000 capital, as Beals, McCarthy & Rogers, Inc., the name assumed two years ago when it was changed from Beals & Co., as the partnership had been known for 26 years. Officials of the company have perfected arrangements whereby department heads and principal employes can acquire an interest in the company by buying stock. The firm was organized in 1826 by Samuel F. Pratt and Edward P. Beals, as Pratt & Co. From that time the firm's growth has kept pace with the growth of the city and now is one of the largest iron, steel and hardware supply houses in the country. The officers of the company are Eugene J. McCarthy, president, Charles P. Rogers, secretary and treasurer and Pascal P. Beals.

* * *

THE Vulcan Engineering Sales Co., Chicago, sales agent for the Hanna Engineering Works, the Mumford Molding Machine Co., the J. C. Busch Co. and others, has been dissolved as of June 30, and all business formerly done by it is being transacted by the Hanna Engineering Works.

* * *

THE Evansville Enameling Co., Evansville, Ind., has been incorporated by five stove manufacturers in that city, with Henry Karges as president, and will build a co-operative enameling plant to furnish enameled specialties for stoves turned out by all these manufacturers. Plans are being drawn by Gilbert Karges, architect, Furniture building, Evansville.

* * *

THE business conducted by M. B. Hill as an individual and known as the M. B. Hill Mfg. Co. has been incorporated under the laws of Massachusetts, with the same firm name. The company was formed to develop a business started by M. B. Hill, in the manufacture of drilling jigs, parallel clamps, test indicators and tool holders. A new plant will not be built, but the business will be conducted in a building rented at 10 Edin street, Worcester, Mass. The company has a paid in capital of $5000. Officers are, William Arter, M. B. Hill and Harold Tattersall, who also constitute the board of directors.

* * *

THE manufacture and sale of Lundie tie plates, formerly handled by John Lundie, 52 Broadway, New York, has been taken over by the Lundie Engineering Corp. The Chicago office at 30 North LaSalle street, is in charge of C. Z. Moore, manager of sales.

* * *

HENRY F. MIDGLEY, New York, president of Midgley & Prentice, Inc., New York and Worcester, Mass., steel and iron scrap, and his brother Frank L. Midgley, recently purchased the Prentice interests in the company. Robert L. Prentice, who died Oct. 16, 1918, was an active member of the company, and since his death his widow, Mrs. Helena M. Prentice, Worcester, has been its treasurer.

* * *

TITLE to the old plant of the General Chemical Co. recently was taken by the Pittsburgh Malleable Iron Co., Pittsburgh, which after making several improvements will occupy the plant. The chemical company plant has been idle for several years and contains a number of substantial manufacturing buildings and an office building on a site of more than seven acres. At a recent meeting of stockholders the Pittsburgh Malleable Iron Co. increased its capital from $300,000 to $1,000,000.

* * *

TOPICS of interest to them in their business were discussed at the mid-summer meeting of representatives of the Buffalo Forge Co., Buffalo, Steam Pump Co., and Carrier Air Conditioning Co., all of Buffalo, at the summer home of Henry W. Wendt, treasurer of the first mentioned company, Crystal Beach, Ont., held recently. Between 50 and 60 managers, sales engineers, etc., attended the various sessions, at which addresses were delivered by company officials and employes, dealing with various phases of their work and problems encountered.

* * *

A LABORATORY at the Cumberland, Md., steel plant of the N. & G. Taylor Co., Philadelphia, is being equipped for physical tests and research work along microscopic lines. This laboratory will supervise tests and experiments of the various grades of steel produced by the company, for use in the manufacture of tinplate and heat-treated forgings. It will be in charge of Isaac Berman, a graduate of the laboratory of Sauveur & Boylston, Boston, under the direction of R. C. Drinker, the company's consulting metallurgist.

* * *

GEORGE W. PRENTISS & CO., Holyoke, Mass., manufacturers of iron and steel wire, have purchased the plant of the G. Haarmann & Co., Inc., iron and steel work, in that city and will transfer their annealing furnaces from their Dwight street mill to the newly purchased shop which will allow further expansion of the other departments. Haarmann & Co. will take over from the Holyoke Water Power Co. the old league ball park on Berkshire street, where a new plant, double the size of the present one, will be erected at once.

* * *

BECAUSE of its rapidly-expanding business, the Reliable Engine Co., Portsmouth, O., has changed its name to the Reliable Tractor & Engine Co., and has incorporated with an increased capital of $2,000,000. New interests have been taken in and the incorporators are: C. Heer, F. E. Adams, George W. Platt, F. N. Tynes and M. Heer. The company's plant at Spring Lane and the N. & W. railroad, covers about three acres and alterations and extensions are to be made as rapidly as the business continues to fulfill expectations of growth.

* * *

THE Foss & Bump Co., Inc., Springfield, Mass., which has been incorporated under the laws of that state with $100,000 capital to make leather belting, has obtained a factory at Dwight and Taylor streets in that city and expects to begin operations at once. The officers of the company are: President, W. J. Foss; vice president, Harry J. Foss, both of Pittsfield, Mass.; treasurer, Charles H. Bump Jr., and secretary, D. R. Johnson, both of Springfield. Charles S. O'Brien, for several years superintendent for the J. F. & W. H. Warren Co., Worcester, Mass., will be superintendent.

Here and There in Industry

Live Information Which Records the Expansion of Various Lines of Productive Enterprise

CAPITALIZATION of the Perry, Buxton, Doane Co., of Boston and Philadelphia, recently was increased to $2,000,000 and the company's nine branches have been increased by the opening of additional offices in New York and Milan, Italy. W. Vernon Phillips, former chief of the iron and steel scrap section of the war industries board, has been elected chairman of the board of directors, and C. A. Barnes, former secretary of the committee on iron and steel scrap of the American Iron and Steel institute, has been appointed second vice president of the company. The other officers of the company continue as heretofore.

* * *

HENRY C. FRICK has purchased the portrait of Col. Raynel C. Bolling, in the collection of 12 portrait drawings by John Elliott, of distinguished Americans who sacrified their lives during the war. Colonel Bolling, who died at the front near Amiens, on March 27, 1918, refusing to surrender after being surrounded, was general solicitor of the United States Steel Corp. It is understood to be Mr. Frick's intention to present the drawing to that corporation.

* * *

HOW Thermit Healed My Broken Jaw" is the title of a folder just issued by the Metal & Thermit Corp., 120 Broadway, New York. This folder describes the operations involved in making a thermit weld on the 13½-ton broken upper jaw of an alligator shear used by Joseph Josephs & Bros., Modena, Pa. The break welded was 80 inches long and varied from 4½ to 23 inches in thickness.

* * *

THE GRIP NUT CO., which now has works in South Whitney, Ind., and Columbus, O., has purchased land in the southwestern part of Chicago for the erection of a new plant. The tract is 250 x 900 feet, and the building will be 100 x 750 feet, of reinforced concrete, the first unit of which will be built in about 90 days. It will have a traveling crane extending the full length of the building and over the switch tracks which are being installed to connect with the Baltimore & Ohio Terminal railroad. The total investment in ground and buildings will approximate $500,000.

* * *

TO provide working capital to increase its plant, the Fairmount Tool & Forging Co., 10611 Quincy avenue, Cleveland, has increased its capitalization from $100,000 to $500,000. Its principal product is assembled tool kits for automobile manufacturers, as well as tools of other sorts. At present the company is lining up its machine tool requirements which will comprise principally drop forging equipment, together with milling machines and other tools to turn out finished products. A 2-story factory building of brick and steel construction has just been completed and additional buildings are under contemplation.

* * *

AT the annual meeting of stockholders of the Rickert-Shafer Co., Erie, Pa., manufacturer of machinery and tools, July 2, the management reported that business for the first six months of the year, equaled sales for the corresponding period during 1918. Various policies of the company were discussed, and due to the heavy demand for the company's products, it was decided to enlarge the plant by the erection of an addition, 2 stories, 33 x 150 feet. The company has placed orders for a number of new machine tools, but will not order the bulk of its machine tool requirements until its proposed addition is completed. August Rickert is treasurer.

* * *

THE Root & Van Dervoort Engineering Co., East Moline, Ill., manufacturer of automobile and tractor engines, has increased its capitalization from $1,346,200 to $7,500,000. Manufacturing facilities and production will be increased. W. H. Van Dervoort is president and general manager, O. J. Root, vice president and assistant general manager and Rufus Walker Jr., vice president. A tract of 61 acres was bought recently adjoining the plant to provide for expansion. The business was established in 1898 at Champaign, Ill., and in 1901 it was removed to East Moline. Mr. Van Dervoort was professor of mechanical engineering at the University of Illinois when he founded the present business.

* * *

SEVERAL representatives have been appointed by the Ohio Electric & Controller Co., 5800 Maurice avenue, Cleveland. These include the Iron & Steel Equipment Co., 1502 First National Bank building, Pittsburgh; Williams, Beasley Co., 343 South Dearborn street, Chicago; Linn O. Morrow, 707 Franklin Trust building, Philadelphia; J. W. Dopp & Co., 18 Columbia street, Detroit; Kelly, Powell, Ltd., 403 McArthur building, Winnipeg, Canada; Wonham, Bates & Goode, Inc., Dominion Express building, Montreal; Shook & Fletcher Supply Co., Birmingham, Ala. Exporting representatives include: Wonham, Bates & Goode, Inc., 17 Battery place, New York, covering London, Paris, Havana, Rio de Janeiro; Mitsui & Co., 65 Broadway, New York, for Japan, China, Philippine islands and Honolulu; and Gustav Neilson, A/S Christiania, Norway, Sweden and Denmark.

* * *

THE Kidwell Boiler & Engineering Co., incorporated with $1,000,000 capital, will engage in the manufacture of high pressure steam boilers, with headquarters in Milwaukee. Officers are: President, John F. Jackson, formerly vice president, Wisconsin Bridge & Iron Co.; vice president, R. W. Campbell, formerly of the Stirling Consolidated Boiler Co., and Babcock & Wilcox Co.; secretary and treasurer, Stuart H. Markham, president of the Markham & May Co., First National Bank building, Milwaukee. The corporation takes its name from Dr. Edgar Kidwell, for eight years professor of mechanical engineering at the Michigan College of Mines, Houghton. Dr. Kidwell will be general manager. He has served as general superintendent of the Arcadian Copper Co., and later was Pacific coast manager of the Stirling Co., Stirling Consolidated Boiler Co., and the Babcock & Wilcox Co. The company will manufacture all-steel boilers suitable for pressures of 300 pounds and higher. They will be designed for use with triple and quadruple expansion engines and a number will be manufactured under contract.

Men of the Iron Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

W. T. HERSHER, for several years superintendent of the Bridgeport Malleable Iron Works of the Eastern Malleable Iron Co., Bridgeport, Conn., and who more recently was superintendent of the malleable foundry operated by the Chain Belt Co., Milwaukee, has organized a new foundry which he heads. The new plant will be known as the Great Lakes Malleable Co. and will occupy a plant formerly used by the Maynard Steel Co., Milwaukee. The incorporators of the new company, which is capitalized at $100,000, are W. T. Hersher, F. J. Vea, president of the Stoughton Wagon Co., Stoughton, Wis., and R. F. Eithier, formerly assistant sales manager of the Chain Belt Co.

S. M. Marshall, member of the firm, Perin & Marshall, New York, consulting engineers, sailed recently for England.

Edward R. Stettinius, former assistant secretary of war, has been made a commander of the Legion of Honor, according to a cable from France.

John Jeppson, superintendent of the Norton Co., Worcester, Mass., since its organization in 1886, recently celebrated his seventy-fifth birthday.

Richard Jones Jr., general counsel of the Republic Iron & Steel Co., Youngstown, O., recently was elected vice president of the Harvard Alumni association.

George M. Covey, who was formerly with the Hook Foundry Co., Marcus Hook, Pa., has taken charge of the Fairbury Windmill Co., Fairbury, Nebr.

J. P. Davis, purchasing agent of the Belden Mfg. Co., Chicago, has been elected second vice president of the Purchasing Agents' association of that city.

Frank Tod recently was appointed assistant to Vice President George F. Alderdice, the Brier Hill Steel Co., Youngstown, O. Mr. Tod formerly was assistant general manager of sales.

Maj. T. E. Ryder, who recently returned after four years military service abroad, has been appointed general manager of the Rudel-Belnap Machinery Co., Ltd., with offices at Montreal, Que. Before he enlisted in the army he was manager of the Canadian-Fairbanks-Morse Co.

James Whitehead has resigned his position as foreman of the St. Louis Malleable Casting Co. to become superintendent of the pattern department at the Buffalo plant of the American Radiator Co.

Dr. Epitacio Pessoa, president-elect of Brazil, visited the Bethlehem plants of the Bethlehem Steel Co. July 3, as the guest of Charles M. Schwab. The trip from New York to Bethlehem was made in Mr. Schwab's private car.

Capt. W. Harry Brown, well known coal and coke operator of Pittsburgh, is back at his desk once more, having fully recovered from a major operation which he underwent recently.

Hon. George M. Wright, chairman of the board of directors of the Clinton-Wright Wire Co., Worcester, Mass., has been elected president of the Eastern Hampden Agricultural society, Palmer, Mass.

J. T. Morris has been appointed acting dean of the school of applied industries, Carnegie Institute of Technology, to serve during the absence of Dean Clifford B. Connelley, who is on leave, having been appointed state secretary of labor and industries.

Van H. Manning, Washington, director of the bureau of mines, department of the interior, received the honorary degree of doctor of engineering at the recent commencement of the University of Pittsburgh. The degree was conferred in special recognition of Dr. Manning's activities in aiding in winning the war.

Arnold Rees, for four years foreman of the Goyne Steam Pump Co., Ashland, Pa., and more recently with the Birdsboro Steel Foundry & Machine Co., Birdsboro, Pa., has purchased an interest in a foundry in Gouverneur, N. Y., which will be known as the Millard & Rees Iron & Brass Foundry.

C. W. Jinnette, Detroit, representative of the Norton Co., Worcester, Mass., has been appointed manager of the company's branch house.

C. R. Mabley has been appointed Michigan sales manager for the S. K. F. Industries, Inc., with headquarters in Detroit.

Frederick L. Jewett has been elected first vice president and Thomas Bradley, vice president in charge of purchasing, by the stockholders of the Paige-Detroit Motor Co., Detroit.

D. McWhite, former chief engineer of the Cadillac Motor Car Co., has opened offices at 8 Warren avenue west, Detroit, where he is designing a new passenger car to be placed on the market shortly.

C. C. Hanch, former treasurer of the Studebaker Corp. and for 19 years with the Nordyke-Marmon Co., Indianapolis, has been appointed general manager of the reorganized Maxwell-Chalmers Co., Detroit. During the war he was chief of the automobile products section of the war industries board.

Hon. William J. Shaughnessy has been elected a director of the Canadian Pacific railway to fill the vacancy caused by the resignation of Hon. James Dunsmuir of Victoria, B. C. He is a son of Lord Shaughnessy, former president of the company, and enlisted as a captain for service overseas from which he recently returned.

Capt. Charles S. Pillsbury, who was assistant sales manager of the Chicago Bridge & Iron Works, Chicago, prior to his entrance into military service, recently was promoted to the rank of major and decorated with the French legion of honor cross. Major Pillsbury is in the construction division of the United States army in France.

E. S. Stemler, William J. Harvey and Alexander M. Rae, who volunteered for the army shortly after this country entered the war, and who have been through much fighting in France, have been discharged from the twenty-eighth division, 103rd engineers, and have resumed their connections as salesmen attached to the Philadelphia office of the Jones & Laughlin Steel Co.

Men of the Iron Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

EDWARD N. HURLEY, chairman of the United States Emergency Fleet corporation, whose resignation has been accepted by President Wilson, effective Aug. 1, was one of the creators of the pneumatic machine and tool industry of the United States and Europe. He began life as a machinist, made good as a railway shop workman and engineer, and then turned salesman. Later he joined partnership with a man who had invented a pneumatic boring machine, and started business in an old barn in Chicago. Five years later he sold his interest in the firm and became active in several corporations and visited the Latin-American republics to develop trade. He was organizer and president of the Hurley Machine Co. and later became chairman of the federal trade commission. He was recalled to public life at the outbreak of the war, first with the Red Cross, later on the newly-organized war trade board and two years ago to the chairmanship of the shipping board. He is expected to return to private life to engage in a private business enterprise.

John Barton Payne, Elmhurst, Ill., counsel for the United States railroad administration and former counsel for the shipping board, has been appointed to succeed Mr. Hurley.

T. L. Lewis, who recently tendered his resignation as sales manager of the A. M. Byers Co., Pittsburgh, has withdrawn his resignation and continues in that position with the Byers company.

R. B. Oliver was elected president of the William J. Oliver Mfg. Co., Knoxville, Tenn. ,at a recent meeting of stockholders. He succeeds William J. Oliver, who was injured in an accident several months ago.

D. C. Schultz Sr. has assumed his duties as sales manager of the Pittsburgh Crane & Equipment Co., Sharpsburg, Pa. He has had wide experience in the design and sales of cranes for other companies.

T. J. L. Crane, of the Wales Advertising Co., 110 West Fortieth street, New York, on July 1 sailed for England. He will remain abroad for some time in the interests of clients of the Wales agency. Mr. Crane is an Englishman and during the war served in the Royal Flying Corps of Canada.

E. J. Good, assistant purchasing agent for the American Steel Export Co. of New York, recently sailed for China where he will make a survey of conditions in the far east in the interests of his company.

EDWARD N. HURLEY

Roy M. Wolvin, president and managing director of the Montreal Transportation Co., and vice president and managing director of Halifax Shipyards, Ltd., has been elected a director of the Dominion Steel Corp.

E. H. Roelofs has resigned as assistant superintendent of motive power of the Philadelphia & Reading railroad, to become assistant to the vice president in charge of foreign sales of the Baldwin Locomotive Works, Philadelphia.

H. S. Kinsley, who has been placed in charge of the recently opened Detroit office of the Cutler-Hammer Mfg. Co., Milwaukee, recently was mustered out of military service. He formerly was connected with the engineering department of the company.

Leonard W. Williams of Park & Williams, Real Estate Trust building, Philadelphia, has returned after an extensive trip to Europe, which he made in the interests of the export pig iron business of F. R. Phillips & Son Co., in an association with Park & Williams.

H. B. May, who for the past two years has been connected with the Youngstown Sheet & Tube Co., Youngstown, O., in the capacity of efficiency engineer, with the exception of six months in the army air service, has joined the staff of C. E. Knoeppel & Co., Inc., New York, industrial engineers.

Isaac Berman, a graduate of the laboratory of Sauveur & Boylston, Boston, is to be placed in charge of the new laboratory being equipped at its Cumberland, Md., plant by the N. & G. Taylor Co., Inc., Philadelphia. He will be under the direction of R. C. Drinker, the company's consulting metallurgist.

L. F. Lemme, until recently superintendent of the A. Plamondon Mfg. Co., Chicago, has been made foundry superintendent of the Michigan City Foundry & Machine Co., Michigan City, Ind. George H. Gould has been appointed assistant superintendent of the plant and will supervise coremaking and foundry detail.

Roger H. Williams, banker and lawyer, has been elected vice president of the National Bank of Commerce, New York City, retiring from the law firm of Williams, Glover & Washburn, New York City, of which he was head. At one time he held an executive position with the Crane Valve Co., Bridgeport, Conn.

Fred Vaill Larkin has resigned as assistant superintendent of the Harrisburg Pipe & Pipe Bending Co., Harrisburg, Pa., to become professor of mechanical engineering at Lehigh university. Mr. Larkin is a graduate of the University of Wisconsin with the bachelor of science and mechanical engineer degrees, and has had considerable industrial experience. He has served with the Telluride Power Co., the Terry & Tench Co., New York, and other companies. He was superintendent of construction of a section of the New York state barge canal.

Men of the Iron Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

WILLIAM SCHOUP, formerly assistant superintendent of No. 3 open-hearth department at the Homestead works of the Carnegie Steel Co., has been appointed superintendent at the Franklin open-hearth department of the Cambria Steel Co., Johnstown, Pa. He has entered upon his new duties. Mr. Schoup was with the Carnegie Steel Co. since 1899 and advanced through various positions in the open-hearth plants of the works to the position he has just been promoted from. He has been succeeded at the Homestead works by Allison R. Maxwell who has been with the Carnegie company for about eight years and until recently assistant metallurgist at the Homestead works.

H. H. Farr, who received his release as captain in the ordnance in February and accepted a position with the Woodward Iron Co., Woodward, Ala., recently was made assistant foundry superintendent for the Kanawha Mfg. Co., Charleston, W. Va.

William A. Nugent who recently received his discharge from the Twenty-first Engineers with which unit he served in France has resumed his position as Indiana sales representative with the Independent Pneumatic Tool Co., Chicago.

Charles G. Du Bois, controller of the American Telephone & Telegraph Co., New York, recently was elected president of the Western Electric Co., succeeding H. B. Thayer, who was made chairman of the board. Mr. Thayer resigned after 38 years' service to assume the presidency of the American Telephone & Telegraph Co.

T. S. Disler, traffic manager of the Fort Pitt Steel Casting Co., McKeesport, Pa., now also is purchasing agent of that company. H. H. Nicholson, auditor of the company, hitherto has taken direct charge of purchases. Mr. Disler before becoming identified with the Fort Pitt Steel Casting Co. was a traveling freight agent for the Baltimore & Ohio railroad.

L. C. Murray has been appointed to the Blaw-Knox Co.'s corps of engineer-salesmen. He is a graduate of Penn State university and for a number of years was connected with the Carnegie Steel Co., both at the Edgar Thomson works, Bessemer, Pa., and in the sales department. His activities in his new position will be devoted to the steel plants in the Pittsburgh district.

Louis Marshal Ream, Thompson, Conn., who is connected with the office of the district manager of the American Steel & Wire Co., in Worcester, Mass., has been offered the position of sales manager of the Steel corporation in Johannesburg, South Africa, of which his father was a director until his death. If he accepts the position which he will decide in about a month, Mr. Ream will specialize in steel and wire rope and cable.

JOHN B. PAYNE
Who succeeds Edward N. Hurley as chairman of the Shipping Board

William E. Corey, chairman of the Midvale Steel & Ordnance Co., Philadelphia, has been elected a director of the Sinclair Consolidated Oil Corp.

A. S. Fawcett has been appointed purchasing agent for the Pittsburgh Steamship Co., Cleveland, to succeed the late Louis Hausheer. Mr. Fawcett has been with the company for 15 years, and most of the time was private secretary to Harry Coulby, president of the company. He was formerly with Pickands, Mather & Co.

L. G. Knight, who early this year became manager of sales in the eastern territory for the Pacific Coast Steel Co., San Francisco, with headquarters at 52 Broadway, New York City, is to be transferred to the Seattle works of the company. W. W. Truesdale will succeed him at New York. Mr. Truesdale recently returned from France, where he saw active service with the engineer department of the army. Prior to that he was affiliated with the Pacific Car & Foundry Co., Seattle, and with the Seattle works of the Pacific Coast Steel Co.

Lieut. Col. Elmer K. Hiles, of the engineering department of the American expeditionary forces, who went overseas as a captain in the Fifteenth engineers, has just returned after two years service in France. On July 15, he became affiliated with the Pittsburgh Testing Laboratory, 612-620 Grant street, Pittsburgh, engineers and chemists, as manager of laboratories, with headquarters in Pittsburgh. The company operates six branch chemical and physical laboratories and 14 cement laboratories in addition to offices in 11 principal cities.

George K. Hamfeldt, who was superintendent of the Carrie furnaces of the Carnegie Steel Co., and in 1905 supervised the construction of the blast furnaces and coke ovens of what was then the Midland Steel Co., Midland, Pa., subsequently taken over by the Crucible Steel Co., has been visiting in Pittsburgh. Mr. Hamfeldt left the country about a dozen years ago and spent about four years in an executive position with a large German steel company in Lorraine. He then went to his native country, Sweden, and in association with P. T. Berg, an old Carnegie Steel Co. man and engineering and sales representative for that company in Europe formed the Oxelosunds Iron Works, at Oxelosund, Sweden. Mr. Hamfeldt, who is president of the company, now is in America seeking to build up reserve stocks of coal and machinery.

Put Pension System Into Effect

Midvale and Subsidiary Companies Pay Workmen of 25 Years Service $30 Per Month After Retirement — Loan 90 Per Cent of Cost of Homes to Employes — Important Discussion On Union Liability

FOLLOWING the plan of representation of employes inaugurated by the Midvale Steel & Ordnance Co., Cambria Steel Co. and subsidiaries companies on Aug. 1, 1918, these companies on July 1, 1919, put into effect a pension system and a home-building plan for employes. The plan of representation of employes is designed to establish a representative system to provide a regular means of communication and conference between the officials and the employes of the Midvale companies. Each plant is divided into divisions on the basis of one representative for each 300 men. If any division has 150 men in excess of 300 or a multiple of 300, it is entitled to a representative for such fraction. In case the fraction is less than 150, it is not counted unless merged with a similar fraction from another division. The representatives are elected annually on the second Monday of January. During the nine months that this plan has been in effect, the division representatives have successfully handled grievances and other matters that have been directed to their attention.

The employes' pension plan was authorized at a meeting of the board of directors of the Midvale Steel & Ordnance Co., May 7, 1919. The pension system is administered by a committee appointed by the president of the company, and all of the funds required are provided by the company. All employes who, on July 1, 1919, had been 25 years or longer in the service and had reached the age of 70 years or over, were retired and pensioned. All employes, who on that date were 65 years or over and who had completed 25 years of service, are eligible to receive pensions. After July 1, 1919, all employes will be retired and pensioned upon reaching the age of 70 years provided they have previously completed 25 years of service. All male employes will be eligible for pensions when they reach the age of 65 years provided they have previously completed 25 years of service; and all employes who, after attaining the age of 65 years, and before attaining the age of 70 years, complete 25 years of service, will be eligible for pensions on completing 25 years of service and may be retired with pensions either at their request or the request of the employing officers. All women employes who have completed 25 years of service will be eligible for pensions when they reach the age of 55 years. A uniform pension of $30 per month is paid to each employe eligible for a pension, regardless of the position, wages, or salary prior to retirement.

The home-building plan for employes was authorized by the board of directors at a meeting held June 4, 1919, when a fund of $2,500,000 was provided. Employes are required to provide at least 10 per cent of the total value of the property when completed, and the remaining 90 per cent is loaned by the company. No loan in excess of $8000 will be made. The interest charged upon deferred payments is at the rate of 5 per cent per annum. In the event of permanent incapacity of the purchasers, through illness or accident while an employe of the company, or the death while still employed, he or his legal representative may continue the payments under the contract or cease payment of installments, in which event the total or principal sum which has been paid on account of the loan, is returned to the purchaser. When the purchaser ceases to be an employe of the company he may, within 60 days, complete the payment of all deferred installments and interest charges, and thus secure a clear title to the property; otherwise, the company will return the money paid.

Unemployment Statistics Are Dropped

WASHINGTON, July 15.—Forced to economize at every turn in order to continue with less than half its former field and office staff, the United States employment service, with the publication of its unemployment report for the week ending July 5, has decided to abandon this feature of its service. Other curtailments will have to be made in addition to those already in effect, but in the passing of the surplus labor statements the service dismisses one of the causes of its unfavorable standing among manufacturers and business men. In noting the last report as concluding the series begun after the signing of the armistice, John B. Densmore, director general of the service, stated the feature has been misunderstood. The report for the week covering the end of the fiscal year is accompanied by a plea that congress create a permanent national employment service and that the weekly statements be "resumed and made more complete and authoritative." Only a day or two before issuance of the report Royal C. Meeker, commissioner of labor statistics, Lewis T. Bryant, labor commissioner of New Jersey and director of the federal service in that state, and Director General Densmore appeared before the joint committee on labor of the senate and the house at a hearing on the Nolan-Kenyon permanent employment service bill and urged enactment of the measure. The administration is intent on having the service created as a permanent government bureau from all indications.

The final employment report shows that in 80 cities in the United States there was an aggregate surplus of 177,392, as compared with a surplus of 211,290 in 196 cities in the week ending June 28. The statement says the "figures indicate that while the surplus of labor is about unchanged the shortage has shown a rather material increase." Despite this interpretation, however, prorated surpluses in the two comparative periods show that actually there was an increase in the aggregate surplus. The statement is made that of the 80 cities reporting, 16 report a shortage, 26 an equality of supply and demand, and 38 a surplus. Of the 38 states represented in the report, 20 report surplus, 19 indicate an equality and eight

a shortage of unemployed workmen.

"The curtailment of the funds and field organization of the employment service makes it impossible to continue the gathering of these reports," Director General Densmore said. "They were begun a week after the signing of the armistice in order to provide the war department and the war industries board with a barometer for gaging industrial demobilization. They also have been of value in indicating to the country generally the labor situation week by week.

"The reports have not been complete and they frequently have been misunderstood and supposed to give the total unemployed in the country. The reports never attempted to do that. What was done was to cover representative centers and representative industries in those centers, the reports furnishing an indication of the situation generally. It is to be hoped that if congress acts favorably on the bills for a permanent national employment service these 'weather reports' of labor and unemployment conditions may be resumed and made more complete and authoritative for they can be of great value."

In testifying in behalf of the Nolan-Kenyon bill, which would establish this national bureau, Commissioner Meeker of the labor department's statistics service declared "Germany would have won the war in four months if it had not been for England's national employment service." He repeated the oft-expressed argument that "the United States is the only large industrial nation that has not a permanent, comprehensive employment system." Labor Commissioner Bryant of New Jersey said:

"Nearly all of the protests against the proposed national service are made by members of employers' organizations and are organized propaganda. Manufacturers send letters of protest at the request of their national associations regardless of whether they individually know anything at all of the service or its merits. Large employers, friends of mine, have admitted to me that they have protested at the suggestion of their organizations, although they themselves had no complaint to make."

Says Unions are Liable for Members' Acts

That a labor union is liable for the acts of its members is the opinion rendered recently by the United States circuit court of appeals for the eighth district, in imposing against the United Mine Workers of America, damages to the amount of $625,000 for violation of the Sherman anti-trust act. This is one of the most important decisions affecting the responsibility of labor unions and is the first instance in the United States where a labor union has been held liable for an act of its members.

The essential principles established by the decision are that a labor union is responsible under the Sherman anti-trust act for treble damages for injury or destruction of property by its members; that the organization is responsible as a principal for the acts of its district and local branches, their officers and members, and that the organization is responsible when it takes no steps to control or discipline its officers and members for acts of violence.

So far as known no other decision has been rendered in this country which so strongly hits the malicious destruction of property by striking workmen, who heretofore have done considerable damage and escaped without punishment. If this decision is upheld plant owners can compel unions to enforce law and order among its members, under penalty of being liable for their acts.

Labor Commission Favors 8-Hour Day

Toronto, Canada, July 14.—The Canadian commission on industrial relations appointed to investigate labor conditions recently in its report makes some sweeping suggestions for legislation. It recommends the establishment of an 8-hour workday, with a weekly rest of at least 24 hours; a minimum wage law especially for women, girls and unskilled labor; state insurance for those unable to work, proportional representation by grouped constituencies and restoration of the freedom of speech and publication. The commission found that one of the chief causes of labor unrest was the high cost of living and that there is a great reluctance to risk unemployed capital in new enterprises. The principle of collective bargaining is approved, the report pointing out that it does not necessarily mean recognition of the closed shop.

The report outlines and gives suggestions regarding various types of joint industrial councils. The essential feature of all these systems is that the human factor in industry is regarded as of first importance. The commission believes that a beginning should be made with joint plant councils and more extensive organizations of district and national councils evolved therefrom as necessity arises. Every council must be the result of the unfettered choice of both employes and employers and some machinery should be established to bring the parties together. It was recommended that a bureau be established under the minister of labor to compile available information and statistics.

Plate Contract

For 250,000 Tons Renewed by Canadian Government at 3.65c

Toronto, Ont., July 15.—C. C. Ballantyne, minister of marine, has announced that a new contract has been entered into between the Dominion government and the Dominion Steel Corp., Sydney, N. S., for the delivery within a five-year period of 250,000 tons of ship plates at the price of $3.65 per 100 pounds. The original contract made in 1918 between the government and the company called for the delivery of 50,000 tons of ship plates per year for a period of five years, at $4.15 per 100 pounds. The minister of marine stated that after extended negotiations with Mark Workman, president of the Dominion Steel Corp., an amicable arrangement has been arrived at, Mr. Workman having agreed to reduce the price by 50 cents per 100 pounds. "Pending the outcome of the recent negotiations," said Mr. Workman, "the government requested us last spring to discontinue building operations, which was instantly done. Now that the matter is settled definitely, we will rush the plate mill to completion, and I expect that we shall be rolling by Jan. 1 next."

The new mill will represent an expenditure of approximately $5,000,000. It is the first mill of this character to be erected in Canada.

The Canadian government has received tenders for the construction of 40 steel cars for the Canadian National railways. It is stated that the bids were 50 per cent higher than the estimate of the railway officials, and that it has not as yet been decided whether any of the tenders will be accepted. Deliveries are now being made of 150 steel colonist cars under order for the Canadian National railways, of which 100 were ordered from the Canadian Car & Foundry Co., Montreal, and 50 from the Pullman Co., Chicago. The National Steel Car Co. of Hamilton, Ont., is making delivery of 750 box cars to the Canadian National railways. The company is also delivering rolling stock material to the Federated Malay states government, and forgings for the Paris, Lyons & Mediterranean railway and the Midi railway of France.

John Coughlan, shipbuilder of Vancouver, B. C., recently placed a large order for steel plates with the Dominion Steel Co., Sydney, N. S. The shipbuilding industry on the whole, however, is quiet, owing partly to the metal workers' strike.

May Bring Home War Material

France Offers $300,000,000 For Equipment Costing $1,500,000,000 and Army Sales Department Head Declares Property Will Not be Sacrificed—Reduction of Size of Army to Result in Increased Offering of Scrap

WASHINGTON, July 15.—Rather than sacrifice it at the extremely low prices bid by foreign nations for it, Director of Sales C. W. Hare has announced that much of the war department material in Europe will be shipped back to this country. This statement was made by Mr. Hare last week in the course of testimony given by him before the special house committee which is investigating war expenditures.

Mr. Hare said a sales organization will be formed and maintained throughout Europe, but if better prices cannot be obtained for the surplus over there than those bid much of it will be returned to this country. Mr. Hare and a small party was to have sailed last Saturday for Europe, but the trip has been delayed upon receipt by Secretary of War Baker of a cablegram from Assistant Secretary Crowell, saying he was to sail on the day named for the United States and suggesting that Mr. Hare and his party remain here until he held a conference with them. Apparently the conference is to relate to the new sales policy abroad.

Mr. Hare, when before the house committee, said that neither he nor anyone else on his staff would supersede anyone who has proven himself efficient. It is understood however that the mission will, so far as sales of surplus materials are concerned, supersede the liquidation commission in Europe which is headed by Judge Edwin B. Parker. It has been pointed out that the liquidation commission has a vast amount of other work to do and that, morever, experts are required to sell the various lines represented in the surplus materials abroad. While it has not been announced who will have immediate charge of the sale of machinery and machine tools abroad, it is known that Lieut. Col. A. LeMar of the machine tool section, who recently returned from France, will sail with the party back to Europe and probably will have a prominent part in the sale of machine tools there, if satisfactory prices can be obtained. Mr. Hare said sales of machinery and machine tools worth $20,000,000 to $30,000,000 to Belgium are planned. Belgium will have no difficulty in arranging for credits. That country, as a matter of fact, has a better standing in this direction than other allied belligerent nations because it has been given precedence in recovering indemnities from Germany.

Mr. Hare told that committee that the French government had offered only $300,000,000 for American army equipment in France costing $1,500,000,000. The offer was made to Chairman Parker of the liquidation commission and included ship docks, railroad works and equipment, automobiles, and other materials.

"If France will not pay a fair figure," said Mr. Hare, "we will take the stuff out of that country and sell it elsewhere."

It was declared by Mr. Hare that it was the policy of the war department not to preserve high prices for the benefit of manufacturers, but to prevent unnecessary industrial disturbance and sacrifice in prices that would result from "dumping all surplus goods on the market."

Reduction by congress in the size of the army will result in the war department throwing larger supplies of steel on the market. A large portion of the supplies sold and held for sale, while not actually scrap, has been classified as such, largely because much of it is high in carbon, such as bar steel and screw stock, and shell forgings, and is not readily suitable for commercial manufacture. About three weeks ago an inventory showed that there was a surplus of approximately 492,000 tons of scrap held by the war department, while 79,000 tons were sold during June. While it is not possible to say just how much the department now has on hand, because inventories fluctuate and have not been completed in all cases, it is understood that the additional supplies to be put on the market will bring the surplus scrap tonnage up to at least 800,000 tons.

This material is in various stages of manufacture and the increased tonnage to be offered for sale represents that portion which had been placed in reserve ready for completion of manufacture whenever necessary. Now that the size of the army has been reduced, however, it will be taken out of stock and sold.

The department does not propose to dump this material any more than it has done with other steel supplies. On the contrary it is closely watching the market, and, realizing its upward trend, arranges schedules for bids so that it may benefit from stronger market conditions. As an instance of the improvement in the market, there was sold last week to a Cleveland consumer 3500 tons of shells forgings as scrap at $23.30. The same kind of tonnage had been sold by the war department a week previous at $19.60 a gross ton. There also have been some sizable sales of hard bar steel stock to a prominent scrap dealer in Pittsburgh recently, who disposed of them to a large independent steelmaker and a prominent maker of steel castings in that district as high as $30 a ton. Some of this class of stock had sold for $18.

Plan to Resume Trade With Germany

WASHINGTON, July 15.—Lifting of the blockade of Germany does not give promise of developing any important movement of iron and steel or raw materials for their manufacture from the United States to that country. This at least seems improbable for the present and so far as blast furnace, semifinished and finished products are concerned indications are that Germany will do everything in its power to use its undamaged furnaces and mills to supply her own needs and perhaps establish prices so low that will prevent American competition. While it is also unlikely that raw materials may be exported to any great extent, it is thought there may be some shipments of coal, if not of small quantities of ore, partly due

to the depriving of Germany by the peace treaty of some of her ore and coal fields. In the case of ore, it is pointed out that, even if Germany cannot supply her own immediate needs, she has nearby countries to draw from, such as Sweden and Spain. In the line of metals, the largest exportation from this country to Germany will be copper. It is understood that Germany is in need of large supplies of this nonferrous product.

It also is explained that Germany will have to establish credits before it can trade freely with other countries and that those European countries associated in the war with the United States will be given precedence in this direction. Doing business on a basis of exchange of goods is not probable to any great extent for the present because of the lack of supplies that country has on hand and also because of the shortage of shipping. However, Germany may be in a position to carry on sizable trade with nearby neutral countries, such as Norway, Sweden, Denmark, Switzerland, Holland, and other countries.

Chairman Hurley, following the announcement of the state department that the German blockade would be removed, said shipping facilities were ready to handle cargoes to Germany, and that tonnage would be allocated to north Atlantic and south Atlantic and gulf ports as rapidly as shippers indicated the need of them. One of the first lines to Germany to be authorized by the shipping board is the Philadelphia and Hamburg line of Philadelphia to be operated by Halstead & Sons.

Acting Secretary of State Polk said that trade with Germany will be resumed through the issuance by the state department of blanket licenses covering all commodities, except dyestuffs, potash and chemicals, restrictions having been placed upon the German export of these articles by the peace treaty. The blanket license will otherwise give complete freedom to trade and communication with Germany. The object of the exceptions of dyestuffs, potash and chemicals is to protect the infant industries created in the United States and allied countries during the war.

Emphasis has been laid on the fact that the lifting of the trade ban applied only to Germany and that the action announced by the state department is in conformity with the treaty of peace.

Official announcement also was made at the state department that American consular officers will not be immediately returned to Germany, although special agents may be sent there to look after American interests in the country.

The shipping board has announced that, effective Monday, all restrictions heretofore exercised in connection with the approval of charters and voyages for merchant ships will be discontinued. This is in line with the previous announcement that control over ocean freight rates had been discontinued.

"While charters must still be submitted to the chartering executive of the board at New York for formal approval," it was announced by the board, "the effect of the new ruling will be that owners or charterers will no longer be required to observe maximum or minimum rates either on charters or on berth business."

Hurley's Resignation is Surprise

WASHINGTON, July 15.—While surprise was created by the resignation of Edward N. Hurley as chairman of the shipping board, effective Aug. 1, the latter insists that it is based on a long-expressed anxiety to return to his family and private work. Mr. Hurley declares he wants to rest a time at his home in Wheaton, Ill., and then will establish offices in Chicago, and later in Philadelphia and New York, as a business adviser of small manufacturing concerns. President Wilson has appointed John Barton Payne, Elmhurst, Ill., as successor to Mr. Hurley. Mr. Payne at present is counsel for the United States railroad administration and formerly acted in a similar capacity for the shipping board.

Various reports have been heard as to the cause of the resignation of Mr. Hurley, and he has taken occasion to deny each of them. That any discord existed between the President and Mr. Hurley is denied by the latter by referring to the cordial tone of the letter of the President in reply to the letter of resignation written by Mr. Hurley on May 28. Claims that he had grown tired of being quizzed by the senate committee on commerce and house committee on merchant marine and fisheries were replied to by Mr. Hurley that he had been treated "royally" by both.

"If the President fired me," said Mr. Hurley, with a smile, "it took him a long while to perform the job. You will notice that my letter of resignation was written on May 28, and it is hardly conceivable that we would have waited until July 10, the day he acknowledged my resignation, to 'fire' me. I also believe the cordial tone of the letter of the President to me will hardly justify the report that I was 'fired.'" Mr. Hurley denied emphatically that he resigned because of any antagonism toward him by congress.

Mr. Hurley was told that in some quarters it was felt that now was a particularly inopportune time for him to resign inasmuch as he had only recently laid the merchant marine policy of the board before congress, and it was about to be taken up. Mr. Hurley said that he had appeared before the legislative committees and

Status of Shipbuilding Program June 30, 1919

Total Tons in Program—17,393,061 Tons Canceled—3,797,895

Contracts	Total Program	Delivered	Launched and Fitting Out	On Berths	Canceled	Not Started
Steel	1676	460	198	391	325	302
Wood	1030	361	193	88	385	3
Concrete	42	...	7	7	28	...
Total	2748	821	398	486	738	305
Requisitioned	400	334	17	20	16	13
Grand Total	3148	1155	415	506	754	318
Estimated Status on December 31, 1919	3148	1832	209	222	754	131
Estimated Status on March 31, 1920	3148	2016	163	127	754	88

had gladly answered their inquiries, that he still will be available to them if they want him, and that he could only recommend a policy on behalf of the shipping board. It remained for congress to accept or reject the program, or revise it, he said. No dissension of any character exists within the shipping board, according to Mr. Hurley.

Mr. Hurley said he had retired. About two years ago, he said, the President asked him to head the shipping board, but that at first he declined the position. When the President said, however, that it was a personal matter, Mr. Hurley explained, he felt obliged to take the position and had enjoyed the work. Until Aug. 1, Mr. Hurley will remain in Washington actively directing the board's present program of selling to private owners the ships built by the government.

It is reported that Mr. Hurley's departure will forecast a radical change in the method of government shipping control. At present the shipping board consists of five members and is considered an unwieldy body. There are indications that legislation to make it either a one-man organization or place control of shipping under an existing government department will be urged. Mr. Hurley is said to favor one-man control, along the lines proposed in the bill of Representative Joseph Walsh, of Massachusetts, which would create another cabinet office to be known as the department of the marine.

Contract Liquidation is Proceeding Rapidly

Washington, July 15.—Valued at $1,385,300,000, uncompleted portions of suspended contracts of the war department had been liquidated to June 21. This is 39 per cent of the total suspensions of $3,549,200,000, as shown by incomplete reports. Inasmuch as the munitions board, Toronto district, and the director of explosives have suspended a number of contracts whose value has not been reported, the latter figure is expected to be increased slightly. The number of contracts liquidated to June 21 is 17,764, and $188,614,000 has been paid to contractors in settlement, the savings effected being $1,196,731,000 or 86.4 per cent of the value of uncompleted portions.

Of the contracts and agreements to the value of $1,385,300,000 reported liquidated to June 21, $471,300,000 or 34 per cent, represents informal agreements adjusted. Settlement costs for these agreements average 11 per cent of what it would have cost to complete them, against 15 per cent for the formal contracts.

More than 4200 suspended contracts, of which the value of the uncompleted portions is estimated to be $1,824,000,000, are being liquidated by the ordnance department claims board. During the week ended June 21 nearly $50,000,000 worth of these contracts were liquidated, as compared with $29,000,000 the previous week. The rate of saving for the week was 91 per cent, as compared with a rate for contracts previously liquidated of 81 per cent.

Will Reorganize Bureau of Foreign Commerce

Washington, July 15.—Announcement of the resignations of Burwell S. Cutler, chief, and Grosvenor M. Jones, first assistant chief, of the bureau of foreign and domestic commerce, indicates a complete reorganization of the bureau of the government but is not regarded as expected to change the bureau's foreign trade policy or otherwise disturb the operations of the department. Better personal opportunities and not dissatisfaction are said to have caused the departure of the first officers of the bureau.

Prior to the statement Mr. Cutler was to leave, announcement was made Mr. Jones had quit to become assistant manager of the Mercantile Bank of the Americas, New York City. At that time it was said Mr. Cutler would go to Europe to study the economic situation and the bureau's work there in connection with American foreign trade. Now that his resignation also has been announced, it is stated he will make the European trip before retiring to his private affairs as president of Cutler Mfg. Co.

Phillip S. Kennedy, commercial attache at London, former professor of economics at Harvard and New York universities, will, it is expected, be nominated by the President to succeed Mr. Cutler. Mr. Kennedy was a commercial attache in Australia before going to London and for several years has been in the bureau. Who will succeed Mr. Kennedy has not been determined, but Mr. Jones' successor will be Roy S. McElwee, second assistant chief of the bureau, and Herman G. Brock will succeed Mr. McElwee.

The F. J. Greene Engineering Works, Racine, Wis., has engaged Architect Edmund B. Funston of Racine to prepare plans for a one-story brick and steel shop addition, 100 x 123 feet in size, costing about $50,000.

Fair Demands

Are Current in Refractories and Makers Cheerful

Pittsburgh, July 15.—While demands for brick for blast and open-hearth furnaces could increase considerably and still provide no tax on capacity, current requirements are of fair size and manufacturers are quite cheerful. It is believed that stocks of the various kinds of brick on the hands of the steel and iron producers at the beginning of the year now are pretty well exhausted and that the recent improvement in the demand for iron and steel must soon be reflected in a better demand for refractories. Iron and steel plant stocks of brick at the signing of the armistice last November are said to have been sufficient to meet about four months' requirements on 100 per cent operations of the works. With operations on a considerably smaller scale the stock of bricks has been prolonged, but it is generally believed that they must now be pretty well depleted.

No particular change is noted in prices but the market relatively is stronger on magnesite and chrome brick than on fire clay and silica brick. Magnesite has become extremely scarce, due to the absence of imports and the fact that operations at the Washington and California mines largely have been suspended since the war ended. Nothing has developed in connection with the proposed tariff on magnesite, ore and brick.

Refractories

(Per 1000 f. o. b. works)

FIRE CLAY BRICK
(First Quality)

Pennsylvania	$36.00 to 41.00
Ohio	36.00 to 38.00
Kentucky	36.00 to 38.00
Illinois-Missouri	30.00 to 40.00

FIRE CLAY BRICK
(Second Quality)

Pennsylvania	$30.00 to 35.00
Ohio	20.00 to 25.00
Illinois-Missouri	25.00 to 30.00

SILICA BRICK

Pennsylvania	$40.50 to 45.00
Chicago	45.50 to 50.50
Birmingham	46.50 to 51.50

MAGNESITE BRICK
(Per Net Ton)

76 per cent	100.00 base

Little Stories of Business Life

Enthusiasm of Youth

A PARTY of young engineering students went through the plant of the Illinois Steel Co., at Gary, Ind., the other day. Each member of the party had a note book and pencil, asked many questions and made a memorandum of what he saw and heard. "How many buildings are there?" asked one student as he entered the works. "How many square feet does the plant cover?" asked another. "Have you ever thought of putting smoke consumers on those stacks?" inquired one, gazing aloft intently. The guide was hoarse before he emerged from the rail mill, one of the first mills entered by sight seers on their round of the plant. He kept a few paces ahead of the party so that he could not hear all the questions, and he doubled his pace. He took the students close to the soaking pits and the open hearths in hope that some of their enthusiasm would wilt and he walked them fast over the hot sands and cinders. At length they emerged from the plant.

"The greatest sight I ever saw since I saw Niagara Falls," said one.

"Beats going through the jail," remarked another student.

And then a dapper boy stepped forward with a swagger of importance.

"You will kindly extend to Judge Gary my hearty thanks," he said.

Corrected Teddy

TO dispute the word of the late Colonel Roosevelt and not only get away with it without being presented a membership card in the Ananias club but actually to be thanked by the doughty colonel is the unique experience of William Thum who died a few days ago at Hammond, Ind. Mr. Thum's lifework was that of metallurgist and he was head of the United States Metals Refining Co., East Chicago, Ind. But he was a hunter as well and had trailed big game in Africa before Colonel Roosevelt made his memorable trip there. Mr. Thum corrected some statements of the latter and received a cordial acknowledgment and thanks for setting the matter right.

Needs the Money

THE watchful eye of the government on its purse strings is illustrated by the experience of a member of a rate investigating committee who has recently returned to private life. At the time he left government service his last expense check, although paid, had not been checked through the auditing department. Now he receives the following letter: "Please refund 60 cents to the government as it is held the item of that amount covering taxi fare cannot be allowed. The arriving time of your train in Buffalo has been checked and found to be after business hours. Evidently the taxi was hired for the purpose of going for dinner and as there is a good restaurant at the station, it is thought the 60 cents was an unnecessary expense."

Skill is Rewarded

MEMBERS of the National Founders' association, with headquarters in Chicago, tell this little story on the railroad administration:

"Down on the Wabash line a water tank was operated by electricity which was tended by a nearby farmer. He turned on the switch in the morning, went about his own business, came back about 6 o'clock and turned it off. For this service of a few minutes each day he received about $20 a month. When the railroad administration took hold, those classifying employes rated this farmer as an electrician. They figured his time for the entire day and allowed him about $300 a month, without, however, requiring any additional work from him. Furthermore, he was given back pay to the amount of $2500 or $3000."

Earning the Increment

LIFTING oneself over the fence by the bootstraps ever has been classed with the search for perpetual motion, but maybe it can be done. Likewise the unearned increment on real estate seldom goes to the interest most instrumental in putting the value into the land, probably the reason for calling it "unearned." But when a great steel company decides to locate a plant on a tract of sand that for miles possesses almost no value, buying a tract many times as large as it needs for itself, it may cause an increase in values that comes back in sales of the excess acreage. It has been thought that one immense steel plant in the west paid for itself in full as a result of this method of procedure and added profits have been coming in ever since. This is such a legitimate a profit, though outside the company's regular line of business, that it admits of no reasonable criticism.

Lackawanna Report Not Typical

Company Reports Deficit for Second Quarter—Makes Heavy Products for Which Sales Lag Because of Lack of Railroad Buying—Trade With Germany Resumed and Credit Problem Looms—General Financial News

BY JOHN W. HILL, FINANCIAL EDITOR

SECOND quarter earnings of the Lackawanna Steel Co. disclosing a deficit of $233,086 for April-June operations might have come as a disconcerting shock had it not been for developments covering the more recent period such as the Steel corporation's gain in unfilled orders, and other important considerations relating specifically to the general steel business which served to nullify the significance of the report as an index to conditions in the whole industry. While the report reflected the trade paralysis that paralleled the unfortunate controversy over prices between the railroad administration and the industrial board set up by the department of commerce, it also reflects the fact that the nature of the Lackawanna products had an important effect upon the earnings statement.

The company's output is confined largely to heavy steel products, including rails, merchant bars, structural shapes, plates, etc., most of which lines have not shared in the recovery in activity that has been enjoyed by the lighter products. As a producer of rails, plates and other material heavily consumed by railroads and the manufacture of road equipment the company is a conspicuous sufferer from the lack of railroad buying.

Even so, the earnings record presented by the company for the second quarter does not exactly indicate the state of the company's position at the present. The greater share of the deficit doubtless was accumulated during April and May, when operations were around 25 per cent of capacity. Recently the company was allotted one-fifth of the 200,000 rail order placed by the railroad administration and operations now approach 75 per cent of capacity with new business flowing in encouragingly.

Low Earning Point Passed

Speaking for the industry as a whole evidence abounds that the low point in earnings has been passed. As the time approaches for the appearance of the Steel corporation's June 30 report conjecture respecting the exhibit it will make, is increasing. Owing to the wide diversification of the corporation's products and the fact that the unfilled tonnage report for the end of June indicates the tide turned during that month, a fair showing is anticipated.

Announcement that the trading-with-the-enemy act, which is to remain a law until peace is ratified by this government, will not be permitted to prevent the resumption of commercial relations between America and Germany has been made by the state department. Save in respect to dyes, chemicals and potash, trading will be possible by means of blanket licenses issued for all other commodities. Ships have been made available and routes will be established to former enemy ports as soon as desired by shippers. This is a development of tremendous importance as it signalizes the sweeping away of the hampering government regulations upon trade and the resumption of normal international relations, war-bound for five years. In connection with the beginning of the commerce with the still-technical enemy, there is raised a problem of exceptional proportions. It is that of supplying Germany with credits.

If the allies in Europe need credits to enable them to buy goods and materials in America, the need of Germany must be even greater. Her financial position is worse in comparison than that of the nations she fought. Germany has been stripped of territory and resources and must pay enormous indemnities, which the other nations will receive and may use as bases for credits. It is said now that the credit requirements for Europe will not be so great as was estimated previously, the total being placed at $2,000,000,000 as compared with the $5,000,000,000 and upwards suggested some weeks ago. Of this sum Germany is understood to want $500,000,000, which will mean that she expects to make purchases of raw materials, chiefly cotton and copper, to this extent in America.

While the problem of extending credits to the allies is being satisfactorily worked out some difficulty may be experienced in regard to Germany. The prejudice against the Germans, the fact that they have but $4,000,000 of American securities to put up as security, and the undermining of her credit will combine to make the problem a serious one. It is suggested however that German concerns formerly with good credit standing in this country will not find it impossible to resume business relations here. It would seem that it will be necessary both for this country to sell raw materials to Germany on credit as well as to buy reasonable amounts of the finished products from Germany, if the old enemy is going to be able to pay the debts assessed by the victors. It may not strike some as just that a country which has wrought such cruel wrongs upon humanity should be given encouragement in regaining prosperity. But the cold economic fact remains that unless the Germans prosper they cannot meet their obligations and unless the margin of profit left for themselves is sufficient to serve as an incentive to work, they will not even strive to re-establish themselves. In other words it is in the interest of the allies to see that Germany has every opportunity to get on her feet again in a business way, which means the allies must buy from the Germans, else hope of collecting the indemnity must be given up. There is every evidence that France and other European countries are ready to resume relations with the former enemy, the more so because the discount of the German mark makes it cheaper to buy in Germany than anywhere else, especially the United States where the dollar is at a premium.

Lackawanna Report Shows Quarterly Deficit

In its report for the three months ending June 30 the Lackawanna Steel Co. shows a deficit of $233,086, after provision for all charges and war taxes. Not only does the record for the second quarter suffer tremendously in comparison with the profit of $3,830,408 earned for the corresponding period of 1918 but it also is far below the showing of $1,207,109 earned for the first quarter of the present year. The income account for the six months of this year shows profits of

$974,022 or the equivalent of $2.77 a share, as compared with profits of $6,782,833 for the same period last year, or $19.32 a share. The falling off is nearly $600,000.

The present six months profit of slightly less than $1,000,000 is a decline of more than $12,000,000 from the figures reported for the first half of 1917. The report has attracted great interest in the industry because it is the first showing of a large steel company for the second quarter period to appear.

A decline in tonnage in unfilled tonnage is also exhibited by the company. Unfilled order on June 30 amounted to only 122,399 tons as against 656,207 tons on the corresponding date last year. The comparative income account follows:

	1919	1918
Net earnings after taxes and expenses	$446,757	$4,690,842
Interest Lackawanna Steel bonds and other obligations	227,668	233,157
Subsidiary bond int.	41,092	43,400
Balance	177,977	4,414,285
Extinguishment mines and min. invest	63,956	101,385
Depreciation, renewals	347,127	482,412
Profit for second quarter	*233,086	3,830,488
Unfilled orders	122,399	556,207

*Deficit.

Finance Furnace Plans

Birmingham, Ala., July 15.—Electrification of mines, improvement of furnaces and other properties, financing of the by-product coke oven plant nearing completion and meeting of a $2,000,000 first mortgage 6 per cent loan due on Feb. 1, 1920, are said to be the objects of an issue of $6,000,000, 10 years, 6 per cent notes by the Sloss-Sheffield Steel & Iron Co. J. W. McQueen, president of the company, has been in the east for the past three weeks in conference with members of the board of directors on the subject and on his return the latter part of the week it is believed full statement of the proposed betterments will be announced. The company has in operation two out of seven blast furnaces and its sales have been equal to the output of the two stacks. Two other furnaces are in shape to go in blast on short notice.

British Pay Dividends

Ample evidence that British steel companies continue to show satisfactory returns, despite the falling off of war orders, is to be found in the dividend disbursements announced by a number of concerns. The Edgar Allen Steel Works are able to pay for the second year in succession a dividend of 17½ per cent, according to advices from the British staff correspondent of THE IRON TRADE REVIEW. This concern may claim to have been consistently successful. For the seven years preceding 1913 the average was 10½ per cent on ordinary shares, for the next two years 12½ per cent, for the following two years 15 per cent and now for the second time 17½ per cent. The Rhymney Iron Co., which is unable to declare its final dividend owing to its returns not being quite complete, pays a 6 per cent dividend. Messrs. Davy Brothers report a greater output than ever, and large extensions are being planned. The concern has a very full order book, and claims that its rolling mills are in advance of the usual practice either in England or America. The firm pay 10 per cent dividend and the shareholders have sanctioned a substantial increase of capital.

Report One Hill Lease

Trustees of the Great Northern Iron Ore properties report the leasing during 1918 of only one parcel of ore lands. The Cleveland-Cliffs Iron Co. and the Struthers Furnace Co. leased the Wade mine, which adjoins the Deacon near Buhl, Minn. This property carries a royalty of from $1.10 to 70 cents, shipments in 1918 amounting to 67,577 tons with a minimum shipment this year of 80,000 tons. The small Langdon & Warren mine was exhausted in December, 1918.

The annual report, which has just been issued, shows total receipts from the proprietary companies of $4,557,000. Miscellaneous receipts and disbursements together with a dividend distribution of $6,000,000, accounted for an excess of disbursements over receipts of $1,477,496. The undistributed receipts accordingly were reduced from $2,079,775 to $602,279.

Ore shipments in 1918 from the "old leases," which include the Mahoning, Stevenson, Leetonia and Utica mines, were 2,734,678 tons. The report shows shipments from stockpiles by the Arthur Iron Mining Co. of 633,914 tons. Shipments under leases made in 1913 and following years, aggregated 3,136,750 tons. Stockpiles at the end of 1918 held 236,712 tons against 651,409 tons at the close of 1917.

The Leader Iron Works, Decatur, Ill., has been consolidated with the Trahern Pump Co., Rockford, Ill. The Decatur concern will be continued in that city for the present but eventually it probably will be removed to Rockford.

Much Phenol

Will be Released by Government—Naphthalin Market Lowered

New York, July 14.—The release of 27,000,000 pounds of government phenol in the near future is being strongly anticipated by consumers of this product. For some time past the shortage of phenol has been most pronounced, spot shipments being almost impossible. The government stocks will be released through trade sources, so as not to unduly disturb the market, and the price will be fixed by the government. No assurance is forthcoming at this time as to what the price will be, but it is thought in authoritative quarters that the figure will be around 12 cents. Two large producers of phenol, it is further believed, will handle these supplies. At present, the market is largely nominal.

Coke Oven By-Products

Spot

Per Gallon at Producers' Plant

Pure benzol	$0.24 to .28
Toluol	.25 to .35
Solvent naphtha	.22 to .27

Per Pound at Producers' Plants

Phenol	nominal
Naphthalin, flake	0.06½ to .07½
Naphthalin, balls	0.08½ to .09½

Per 100 Pounds at Producers' Plants

Sulphate of ammonia	nominal

Contract

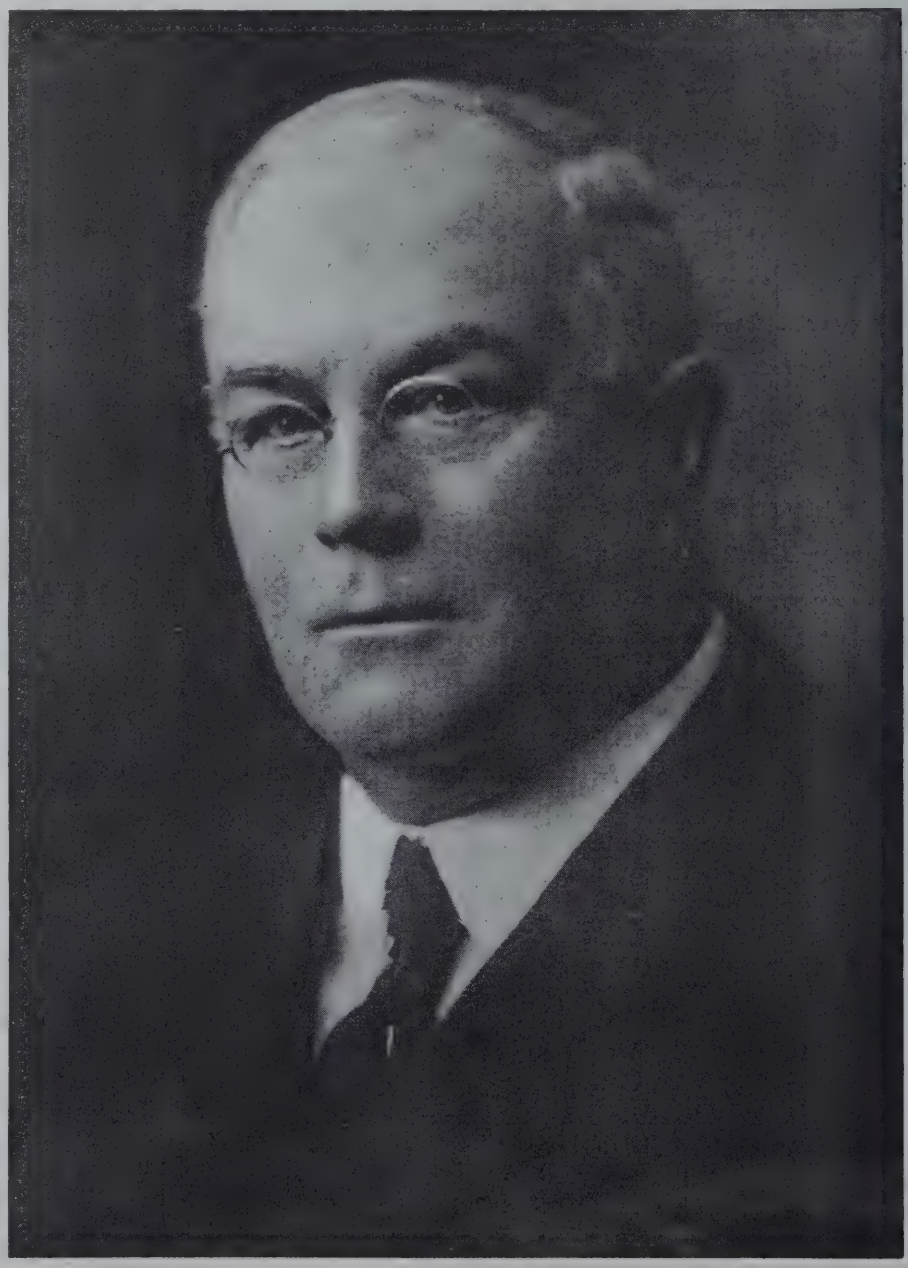
Pure benzol	$0.24 to .28
Toluol	.25 to .35
Solvent naphtha	.22 to .27

Per Pound at Producers' Plant

Phenol	nominal
Naphthalin, flake	0.08½ to .09½
Naphthalin, balls	.10½ to .11½

Per 100 Pounds Producers' Plants

Sulphate of ammonia	nominal



Naphthalin has undergone a decline, the market now holding at 6½ cents to 7½ cents for flakes, and 8½ cents to 9½ cents for balls. This is a drop of approximately 2 cents, and follows several weeks of relative inactivity. Although weakness continues in sulphate of ammonia, it is believed that the time is not far off when buying by the fertilizer industry will set in. At the present time so little domestic business is going that the market is virtually impossible to define on this class of trading. Export buying, it seems, comprises the bulk of current business in sulphate of ammonia, and the aggregate of this trading is small. Prices on export business, however, are fairly well settled at around $4.60 for ammonia in double bags at eastern seaboard.

Samuel Thomas Wellman

Feb. 5, 1847—July 11, 1919

SAMUEL THOMAS WELLMAN, Cleveland inventor, engineer and manufacturer and one of the outstanding figures in the development of modern iron and steel manufacture, died at Stratton, Me., July 11, at the age of 72. For more than half a century Mr. Wellman has been closely identified with the improvement of equipment used in the making of steel and during that time has contributed a number of inventions that virtually revolutionized the industry. The electric charging machine and the handling of materials by the electric magnet introduced by Mr. Wellman have sprung into widespread use in practically every civilized country where steel is made. These inventions, while greatly lowering the cost of making steel, have eliminated numerous operations once performed laboriously by hand. Through his genius Mr. Wellman saved millions of dollars for manufacturers and contributed an invaluable service to humanity in promoting safety in steel works. Like many other men who have risen to prominence in the industrial world, Mr. Wellman received his early training in New England. He was born Feb. 5, 1847, at Wareham, Mass., and shortly afterwards went to Nashua, N. H., where his father, Samuel K. Wellman was superintendent of the Nashua Iron Co., a small concern engaged in rolling locomotive tires from hammered steel blooms imported from England. Mr. Wellman secured a common school education at Nashua and later attended Norwich university, Norwich, Vt., where he received the degree of bachelor of science and later in life was given an honorary degree in civil engineering. In 1864-65 he served in the Civil war as corporal, Company F, First New Hampshire heavy artillery.

Early in life Mr. Wellman displayed an interest in the iron works at Nashua. He became familiar with the various operations which changed the blooms to finished tires and in the early sixties, when the company decided to install a regenerative gas furnace to heat the blooms, young Wellman was handed the drawings for the new furnace and directed to build it according to the plans. C. W. Siemens, English designer of the furnace, had arranged to send an engineer from England to erect the furnace but when he arrived at the plant, he found that the junior Wellman had already built it. The engineer went over the installation with Mr. Wellman, and after carefully checking it with the drawings, pronounced it a very good job. The furnace already had been dried out, and therefore the gas producers were started and the furnace given its initial test. It was entirely satisfactory. The Siemens engineer was so pleased with Mr. Wellman's work that he took him to Pittsburgh to assist him in starting a crucible steel melting furnace that had just been completed. Mr. Wellman remained in the Pennsylvania city through part of 1867 and 1868, spending about three months at the works of Anderson Cook & Co. Here he operated the first crucible steel melting furnace in America, using about 1000 pounds of cheap nut coal to melt a ton of steel which in the old-fashioned coke furnaces had re-

SAMUEL THOMAS WELLMAN

Pioneers Who Revolutionized the Manufacture of Steel

AMBROSE SWASEY, JOHN FRITZ AND SAMUEL T. WELLMAN—PAST PRESIDENTS OF THE AMERICAN SOCIETY OF MECHANICAL ENGINEERS

AMERICA is indebted to Samuel T. Wellman and John Fritz, more than to any other men, for the rapid development of the iron and steel industry during the last half century. John Fritz, who died Feb. 13, 1913, invented the three-high rolling mill and placed the manufacture of rolled steel on a practical basis. Mr. Wellman accomplished for the melting what Mr. Fritz achieved for the rolling of steel. His tilting open-hearth furnace and his charging machine enabled manufacturers to produce ingots on a quantity basis. The inventions of these two men were necessary, each to the other. Without the facilities for shaping the ingots into finished forms, introduced by Mr. Fritz, Mr. Wellman's inventions would have been relatively unimportant. If Mr. Wellman had not found a way to melt and handle steel in large quantities, there would have been no need for Mr. Fritz's efficient mills. The names of Fritz and Wellman must always be linked together as benefactors of the industry.

quired three tons of expensive coke. While in Pittsburgh he also built two crucible furnaces for Singer, Nimick & Co., and later went to Boston in the offices of the Siemens agents. He built a furnace for the Chrome Steel Works, Brooklyn, N. Y., and for other concerns throughout the country.

Mr. Wellman then left the Siemens interests and in 1870 built an open-hearth furnace at the Bay State Iron Works, South Boston, Mass., which proved to be the first installation of its kind in this country to meet with commercial success. The furnace produced a higher quality of steel than previously had been attained and the product was used chiefly for locomotive fire boxes. From Boston, Mr. Wellman returned to his father's plant at Nashua, where he built an open-hearth furnace, and a plate and bar mill.

In 1873 Mr. Wellman went to Cleveland to design and build the plant of the Otis Steel Co. He remained with this company for a period of 16 years as engineer and superintendent. During this time he developed the open-hearth charging machine and introduced the electromagnet for handling pig iron and scrap steel. The first charging machine was operated by hydraulic power, and although it was not entirely satisfactory, it performed the work fairly well and encouraged its inventor to build another one which was driven by electric motors. This proved to be more satisfactory, and was installed in the plant of the Wellman Steel Co., Thurlow, Pa., a company organized by Mr. Wellman in 1890. A second electric machine was installed in the plant of the Standard Steel Works, Burnham, Pa. The machines at Thurlow and Burnham were of the low type. In 1895 four high type machines were built for the Homestead works of the Carnegie Steel Co., and from that time the development and use of electric charging machines has been rapid. Charles M. Schwab once stated that he believed that the open-hearth charging machine effects a saving of 50 cents per ton of steel. Inasmuch as upwards of 300,000,000 tons of open-hearth steel have been manufactured since the conception of the charging machine, it is apparent that Mr. Wellman's invention has been an important factor in the industry.

In 1896 Mr. Wellman organized the Wellman, Seaver Engineering Co. in which his brother, Charles H. Wellman, and John W. Seaver were associated. Later this company was consolidated with the Webster, Camp & Lane Co., Akron, O., forming the Wellman-Seaver-Morgan Co. This company retains the name at the present time, although Samuel T. Wellman retired from active participa-

tion in the firm in the year 1900.

Mr. Wellman was interested in many problems confronting the iron and steel industry and was ever eager to learn more of steelmaking. On one occasion about two years ago he said, "It is 50 years since I left my home among the hills of New Hampshire and started for Pittsburgh to get my first insight into the steel business. I have been trying to learn all about it ever since, but what I don't know would still fill a big book."

He was a member of many engineering and scientific societies including the American Society of Mechanical Engineers, of which he was president in 1901; American Institute of Mining and Metallurgical Engineers; Iron and Steel institute of England; American Iron and Steel institute; Cleveland Engineering society, of which he was an honorary member; and various other organizations.

He is survived by two daughters and three sons, of the latter all living in Cleveland, W. S. Wellman is president of Wellman Products Co., and M. C. and F. S. Wellman are connected with the Wellman Bronze Co.

The funeral services held Monday afternoon at the Euclid Avenue Congregational church, Cleveland, were attended by many prominent engineers, manufacturers and business men. Robert W. Hunt and Ambrose Swasey represented the American Society of Mechanical Engineers. Members of the Cleveland Engineering society and delegations from the Wellman-Seaver-Morgan Co. and Wellman Bronze Co. were present. The pall bearers were Frank A. Scott, E. S. Church, C. C. Smith, L. L. Pope, E. H. Whitlock and John A. Penton, of the Penton Publishing Co.

Obituaries

DAVID S. KENNEDY, superintendent of the structural mill of the Homestead works of the Carnegie Steel Co., died at his summer home in Pulaski, Pa., July 10. He was born in Youngstown, O., 58 years ago and came to Homestead in 1887. He took an active part in the civic and business affairs of the community, having been a burgess of Munhall borough and for several terms a member of the borough council. He was president of the county selective service board of Homestead and the strain and exertion of duties in connection with that service are believed to have directly caused his decline in health.

Elwyn A. Mallory Sr., superintendent of the Milwaukee Corrugating Co., Milwaukee, died at his home recently. He was 66 years of age.

Michael J. Reilly, president of the Reilly Machine Co., Chicago, died suddenly on a street car in Chicago, July 10. He was 50 years old and is survived by his widow and two daughters.

Gen. William Emil Doster, for 35 years counsel for the Bethlehem Steel Co. and its predecessor, the Bethlehem Iron Co., and connected with or interested in many other corporations, died at his home in Bethlehem, Pa., July 2, aged 82 years.

John Burnham Pevear, who for a number of years was western district manager for the General Electric Co., died at his home in Braintree, Mass., recently. He was 51 years of age, and was the son of the late Henry Pevear, president of the Thompson-Houston Electric Co., Lynn, Mass., which was consolidated with the General Electric Co.

William Thum, president of the U. S. Metals Refining Co., East Chicago, Ind., died at his home in Hammond, Ind., recently, of pneumonia. He was connected with the Balback metals refinery at Newark, N. J., for 20 years and built the plant at East Chicago. During the war he perfected a process for safety in handling explosives which was adopted by the government.

George Carpenter, former general manager of the DeLaval Steam Turbine Co., Trenton, N. J., and at one time superintendent of the Standard Roller Co., Philadelphia, was drowned July 6, while bathing in Sanhican creek, Trenton, N. J. It is believed he suffered an attack of heart failure while in the water. He recently resigned from his position at the turbine company.

George G. Lockwood, general manager of the Bryan-Marsh division of the National Lamp works of the General Electric Co., Central Falls, R. I., died June 26 at Association Island, O., at the age of 47. He was taken ill while attending a business meeting in Cleveland, and was taken to Association Island, where an operation was performed, from which he rallied, later suffering a relapse. Most of his business life was passed in New York.

William Gibson Sharp, president of the United States Smelting, Refining & Mining Co., died unexpectedly at his home in Wenham, Mass., July 1. After graduating from the Rensselaer Polytechnic institute in 1879, he was for a number of years connected with the United States geological survey. Later he was superintendent of the Utah Fuel Co., going from there to the Consolidation Coal Co., where he was manager of its mines in the Fairmount district.

Fred S. Sayre, aged 55, secretary and general manager of the Positive Lock Washer Co., Newark, N. J., died suddenly June 15. He was connected with the Vreeland Gas Engine Co. for two years, was bookkeeper for the Positive Lock Washer Co. for two years and traveled for Bless & Drake for a year. Later he rejoined the staff of the Positive Lock Washer Co. as office manager, was made assistant general manager and in 1915 assumed the position he held at the time of his death.

Edwin E. Jackson Jr., one of the most prominent organizers of business corporations in the United States, died at his home in Brooklyn, N. Y., recently, following an attack of acute indigestion. He was born in Binghamton, N. Y., 52 years ago and was educated at Amherst and Columbia universities. He practiced law in New York and his first big business feat was the organization of the so-called hardware trust, out of which he was credited with making $250,000 annually. Later he organized several pools in the wire industry and was fined $45,000 in 1911 for violating the Sherman antitrust law. Mr. Jackson's ability as an organizer netted him large returns and his home in Brooklyn is said to have cost $100,000.

Foreman Class Formed

J. Lewis Hay, of the Hay Foundry & Iron Works, Newark, N. J., has organized a group of foremen of the various departments to study modern production methods. The general subjects covered by the training include the handling of men; materials from purchase to final product; plant plan and layout; principles of organization; elements of cost finding and cost accounting; record keeping; industrial relations; hiring and firing; welfare work; safety; plant teamwork, etc.

Eight-Hour Day Brings Novel Wage Schedule to France

Yesterday Today and Tomorrow in European Industry

BY FRANCIS MILTOUN

Paris Correspondent of The Iron Trade Review

PARIS, June 20.—When M. Loucher, minister of ravitaillement, expressed the hope that the 8-hour day adopted in the metal trade of France would increase the pay of the workmen and increase the production, he reckoned without his host. During the nearly one month that the 8-hour day has been in operation, France has experienced strikes and interior disturbances, especially in the Paris region where at one time nearly a quarter of a million workmen of the metal trades were out. Since that time they have returned to work, but now the miners have struck. For three days not a bucket of coal has been mined in France.

Surprising features of the wage problem in Grenoble district have recently come to the surface. Here it appears a workman is payed, not according to his skill but in proportion to the number of children he has. This is shown in the following agreement, entered into by the employing organizations in order to stop the strikes of metallurgists in the Grenoble region:

1. Immediate application of the 8-hour law.
2. Increase of 40 cents per day for all wage earners, this bringing that of the mere laborer up to the normal equivalent of approximately $3 per day. This arrangement not to include family allocations.
3. The extension of family allowances whereby the married workman, whether his wife is employed at a wage-earning occupation or not, receives an additional $5 per month, with a still further additional $5 for the first child, and $4 per head for all others.

The daily wage of a common laborers with two children is $3.56 and $4.06 for a skilled mechanic. Before the war, without family allowances, wages in this particular legion were 80 cents per day of 10 hours for common laborers, and $1.20 per day of 10 hours for skilled labor.

* * *

Fear Coal Shortage

A cry of alarm has gone up in the French chamber of deputies over the fear that there will not be sufficient supply of coal the coming winter for French industrial and domestic needs. This comes something as a shock when we know that the coal of the Saar basin is to be available; but possible labor troubles are foreseen there; the supply from England it is considered will be nil from now on; the northern French mines only are in about one-fourth of their normal output of before the war; and besides Alsace is to be supplied with approximately 11,000,000 tons which formerly came from Germany. France's prewar need was something like 60,000,000 tons. Actually, at the moment, according to the figures given in the chamber of deputies recently by Jean Perrier, deputy of Isere, the coal production of French mines is but 60 per cent of what it was during the last months of hostilities. Mobilized miners, as their term runs out, are leaving for the better-paid and less onerous work in other lines. For the working of the Saar mines the modus operandi is yet to be arranged, and it is not yet certain what the output will be and how and by whom it will be produced. By the peace treaty Germany will doubtless be compelled to furnish France any coal that she may need, but the details of this are yet to be arranged, indeed the whole peace treaty as to details of working out its finality will have to be discussed for months after the actual signing.

* * *

Register Foreign Firms

The French government is introducing a bill in the chamber of deputies requiring all foreigners to first obtain government authorization before they may acquire or retain ownership in real estate of any kind in any of the frontier departments of France. Such property as might otherwise be owned may not even be leased for a longer period than 18 months. The formal authorization is to be granted by specific decree in each instance, a decree being a law which does not require legislation for its repeal but may be summarily canceled. This is another manifestation of the growing policy of France for the French, and one which will ultimately make it necessary for the foreign operator in France to actually associate himself with a French partner or company stockholders. Failure to observe this regulation will incur seizure and sale by a similar process to that which provides for the sale of the property of minors—a process in the conduct of which the foreigner, like the minor, will have nothing whatever to say.

* * *

Exports To India

American progress in the iron and steel trade of India has been phenomenal during the last years of the war. England's exports of these materials to India fell off from 1914-15 to 1917-18 from 78.5 per cent to 51 per cent; while those of the United States increased from 5.9 per cent to 41 per cent. Germany and Belgium accounted for approximately

8 per cent each of the remainder during the five-year prewar period, but all of this and more has been diverted to America.

Tubes, sheets and wire, and bale and box bands formed a large bulk of the trade. In British circles it is believed that the proportion of traffic to India will not differ greatly in the future from the figures given above, basing this belief upon the fact that the haul from Atlantic ports of the United States is not appreciably greater than that from England.

* * *

Seeks Levant Trade

France, with her new affiliations in the Near East, and her tutelage over Syria, which is to be granted her by the peace treaty, is entering upon a new era of foreign trade. Here she will come into immediate competition with Italy. Under the name of the Compagnie Francaise du Levant, with a capital of 9,000,000 francs ($1,800,000), the French Society for the Exportation of Matallurgic Products has founded a puissant organization. Associated therewith is the Bank of the Parisian Union, which is financing the new Citizen organization, the director of the Salmson Aviation Motors Co., the big Mediterranean shipping company, the Messageries Maritimes, and the Société des Hauts Fourneaux of Pont-à-Mousson. From its composition it is evident that the new organization is essentially a metal-trade organization.

* * *

Implement Needs Heavy

There is great complaint among the farming communities and the authorities alike as to the high prices of French-made farm machinery. This is due to the prime causes of the high prices of labor, the consequent high cost of production and the fact that quantity production is not possible from the fact that the government insists that no paarts for assembly, or semifinished parts, shall be imported.

The Syndical Chamber of Farm Machinery Manufacturers declares absolutely that any reduction in established prices, as agreed with the government, is impossible for the present.

France will not be in a position to produce one-tenth of her requirements for the next two years, unless a regime is instituted which will allow the importation of component parts for assembling. The following figures were announced officially recently to show what agricultural implements France needs: 55,000 plows, 39,350 cultivators, 50,750 harrows, 44,000 disk harrows, 13,000 seeders, 27,000 reapers, 20,000 rakers, 14,000 thrashers, 15,000 binders, and 70,000 farm vehicles. This list does not include motor vehicles, motor cultivators or tractors.

German Iron Prices

Quotations on German iron still continue to rise. All grades show material increases in May over previous values. The prices in marks per ton, f.o.b. cars, follow:

	Gray Iron.	Hematite.	Gray—Luxembourg.
Last quarter, 1918..	161.50	223.00	130.00
First quarter, 1919..	250.00	314.50	215.00
April, 1919	340.00	366.50	296.50
May, 1919	391.00	407.00	341.50

Lloyds In France

Lloyd's register of shipping is opening branch quarters in Paris. The French Bureau Veritas hitherto has performed a similar service for French ships and now is to have competition. It is said quasi-officially, appropos of the opening of the Lloyds Paris branch, that 85 per cent of French shipping now under construction is in British yards.

German Output Declines Much in Year

Washington, June 14.—Decline in the German production of pig iron in January and February of 1919 as compared with the same months of 1918 is shown by data as published in *Stahl und Eisen,* the figures having been prepared by the Union of German Iron and Steel Manufacturers.

The figures in metric tons, which do not include the output for Alsace and Lorraine and Luxemburg, follow:

	January 1919	January 1918
Hematite iron	53,347	47,256
Foundry pig iron and castings....	58,361	70,877
Bessemer pig iron (acid process).	1,994	9,384
Thomas pig iron (basic process)..	262,395	393,066
Steel iron, spiegeleisen, ferromanganese and ferrosilicon.....	113,785	207,182
Puddling iron (except spiegeleisen)	8,119	13,712
Other iron	1,351	4,134
Total	499,352	745,611
	February 1919	February 1918
Hematite iron	47,823	58,521
Foundry pig iron and castings...	57,316	67,664
Bessemer pig iron (acid process)	653	12,960
Thomas pig iron (basic process)	238,494	369,882
Steel iron, spiegeleisen, ferromanganese and ferrosilicon.....	118,251	194,207
Puddling iron (except spiegeleisen)	8,584	12,776
Other iron	1,757	2,773
Total	472,878	718,783

Through the return of the Briey basin and the Lorraine territory to France, the iron industry of Germany has been dealt a most severe blow, this fact being readily admitted even by German newspapers. Practically the only iron producing center of any importance left Germany is the Rhenish-Westphalian district.

According to the *Chemiker-Zeitung,* Germany has in recent years built up a great iron and steel industry, of which the principal center is the Rhenish-Westphalian district. It is affirmed that on that industry one-tenth of the population of Germany exists, but the production of ore lately has not kept pace with the output of finished iron, so that more than half of the requirements of the blast furnaces has had to be imported from numerous foreign sources.

Wire Merger Organizes

Pending the selection of a treasurer the meeting of the stockholders of the Clinton-Wright Wire Co., Worcester, Mass., to perfect the new organization has been deferred. Charles F. Fairbanks, Lexington, Mass., who was president and treasurer of the Clinton Wire Cloth Co., Clinton, Mass., and Boston, one of the merged companies has declined to serve as treasurer of the new company. At the outset only 10 directors were named. They are: Chairman of the board, George M. Wright; Frank A. Drury; Paul B. Morgan; Charles F. Fairbanks; Harry Bronner; Richard B. Young and George F. Naphen. Officers are, Evans F. Jones, president; John A. Denholm and George F. Wright, vice presidents.

The company contemplates the erection of extensions of the Palmer, Mass., branch plant of the Wright Wire Co. department, at an estimated cost of $1,500,000. It also plans to put each plant of the company on a 24-hour basis of three 8-hour shifts. Employes will be permitted to buy common stock along lines similar to those of the United States Steel Corp.

Launch Steel Barge

The first of 40 steel barges ordered by the railroad administration, of which the American Bridge Co. has the contract for 25 and the Dravo Construction Co. for 15, was launched at the Ambridge plant of the former company last Thursday afternoon. These barges, which are for use in the Mississippi river trade, are of standard type 230 feet long, 11 feet deep and 45 feet beam. The cargo box is 184 feet long, 9 feet high and 37 feet wide. Oil in bulk can be carried in compartments with which the barges are equipped. The carrying capacity is rated at 2300 tons. About 430 tons of steel is in the construction of these barges.

Ore Production Still Held Down

Steel Corporation and Few Independents Remain Only Active Factors on Ranges—Moving of Town of Hibbing Now Well Under Way—Some Inquiry for Manganiferous Ores is Reappearing

(Special Correspondence)

DULUTH, July 14.—Though no material improvement in mining operations on the Minnesota ranges can be observed, as yet, officials of the various companies interested in this territory are expectant of orders from their headquarters in the east to put on larger forces and to increase production to the close of the season.

"When I first went into the business I was told by one of the most experienced men in the trade not to let myself believe that I was doing better than I really was and so not to flatter myself into rearing up any balloons," said an official of one of the independent companies. He explained that he is naturally an optimist, but at the same time he did not believe the steel trade in this country is going to experience any immediate boom. The season is now so far advanced that this operator doubts whether any extensive programs will be undertaken this season by the railroads, and he believes that the hope of any real trade boom must be put over until 1920.

This producer recently was in receipt of inquiries for both bessemer and nonbessemer ores and he had quoted the established prices. The prospective buyers reported, however, that they had been offered tonnages at from 65 cents to $1 under the list. They agreed to place orders if he would meet the cuts, but he declined.

Estimating Season's Movement

Some of the authorities in the trade have been estimating the season's ore tonnage recently. There is a wide spread in the current estimates. They ranged all the way from 45,000,000 to 52,000,000 and even 55,000,000 tons has been stated. While shipments from the head of the lakes docks from the opening of the season up till June 30 were only slightly over 2,000,000 tons under the amount for the same period last year, it is feared unless the independents speed up materially, the present rate of shipments will not be maintained to the end of the season. It is noted that the grain movement from over the northwest to the terminals here is likely to call for the chartering of a larger percentage of the lake shipping tonnage than ordinarily because of the expected heavy crops of wheat and other grain, and the announced policy of the United States Grain Corp. to export on as large a scale as possible before the close of the lake navigation season. With the probability that some of the large ore carriers will be diverted to the grain trade to a greater or lesser extent at times, it is thought that iron shipments must be cut down from the high basis attained during the last three years.

Moving of Hibbing Under Way

The Oliver Mining Co. is maintaining shipments from its open-pit properties at slightly under last season's record. The company also is affording employment to a large number of miners in pushing stripping operations at some of its properties, and it is making liberal expenditures in other directions. Under the latter category may be mentioned its enterprise of moving Hibbing the "richest village on earth" from its old location to the new townsite established by the company at Alice. The work was started early last fall. In the interval the town may be said to have been on the move. Whole streets of houses have been moved bodily and others have been torn down. Several business buildings have been already erected in the new location and contracts for other mercantile structures to be built this season are about to be let by the mining company. As the reason for the decision of the Oliver interests to inaugurate a grand moving day, experts here estimated that the townsite 40 upon which Hibbing was largely built, has underlying from 25,000,000 to 30,000,000 tons of ore, one of the largest single deposits on the Mesabi range.

Apart from M. A. Hanna & Co. and Pickands-Mather & Co., the independent operators on the ranges may be said to have been holding down their mining operations to the lowest possible limits thus far this season. Commenting upon this cautious policy, as some see it, a prominent mining engineer who has been in close touch with developments in the Lake Superior district for many years, said: "It seems to me that the United States Steel Corp. has pursued a sensible course in getting out the ore and shipping it down the lakes, where it will have it available for use when required. It is quite possible that all but a couple of the independent operators will have reason to regret their inaction later on. They may be scurrying around for ore before the close of the season, and find that it will cost them more to mine and ship it, than if they had worked along in a normal way from the start in the spring."

Several new operations have been announced on the Mesabi range recently, and the outlook now is thought to be more reassuring. The Longyear interests are drilling north of the Bennett mine, what is known as the Russell mine in the Kewatin field. The McDonald 40, east of Ely, Minn., is being worked by the Chippewa Iron Mining Co. of Cincinnati. It is regarded as high-grade property. It starts with a logging railroad and a good equipment. The Cleveland-Cliffs Co. will soon be ready to operate the Boerne mine near the Buffalo property in Hibbing.

Practically all the manganiferous properties on the Cuyuna range are shut down awaiting inquiries for their ores. W. H. Locker, vice president of the American Manganese Mfg. Co., said the company lately had received an inquiry for its Cuyuna Mille Lacs mine ore. This is the first sign of any interest in manganiferous shown since the signing of the armistice, he asserted. Several of the straight ore Cuyuna range mines are being operated however, and shipping from now on is expected to be on a larger scale.

The Minnesota Steel Co. Duluth plant is now operating around 33 per cent of capacity, and approximately 1300 men are being employed, as compared with 3000 men during the war period. The company's No. 1 furnace is in blast and No. 2 furnace is down at this time for relining. The company is taking advantage of the slack period to push through much-needed repair work.

The Root & Van Dervoort Engineering Co., Champaign, Ill., has increased its capitalization from $1,346,200 to $7,500,000 and has increased its directors.

Orders Are Lax in Tool Market

Dealers Report Little Business Done in the Past Week—No Large Inquiries Are Being Put Out—Building Activity is Expected to Bring Trade From Its Lethargy—Advances Rumored at Chicago

MACHINE tool dealers throughout the various distributing districts, during the past week, report very few orders or inquiries of any consequence, but despite this, state they are doing a fair amount of business on orders for single machines, which continue to come out in steady volume. Some dealers report that the demand for tools is much heavier than is apparent on the surface, stating that in the central states, automobile manufacturers are having such a hard time supplying their immediate wants, that they are purchasing used equipment in lieu of new tools. Other manufacturers are reported holding up their orders in the hope of lower prices, but dealers state that such hopes are useless, as every indication points to advances instead of declines.

In the East there was little buying and very few inquiries. Apparently purchasers in that district are holding off for a more favorable time. On the other hand dealers state the stagnant condition of the market is only natural for this season of the year.

A fair amount of business was done in the Cleveland district, but no large inquiries are out, most of the business being done on a small scale. Dealers are filling the requirements of their regular customers, who place their orders without inquiring in the general market. One dealer reported tool manufacturers at Cincinnati are preparing to operate their plants on a wartime basis, in order to supply the demand. The automobile trade is active, it purchasing a large quantity of used machines in place of new ones. Building activity is on the increase and a number of orders are expected to be developed by these.

At Pittsburgh, little business was done, dealers confining their efforts to sales of individual machines. No lists of any size have made their appearance. Proposed plant additions and improvements to plants are increasing and are expected to enliven the market shortly. Various reasons are given for the lack of large inquiries, but dealers point out in some instances this summer's business is better than that offered during other years. The Weirton Steel Co. has practically purchased all necessary equipment for its new steel plant at Weirton, W. Va. Motive equipment is the only equipment yet to be awarded for this plant. As yet no railroad business of any consequence has appeared.

The large demand for lathes in Chicago territory has brought out the rumor that manufacturers are considering a 10 per cent increase in price within the near future, while dealers in the district are forecasting a general advance of from 5 to 10 per cent on other equipment. This follows an increase in price of shapers, recorded last week. Little business was done during the week outside of dealers filling inquiries for single machines. Despite the absence of large orders some dealers are experiencing difficulty in obtaining delivery on practically all kinds of machines.

Tool Inquiries Light in Eastern Market

ALTHOUGH plant expansion in the east is being carried out on a large scale, the equipment market has still to reflect this fact, as for the past several weeks buying of machine tools has been exceedingly light. Larger lists are virtually nonexistent and the run of small orders is not up to the volume noted in the spring. Some interests expect little real revival in machine tool trading in the east until the railroads come into the market. A rather wide range of opinion prevails as to about when this will be; nevertheless, it is generally conceded that the next month or six weeks should see considerable activity in railroad buying.

While there is little real business to thoroughly test the market, prices of machine tools are steadily showing a stronger tendency upward. In a few instances there have been slight advances, and in several others, manufacturers have stated quite flatly that their next revision would be to a higher level.

Included in current inquiries is that of the Southern Sales Corp., 68 Williams street, New York, calling for a shaper, an engine lathe, and a radial drill for shipment to Cuba. The Treadwell Engineering Co., Easton, Pa., will be in the market shortly for equipment for a new erecting shop. The Steel Equipment Corp., Avenel, N. J., will require new equipment, much of which will be of special character, for a new addition. The American Motor Truck & Tractor Co., 110 West Fortieth street, New York, will utilize the plant of the Portland Mfg. Co., Portland, Conn., which it recently purchased, for the production of trucks and tractors.

The Bethlehem Steel Co., Bethlehem, Pa., is the largest buyer in the eastern crane market at present. In addition to the inquiries recently noted, in previous issues of THE IRON TRADE REVIEW, this company is now in the market for six 5-ton electric cranes. It is understood these cranes are for Sparrows Point, Md. Aside from this business, few new inquiries are out at this time.

The Standard Oil Co. has placed orders for two 30-ton, two 20-ton and two 10-ton cranes for its Bayway, N. J., plant. The American Locomotive Works has placed orders for two 50-ton cranes with the Shaw Electric Crane Co., while a report is current to the effect the Bethlehem Steel Co. has placed an order with Pawling

& Harnischfeger Co. for several cranes. Orders for a 10-ton gantry crane for South America has been placed by W. R. Grace with the Milwaukee Electric Crane & Mfg. Co.

Lathe Demand Presages Price Advance

DEMAND for high grade lathes, medium to large size, is so great in the Chicago territory that an advance in price of 10 per cent in the near future is predicted by dealers. Some dealers are forecasting a general advance of from 5 to 10 per cent, following the increase of 8 per cent in the price of shapers. It is a noticeable fact that while business is good, the demand is almost entirely for single machines. One exception to this is an inquiry now being made for seven steam drop hammers. Armour & Co. placed an order for five small machines for one of its shops and the Atchison, Topeka & Santa Fe railroad has an inquiry out for three machines, one a lathe, another a drill press and the third a pipe machine. The Morris Fertilizer Co. is in the market for 17 machines, the list being put out by the Chicago Pneumatic Tool Co., and the post office department is inquiring for $40,000 worth of tools for garage equipment. Dealers are experiencing difficulty in obtaining delivery on nearly all types of machines, delay being anywhere from 30 to 60 days.

Large Inquiries Are Absent

INQUIRIES of size are lacking in the Cleveland district, but despite this dealers report business fair with indications of heavy demand shortly. One dealer stated that at the present time the demand is greater than the supply and that machine tool manufacturers in the Cincinnati district, several of whom he represents, are preparing to operate their plants on a war time basis, that is, night and day shifts. Another dealer states that the demand for new machinery is so great that it cannot be supplied, and consequently purchasers are buying used equipment in lieu of new tools. Labor conditions are reported to be in such a state that machine tool manufacturers are unable to obtain the necessary amount of men, other industries, such as the automobile trade, acquiring all skilled labor as rapidly as possible.

Although no large inquiries have appeared in the district, inquiries for single machines continue in steady volume, as has been the rule for the past month, and dealers are converting these into sales as fast as possible, which as a whole usually total a fairly good volume.

Building activity is on the increase and many large orders are expected to be developed through these. As yet the Allen Motor Car Co., Columbus, O., which plans to purchase $50,000 worth of machinery, has not issued a list. The Chandler Motor Car Co., Cleveland, which has been purchasing machinery for the past few weeks, is reported contemplating the erection of a large plant addition and will probably be in the market for equipment shortly. The Colburn Machine & Tool Co., Franklin, Pa., is reported planning the erection of a large plant in Cleveland, to be built at an estimated cost of $140,000, and undoubtedly will be in the market for equipment. The Apex Electric Mfg. Co., Cleveland, will build a plant addition, as will the Cuyahoga Galvanizing & Mfg. Co., 1280 East Fifty-ninth street, Cleveland. The Hydraulic Pressed Steel Co., Cleveland, is purchasing machinery of all kinds. Cleveland dealers have an inquiry from the J. C. Wilson Mfg Co., Ltd., Arnprior, Ont., for a vertical boring mill, 6 to 8 feet. The Commercial Engine Co., Los Angeles, Cal., has inquired in the district for a horizontal boring mill. The Brewer-Titchener Corp., Cortland, N. Y., is inquiring for punch presses. Saiberlich Bros., 767 Drew street, Appleton, Wis., plan to build a tractor plant, 120 x 120 feet, which they state will be

China Offers Market For Machine Tools

THE present time seems especially favorable for the introduction of American machinery and machine tools in China, according to a recent statement issued by the bureau of foreign and domestic commerce, in which American machinery manufacturers are urged to take advantage of the unusual opportunity offered. According to the statement, numerous textile mills are being erected, as well as iron foundries, and a large variety of other industries, which show that the country is apparently at the beginning of a very considerable industrial development.

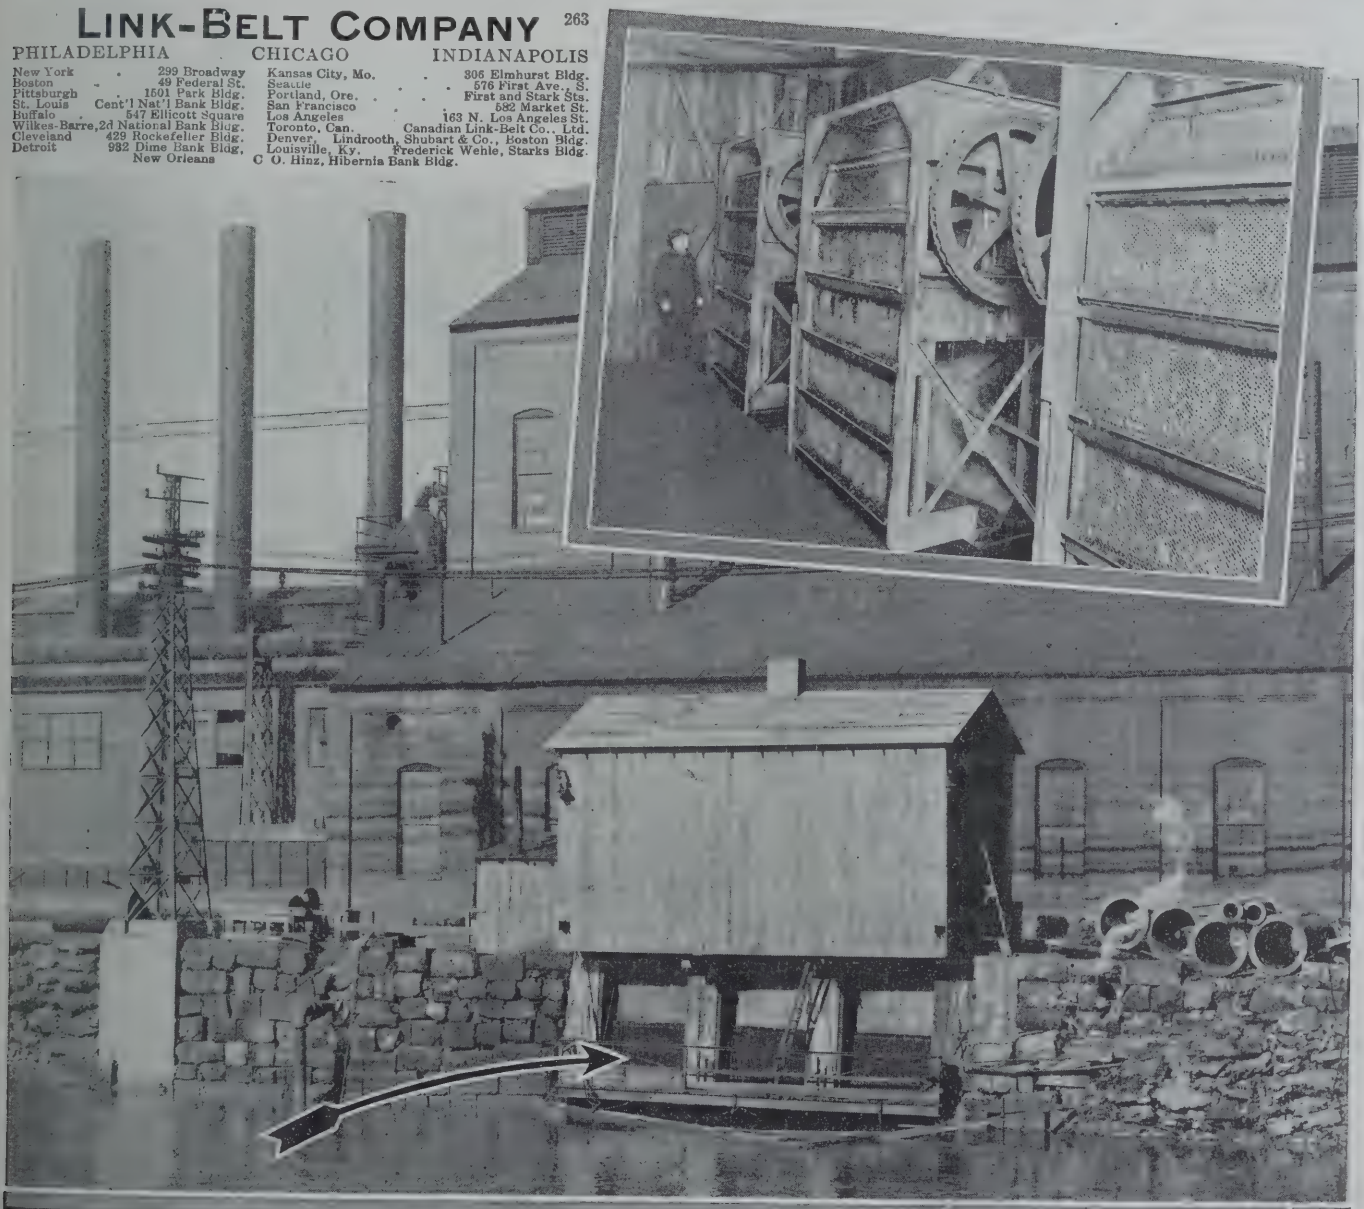
"Other countries are aware of the opportunity, and British manufacturers have been arranging to supply their machinery gratuitously to the engineering college which they have established in Hongkong, to a textile school in Shanghai, and to a number of Chinese industrial schools and other institutions which require machinery and mechanical equipment. The more intelligent Chinese consider American machinery excellent in design, and superior in construction, and for that reason are anxious to equip their schools with it, although it is difficult to do so owing to the universal lack of funds," says P. R. Eldridge, chief, Far Eastern division of the bureau of foreign and domestic commerce.

"It has been felt in the past that American machinery was not suited for the use of the Chinese, but this seems to be an error, as it is agreed among those who are employing Chinese in machine shops and mechanical work, that their intelligence, perseverance and manual dexterity quickly develop them into skilled mechanics under proper instructions.

"As these people are not accustomed to machinery, it will be necessary to teach them how to use American tools and the best way seems to be through the industrial and manual training schools, many of which are now in existence. It can be taken for granted that graduates of these schools will endeavor to have the machinery to which they are accustomed introduced in the factories, and as they are practically the only trained workmen they will have great influence in the selection of equipment. The ordinary manual training school requires lathes from 12 to 14 inches and 16-inch lathes of the gap type. Planers up to 24 x 24 x 48 inches are needed; and, also, 14 to 16-inch shaping machines and small milling machines, as well as small and medium universal grinding machines, wood turning lathes, small buzz planers, circular and band saws, and numerous small tools."

It is pointed out that it would be advantageous if the manufacturers of machinery would either present some of their machinery free to these schools, to loan it, or to sell it at reduced prices. Manufacturers who are interested can get details from the bureau of foreign and domestic commerce, and Julean Arnold, commercial attache, Peking, China.

Clean Water Means Greater Boiler Efficiency



STATIONARY water screens which become clogged with trash, leaves and debris of various kinds results in a dangerously low water supply to boilers, often making a complete shut-down of the entire plant necessary while clearing the intake.

Link-Belt Traveling Water Screens are self-cleaning. They need no attention whatever and insure a steady supply of clean water to boilers at all times. There are no expensive shut-downs, no extra cleaning costs, and no dangers to power plant equipment due to trashy water.

We show a Link-Belt installation at the power plant of the Republic Iron & Steel Company at Youngstown. Send for a copy of our Water Screen Book.

Say you saw it in THE IRON TRADE REVIEW

modernly equipped for the manufacture of tractors. Three additions are being added to the plant of the Star Foundry Co., Troy, O. The Mohegan Tube Co., Brooklyn, N. Y., is adding an extension to its plant, 100 x 150 feet, and will be in the market shortly for all kinds of metal working equipment.

Dealers are advising purchasers to buy their necessary equipment now. Predictions of higher prices are being made. Some dealers report that several manufacturers, who are known to be in the market for equipment, are holding up their purchases, in the hope that prices will drop. Other dealers state that most manufacturers, especially the automobile trade is active in the market, but are unable to supply their wants immediately, and therefore are buying used equipment, all of which will have to eventually be replaced.

From the dealers' standpoint the market although lax on big orders is fair, and the usual dull period of other years experienced during the summer, as yet has not been apparent in the district.

Buyers Await Lower Prices

THE Weirton Steel Co. has practically completed purchases of equipment for its new steel plant now being constructed at Weirton, W. Va. Last week it awarded to the General Electric Co. the power plant, turbine engines, motor generator sets and switchboards, and to the Westinghouse Electric & Mfg. Co. the continuous mill and other mill motors. Motive equipment for the blooming mill is yet to be awarded. It has not yet been decided whether this mill will be electrically or steam driven, but in the trade the expectation is that it will be steam driven and a Pittsburgh district company is reported to be the low bidder. The Cleveland Crane & Engineering Co., Wickliffe, O., has taken two 5-ton and one 10-ton cranes for the byproduct coke plant of the Pittsburgh Crucible Steel Co., Midland, Pa. The Whittaker-Glessner Co., Wheeling, W. Va., has placed an order for one 15-ton crane with the Champion Engineering Co., Kenton, O., which also has booked two 20-ton cranes from the Wheeling Mold & Foundry Co., Wheeling, W. Va. Both orders were placed through the Pittsburgh office of the Champion company. Cranes for the Stark, O., car plant of the Pennsylvania railroad, lines west, have not yet been placed, but it is expected they will be soon. Eight cranes will be installed at this plant ranging in size from 10 to 250 tons. Expectations run strong among the Pittsburgh district machinery and tool trade that some of the big projects which were put up for bids some time ago will be closed shortly. While prices of small tools appear to have struck bottom, this is not the case with heavy equipment and because makers of the latter are not liberally supplied with business, they are inclined to revise their bids frequently. This creates the belief in the minds of buyers that still lower prices might have been named had they waited. It is because buyers are not satisfied that prices have struck bottom that some big equipment specifications have not been placed.

Construction and Equipment

Concise and Timely Business Building Opportunities from the Field of Industry

Along Middle Atlantic Seaboard

BROOKLYN, N. Y.—The B. & L. Metal Stamping Co. has been incorporated with $5000 capital, by S. and L. Bady and S. Levinson, 136 Bay Thirty-first street.

BROOKLYN, N. Y.—The Schaefer Machine Co. has been incorporated with $25,000 capital, by F. M. Livingston, G. D. Ackley and J. G. Williams, 341 St. John's place.

BROOKLYN, N. Y.—The Brooklyn Drydock & Repair Corp. recently was incorporated with $5000 active capital, by T. J. Dobson, C. P. Schroetter and F. J. V. Wagner, 64 Wall street.

BROOKLYN, N. Y.—The G. F. Richer Mfg. Co. has been incorporated with $75,000 capital to manufacture and deal in tools, surgical instruments, etc., by G. F. Richer, M. Richer. 481 Monor avenue and W. J. Hoske. 618 Monroe street.

BROOKLYN, N. Y.—The Smith Randall Engineering Corp. recently was incorporated with $25,000 capital, to engage in the manufacture of tractors and engines, by F. W. Smith, G. W. Randall and M. F. Hickman, 210 East Forty-second street.

BROOKLYN, N. Y.—Joseph Gaydica, operating an iron and metal works at 1433 Thirty-eighth street, is reported having plans prepared for the erection of a 1-story shop addition, 105 x 180 feet, to be built at an estimated cost of $60,000.

BUFFALO.—The Wire Wheel Corp., 1700 Elmwood street, plans a shipping plant to cost $20,000.

BUFFALO.—The Rogers, Brown Iron Co., Erie County Bank building, is taking bids on a machine shop and storage plant, 66 x 262 feet.

BUFFALO.—Levering Bros., Baltimore, have awarded a contract for mill alterations and the erection of a cupola and charging structure at their plant here.

BUFFALO.—The Superior Bronze & Aluminum Mfg. Co. has been incorporated to make castings, etc., with $5,000 capital, by J. L. Dunn, W. D. Hopkins and L. O. Ploss.

BUFFALO.—The J. P. Devine Co., 1372 Clinton street, will spend $200,000 for a foundry 90 x 225 feet and has let the contract to Chas. Borrick & Sons Co.

BUFFALO.—Rice & Adams, 180 Chandler street, manufacturers of dairy machinery, recently filed plans for the erection of a 3-story plant addition to be built at an estimated cost of $45,000.

GARRISON, N. Y.—The Canopus Iron Corp. recently was incorporated with $1,000,000 capital, by J. G. Pearse, G. O. Angell and R. I. Gutham, 353 West Fifty-seventh street.

HADLEY, N. Y.—The Hadley Light & Power Co. has been incorporated with $25,000 capital, by W. Fowler, J. H. Smead and J. J. Breen.

LOCKPORT, N. Y.—The Root Electric Sign Co. has been incorporated with $200,000 capital, by C. T. Metzger, A. L. Hoag and I. A. Root.

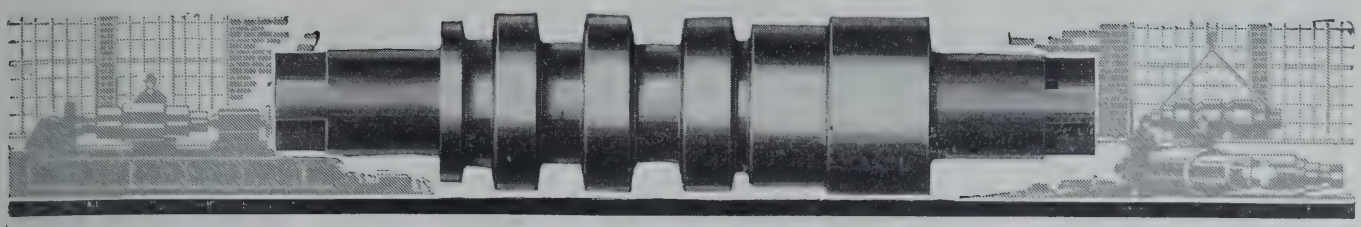
NEW YORK.—The Chatham Die Casting Co. recently was incorporated with $35,000 capital, by H. Baudney, A. Hakanson and J. Preuss, 385 Fort Washington avenue.

NEW YORK.—The Victory Engine Co. recently was incorporated with $50,000 capital, by C. H. Atkins, C. O. Assmus and M. A. Farley, 28 Sterling place.

NEW YORK.—The F. B. Potterton Co., pipe fittings and valves, recently was incorporated with $10,000 capital, by F. B. Potterton, H. Weiss and A. Hild, 83 St. John street.

ROCHESTER, N. Y.—The General Fuel Saving Corp. has been incorporated to manufacture fuel saving devices, with $225,000 capital, by E. J. Shea, F. B. Shea and V. D. Ludington, Holley, N. Y.

SYRACUSE, N. Y.—The Syracuse Sander Mfg. Co. will establish a plant at Brookville, Ont., under the name of the Canada Sander Mfg. Co.



TONAWANDA, N. Y.—The Buffalo Bolt Co. has completed plans for the erection of a plant addition, 81 x 171 feet.

ERIE, PA.—The Erie City Iron Works will build a plant 40 x 122 feet.

ERIE, PA.—Rickert-Shafer Co., manufacturer of machinery and tools, contemplates a plant addition 2-stories, 33 x 150 feet. It will be in the market for equipment shortly.

HOMESTEAD, PA.—The Homestead Valve Co. has awarded the Austin Co. a contract for the erection of a foundry, 27 x 40 feet, to be erected at an estimated cost of $10,000.

KANE, PA.—The Hollingsworth Knife Co. is having

Hubbard Steel Foundry Co.

EAST CHICAGO, IND.

All Kinds of Iron and Steel Rolls and Steel Castings.

plans prepared for a 2-story and basement addition, 40 x 80 feet, to cost $20,000. H. Hollingsworth is president.

MANHEIM, PA.—The Bond Foundry & Machine Co. has let the contract for an addition.

MEADVILLE, PA.—Harlet D. Carpenter, of this city, will build a lighting plant at Cochranton, Pa.

NEW CASTLE, PA.—The New Castle Clay Co., the Youngstown Clay Products Co. and the Carbon Brick Co. have consolidated as the Liberty Clay Products Co., with a capital of $500,000 and will spend $200,000 for plant improvements.

PHILADELPHIA.—Hughes Foulkrod & Co. have a contract for the erection of 12 metal storehouses at Quantico, Va.

PHILADELPHIA.—The General Machine Co., Thompson and Clementine streets, is reported planning the erection of a 2-story addition, 50 x 147 feet, to be erected at an estimated cost of $10,000.

PITTSBURGH.—The Damascus Bronze Co., 928 South avenue, is taking bids for the erection of a 3-story plant, 66 x 75 feet.

PITTSBURGH.—The Russell Machine Co. has been chartered with $100,000 capital, by Charles J. Lang, Wilkinsburg, Pa., Edward J. Lang and others.

PITTSBURGH.—The Pittsburgh Open-Hearth Steel Co., Pittsburgh, has been incorporated with a capital of $5000 to manufacture ingots, billets, bars, plates, rails, etc., by J. H. McCloy, Cecil, Pa.; G. S. McCloy, Ingram, Pa., and others.

PITTSBURGH.—Dilworth, Porter & Co. has awarded to the McClintic-Marshall Co. a contract for four buildings estimated to cost $110,000. The buildings will be used as machine shop, foundry, forge and store and will be one, two and three stories high.

STROUDSBURG, PA.—Part of the plant of the International Boiler Works recently was damaged by fire.

WILLIAMSPORT, PA.—The American Farm Equipment Co., capital $100,000, has been incorporated by Charles A. Bair, William J. Housel, S. J. MacMullin, Williamsport.

WILLIAMSPORT, PA.—The Lycoming Foundry & Machine Co. has started on improvements to its plant which includes the erection of a 3-story office building and an addition to the machine shop.

YORK, PA.—The York Steel Corp. will built a plant.

AVENEL, N. J.—The Steel Equipment Corp., manufacturer of steel furniture and office equipment, will shortly undertake the erection of an extension.

ELIZABETH, N. J.—Singer Mfg. Co. will erect a foundry, 180 x 260 feet, contract having been awarded to Turner Construction Co. at estimated cost of $500,000.

HOBOKEN, N. J.—The Greater New York Ship Service has been incorporated to build boats, ships, vessels, etc., with $100,000 capital.

HOBOKEN, N. J.—The plant of the Titjen & Lang Dry Dock Co. recently was damaged by fire. The loss was estimated at $15,000.

LYNDHURST, N. J.—The Lyndhurst Body & Equipment Co., automobile bodies, etc., has been incorporated with $125,000 capital.

NEWARK, N. J.—Weston Electrical Instrument Co. will erect a storehouse.

NEWARK, N. J.—The Seton Leather Co., 62 Berona street, will erect a 1-story boiler plant.

NEWARK, N. J.—A $20,000 addition, 60 x 600 feet, will be erected here by the National Carbide Gas Co.

NEWARK, N. J.—Butterworth-Judson Corp., Doremus avenue and Central railroad, has a permit for a 2-story chemical laboratory.

NEWARK, N. J.—George Zisch has filed plans for the erection of a 1-story machine shop, 40 x 80 feet, to be built at an estimated cost of $10,000.

PASSAIC, N. J.—The Central Supply Co., plumbing materials, recently was incorporated with $50,000 capital, by Louis Levy, Joseph Hirschberg and A. H. Dunberg.

PASSAIC, N. J.—The J. G. Schmidt Iron Works, 330 Harrison street, has been incorporated with $100,000 capital, to manufacture structural steel and ornamental iron works.

PATERSON, N. J.—The Sipp Machine Co., Keen street, is having plans prepared for the erection of a 2-story plant addition, 45 x 85 feet, to be built at an estimated cost of $15,000.

TRENTON, N. J.—Hutchinson Storage Battery Co., 209 South Warren street, let a contract to Frank D. Pavory, 162 Pennington avenue, for a 2-story, factory to cost $16,500.

BALTIMORE.—Frank M. Krasmer, Dauphin street, is having plans prepared for the erection of a 2-story machine shop, 36 x 78 feet.

BALTIMORE.—The first unit of the plant of the Canion Air Brake Co., 563 Calvert building, will be a 2-story machine shop, 60 x 200 feet.

BALTIMORE.—Wm. Haselhurst, Park avenue and Preston street, is planning to build a 2-story blacksmith shop 100 x 150 feet to manufacture automobile springs.

BALTIMORE.—An option has been taken by F. S. Weise, realty broker, representing a New York manufacturing company, on property on West Baltimore street, on which to erect a $200,000 plant. The name of the concern is being withheld.

HAGERSTOWN, MD.—The Hagerstown Welding & Automobile Works, Virginia avenue, has been organized and will erect a 1-story 40 x 100 foot building and a 2-story 40 x 50 foot building.

ROANOKE, VA.—The Metal Mfg. Co. recently increased its capital from $10,000 to $25,000.

Belgians Buy American Tools From Army

(Special Correspondence.)

PARIS, June 22.—The Belgian government "Office Central d'information," has made known the fact that a syndicate has been formed known as "La Construction Metallique," for the express purpose of co-operative action to purchase from the American army in France and Belgium, any and all supplies which that army may be willing to cede in the nature of machinery and tools. The agreement has been concluded under conditions satisfactory to the Belgian purchasers. Prices are to be based upon quotations for similar articles in 1914, plus 55 per cent c.i.f. Antwerp. Purchasers are to be allowed a credit of three years at a moderate rate of interest and deliveries are to be made within stated times, which are assured of being relatively short.

These are exceptional conditions in favor of starting the wheels of production and trade in Belgium turning again with at least a semblance of their former speed. A Belgian officer, who recently returned to Brussels from a mission to Germany, has stated that innumerable Belgian machines were observed in operation in German factories, their own machinery lying idle. The difficulty of reclaiming stolen Belgian machinery is in the identification of it and for this reason it is necessary that Belgium acquire new equipment. The proposition of the American army, it is expected, will do much toward cementing the former social and business friendships between the United States and Belgium, and it is thought the newly acquired American machinery will do much toward making Belgium the first to recover from the effects of the war.

New England States

DEERING JUNCTION, ME.—The American Can Co., New York, has let the contract to the Turner Construction Co., Boston and New York, for a 4-story and basement, 220 x 240-foot factory and a 3-story, 42 x 112-foot service building to cost $300,000.

PORTLAND, ME.—Fire recently damaged the building of th Cumberland County Light & Power Co.

BOSTON.—The Northern Mining Co. has been incorporated with $5000 capital by Mark A. Lawton, Edward S. Page, Melrose, Mass.; and William E. Hutchins.

BOSTON.—The New England American Motor Car Corp. has been incorporated with $100,000 capital by Harrison D. Dockray, Walter G. Burns and M. T. Atwood.

BOSTON.—The Nelson Corp. will build a 1-story, 400 x 500-foot manufacturing plant, a 2-story, 80 x 400-foot receiving building, a 4-story, 60 x 120-foot office building and a 2-story, 84 x 87-foot power house.

HOLYOKE, MASS.—The Cowan Truck Co. has let the contract for a brick, 2-story, 100 x 200-foot mill addition.

IPSWICH, MASS.—The Boulais Tractor Co. has been incorporated to build machinery with $50,000 capital by Wilfred Boulais, Ovild H. Rathe and Edward J. Marcorelle.

TAUNTON, MASS.—Brownell & Burt, Inc., has been incorporated to make autos, carriages, etc., with $15,000 capital by Daniel L. Brownell, George H. Burt and E. H. Brownell.

QUINCY, MASS.—Fire recently damaged part of the plant of the Quincy Electric Light & Power Co. The loss has been estimated at $15,000.

WINCHESTER, MASS.—The John J. Sullivan & Co., Inc., has been incorporatel to make gas fittings, tinsmiths and plumbing supplies and materials with $2500 capital by Charles D. Mahan, John J. Sullivan and M. A. Sullivan.

WORCESTER, MASS.—Bids have closed for an addition and alterations to the foundry and storage building of the Crompton & Knowles loom works, to cost $25,000.

WORCESTER, MASS.—James Smith & Son, machinists, have let the contract for a 2-story, 60 x 212-foot manufacturing building and boiler house to cost $38,000.

PAWTUCKET, R. I.—The Muirhead Gas Heater

FARRELL-CHEEK
STEEL CASTINGS

There are certain broad characteristics about Farrell-Cheek Steel Castings that make them different.

We are not wedded to the use of any one material or form of construction. Your requirements are treated as an individual problem and the special materials best adapted to that problem are supplied. A close adherence to your patterns means a saving of expensive waste materials. Even more important to you is the saving of machine time.

By the confidence imposed in us by our customers in laying their ideas before us we feel certain that such procedure by you will be to our mutual advantage.

Farrell-Cheek Steel Foundry Company

Makers of Steel Castings that are a Little Better Than the Next Best

Sandusky, Ohio

MEMBER OF
STEEL FOUNDERS' SOCIETY OF AMERICA
NEW YORK, U.S.A.

Co., Inc., has been incorporated with $10,000 capital by James Muirhead, Frank Garvin and Edward L. Letourneau.

BRIDGEPORT, CONN.—The Perfection Shear Co. has been incorporated with $500,000 capital by E. F. Von Weytberg, and G. P. Brett Jr., both of Fairfield, Conn., and A. Dunn, Stratford, Conn.

HARTFORD, CONN.—Bids close July 22 for a brick, 2-story addition to the factory of the Arrow Electric Co., to cost $45,000.

NORWALK, CONN.—The Nash Engineering Co. will build a 3-story factory addition.

PORTLAND, CONN.—The plant of the Portland Mfg. Co. has been purchased by the American Motor Truck & Tractor Co., 110 West Fortieth street, New York, which will convert it for its own use.

PUTNAM, CONN.—The Nightingale-More Mills, Inc., has let the contract for the erection of a hydroelectric plant.

Central States Activity

KALAMAZOO, MICH.—The Goodale Co. will triple its capacity by the erection of a foundry, 80 x 80 feet with a single cupola, to manufacture brake shoes, and a foundry 140 x 280 feet, with two cupolas and an oven.

LANSING, MICH.—The Reo Motor Car Co. is erecting a machine shop, 2-stories, 200 x 541 feet.

LANSING, MICH.—The John Bohnet Co., manufacturer of motor truck bodies, is reported planning to erect a new plant in the fall.

LANSING, MICH.—The Lansing Stamping & Tool Co. is reported planning to install three new presses at an estimated cost of $35,000.

LAPEER, MICH.—The plant of the Bostic Stove Co. recently damaged by fire is being rebuilt at an estimated cost of $10,000.

MUSKEGON, MICH.—The Eagle Foundry & Machine Co. recently was incorporated with $50,000 capital, by Charles Habel, W. E. Jeannot and A. Shaw.

OWOSSO, MICH.—The Owosso Bronze Bearings Co. has started on the erection of a foundry and machine shop, both, 40 x 100 feet.

PONTIAC, MICH.—The Van Auken Co., motor car tops and equipment, is reported planning to erect a new plant.

PONTIAC, MICH.—The Pontiac Spring Works will erect a $100,000 plant, 100 x 186 feet and 63 x 87 feet, to replace the plant damaged by fire some time ago.

VERONA, MICH.—The Union Steam Pump Co. has started on the erection of a machine shop, 150 x 200 feet, which is the first unit of a proposed new plant which will be built at an estimated cost of $500,000.

CHICAGO.—Freyn, Brassert & Co., engineers, have been awarded a contract for the design and construction of an industrial building for the Grip Nut Co.

EAST ST. LOUIS, ILL.—The plant of the East St. Louis Light & Power Co. recently was damaged by fire. The loss has been estimated at $60,000.

GRANITE CITY, ILL.—The St. Louis Coke & Chemical Co. has under construction here, a battery of 80 by-product coke ovens.

ROCK ISLAND, ILL.—The Standard Metal Products Co. recently was incorporated with $30,000 capital to engage in the manufacture of silos and coal pockets. Richard Sybenga is president of the company.

SPRINGFIELD, ILL.—The Racine-Sattley Co. has started work on a plant addition, which will house the gas engine plant of the company. Total expenditure has been estimated at $50,000.

INDIANAPOLIS.—The Collapsible Auto Rim Adjustable Tool Mfg. Co. has been incorporated with $100,000 capital, by Edward H. Bauman, Dave Yover and Paul P. Scharffin.

ASHLAND, O.—Henry L. Doherty & Co. is reported planning a 10,000 kilowatt turbine at the company's power station near Mansfield, O.

CINCINNATI.—The plant of the Standard Electic Tool Co. recently was slightly damaged by fire.

CLEVELAND.—The Chandler Motor Car Co. is reported contemplating two additions and an office building, to cost $500,000.

CLEVELAND.—The Colver Mfg. Co. has awarded the Austin Co. contracts for two buildings, 35 x 60 feet and 90 x 280 feet.

CLEVELAND.—The Metals Smelting Co. has been incorporated with $10,000 capital, by Max P. Goodman, Society for Savings building, and others.

CLEVELAND.—Through the Chamber of Commerce it is reported that the Drew Electric & Mfg. Co., an Indianapolis corporation, has purchased a 2-acre site here on which to eerct a plant at an estimated cost of $50,000, to include a machine shop and brass foundry. James H. Drew is president.

COLUMBUS, O.—The plant of the Union Fork & Hoe Co. recently was damaged by fire. It will be rebuilt.

COLUMBUS, O.—The Shartle Machinery Co. recently was incorporated with $10,000 capital, by George W. Shartle and others.

DAYTON, O.—The Dayton Steel Co., recently incorporated, has purchased the plant of the Dayton Structural Steel Co. and will equip it for fabricating structural steel. J. A. Berger is president of the company.

DEFIANCE, O.—The Ohio Electric Railway is considering the erection of a power plant at Lima, O.

DELAWARE, O.—The Sunway Stove Co. contemplates a plant addition. Architect Frank Mason is preparing plans.

ELYRIA, O.—The Colson Co. has started on the erection of a $100,000 addition to its metal working plant.

FOSTORIA, O.—The Fostoria Tool & Machine Co., which was recently organized with $500,000 capital, is reported planning a 4-story plant.

HAMILTON, O.—Contracts for doubling the capacity of the Hooven, Owens & Rentschler Co. power plant, have been awarded to the F. K. Vaughn Building Co. The power house will be equipped with automatic stokers.

LIMA, O.—The Ohio Electric Co. is planning a new lighting and power plant. J. E. Dugan is general manager.

MANSFIELD, O.—The Fuller Engineering Co., Allentown, Pa., has a contract from the Mansfield Sheet & Tin Plate Co. for the installation of pulverized coal burning equipment.

PORTSMOUTH, O.—The Reliable Tractor & Engine Co. has been incorporated by Chris Heer, F. E. Adams and George W. Platt.

STEUBENVILLE, O.—A. J. Shantz & Sons, manufacturers of organs, is reported planning a 1-story building, 40 x 80 feet.

TOLEDO, O.—The Mather Spring Co. has leased a 1-story building, 70 x 120 feet.

TOLEDO, O.—The Toledo Metal Products Co. recently was incorporated with $100,000 capital by Frank S. Schroeder and others.

TROY, O.—The Star Foundry Co. will erect two plant additions, 25 x 48 feet and 85 x 90 feet. W. T. Anglemeyer is president.

YOUNGSTOWN, O.—The Youngstown Welding Co. has been incorporated with $50,000 capital, by Walter D. McKay and others.

ZANESVILLE, O.—The Dockery Brass & Iron Co. has been purchased by Louis H. Wise. It is reported extensions to its foundry and machine shop are contemplated.

Business in Canada

TORONTO, ONT.—The Northern Aluminum Co., Ltd., 158 Sterling road, is reported planning to build a plant at an estimated cost of $60,000. C. A. P. Turner, 1005 Lindsay building, Winnipeg, is the architect and engineer in charge.

TORONTO, ONT. — The Carmichael Waterproofing Co., Ltd., has enlarged the scope of its business by including a sheet metal works for the manufacture of sheet metal building material, etc. This department will be in charge of W. H. Stacey.

TORONTO, ONT.—The Canada Oil Gas Heaters, Ltd., has been incorporated to manufacture oil gas generating machines, oil heaters, gas stoves, etc., with $500,000 capital, by Murray H. Gillam, 773 Indian road; Morely P. Van der Voort and others.

TORONTO, ONT.—The Beaver Truck Builders, Ltd., have been incorporated to manufacture automobiles, trucks, engines, motors, etc., with $250,000 capital, by Richmond W. Hart, 1126 Traders Bank building; Charles H. C. Leggott, 116 Arundel avenue, and others.

TORONTO, ONT.—The Siemon Tractor Corp. has been granted a license to carry on business in Ontario as manufacturers of motor tractors, trucks, engines, motors, etc., with $200,000 capital, and has appointed Jacob C. Siemon, 309 Confederation Life building, to be its attorney.

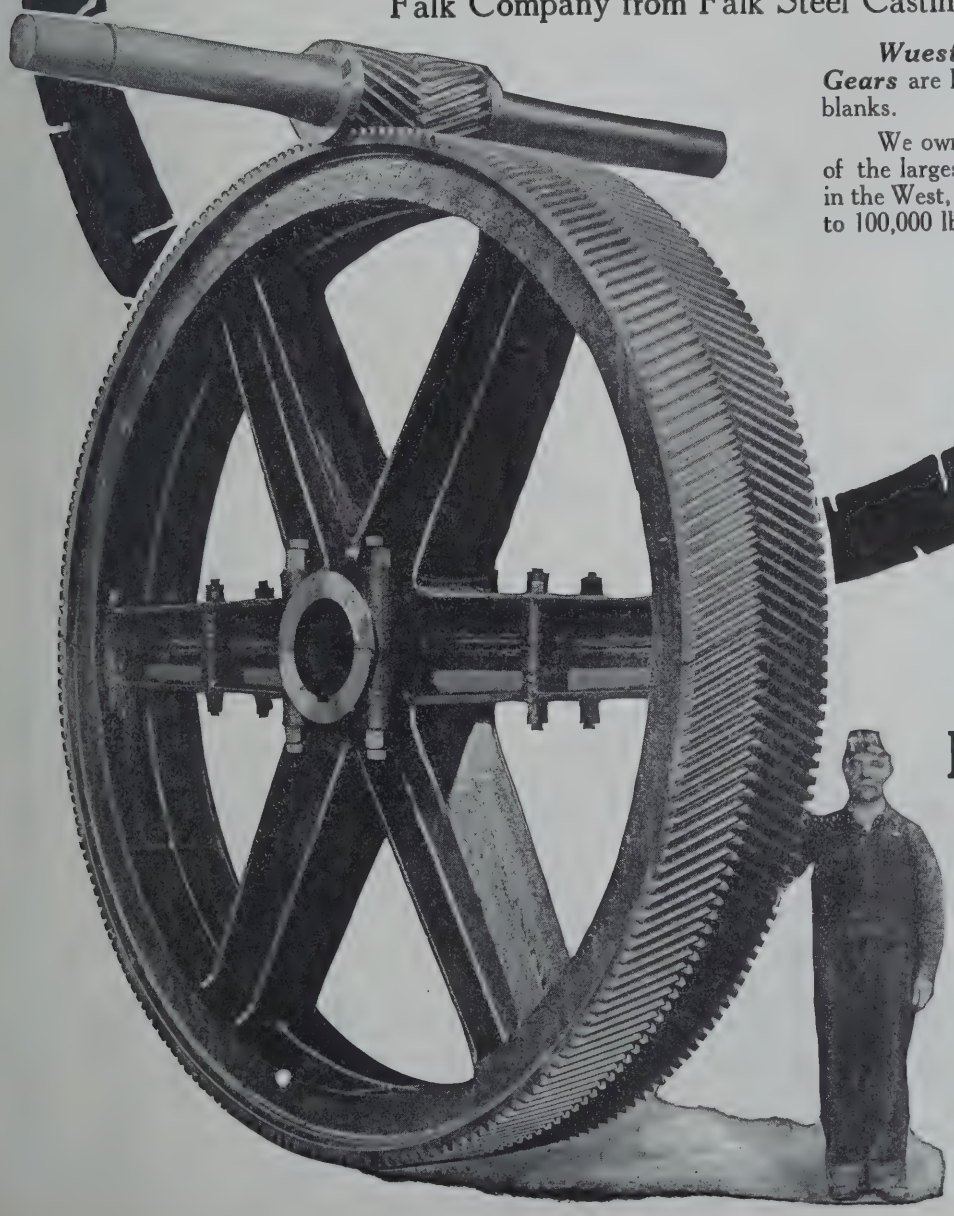
WALKERVILLE, ONT.—The Acme Roofing Co., Walker road, plans a factory estimated to cost $40,000. G. J. Keith is manager.

WELLAND, ONT.—The Volta Mfg. Co., Ltd., has been incorporated to operate electric furnaces and to manufacture castings, iron and steel goods, etc., with $100,000 capital by Robert T. Turnbull, John Young both of Welland, Ont.; Charles W. Sim of St. Catharines, Ont., and others.

WINDSOR, ONT.—The Leggett & Platt Spring Bed Co. is building an addition 51 x 131 feet.

WINDSOR, ONT.—The John V. Gray Construction Co., Confederation Life building, Toronto, Ont., has the general contract for a plant here for the Champion Spark Plug Co. of Canada, Ltd., to cost $60,000.

WINDSOR, ONT.—The Standard Computing Scale Co., of Canada, Ltd., has been incorporated to manufacture computing scales, etc., with $10,000 capital, by Joseph M. Bucher, Thomas F. Comeford, Ferdinand P. Goettman and others of Detroit.



WINGHAM, ONT.—The Aero Cushion Tire Co., recently organized, has purchased two buildings from the Western Foundry Co.

YORK, ONT.—Plans have been prepared for a bridge shop here for the Grand Trunk railway, Union

PRINCE RUPERT, B. C.—The Prince Rupert Dry Dock & Engineering Co., Ltd., recently leased the Grand Truck Pacific railway's drydock for the establishment of a shipyard.

WUEST HERRINGBONE GEARS

If you are interested in obtaining
—maximum mechanical efficiency
—elimination of shock and vibration
—minimum noise
—absolute reliability
specify ***Wuest Herringbone Gears,*** manufactured by the Falk Company from Falk Steel Castings.

Wuest Herringbone Gears are hobbed from solid blanks.

We own and operate one of the largest Steel Foundries in the West, capacity 1 lb. to 100,000 lbs.

The Falk Company
Milwaukee, Wis.

Agents:

Pittsburgh—W. O. Beyer, 1024 Park Bldg.
New York—M. P. Fillingham, 50 Church St.
Wilkes-Barre—Vulcan Iron Works
Denver—Denver Engineering Works
San Francisco—F. W. Grimwood, Rialto Bldg.

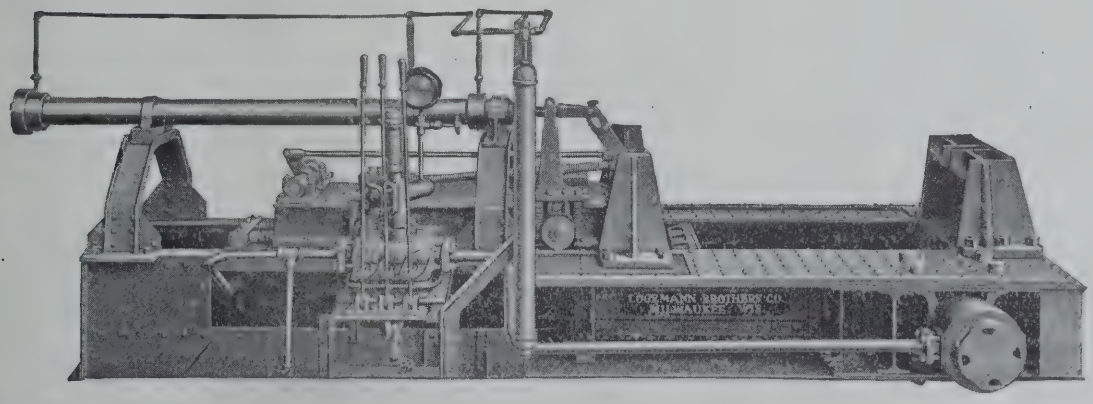
When the Scrap Market Is Dull

While seeking a more favorable market the best form in which to hold your sheet scrap, etc., and the form that always commands the best prices is the dense hydraulically compressed bundle.

Thus less storage space is required—under roof to prevent loss from corrosion; and because of greater car tonnage under minimum car rate, you add from 25% to 50% freight savings to your profits.



For greatest compression, largest daily output, at lowest operating cost, use

LOGEMANN Double Ram Hydraulic Scrap Metal PRESSES

You can enjoy the advantage of the accumulated experience from hundreds of Logemann scrap bundling presses now in use.

They embody a simplified mechanism that requires no special skill to operate rapidly. Press and pump are so designed that all the motive power applied is utilized, thus reducing power cost.

Powerfully built, all working parts constructed to resist the severest strains—selected material, first class workmanship—all minimize upkeep cost and insure lasting efficiency.

A medium sized press is shown; there are smaller and larger sizes in standard models.

Advise character and daily tonnage of your scrap and let us suggest press best suited to your requirements.

Logemann Brothers Co.

New Trade Publications

AIR COMPRESSORS.—A 16-page booklet recently was published by the Union Steam Pump Co., Battle Creek, Mich., in which it describes and illustrates its line of air compressors of the steam, belt and motor driven, horizontal and vertical types. Capacities of the various compressors and other data are given.

RIVETS, BOLTS AND NUTS—Catalog No. 19 has been published by the Falls Rivet Co., Kent, O., in which illustrations and lists of the company's standard products are given, as well as ready-reference tables of data concerning rivets, carriage and machine bolts, stove and tire bolts, coach screws, hot pressed nuts, cold pressed and semifinished nuts, etc.

FOUNDRY EQUIPMENT—Sand-blasts and allied equipment are described and illustrated in a small booklet being distributed by th Pangborn Corp., Hagerstown, Md. The equipment described, includes, hose, cabinet, barrel, rotary table and room sand-blast, dust arresters, dust exhausters, abrasive separators, moisture and oil separators, sand dryers, sand-blast cars, etc. All of these articles are fully described and illustrated.

MILLING MACHINES — An illustrated loose-leaf booklet containing data on milling machines and their attachments, is being distributed by the Kempsmith Mfg. Co., Milwaukee. The first part of the booklet contains a small history of the company which was organized in 1888. Plain, universal and production milling machines, either belt or motor driven, and vertical, circular, universal, cam and slotting attachments, dividing heads, index centers, vises, arbors, collets, etc., are all fully described and illustrated.

FLOOR GRINDER—The St. Louis Machine Tool Co., St. Louis, is circulating a leaflet in which it describes and illustrates a heavy floor grinder. This grinder is equipped with arbors which are larger than usual, are 0.40 per cent carbon steel and have extra coarse pitch, square threads. Bearings are long, have large oil chambers which are filled and drained through a pipe connection at the back and so arranged that the oil cannot overflow. The bearings are lubricated by chains which provide a large flow of oil. A number of accessories are described and illustrated.

GEARS—R. D. Nuttall Co., Chicago, has issued a booklet containing data on gears for tractor service. A number of illustrations are given, showing the various stages of gear manufacture, such as testing a gear with a master gear to determine whether the centers are correct and teeth accurately set; giving bevel gear the running test; determining resistance of gears to abrasion; determining the hardness of gears after heat treatment, etc. Other illustrations show a jackshaft transmission with cover removed; live transmission with cover removed; live-axle transmission unit ready to be installed in a tractor; jackshaft transmission for use with bull-gear and illustrations of gear-tooth fractures showing the uniform close-grained structure of the gear teeth.

STANDARD BUILDINGS—The Austin Co., Cleveland, industrial engineer and builder, is circulating a large illustrated catalog in which standard factory buildings which it designs and constructs, are described and illustrated. According to the booklet, the company erects permanent and substantial factory buildings quickly, eliminating by standardization and quantity production delays otherwise unavoidable. Summed up the booklet contains an explanation of the company's method of factory construction, including engineering data, illustrations and descriptions of the 10 types of standard factory buildings which it builds, as well as a presentation of the company's industrial building service for the design, construction and equipment of complete factories.

INDUSTRIAL TRACTORS—A well illustrated 18-page booklet is being circulated by the Mercury Mfg. Co., Chicago, in which tractors for use in plants, warehouses, etc., are described and illustrated. These tractors are designed to pull trackless trains of trailers and can be used to either push or pull loads. They are driven by electric motors, which obtain their current from storage batteries contained in the body of the tractor. According to the booklet, the power of these tractors in terms of draw-bar pull, varies from 600 to 1800 pounds, depending upon the power equipment. The illustrations show the tractors in actual operation at lumber yards, railroad stations, oil plants, tire manufacturing plants, foundries, machine shops, packing plants and mail order houses.

Business Change

Reorganization of the Chatham Machine & Tool Works, New York, has been effected and hereafter the company will transact business under the name of the Chatham Die Casting Co., at 128 Mott street, New York.

* * *

General offices of the Permalife Storage Battery Co. recently were moved to Indianapolis, where the company has leased the old plant of the Pathfinder Automobile Co.

* * *

The Bronzo Alumina Corp., Buffalo, manufacturers of die castings as well as sand castings in brass, bronze and aluminum, has removed its plant from Tonawanda, N. Y., to Buffalo, where it is located at 212-218 Winchester avenue.

* * *

A Cleveland office has been opened in the Garfield building, by the Sharon Steel Hoop Co., Sharon, Pa., in charge of R. C. Garlick. This office will take care of the northern Ohio and northern Indiana territories.

Opportunities Abroad

Information Can be Obtained From the Bureau of Foreign and Domestic Commerce. Requests Should be on Separate Sheets and Should be Accompanied by Opportunity Number

A party in Switzerland wishes to get in touch with exporters of American goods. Correspondence should be in French. Opportunity No. 29884.

A company in England desires an agency on a commission basis for the sale of general merchandise, cutlery, fancy leather goods, canned goods, textiles, chemicals and novelties. Opportunity No. 29,874.

The purchase and agency for all kinds of sanitary ware, toilet equipment, sinks in fire clay, bath tubs in enamel ware, gas water heaters and construction materials, are desired by a party in Belgium. Correspondence should be in French. Opportunity No. 29875.

A commercial agent in Switzerland desires to be put in touch with manufacturers who wish representation in that country. Opportunity No. 29878.

The purchase of asbestos packing, piston rings, drills, files, magnetos, copper connections, wheels, automobiles, tools, parts, tires, automobile accessories, etc., are desired by a firm in Spain. Opportunity No. 29879.

A firm in Italy wishes to purchase or secure an agency for soft steel for making bolts and nuts, known under the German name, "Weicheisen," sheet resistance 38 to 42 per cent, prolongment 20 to 25 per cent. Opportunity No. 29880.

The purchase by a company in Norway of electrical supplies, gas and electric fixtures, iron, steel boilers, various metals, shipbuilding materials, engines, electrical cable-making machinery, flour mill machinery, motion picture machinery, etc., is desired. Opportunity No. 29876.

An American firm in Salvador desires to secure representation in the Republics of Salvador and Honduras for road-making machinery and equipment of all kinds, blacksmith tools, gasoline and steam pumps, iron pipe, building materials, tools and accessories for silversmiths, goldsmiths and watch repairers. Opportunity No. 29883.

A commission merchant who has resided in Turkey for several years desires to return to that country or to the near East as a representative for the sale of farm machinery, gasoline engines, fertilizers, meats and provisions. Opportunity No. 29885.

An English company wishes to secure agencies for manufactured or unmanufactured Virginia tobacco, leather, for boot and shoe making, upholstering machinery, metals, etc. Opportunity No. 29888.

An importer in Belgium wishes to purchase or secure an agency for bathtubs, wash basins, enamel ware, gas water heaters, etc. Opportunity No. 29889.

A firm in Italy desires to purchase concrete manufacturing machinery. Correspondence should be in Italian. Opportunity No. 29891.

Cable quotations are urgently desired by a company in Brazil for caustic soda, soda ash, acetic acid, sulphate soda, sulphate lead and barbed wire. Opportunity No. 29862.

A municipality in Ecuador has asked for tenders for the construction of an electric light and power plant. Bids will be received until Sept. 1. Opportunity No. 29864.

The purchase of a 300-ton seagoing vessel, preferably iron hull, is desired by a party in Mexico. Opportunity No. 29869.

A manufacturer's agent in Australia desires to secure an agency from manufacturers of hardware and motor car accessories. Opportunity No. 29871.

The purchase and agency is desired by a party in Belgium for the sale of instruments for the reproduction of plans, scientific instruments, surveying instruments, compasses, etc. Opportunity No. 29870.

THE IRON TRADE REVIEW

Vol. LXV Cleveland, July 24, 1919 *No. 4*

Labor Threat Being Discounted

Iron and Steel Industry Anticipates Minimum of Disturbance From Unionizing Movement —Market Continues to Expand Steadily—Automobile Builders Place Large Tonnages—Scattered Advances in Price Announced in Several Products

MANIFEST propaganda of union labor agitators being carried on in the daily press has failed to impart the slightest effect upon the iron and steel market. Business moves forward in a growing volume which is being spread over an increasing number of consuming classes and production is working closer steadily to the capacity line. Some of the largest interests with a widely diversified production now are on a 90 per cent basis. The industry is inclined to discount greatly the extravagant claims of union organizers who have been at work among the mill forces for some months, recalling the fiction and failures that have marked similar efforts in the past because the rank and file of the workmen always have withheld their sympathies from such movements. This confidence of the industry arises largely from the fact that the question of higher wages is not involved inasmuch as employes have been kept at the maximum of about 140 per cent above the prewar basis notwithstanding the decline of 18 to 21 per cent in iron and steel prices since the armistice period. At the same time developments are being followed closely because of their possible bearing upon the none-too-adequate labor supply now available.

The Carnegie Steel Co. expects to have 45 to 46 blast furnaces in commission by the end of the present week, a gain of 13 to 14 stacks in the past four weeks. The American Sheet & Tin Plate Co. has in operation 90 per cent of its sheet and 95 per cent of its tin plate capacity.

Foreign Sales Are Good

A reduction of $5 per ton in ferromanganese by English producers which places their prices below the schedule of domestic makers is interesting but scarcely is considered in retaliation for the sale of American iron and steel to the British Isles. Another sale of American girder rails in this case to Sheffield has occasioned comment. One exporter reports additional sales of 8000 tons of steel to England. The heavy advance in coal costs continues to force up British iron and steel prices. Coke is now around $14 to $15 per ton as compared with $4.30 before the war. The best export buying from this country is by Japan and the Far East. Japan is insistently seeking sheets and offering premiums. That country has purchased 10,000 tons of rails, 3000 to 4000 tons of sheet bars and its recent inquiries for tin plate total probably 200,000 boxes. Pittsburgh mills are bidding on 24,000 tons of ship steel for Japan.

Big Orders Are Placed

Distribution has been made to various mills of contracts for upwards of 300,000 tons of bars, sheets, tubes and cold rolled steel representing 12-months' requirements by two large automobile interests in Detroit and Ohio territory. The sheet tonnage placed by one of these builders, the Ford Motor Co., is reported at 80,000 with about one-half as much to the other buyer. About 200,000 tons of bar stock are included. It is understood that on at least a large part of this business no advance was paid for the 1920 deliveries.

Independent producers of wire products have taken the lead in advancing prices. The changes announced by two companies range from $2 in wire to $5 in nail products. Cast iron pipe makers have added $2 to their schedules in the west. A Chicago maker of tie plates has advanced $3 per ton. Eastern bar iron makers have advanced prices $3 a ton and report some sales on the new basis. As a rule, however, the larger producers are not inclined to favor higher prices until operations are better rounded out.

Basic Inquiry Appearing

Pig iron selling keeps up at a fair rate. Shipments generally exceed current production notwithstanding the fact that a number of plants are holding back on receiving iron because of labor troubles. The total of these interruptions is considerable. A negotiation for 50,000 to 75,000 tons of last half basic by a Mahoning valley consumer is welcomed by the furnaces in view of the sluggish market that heretofore has prevailed in this grade. Other lots of basic are being sought in various districts. The New York Air Brake Co. has closed for 10,000 tons of foundry iron. A new export sale of 5000 tons of basic has been made. Pig iron prices continue to gather strength and one valley maker has advanced $2 to $28.75 for the base grade for last quarter. Additional merchant furnaces are resuming.

Big Strike Talk, Small Facts

NEWSPAPER reports of threatening labor troubles in the iron and steel industry need to be read in the light of the past to be given their true importance. It is a cardinal fact that the labor unions, despite intensive efforts exerted at times over the past 15 or 20 years, have never been able to make much progress in organizing the iron and steel industry. The conclusion inevitably asserts itself that the men have received fair treatment on the whole in the matter of wages and other considerations and that there have been no prolonged grievances to drive the rank and file into the union ranks.

Since the period of prosperity for the iron and steel industry brought on by the war was inaugurated in 1915, wages of iron and steel workers have been advanced about 140 per cent. This advanced scale of wages remains in effect and unchanged today notwithstanding the fact that since the armistice iron and steel prices have declined over 18 per cent on leading finished steel products, and over 21 per cent on pig iron. According to the statistics of the bureau of labor for April of this year, although a decrease of 30,000 was shown in the number of men employed in 106 typical establishments of the iron and steel industry as compared with the corresponding month in 1918, the combined payrolls were $150,000 greater. This represents an increase of 1.4 per cent in wage total notwithstanding a decrease of 15 per cent in the number of employes. With the exception of the ready-made clothing industry, no other major industry of the country made a showing so favorable to its employes as iron and steel.

Against this record of practical performance, the reported demands of the unions given out at Pittsburgh approach the grotesque. Some of these are:

"Increase in wages sufficient to guarantee American standards of living."

"Standard scales of wages in all trade and all classes of workers."

"Principles of seniority to apply in the maintenance, reduction and increase of working forces."

"Abolition of physical examination of applicants for employment."

"Abolition of company unions."

The last demand has considerable significance. It is a thrust against the representative plan of plant control which has been adopted with great success by a number of large independent steel companies. Manifestly the leaders of the general unions fundamentally must be opposed to inside plant control else they are likely to be looking for jobs.

Another statement credited to the strike agitators declares the movement has been inaugurated because the Steel corporation has disregarded a request from the president of the Federation of Labor to define its attitude regarding the recognition of unions and collective bargaining. This is a surprising declaration because the Steel corporation's labor policy always has been unalterably in favor of the open shop and that fact is widely known, certainly by none better than the unions. Only on May 20 in correspondence with an official of the Amalgamated association, Judge Gary said:

"We stand for the open shop which permits a man to engage in the different lines of employment whether he belongs to a union or not. We think this attitude secures the best results to the employes generally and to the employers."

History shows the Amalgamated Association of Iron, Steel and Tin Workers, which obviously would be the leader in any general strikes of dissimilar unions in the industry always has claimed far more influence and membership than it had the facts to show. It is recalled that in 1902 when a general strike was called, the Amalgamated association claimed that 200,000 to 300,000 men, largely belonging to the union, were idle. Through the enterprise of THE IRON TRADE REVIEW at that time it was shown through an exposure of the Amalgamated association's own records that the actual membership was something like 12,000. Now the union leaders are playing their usual game of feeding large figures and claims to an uninformed or biased daily press. While any form of labor disturbance at this time in the iron and steel industry would be regrettable and costly to all

concerned, the main element of misfortune would be that the public through ignorance might attach to it much greater importance than the facts warrant. It is certain that a strike in any event would not be extensive enough to be a major obstacle to the industry's rising prosperity. If a strike does come the iron and steel industry could do nothing better for itself than to give the widest publicity to all the facts for its record of generous treatment of its men stands virtually unequalled for a whole industry. If the public once grasps the true facts, there can be no question as to where its sympathies will rest.

Exchange Runs Against Trade

COMPLICATIONS of the foreign exchanges have long been regarded by practical men of business as belonging in the realm of academic discussion and theory. Last week, however, the wild gyrations of pound sterling and the drastic downward movement of other European currencies in the American exchange market brought home the timeliness of the subject to the man in the street.

Complacently basing hopes of expanded industrial activity in a large measure upon expectation of a swelling volume of orders from abroad, this country now is beginning to realize that unless something is done to steady the erratic exchange market and prevent its complete demoralization exports of necessity, particularly to European countries, will be curtailed. As the situation stands now Europeans who seek to buy in the United States must pay a stiff premium upon the dollar for what they purchase. By the amount of this premium is the cost increased.

Because of their huge debts in this country and their tremendous excess of imports from America, these countries welcome a natural weapon which will assist them in scaling down this excess of buying in the United States and in expanding their exports to this country. They are making no effort to remedy the condition. If a remedy is to be applied it is up to the United States to apply it. Otherwise Europe notwithstanding its great needs will buy only such indispensable raw material and other goods as positively cannot be obtained elsewhere. For other purchases the neutrals certainly and probably the allies will turn to Germany, which is already making a strong bid for trade, where the depreciation of the mark will offer an attraction in contrast with the obstacle of the premium on the dollar.

What is the remedy? First of all must come the machinery by which Europe may be granted long time credits to carry buyers over the period of low exchange rates. Next in importance is the liberal investment of American capital in foreign securities for the purpose of helping stabilize exchanges. Last of all, American sellers in the European market, if they would overcome German competition and the handicap of the exchanges, must price their goods at the most reasonable figure possible. The people of Europe are going to buy in the cheapest market and much as they would prefer to deal with the United States they will not countenance what seems like an exploitation of their unfortunate position.

Metals Adjust to New Basis

AN excellent example of the trend of business sentiment the past several months is found in the nonferrous metal markets. When the armistice was signed last November a widespread feeling existed that prices would decline to something like prewar levels, in view of the large producing capacity established during the war, large stocks and the slackened demand of peacetime conditions. Being highly speculative and therefore extremely sensitive to changes in sentiment, metal prices started to decline. Copper dropped from 26c on Nov. 11 to 14.50c in early spring; zinc declined from 8c to 6c; lead dropped from 8.05c to 5c. But business sentiment veered on another tack about the time the now-defunct industrial board plan failed in its efforts to fix prices of steel products.

Copper buying began in May, with a rise in prices that has thus far amounted to 9 cents a pound and is apparently not yet halted, the metal being sold last week at 23.50c. Zinc recovered from 6c to 8c, and still is advancing. Lead has been somewhat slower to respond, but has recovered 0.75c from the low point of 5c, of which gain one-half was accomplished last week. Following is a table which tells the story of the rebound in copper, zinc and lead prices in cents per pound.

	Copper	Zinc	Lead
Price Nov. 11, 1918.....	26.00	8.00	8.05
Price July 18, 1919	23.00	8.00	5.75
Low price of 1910.....	14.50	6.00	5.00
Average price for 30 years before war	15.50	6.00	4.60

The price movement of these metals reflects the growing acceptance by the public of a new and lower buying power of the dollar. The discounting of the transition from war to peace was overdone and the markets are hastening to adjust metal values in their proper relation to other commodity prices. A copper statistician points out that it normally required 2 to 2¼ pounds of copper to buy one pound of butter or one dozen eggs, but that last spring it required about 5 pounds of copper to purchase the eggs or butter. The rise of 9 cents a pound for copper has partially overcome this disparity. The world still wants commodities in their former proportions and so the law of supply and demand is adjusting values to the new standard.

Iron Sales Keep Up Fair Total

New Bookings and Shipments Generally Keep Ahead of Current Production—Valley Consumer Negotiates for 50,000 to 75,000 Tons of Basic—New York Air Brake Co. Buys 10,000 Tons of Foundry—More Furnaces In

Pittsburgh, July 22.—Fair-sized lots of standard bessemer pig iron have been sold in this district during the past week, and indications are that consumers' stocks are being cleaned up, and that they are coming more freely to the furnaces for their requirements. A sale of 1500 tons of bessemer was made Monday by a nearby furnace interest to a Pittsburgh consumer. The iron is said to have been sold at the established price of $29.75, furnace. Two or three new inquiries for bessemer iron involve from 3000 to 4000 tons for last-half delivery. Basic iron is being sold only in limited lots from the furnaces, but apparently there is no surplus and in some instances furnaces are short. Some large negotiations are under way. Scattering sales of No. 2 foundry iron (1.75 to 2.25 silicon) are being made. One interest reports sales aggregating approximately 1500 tons for the last half. Makers are well sold up for the remainder of this year and inquiries for this grade of iron are light. One consumer is asking for 500 tons for last half delivery. Furnace operations are increasing. The Carnegie Steel Co. has blown in four furnaces during the past week and now has 40 in operation, with expectations of having 45 or 46 in blast by the end of the present week. The company's Columbus, O., plant is running and the two furnaces there will go into blast about Friday. The company's furnace at Mingo Junction, O., is being relined. In two weeks the company expects to blow out two or three of its furnaces, one at Zanesville and the other probably at the Edgar Thompson works. The Weirton blast furnace, No. 1, of the Weirton Steel Co., Weirton, W. Va., with a daily capacity of 600 tons, was lighted Monday. This furnace is running on basic iron and will be a merchant stack until the Weirton company completes its steelmaking capacity. The furnace of the Clinton Iron & Steel Co., Pittsburgh, which is running on foundry iron, will go out of blast some time next month for relining. The American Pig Iron association will hold its regular monthly meeting at Pittsburgh.

A Girard, O., furnace interest has advanced its prices $2 for the fourth quarter and now is quoting $28.75 furnace for 1.75 to 2.25 silicon.

Good Inquiries at Boston

Boston, July 21.—Several good inquiries are out this week for pig iron. Most sales are for very small tonnages, with one exception, a sizeable order for last half delivery. A tendency toward stiffening of prices is noticed, although the general opinion is that no marked change will occur either in price or amount of tonnage sold until fall. Almost without exception furnaces are refusing to quote on 1920 business. A few scattered orders have been placed but these have been under exceptional conditions and are hardly to be taken as a market factor. One southern furnace refused to give a figure for the first quarter even when it was suggested that anything within reason would be accepted. The weak spots in the Buffalo district seem to have disappeared and all sales reported from there during the past week have been at schedule price or above. One order was placed for 2X iron (2.25-2.75) at $29, furnace, for last quarter delivery. Orders placed for eastern Pennsylvania iron are nearly all at $28 furnace for 2X Eastern (2.25-2.75). An inquiry is out from one Connecticut consumer for over 5000 tons for August and September delivery, and other consumers from the same state are in the market for 100 and 200-ton lots. A Vermont consumer is asking for a small tonnage for last quarter delivery. Total sales during the week for New England delivery are estimated to be 7000 tons.

Large Users Inquire

New York, July 21.—Largest of the pig iron transactions in this district for sometime was the purchase by the New York Airbrake Co., during the past week of approximately 10,000 tons of foundry for last half. All of this iron was placed in the Buffalo district. In addition, there were numerous sales of 1000 tons each and less. The total for the past week's business in foundry iron here is conservatively estimated to be close to 25,000 tons, all for shipment this year. Sales for 1920 did not figure in the week's business. Numerous large inquiries now are before the trade and they come from some of the most important eastern users. One large interest is in the market for 3000 tons of foundry for last quarter delivery to its western plants. Another big melter wants 4000 tons of foundry, of which half is for export. Another wants 5000 tons of foundry for August and September and some malleable and high silicon. A large eastern railroad wants 1800 tons of foundry for third quarter. Numerous other tonnages are under negotiation. A feature of the business is the inability of consumers to obtain the low prices which were being quoted a few weeks ago. The market reflects a notably stronger tone and the minimum range of delivered prices now is $29 to $30, New

Jersey tidewater points, for 1.75 to 2.25 silicon foundry, with $1 higher for 2.25 to 2.75 silicon. Sales are being made at higher figures. One eastern Pennsylvania maker has made several small sales of foundry (from 1.75 to 3.75 silicon) at prices ranging from $30 to $33 furnace. Sales of about 500 tons of low-phosphorus iron have been made by a Pennsylvania maker at $35 and $35.50 furnace. A central Pennsylvania furnace sold 1000 tons of 2.25 to 2.75 silicon foundry at $28.50 furnace. An eastern Pennsylvania maker sold some round tonnages at $27.25 furnace, for 1.75 to 2.25 per cent silicon, and at $28.25 furnace, for 2.25 to 2.75 silicon, and now practically is out of the market. A sale of 1000 tons of malleable has been made to an eastern consumer at $27.25, although eastern Pennsylvania malleable still can be had at $28 furnace. An interesting transaction is the purchase by a New Jersey consumer of 250 tons of southern iron (2.75 to 3.25 silicon) at $29.75, Birmingham. Export sales included one lot of 5000 tons of basic.

Booked for Balance of Year

Buffalo, July 22.—With two furnaces practically booked up to capacity for this year's output, others are advancing to the stage where they will be able to take only orders for delivery next year. So far no iron has been sold for delivery in 1920, with the exception of a small tonnage disposed of some months ago. Two interests which are practically out of the market made some small bookings during the week, and one of these states it still has a very small tonnage open. Neither of these interests is seeking any business for the balance of the year.

Prices Steadier in East

Philadelphia, July 22.—Although $28 Eastern Pennsylvania furnace been shaded in past week on attractive lots of No. 24 (2.25 to 2.75 silicon), this figure is now believed to be minimum. Prices show a definite hardening tendency and most of week's business was at prices equivalent to $28 to $28.50 Eastern Pennsylvania furnaces for No. 24 (2.25 to 2.75 silicon) and considerable higher foundry business was of fair proportions here in the past week but not nearly as large as in other districts. It is estimated about 15,000 tons of foundry were sold. Fairly good inquiry is out, including one lot of 2500 tons and several between this figure and 1000 tons. Several consumers are inquiring for 1920 delivery but the furnaces are not anxious to sell so far ahead. A Virginia furnace which has been selling right along lately has withdrawn after having sold an additional 3000 tons the past week at $26.50 furnace for No. 2 (2.25 to 2.75 silicon) and No. 2 plain (1.75 to 2.25 silicon) and $27.50 furnace for No. 1 X (2.75 to 3.25 silicon) 60 days. This maker will not sell any more until he knows more about future costs. This practically removes Virginia as a factor in this market at present as other furnaces are holding for $30 to $31(furnace, to which must be added 4.10 freight rate to Philadelphia. Only a few Pennsylvania makers now can be classed as anxious to sell. Most of them are comfortable as to bookings and are adding further tonnage advisedly. No business in basic was done the past week but one consumer wants 1500 to 2000 tons. No additional low phosphorus was bought but inquiry for a round tonnage for eastern users is expected to be closed this week. Copper-free low phosphorus market now is nominal but is thought attractive tonnages could be placed around $35, eastern furnace, equivalent to around $38.50 to $39. The Bethlehem Shipbuilding Corp. has inquired for 5200 tons of Virginia high manganese iron but does not expect to buy and probably will make iron of similar analysis.

Basic Tonnage Being Figured

Cleveland, July 22.—New sales of iron are running at about 50 per cent of those of June with leading Cleveland sellers but this is considerably more than current production. Shipments also are ahead of furnace output despite the fact that labor troubles among foundries are numerous and operate to hold up deliveries to these consumers. Furnace stocks accordingly are being reduced. One seller in the week booked about 20,000 tons and another 12,000 tons, largely foundry. Of the latter about one-half was for 1920 delivery and one sale of 4000 tons for first half of 1920 was included. These first half sales were made on the present price basis or $26.75 for 1.75 to 2.25 silicon. Producers, however, continue not to encourage next year buying at this time. Local and northern Ohio foundries are inquiring and buying in a fair way in lots of several hundred to 1000 tons. In basic, the principal development is the opening of negotiations by a large Mahoning valley consumer for last half requirements running 50,000 to 75,000 tons. This is the first sizable business in this grade to appear in the market in recent months.

Inquiry at Cincinnati is Light

Cincinnati, July 21.—All southern furnaces have ceased to absorb freight rates. They are holding firm at $26.75 (1.75 to 2.25 silicon) Birmingham, and most of them are maintaining the regular schedule of $28 (2.25 to 2.75 silicon) for any shipment this year. The general opinion is that the market will advance at an early date and it also is predicted that if the melt of iron continues at the present rate a shortage will occur before the end of the year. A few southern furnaces are still holding off quoting for the last quarter, and apparently there are no quotations out for shipment in the first quarter of next year, although some sales made for delivery this year were made with the understanding that part of the iron could be shipped in January and February. The inquiry is very light but another buying movement is anticipated before long.

Estimating 1920 Requirements

St. Louis, July 19.—Sales of pig iron, and inquiries, average about the same as during the past two weeks, there being a fair demand for small tonnages. Some iron has been booked for the fourth quarter, and two producers report they could have taken more orders for that period, but for the fact that their books were full. Melting in the district is in large volume, though virtually all the plants are well covered by contracts extending to Dec. 31. All important consumers are estimating their needs for the first half of 1920, and when furnaces open their books for that period, there may be considerable activity in covering. Southern interests show a decided disposition to await higher quotations before blowing in idle stacks. The leading producer in this district has gone out of blast for relining and repairs, and probably will not resume production before September. His stocks of 8000 to 10,000 tons largely are under sale. Among current inquiries is one for 400 tons of foundry iron from a Quincy, Ill., stove manufacturer. This interest took 1500 tons earlier in July. Some small tonnages were sold to foundries in this district, and 350 tons of No. 2 southern foundry (1.75 to 2.25 silicon) was purchased by a St. Louis melter. Steel plants apparently are well supplied for the time being, and save for limited tonnages of various grades for mixtures, are not buying.

Southern Market Strengthening

Birmingham, Ala., July 22.—While sales of pig iron in the Birmingham district are not as large as during the past four weeks, the market is strengthening. Fourth quarter iron is being sold, although the aggregate is not large. Iron of 1.75 to 2.25 silicon content is selling at $26.75, and iron with 2.25 to 2.75 silicon is quoted at $28. Basic iron is held at $25.75. Production is being increased. The Sloss-Sheffield Steel & Iron Co., the Republic Iron & Steel Co., and the Gulf States Steel Co., have raised their output. Three other furnaces in the state will be repaired immediately. Accumulated stocks in this district are being reduced rapidly. Less than 100,000 tons now are in stock in this district. Some export inquiries for iron are being received.

Blow in More Stacks

Chicago, July 22.—That demand for pig iron has increased largely during recent weeks is proven by the blowing in of two additional stacks at the Iroquois Iron Co.'s plant at South Chicago. One stack went into blast July 15 and the other July 20. This makes six merchant stacks active where only four were operating at the beginning of the month. Inquiry and buying are active and sales have been large in the aggregate during the present month. The present labor situation is having its effect, and if no trouble of this sort were anticipated, it is believed tonnages would be larger and that some melters who have bought already would take additional iron. The plants of the International Harvester Co. and the Crane Co. are closed because of strikes and the Illinois Malleable Iron Co. and the Green Engineering Co. also are strike-bound. Buying of malleable iron still is active. Basic iron seems to be coming to life and some inquiry is being entertained, while tonnages already have been sold, although not

in usual volume. Considerable talk is heard of quotations being advanced. Some sales involving as much as 10,000 tons in a single lot have been made but this is the exception. Inquiry is still being received for 1920 delivery, but makers refuse to quote that far ahead. A malleable foundry at Hammond, Ind., has inquired for 5000 tons for first half, and a gray iron foundry has asked prices on 2000 to 4000 tons for the same delivery. Abandonment of their policy of absorbing freight has stopped selling of iron by southern producers in this district. All southern iron now is being quoted at the full price. Considerable inquiry is being received for silveries, but sales are being made only by stacks south of the Ohio river, as the strike of furnace workers in Jackson county continues.

Bessemer Steel

Sought by Sheet Bar Users—2000 Tons Sold at $42

Youngstown, O., July 22.—Bessemer sheet bars are moving in heavy tonnages at valley mills. Last week specifications of one maker here approximated 4000 tons. Demand for open-hearth sheet bars has declined considerably, the majority of orders calling for the bessemer grade. About 600 tons of the latter for central Ohio shipment were taken today by one producer. A decided improvement has been noticed in the semi-finished market here during the past month and this has had a tendency to increase the production of bessemer steel throughout the district. Mills here are in position to do considerable business in open-hearth steel. Practically no fourth-quarter sheet-bar contracts have been made yet. This week's business at one valley mill includes 300 tons of slabs for delivery to a nearby district.

Demand Continues Heavy

Pittsburgh, July 22.—Demand for semifinished material continues heavy. It is especially marked in the case of sheet bars which are wanted in large lots by makers of sheets and tin plate. Some sellers are out of the market for spot material while others will not quote. The middlemen report that they are having great difficulty in getting steel, owing to the fact that consumers are buying directly from producers more generally than they did previously. Producers of sheet bars are operating heavily and experience difficulty in keeping up with their specifications. Some producers are rolling semifinished material on rail mills and while demand for billets and slabs is not on so large a scale as that for sheet bars, it is active and established prices are being well maintained. Good inquiry continues to exist for wire rods, some of it coming from abroad. One independent maker has been making fair-size sales from its surplus supplies which it had accumulated owing to its inability to obtain labor to draw the rods into finished wire products.

An Ohio consumer has closed with a Pittsburgh broker for 2000 tons of sheet bars at $42, mill.

Coke Inquiry is Improving

Most Producers Quoting Spot Foundry Coke at $5.50, Furnace—Spot Market for Furnace Grade More Firmly Established at $4

Pittsburgh, July 22.—Inquiries for spot foundry coke have shown slight improvement during the past week, but have not yet reached a point where they can be called active. While most of the producers are quoting spot foundry coke at $5.50, furnace, it is reported that this figure has been shaded. Some producers are well covered by contract for the last half of this year on both foundry and furnace fuel. Inquiry for spot furnace coke also has increased slightly as a result of the blowing in of more furnaces. The increase in pig iron output has interested makers more in their requirements for the last half, and some good sales of this grade for the delivery mentioned have been made within the past week. One consumer in Buffalo is reported to have taken 10,000 tons for last half delivery at $4.35, but it is believed this figure might be shaded by some sellers, perhaps as much as 10 cents. Spot market for furnace coke seems to be more firmly established at $4, although offerings are said to have been made during the past week at levels as low as $3.85 and $3.90. According to the *Connellsville Courier,* production of coke from the Connellsville region for the week ending July 12 was 157,838 tons as compared with 130,790 tons in the previous week.

Foundry Coke in Demand

Boston, July 21.—A demand for foundry coke is reported by all dealers, and many new contracts covering the balance of the year are being made. There seems to be a tendency on the part of foundries to increase their storage because of the uncertainties of the freight car situation. No announcement has been made by the byproduct producer as to the price to govern its sliding scale contracts for August, but it is generally expected that the rate will advance to $10.40 either Aug. 1 or Sept. 1. The Providence maker is still tied up with labor difficulties. Coal shipments to New England points are affected by the marine workers' strike.

Prices Firm at Cincinnati

Cincinnati, July 21.—New River and Wise county producers evidently have been able to hold their own as far as prices on foundry coke are concerned, and in the first named district some choice 72-hour coke has been sold at $8, ovens. Wise county foundry coke has brought $7.50, although purchases made were practically for "fill in" purposes. Connellsville furnace coke is very much stronger, and the minimum now is $4.25 with probably the bulk of the business being booked at $4.50. Foundry coke in that district ranges from $5.50 to $6, ovens. Pocahontas operators have not been very active in this vicinity lately but a little foundry coke from that field has been sold around $7, ovens.

Won't Quote for 1920

St. Louis, July 21.—Demand for coke is good and the market remains firm. Most inquiries are for small tonnages for prompt shipment, although a fair volume of contracting for the balance of this year is reported. Several interests have withdrawn prices they were quoting for the first quarter of 1920. Not much difficulty is encountered by dealers in filling orders for immediate delivery, production continuing as during the past six weeks. Thus far there has been an adequate supply of box cars for transporting foundry coke, although the use of more cars to handle the bumper wheat crop in the Southwest and West may create a shortage. Consumption in this district is heavy, but the fuel was bought some time ago.

Demand Growing in South

Birmingham, Ala., July 22.—Demand for both furnace and foundry coke is improving steadily. Every ton of foundry coke that can be produced is finding a ready sale. Foundry coke is up to $9, and indications are that some producers will have to withdraw from the market. Furnace coke is beginning to assume strength as furnace operations increase.

Ore Market Dull

Shipments Increase, But Most Furnaces Still Have Supplies on Hand

Cleveland, July 21.—While ore shipments from the Lake Superior district are in greater volume than last month, the market is dull and sales are much less than in June. Shipments for the first 18 days of July average 282,000, as compared with a daily average of 263,000 in June, but the bulk of the shipments is going to participating interests, and little ore is being sold in the open market. One interest sold 60,000 tons during the past week, and this was practically all that was sold to furnaces without connected interests. The latter are taking their usual consignments, but are not increasing their estimates. Southern furnaces are almost a unit in the claim that they cannot buy Lake Superior ores and make iron at a profit at the current prices of the latter. A number of them have declared themselves out of the market until iron is marked up. Some of them have supplies on hand, while others are using southern ores. No inquiries are in the market and selling agencies report a dearth of interest among the furnaces in Ohio and the eastern states. An exception to this general situation is to be found in a slight demand for low phos ores, coming from eastern furnaces with orders on hand for this grade of iron for export.

Scrap Moves Up Quickly

Advances at Chicago Are Sharp—Sellers' Market at Pittsburgh—Steel Sought in New England—Rerolling Rails Rise $3

FOR COMPLETE SCRAP PRICES SEE PAGE 266

Chicago, July 22.—All grades of iron and steel scrap are advancing, in some instances the price going up $2 to $3 at a time. The greatest advance made recently is on rerolling rails, which have been marked up from $25 to $28 per gross ton. This advance is due to increased demand on the part of rerolling mills and the uncertain supply from railroads, which are not doing as much track work as usual. Prices are getting fairly near the level of pig iron but with the probability that the latter will advance before the end of the year, many scrap dealers expect heavy melting steel to reach $25 and rerolling rails $30 per gross ton. While no heavy buying of heavy melting steel has been done recently, a large consumer is expected to come into the market before long, which will boost the situation. Rolling mill grades are looking up and are in good demand with No. 1 busheling especially wanted. The Chicago, Rock Island & Pacific offers 2800 tons of scrap, including 500 tons of No. 1 and 200 tons of No. 3 steel rail and 250 tons of No. 1 wrought. The Great Western offers 790 tons, the Chicago, Burlington & Quincy three carloads of borings, shearings and punchings, and the government ordnance department 20 tons of coil steel and 76 tons of strip steel.

Steelmakers Buying in Boston

Boston, July 21.—Some steelmakers bought scrap during the past week in the New England market and while the purchases were not large the start of a buying movement by western consumers gives the market a cheerful tone. The market for weeks has been a speculative one, with large piles of comparatively high-priced scrap in dealers' yards. Dealers are paying $16.50 to $17 for heavy melting steel and sales to consumers have been reported as high as a cent a pound on this grade. Eastern Pennsylvania steelmakers are offering $20, delivered. One concern has been looking for 1000 tons for several days but has been unable to find it at the price it is willing to pay. Turnings have been selling to nearby consumers for $11 and dealers are having a hard time buying the quality they desire at $10.50. Borings have also been active during the week and dealers have had to pay $10.50 to cover their sales to consumers. Car axles have advanced from $23 to $24 and prices on many other grades have stiffened considerably.

Pittsburgh Buying at New York

New York, July 21.—Demand by consumers in the Pittsburgh district has again resulted in an advance in the prices of heavy melting steel in the local market. Several sizable inquiries are out from these interests, and some purchases have been reported at $20 and $20.50, delivered. Buying by Coatesville consumers has also helped stiffen the market on steel, further orders having been placed for shipment to that point at $19, delivered. Although this range can be shaded in one or two instances, this material is now holding rather firm at $15.50 to $16, f.o.b., New York. While the local market is far from active, there appears to be a fairly good demand for most descriptions, and the rising tendency in prices continues in evidence. Stove plate is stronger, the market now holding at $17 to $18. An advance has also gone into effect on mixed borings and turnings. The Interborough Rapid Transit Co. will sell 1800 tons of mixed scrap July 24.

Eastern Market Quieter

Philadelphia, July 22.—Less buoyancy is reflected in the eastern Pennsylvania scrap market, with material more easily obtainable. Dealers now are buying mainly to ship rather than to store against future needs. The open market demand, however, is comparatively small. Machine shop turnings and cast iron borings now are quoted at $13.50 to $14.50, delivered.

Prices Continue to Rise

Pittsburgh, July 22.—With increasing demands coming from steel plants and steel foundries, prices of scrap continue to advance. The point has been reached where it is distinctly a seller's market, dealers showing no desire to press sales, while consumers find that they are compelled to meet the increases in prices if they are to get the material. Heavy melting steel now is well established at $21, while some quotations are up to $21.50, delivered, and reports have been heard of transactions at higher figures, although not credited. Dealers say they confidently believe the price will go to $25 or more for this grade before long. Other grades have been responsive to the rising tendency of the market and machine shop turnings, until recently extremely slow of sale, have been moving rather freely. Grades used by iron foundries, however, continue to find only a comparatively small demand. Material for makers of steel castings has become in greater demand, and prices have increased. Billet and bloom crops, low phosphorus, now are quoted at $25, delivered, and steel car wheels, under a stronger demand, are quoted at $21.

Good Demand for Heavy Melting

Buffalo, July 22.—It is now impossible to buy heavy melting steel in this district at $17.50. There is a good demand for it and some small sales have been made, although consumers find it difficult to place orders. Mills want to pay about $18, while dealers are holding out for 50 cents more. There is an outside demand for turnings and borings and No. 1 busheling, and these are strong and active. Low phosphorus steel scrap is now quoted at $22 to $23; bundled sheets, $13 to $14; machine shop turnings, $10 to $11; cast iron borings, $13 to $14; stove plate, $21 to $22; No. 1 busheling, $15 to $16, and No. 1 railroad wrought, $21 to $22.

Cleveland Market Active

Cleveland, July 22.—Strength and activity continue to mark the iron and steel scrap market in this district. Especially is this true of the Mahoning valley, demand for heavy melting steel, turnings and borings there being vigorous. Melters in the valley appear to have run short of supplies, and spot shipments of these three grades have been sought from local dealers. The larger users of scrap in Cleveland have not been buying so heavily in the past week, but trading between dealers shows no signs of falling off. Prices on all grades except No. 1 and heavy cast, stove plate, grate bars and railroad car wheels have advanced. Melting steel here now is quoted at $20 to $21, turnings at $12 to $13, and borings at $15 to $15.50.

Raise Prices in Cincinnati

Cincinnati, July 21.—Dealers have assumed a bullish attitude and nearly all quotations have advanced within the past few days. Steel mill scrap is in better demand than for some time. Cast scrap also is in demand, and foundries making semisteel castings are buying considerable steel scrap for shipment this year. No contracts for next year's delivery have been made. Steel turnings are not in much demand.

Only Dealers Are Buying

St. Louis, July 19.—Speculation among dealers continues to be the outstanding feature in the scrap market. The farmers are buying liberally in anticipation of greater demand and higher prices. Everything offered to the dealers is sold at the highest prices. Market activities, however, seem to be confined almost exclusively to middlemen. The largest consumers have plenty material in their yards and under contract. No railroad offerings were before the market during the week. The government, through the St. Louis ordnance district offers 4385 gross tons of 5½-inch square billets and a small amount of heavy melting, low phosphorus scrap, at the plant of Curtis & Co. Mfg. Co. Sealed bids have been asked for July 29 on about 852 gross tons of ingots for 9.5-inch common steel shells at the Granite City, Ill., plant of the American Steel Foundries Co. On July 25 bids will be received on 529 tons of 8-inch steel shell ingots, at the same plant.

Foreign Buyer Seeks Scrap

Birmingham, Ala., July 22.—Inquiry for heavy melting steel for export, presumably to Italy, has aroused interest among scrap dealers. It is proposed to ship the product through the port of New Orleans, the buyer to pay cost of transportation. The

domestic scrap market continues slow. Prices show some weakness, several slight changes downward having been made.

Wire Advances

Announced by Two Independents—Mills Are Well Sold Up

Pittsburgh, July 22.—Price increases announced last week by the Youngstown Sheet & Tube Co. on wire products also have been made by the Midvale Steel & Ordnance Co. Other independent companies have not announced similar action but this is due to the fact that they are either out of the market or are accepting only limited business. The leading interest is well filled up and it is understood it does not contemplate raising prices at this time. The Youngstown Sheet & Tube Co. advanced polished nails $5 a ton, staples $2 a ton, and has raised the extra for blueing and coppering wire $5 a ton, while on all wire products in less than carload lots the extra over base prices has been increased from $1 to $2 per ton. The price of polished wire nails of this company now is $3.50 per keg, for polished fence staples $3.50 per keg, for galvanized staples $4.20, while extras for coppering and blueing wire range from 75c to 85c, according to gage. The company also has announced that it has decided to discontinue quoting painted barbed wire but will take such business on advance notice. The Pittsburgh Steel Co. is well sold up on wire products and will accept no orders unless they are first submitted to the home office. This company has advanced export prices which accord with the increases announced by the Youngstown Sheet & Tube Co., and is sold up for the third quarter. The Jones & Laughlin Steel Co. also is well sold up and is out of the market on wire products. Some concern is shown about meeting present bookings as difficulty is being experienced in securing wire mill workers.

Deliveries Fall Back

Cleveland, July 22.—Orders with wire producers justify full production but it is found difficult to get operating capacity up over 75 to 80 per cent. Deliveries consequently continue to recede and now range from six to eight weeks on plain wire and nails. Both the jobbing and manufacturing trades continue to buy liberally. Barbed wire still is backward. The leading interest has made no change in its prices and has not as yet followed the lead of various independents, in this respect.

General Demand Strong

Chicago, July 22.—All lines of wire and wire products are in strong demand, the impression having become general among users that it is safe to buy for immediate or future use at present prices. Barbed wire is temporarily slow on account of conditions in the farming sections. The leading interest has made no change in price, but an Ohio competitor has advanced nails $5 per ton.

Sheet Tonnages Closed

Two Large Automobile Interests Place Over 100,000 Tons—Some Sales at Advances Reported—Valley Mills Withdraw

Pittsburgh, July 22.—Brisk inquiry still is being made for sheets and tin plate and large contracts have been closed during the past week. The Ford Motor Co. is reported to have closed a contract for 80,000 tons of sheets but it has not yet been announced how the lot was distributed. Other large tonnages for automobile makers have been booked, including about 40,000 tons for an Ohio builder for delivery over the 12 months to July 1, 1920. Consumers of sheets are placing delayed orders for the second quarter and some are said to have partly covered their requirements for the third and fourth quarters, while it is also reported that business for next year has been closed at an advance over prevailing prices. It is likely that prices will be increased by some independent makers within 90 days. The American Sheet & Tin Plate Co. is making delivery of sheets in five to six weeks and is operating at 90 per cent of its sheet mill capacity, while it is operating its tin mills at 95 per cent of capacity and making deliveries of tin plate in six weeks. Heavy business is being done in tin plate, some of which includes foreign contracts. Japan is buying tonnages of light gage black sheets which are being galvanized in that country.

Buy for Fourth Quarter

Philadelphia, July 22.—The sheet business is good, and one western maker has withdrawn from the market because he is sold up to Oct. 1. Considerable third-quarter contracting was done in the past week, and at the solicitation of buyers some fourth-quarter business also was placed.

Galvanized May Advance

Chicago, July 22.—The leading independent producer of steel sheets in this market is still refusing to quote and has booked almost its entire capacity for the remainder of this year. Occasionally a regular customer is able to place a little additional tonnage for delivery late in fourth quarter. Prices have been withdrawn on galvanized sheets on account of recent advances in zinc and it seems likely a higher price will be forthcoming before long. All former weakness in black and blue annealed sheets has disappeared. Demand is still excellent, but buying is being discouraged by producers.

Withdraws from Market

Youngstown, O., July 22.—Efforts being made to unionize sheet mill labor in this district, and the possibility of strike troubles are having some effect on the selling activities of some producers.

This question has been before sheetmakers in the Pittsburgh and Ohio districts for several weeks but not until recently has the movement in this territory become of importance. A few producers of sheets have withdrawn from the market temporarily and will not commit themselves until the situation clears somewhat. These interests have enough business to operate their mills steadily over the balance of this quarter. Galvanized business is running strong. No price concessions for any grade of sheets are being offered. A few small tonnages were sold recently at attractive prices but the market has stiffened. Western exporters are inquiring heavily, most of their requirements being for light-gage black. Japan especially is wanting several hundred tons of this product.

Export Business Heavy

Youngstown, O., July 22.—Tin plate mills in this district have enough business ahead to carry them over the next 10 weeks. A heavy business is being done both in export and domestic channels. Among export inquiries for Pacific coast shipment quoted on recently was one for 4000 boxes. Prices remain firm.

Plans New Sheet Mills

Youngstown, O., July 22.—Reports are current that a new company headed by Clinton G. Thomas, formerly president of the Western Reserve Steel Co., Warren, O., will build several sheet mills at Newton Falls, O. Approximately 100 acres situated on the outskirts of the town have been purchased for this purpose. The land fronts on the Mahoning river across from the site of the Newton Steel Co. It is declared a large housing program for the benefit of the employes is to be undertaken soon. Subcontractors under the McClintic-Marshall Co., Pittsburgh, have started work on the excavations for the new plant of the Newton Steel Co.

Britain To Get Share

Birmingham, Eng., July 11.—P. M. Salerni, representing the Vulcan Steel Products Co., London, has issued a statement with reference to an announcement that a contract amounting to $250,000,000 for the reconstruction of the devastated district of Nancy has been awarded to his company. He said the impression that the whole of the contract will be placed in the United States was not true, as a substantial part of the money will be spent in the United Kingdom.

The Fischer Machine Works, Chicago, which has operated for several years as a partnership, has been incorporated with capitalization of $50,000 by Engelbert Fischer, Charles Edmund Fischer and D. I. Jarrett. No changes or additions are planned.

Big Bar Orders Placed

Automobile Interests' Contract Was Upwards of 200,000 Tons For All Year—Implement Interests Also Buying—Specifications Are Heavy

Cleveland, July 22.—Unusually large negotiations for bars of both alloy and carbon quality which have been under way with leading automobile builders in Ohio and Detroit territory have been closed. The aggregate of these is in excess of 200,000 tons, including the cold rolled screw stock and deliveries are to run over 12 months. The business was divided among various mills. Bar specifications are coming in very heavily and deliveries are becoming more extended, particularly on the smaller sizes of rounds where they now range in many sizes from two to three months. This is in contrast to the situation which obtained during the war when large rounds for shells were the most difficult to obtain. Considerable new business is being done and makers are scrutinizing orders to eliminate the speculative factor. The T. McShaffrey Construction Co. of Akron, O., has a general contract for the new buildings for the Goodyear Tire & Rubber Co. in that city, and the 2500 tons of reinforcing bars are reported to have gone to a valley producer.

Buyers Double Requirements

New York, July 21.—A noticeable change has come over iron and steel consumers in this district during the past week or two. Most large interests only recently were following the policy of placing their minimum requirements. Now they believe that they are justified, by the current outlook, in placing their maximum requirements for the rest of the year. Two large buyers here about a week ago agreed to place tonnages representing their minimum requirements over the rest of this year, but since that time they actually have contracted for tonnages double those originally mentioned.

Bar Business is Brisk

Pittsburgh, July 22.—Lively demand exists for bars, the principal buyers being automobile makers. So far as known, the Ford Motor Co., has not closed for its requirements for the year ending July 1 next. Export demand for steel bars also is good, being chiefly for small bars from 3/16-inch up to 1 inch. While it is reported that up to recently the price of 2.35c, Pittsburgh, for merchant steel bars was shaded somewhat by certain producers, the market now seems to be firmly established. Increased strength also is shown with regard to bars rolled from new billets and from old rails. Pipe makers are taking good tonnages of muck bar which manufacturers say are being sold at 3.50c.

Bar Iron Advanced

Philadelphia, July 22.—Following example of other interests large eastern bar iron maker advanced iron bars effective today to 2.50c, Pittsburgh, double refined bars to $3.50c, bands 3/16-inch and thinner, 3.20c, for single and 4.20c for double refined, flats wider than 6 inches 2.80c for single and 3.80c for double refined and half round, half oval and fender iron 3 inches and larger 3.65c net, Pittsburgh. This maker now is taking orders at the new prices for deferred delivery as its plant is still idle because of puddlers' strike. The feature of the steel bar market is the good demand for reinforcing bars. Due to fact that most of the demand is for quick shipments the mills are starting to roll for stock. Steel bar demand continues good and one mill reports last week from standpoint of new bookings and specifications, was best since armistice. Another mill reports it has four to five weeks' work ahead.

Commitments Are Heavy

Youngstown, O., July 22.—A good demand exists in the steel bar market here. Mill commitments are heavy over the balance of the quarter. A lot of about 500 tons of soft steel bars was closed this week with an eastern consumers, for ship construction. Implement makers are inclined to contract a little although it is understood this class of trade is well covered for the balance of the year.

General Buying Strong

Chicago, July 22.—Demand for soft steel bars is excellent and manufacturers of agricultural implements, automobiles and tractors have taken large tonnages. The only drawback to an active market is the absence of railroad buying, but it is expected that material for use during 1920 will be placed within the next few months. if financial arrangements can be made. When this business is booked it will make a heavy flood of orders.

Bar iron is strongly held at 2.62c, Chicago mill, and an excellent volume of orders is being booked from general manufacturers. Mills rerolling hard steel bars find new business equal to production and in some instances slightly better. Most demand is coming from manufacturers of agricultural implements and from other manufacturers, while the demand for reinforcing bars for concrete construction is light.

Increased Prices Maintained

Pittsburgh, July 22.—Makers of nuts, bolts and rivets report that the recent increase of 5 per cent in prices is being well maintained and that business continues to come in in large volume from both consumers and jobbers. The demand is of a general character, a fair portion of it being from shipyards. Operations are practically at full capacity.

Bolt Orders Plentiful

Chicago, July 22.—Manufacturers of nuts and bolts are taking heavy orders and most have increased operation to 85 or 90 per cent of capacity. Demand is coming from jobbers and manufacturers, and from a wide expanse of territory. The recent increase of 5 per cent in price is being held firmly.

No Concession in Band Price

Pittsburgh, July 22.—Reports that bands are being sold on the old basis, when they took the steel bar base price, plus extras, appear to be exaggerated. If such sales are being made, they apparently are limited. Prominent producers assert that no concessions are being made, and that the card established on May 21, 1918, by which hoops and bands were taken from the steel bar classsification, and grouped together, with allowances for extras, is being maintained. The hoop and band base, therefore, continues to be quoted at 3.05c, Pittsburgh. Cost of production is too high, it is asserted, to warrant any cut in the price of either hoops or bands. Fair demand exists for both products, but it is not so great in proportion to capacity as is that for merchant bars.

Shafting Business Improves

Pittsburgh, July 22.—Demand for cold-rolled shafting is improving in this market and operations of the makers now are well above 60 per cent of capacity as compared with the recent average of approximately 40 per cent. Buyers are ordering tonnages freely and are specifying against contracts more liberally. Some are attempting to close for the third and fourth quarters. The market is firm at 28 per cent off list.

Price is Cut

English Ferro Down to $105—5000 Tons of Spiegel Closed in Ohio

New York, July 21.—English ferromanganese makers have cut their price to a level which they consider conducive to the bookings of business in this country. Their new figure is $105, c.i.f. Atlantic tidewater, on 80 per cent metal, which not only is lower than the present price of domestic producers, but in effect is even $1 to $2 per ton lower than the minimum price of $110 delivered, at which American producers were selling only recently. The new English price became effective the latter part of last week and so far no business has been done at this figure. Several hundred tons of 80 per cent metal have been sold in this district during the past week, however, by domestic makers, at $115 delivered.

Spiegeleisen continues to strengthen. At least 500 tons of 18 to 22 per cent were sold during the past week at $35, furnace. The chief factor in the market, however, is the inquiry from abroad. This comes particularly from Germany, Austria and Belgium, and while no definite tonnages are mentioned, it is believed that several thousand tons are involved.

The market for 50 per cent ferrosilicon is somewhat stronger, owing to the absorption of some large resale lots. One block of 1400 tons of resale alloy sold at from $70 to $76, but the last of this metal was sold to consumers nearly two weeks ago. It is difficult to obtain any resale ferro-

silicon at less than $80. Producers generally quote around $90, delivered.

Ferrotungsten is somewhat higher, chiefly because makers declare they cannot afford to produce at the lower prices recently mentioned. The minimum on domestic seems to be $1.20 per pound contained, furnace, while some makers will not sell under $1.30. Some American buyers are interested in the recent offerings of English ferrotungsten for immediate shipment at $1.05 a pound contained, c.i.f., duty paid.

The ferrochrome market is sentimentally stronger, with consumers specifying more freely against contracts. Prices continue 32c to 34c per pound contained.

The ferrovanadium market is unchanged. Supplies continue extremely scarce. The market remains at $6.50 to $7 a pound contained.

Market Somewhat Easier

Pittsburgh, July 22.—The market here for 78 to 82 per cent ferromanganese is easier. While some sellers continue to quote a flat base of $115, it is known that sales have been made at $110. The cut in the English quotation of $105, c.i.f. Atlantic ports, for 76 to 80 per cent ferromanganese has been an influence in the domestic market but not to any considerable extent. With the foreign grade selling at $105 for 76 to 80 per cent at Atlantic ports, freight differentials would make the domestic standard grade quotable at about $112, delivered, Pittsburgh. Inquiry for ferromanganese is only moderate and business placed during the past week represented only a small tonnage.

Marked improvement is shown in the market for 50 per cent ferrosilicon, although a few small lots recently have been moved at less than $80, furnace, freight allowed. The makers naming this price state that it is for prompt acceptance and give the intimation that higher levels may be expected in the near future. Some producers are quoting as high as $90 and it is doubtful if much business will be accepted under $85, most of the manufacturers being well booked. The market for ferrotungsten continues to be rather sluggish and not until recently was it possible to make sales at above $1.15 a pound.

Closes Spiegel Tonnage

Cleveland, July 22.—The Central Steel Co., Massillon, O., has a contract with an eastern producer for 5000 tons of 16 to 19 per cent spiegeleisen at $31, furnace, or $35.90, delivered, for August-December shipment.

Alloy Market Steady

Chicago, July 22.—Resale spiegeleisen has been completely absorbed, and the market is again upon a firm basis, being quoted now at $35, eastern furnace. Recent sales have run as high as 500 to 1000 tons each. Ferromanganese is being quoted at $115, furnace, freight allowed.

Buying Cotton Ties

Pittsburgh, July 22.—Fair-size orders for cotton ties are being placed and specifications against contracts are being made freely.

Railroads Want Plates

Car Repair Demands Bring Out Considerable New Inquiry—Seek 2.65c Eastern Mill Price—15,000 Tons Up for Japanese Shipyards

Philadelphia, July 22.—Due to the recent suggestion of the railroad administration that railroads in the east place orders with eastern steel plants on Pittsburgh basis, Philadelphia & Reading is trying to place a round tonnage of plates and other forms which it needs for car repair work at mill price. What the Reading road especially is trying to do is buy plates from eastern makers at 2.65c mill. Railroad repair requirements are coming more activity in the market. The Pennsylvania railroad wants 2000 tons for car repairs and other roads including Chesapeake & Ohio are likely to want some plates for car repairs. Considerable plate business has come from the Baldwin Locomotive Works lately in connection with a number of orders it has received for locomotives for export. The Chester Shipbuilding Co. has inquired for steel for two more vessels. While total still is far from satisfactory, the volume of plate business here is better than it was.

Exporters Close Slowly

New York, July 21.—The numerous good-sized export inquiries for plates alluded to in The Iron Trade Review last week, still are pendng. It was thought that at least some of them would have been closed by this time, but delays in cable communication are holding them up. A couple of good-sized domestic plate orders are under negotiation, but these are exceptional, as current business comprises mainly small orders which aggregate a small total.

Large Tonnages for Oil Tanks

Pittsburgh, July 22.—Oil storage tanks to be built in Mexico are calling for large tonnages of plates and a considerable portion of this business is being placed with Pittsburgh producers. The Treadwell Construction Co., Midland, Pa., has received orders for 17 55,000-barrel steel oil storage tanks to be built at Tampecko, Mexico. This company at present is erecting tanks of this type at Cuba and its fabricating shop is running at full capacity. Foreign demand for plates also is heavy and it is reported that Japan and other foreign consumers are making active inquiry and that the total requirements involved will not be less than 1,000,000 tons. Plate makers are interested in the adjustment that the shipping board may make with Pacific coast steel shipyards, some of whose contracts have been canceled and who are seeking to have the board substitute new contracts calling for a larger type of vessel. Plate makers in this district are bidding on 10 ships for Japan which will take about 24,000 tons of steel of which about 65 per cent will be plates, 30 per cent shapes, and 5 per cent bars.

Boiler Makers Buying Plates

Cleveland, July 22.—Boiler manufacturers are placing fairly large orders for plates, demand from this source developing earlier and much stronger than anticipated. Business continues to improve and the leading maker in this district has acquired a backlog sufficient to keep the mills operating for several weeks as at present, which is about 65 to 70 per cent of capacity.

Sidestep Jap Inquiries

Chicago, July 22.—Business in steel plates is much less active than in bars and shapes, but considerable tonnage has been taken by local producers, and the leading independent is quoting delivery in about six weeks. Shipbuilding interests in Japan are seeking plates in this country, but are asking too many concessions as to base price, extras, and other details to make this business attractive. Most makers are not seeking the business under these conditions.

New Company to Operate Cromwell Plant

Incorporation of the J. C. Cromwell Steel Co. in Ohio to take over the plant of the Cromwell Steel Co., at Lorain, O., has been effected by J. C. Cromwell and others. The majority of the stock of the new corporation, which is capitalized at $4,000,000, is held by Mr. Cromwell. Some weeks ago he took a 99-year lease on the old company's property through a deal closed some months ago, and it is expected he will exercise his option of purchase within a few days.

The Cromwell plant which consists of open-hearth furnaces and forging capacity, has been closed down for some months. It is expected that operations will be resumed in a short time.

Purchases Foundry

The West Side Foundry Co., Troy, N. Y., which several years ago took over the Paris Stove Foundry of that city, has been purchased by Thomas C. Perkins, Inc., investment bankers, of Hartford, Conn. The name of the company has been changed to the Troy Foundry & Machine Co., and additional capital has been provided for plant extensions.

The Perfex Radiator Co., Racine, Wis., manufacturer of automobile, truck and tractor radiators, has been discharged from bankruptcy upon petition of stockholders, endorsed by the creditors, showing the introduction of new capital sufficient to guarantee solvency, and the institution of a new management. It is stated that the liquid assets are $325,000, fixed assets $200,000, and working fund of $100,000 additional gained through the sale of preferred stock.

Awards Best for June

Bookings Total 117,000 Tons or 65 Per Cent—Sizable Lettings at Cleveland—Labor Troubles Check Work at Chicago

New York, July 21.—Further signs of improvement are in evidence in the eastern structural market. One of the most encouraging of these indications is the heavy buying by some of the larger jobbers. These interests are not only placing large orders, but are endeavoring to obtain early deliveries, and to meet some of this rush business one large eastern Pennsylvania mill is now working double turn. As may be inferred, however, this does not necessarily indicate that the mills are booked far in advance, although undoubtedly in view of recent lettings their position generally is improving steadily. The steady gain in structural activity is reflected in the recent report of the Bridge Builders and Structural society for June. In that month, bookings ran up to a total of 117,000 tons, or 65 per cent of the shop's total capacity, a record for the month. Following is a comparative statement:

Month	Per cent	Approximate tonnage
June, 1919	65	117,000
May	49	88,200
April	24½	48,100
March	17½	32,300
February	12½	22,500
January	12	21,600
December, 1918	29	52,270
November	27	48,700
October	43	77,400
September	60	108,000
August	57	102,000
July	116½	209,700
June	56	100,800
May	60	108,000
April	64	115,200
March	47	84,600
February	55	99,900
January	53	95,400
December, 1917	121	205,200
November	77	138,600
October	61½	110,700
September	29	52,200
August	38	68,400
July	41½	74,700
June	47½	85,500
May	56½	102,000
April	61	110,000
March	68	122,000
February	59	106,000
January	61½	119,000

Report Business Improving

Philadelphia, July 22.—Practically all shape makers report at least some improvement in sales and specifications. One mill goes so far as to report improvement of 100 per cent during the past week. Another maker is operating mills double turn, but says that owing to the indifference of workmen output does not exceed 70 per cent of rated capacity. New structural tonnage is small, in fact, while a number of jobs were placed here during the week they averaged only 56 tons each. Much of the current shape demand is from jobbers who appear to be moving their stocks in greater volume.

Improvement in Shape Market

Pittsburgh, July 22.—Improvement is reflected in the market for shapes. Inquiries are coming out in better volume and it is expected that considerable business will come from the shipyards before long and that reconstruction work in Europe also will develop considerable business. The Jones & Laughlin Steel Co. has taken 250 tons for the new warehouse of Rea & Co., Pittsburgh.

Good Awards at Cleveland

Cleveland, July 22.—New structural work in the Cleveland district continues unabated, and among the current lettings are some contracts calling for fairly large tonnages. The American Bridge Co. was awarded the contract for 6000 tons for the new Hanna building, Cleveland, while in Detroit, where a great volume of work is being figured at present, the Russell Wheel & Foundry Co. was awarded 2000 tons for the service building to be erected by the Detroit Edison Co. An addition for the Youngstown Steel Car Co., Youngstown, O., involving 1000 tons was let to the American Bridge Co. The Thompson-Starrett Co. has the general contract for the new Seiberling hotel at Akron, which it is estimated will require 6000 to 8000 tons. These were the largest awards in the Cleveland district, many smaller jobs combining to make up a good total. Fabricating shops in general are not working over 60 per cent of capacity, and the bulk of their business still consists of comparatively small-size jobs. The mills are receiving an increased tonnage of shape orders from the shops for stock.

Chicago Activity Less

Chicago, July 22.—In addition to the recession from a activity of June, the structural market is further depressed at present by a lockout of the building trades in Chicago and vicinity, which has brought to an end for the present all building activities. Every effort is being made to settle this difficulty, but it is feared the lockout may be of long standing. In the face of this situation, new projects are being held in abeyance, as contractors are uncertain how they can figure their costs, and it is difficult to persuade them to take on further contracts. The Rochester Bridge Co., Rochester, Ind., has taken 500 tons for a power house for the Gormully & Jeffry Co., at Indianapolis. Henry Raeder, architect, Chicago, is taking bids on 1800 tons for a tractor plant for the Nelson Corp., Cambridge, Mass.

CONTRACTS AWARDED

Foundry cupola and charging platform for Levering Bros., Buffalo, 100 tons; to Lackawanna Bridge Co.

Two theater buildings, Binghamton, N. Y., 100 tons each; to Lackawanna Bridge Co.

Hoppers for Donner Union Coke Corp., Buffalo, 900 tons; to Lackawanna Bridge Co.

Addition to Sing Sing Prison, Ossining, N. Y., 150 tons; to Kellogg Structural Steel Co.

Alterations to plant of Alberger Pulp & Condenser Co., Newburg, N. Y., 100 tons; to Kellogg Structural Steel Co.

Addition to Pratt & Lambert varnish plant, Buffalo, 100 tons; to Buffalo Structural Steel Co.

Six-story addition to department store of Gimbel Bros., Milwaukee, 100 tons to Northwestern Bridge & Iron Co.

Alterations at Watervliet arsenal; 300 tons, to Eastern Bridge & Structural Co.

Pattern shop at Philadelphia navy yard; 300 tons, to Phoenix Bridge Co.

Seiberling hotel, Akron, 6000 to 8000 tons, general contract placed with the Thompson-Starritt Co.

Warehouse for Rea & Co., Pittsburgh, 250 tons to the Jones & Laughlin Steel Co.

Hanna building, Cleveland, 6000 tons, to American Bridge Co.

Plant of Youngstown Steel Car Co., Youngstown, O., 1000 tons, to American Bridge Co.

Building for Detroit Edison Co., 2000 tons, to Russell Wheel & Foundry Co.

Office building for National Malleable Castings Co., Cleveland, 350 tons, to Bethlehem Fabricators.

Extension for Ohio Seamless Steel Tube Co., Shelby, O., 300 tons, to Hughes & Keenan Co.

Store building for Hess-Snyder Co., Massillon, O., 600 tons, to Massillon Bridge Co.

Bryant High School, Brooklyn, 400 tons, to Bethlehem Fabricators, Inc.

Theater building at Allentown, Pa., 150 tons, to Bethlehem Fabricators, Inc.

Manufacturing plant at Cumberland, Md., for American Cellulose & Chemical Mfg. Co., 300 tons, to Bethlehem Fabricators, Inc.

Lasky Famous Players Studio, Long Island City, 200 tons to Bethlehem Fabricators, Inc.

King City bridge, King City, Cal., 654 tons, to the Toledo Bridge & Crane Co.

Power house for Gormully & Jeffry, Indianapolis, 500 tons, to the Rochester Bridge Co.

Six deck plate girder spans for the United States railroad administration, Chicago, St. Paul, Minneapolis & Omaha railroad, 200 tons, to the American Bridge Company.

Factory for Eggers Veneer Seating Co., Two Rivers, Wis., 200 tons, to the Wisconsin Bridge & Iron Co.

CONTRACTS PENDING

Elevator for Southwestern Milling Corp., Kansas City, Kan., 500 tons; bids being taken.

Foundry building, or third unit, for Samson Tractor Co. of General Motors Corp. at Janesville, Wis., 800 to 850 tons. Frank D. Chase, Inc., Chicago, consulting engineer. Bids being taken. Power plant, 700 to 750 tons, bids to be taken later.

Bridge over Allegheny river for B. & O., 6000 tons, bids being asked.

Service station for Kelly Springfield Tire Co., Fifty-fourth street, New York; 600 tons, bids being asked.

Repairs for seven New York Central bridges; 450 tons, pending.

Jail for Cuyahoga county, O., 300 tons, bids to be opened July 28.

Addition to plant of Maumee Malleable Castings Co., Toledo, O., 200 tons, bids being taken.

Tractor plant for the Nelson Corp., Cambridge, Mass., 1800 tons, Henry Raeder, of Chicago, taking bids.

Drake Hotel, Chicago, 500 tons. Bids being taken.

Will Mine Ore

The Jacks Peak Tramway and Mining Co. of Delhart, Texas, is preparing to develop its iron ore beds, situated 30 miles east of Cavuzozo, N. M. It is constructing a tramway, eight miles long, to give the mine a transportation outlet to the Chicago, Rock Island & Pacific railroad. The company has a contract to mine and ship 200 tons of ore a day. N. M. Vinyard is president and general manager.

Car Repair Work Active

Railroads Coming Out for Numerous Requirements in This Line—1400 Tank Cars Placed—Chilean Order May be Closed

New York, July 21.—An order for 1400 tank cars has been placed with the General American Tank Car Corp. by the Island Oil & Transport Corp. for delivery before January of next year.

Included in recent export inquiries are those for 3000 miscellaneous cars for South African railways; 400 box cars for Siam and 500 coal cars for China. Domestic inquiries include those for 100 special cars for the Atlantic Coast line; 100 tanks for the Texas Oil Co.; 150 cars for the Southern Sales Corp.; 100 tanks for the Chickasaw Refining Co.; 100 tanks for the Texas Pacific; 400 cars for the Swift Co.; 509 cars for the H. C. Frick Co.; 100 coal cars for the Inland Collieries Co. The Northwest Trading Co. wants 100 flat cars and 100 gondolas for export to China. There is virtually no buying.

Several lots of open-hearth rails, averaging around 500 tons, have been recently placed in the local market, the price being around $47.50 a ton.

Place Large Repair Orders

Philadelphia, July 22.—Although few new car orders are likely to be placed in the near future, repairing of old cars will provide considerable activity in the car market for some time. It is estimated there are 50,000 to 100,000 cars to be repaired. The Pennsylvania lines west have just placed the following cars to be repaired: 1500, Pressed Steel Car Co.; 600, Liberty Car & Equipment Co.; 600, Ryan Car Co., and also large numbers with the American, Ralston and Greenville companies. The Pennsylvania lines will repair a considerable number of cars in their own shops. The New York Central railroad is placing big repair orders, while the Chesapeake & Ohio, Reading and other roads either will place orders or do the work themselves. Small tonnages of standard rails are selling at $45 and $47. Light rails continue to sell heavily at full rate. Practically no shading is reported.

Raised $3 at Chicago

Chicago, July 22.—An inquiry made some time ago by the Chilean government for 600 freight cars is still active, but has not yet been placed with a builder. Press reports give the information that that country is seeking to establish a loan of $30,000,000 in this country to be used for rehabilitating its railroads. This gives great promise of business from that source. An inquiry for 500 steel box cars of 30-ton capacity is current in this market. Some repair work is understood to have been contracted by the Pennsylvania and New York Central railroads.

It is understood one manufacturer of tie plates in this territory has advanced his price from 2.75c to 2.90c, an increase of $3 per ton. The leading interest has not made any change in its schedule on track fastenings.

Cast Pipe Up

Western Price Advanced $2—Tubular Goods Keep Up Activity

Chicago, July 22.—An advance of $2 per ton on cast iron pipe has been made for deliveries in Chicago and the West, making present quotation $56.80 for 4-inch and $53.80 for 6-inch and over, class B pipe. Even at this level makers claim they cannot make a profit. Buying of cast iron pipe is somewhat more active than was the case early in the season and cities which have been delaying are now making purchases, although asking for smaller tonnages than usual. The United States Cast Iron Pipe & Foundry Co. has taken 250 tons at Lakewood, O. Bids will be opened at Ashland, Ky., July 24 on 150 tons; at Decatur, Ill., July 25 on 125 tons; at Portsmouth, O., July 28 on 350 tons; at Sterling, Col., July 22 on 1000 tons, and at Akron, O., Aug. 1 on 1250 tons.

Pipe Market Extremely Active

Pittsburgh, July 22.—Extreme activity continues to characterize the market for iron and steel lapweld pipe, and the leading maker of steel lapweld pipe is practically out of the market. Inquiries from jobbers and oil interests are heavy and some consumers have had to divide their lots in order to place the business, while some still are unable to cover their requirements. The recent advance made by the Wheeling Steel & Iron Co., of 2½ points on buttweld and 5 points on lapweld pipe so far has not been followed by other companies, according to reports, but this appears to be due to the fact that they are well sold up and have little to offer. Improvement also is shown in the demand for buttweld pipe and mill operations have increased in consequence.

Demand Has Not Slackened

Youngstown, O., July 22.—Lapweld pipe continues to lead steel sales by producers in this territory. Specifications of one producer last week aggregated between 8000 and 12,000 tons. Two months ago sales were hovering around 5000 tons weekly but these have been increasing steadily until now the average weekly business for this product at valley plants approximates 10,000 tons. The principal consumers of this product are oil country interests.

The Nonferrous Metals

	Copper	Future Straits N. Y.*	‡Lead, New York basis	Zinc St. Louis basis	Aluminum	Spot antimony
July 16	22.75	52.00	5.50	7.75	33.00	8.50
July 17	23.00	52.125	5.50	7.85	33.00	8.50
July 18	23.25	51.875	5.75	7.95	33.00	8.625
July 21	23.50	52.00	5.75	8.05	33.00	9.125

‡American Smelting & Refining Co.'s price.
*July shipment from Singapore, c.i.f. New York.

NEW YORK, July 22.—The nonferrous metal markets have been more active the past week than at any time since this country entered the war. Large blocks of copper, lead and zinc have been sold to consumers at rising prices. Export inquiry has continued in the market, with some business being done, despite the decline in sterling exchange rates. The London metal market has advanced along with this market.

Sales of copper thus far in July have kept pace with those of previous months, which were far in excess of monthly production, more than 200,000,000 pounds having been sold in June, also in May. The Germans have not been inquiring for copper to any extent, but heavy purchases of semi-manufactured goods for shipment to European neutrals are believed to be destined for Germany. However, German demand, hanging over the market, is an important factor. Just as important is the labor situation in the western producing fields. The producers are short handed and facing a great deal of discontent. The Anaconda Copper Mining Co. recently advanced wages of its miners $1 a day, bringing the wages to the basis of 22c copper, as against an 18-cent level which prevailed previously this year. The copper market this week ranged from 23c to 23.50c for July-August delivery.

The zinc market has been extremely strong, both pig metal and zinc ore rising sharply. Prime western zinc sold to consumers at 8.00c on Monday. High grade zinc is quoted 9.00c to 9.25c. Both galvanizers and brass mills have been large buyers, while Japan has continued to make purchases.

The American Smelting & Refining Co. advanced its lead price July 18 from 5.50c to 5.75c a pound, New York delivery. Outside sellers already had been obtaining the advance and immediately raised their quotations to 5.85c.

Keeping pace with the other metals, antimony advanced in price, jumping from 8.50c, duty paid, for spot metal, a week ago, to 9.25c on Monday.

The aluminum market is firm, outside sellers asking 32.50c to 33.00c for virgin metal, while the producers' quotation for 1919 delivery continues 33c.

Brass and copper products are keeping pace with copper, advancing almost daily. Brass sheets are 26.75c, copper sheet, 32.50c; brass rod, 25.25c; seamless brass tube, 35.00c; seamless copper, 36.50c.

English Orders Please Exporters

Great Britain Beginning to Rival Japan as a Market for American Iron and Steel—French Surtaxes Result in Cancellation of Some Contracts—Germans Active in Foreign Fields

NEW YORK, July 21.—Export inquiries and orders are increasing. Coincident with this is a movement toward higher prices. The export houses are, as a consequence, in a general scramble for business. All the markets, with the possible exception of some points in South America, are showing up well. Prices of iron and steel, however, in that territory once covered by the Central Powers, are declining for reasons which are not generally understood here. Prices in India also are declining, but American houses are still able to make sales there. It is said the prime reason prices in the territory of the Central Powers have declined is because the peoples there have no purchasing power and they anticipate that Germany will be able to supply them. Germany already is reported to be underselling the English in Holland.

Japan and the Far East still afford the American producers the best market. Japan has purchased large tonnages of plates within the past month or so, but few sales have been recorded within the past week. That country still has in mind a comprehensive shipbuilding program and American houses anticipate they will be able to supply them. Japan has been a heavy purchaser of 30-gage B. W. G. sheets. Those mills capable of rolling these sheets are well filled up with orders. The United States Steel Products Co. has placed much of this business. It is also understood that the Consolidated Steel Corp. has taken orders for similar plates. One agent declared that the demand for such sheets from Japan is so insistent that he was offered a premium of $20 if he could obtain 1000 tons. Several thousand tons of this material have recently been contracted for. A forthcoming increase in bars is forecast in the fact that mills are rapidly filling up with orders for this material. A Virginia furnace has sold 6000 tons of foundry iron, contracting to deliver 1000 tons a month.

Japan has purchased about 10,000 tons of rails. Inquiries for tin plate from that country have been extremely heavy and orders are being taken by nearly all producers. It is said that recent inquiries for tin plate received from Japan would probably total 200,000 boxes. Japan has also purchased from 3000 to 4000 tons of steel bars. Japan's purchases of copper, aluminum and other metals continue on a large scale.

China is purchasing also, but not nearly in the quantity that Japan has. The Chinese requirements appear to consist chiefly of second-hand material. Shanghai has sent in some orders for bamboo steel, nails, wire, etc. India has also purchased bamboo steel. This is the product that heretofore has been obtainable chiefly from Germany.

Singapore has purchased 2000 kegs of nails, as well as a miscellaneous supply of other materials. As a general thing, the sales to points as far away as India and Australia are small and they appear to be for the purpose of replenishing merchant stocks. Nevertheless American materials can still compete at far away from home. Australia has purchased sheets and wire.

South America's Needs Unfilled

The South American market is not nearly so prosperous as it has been in the past. German commercial activities are reported to have been reinitiated in Argentina. England is said to have sold iron pipe to Argentina. The exact causes of this sale are not known, and it has surprised some American houses inasmuch as England herself is rather short of materials in general and has been purchasing stocks from the United States. The South American purchases have been chiefly sheets and wire products. Some good tonnages of barbed wire have been sold.

American prices on wire and nails have been advanced all around, it is reported. The producers have at last followed the lead of Jones & Laughlin. As a general proposition the prices have been advanced 5 cents on wire and 10 cents a keg on nails. The Consolidated Steel Corp., however, has notified foreign purchasers of prices even higher than this.

Brazil has come into the market for 1000 tons of 12-pound rails. These are desired for a street railway project. There are a number of railroad undertakings in South America awaiting development, but all of these need financing before anything can be done. Bolivia and Brazil both have commissions in this country now looking for loans with which to purchase American products.

Next to Japan, some American exporters declare that England is today the best market for American products. One company is reported to have sold approximately 8000 tons of steel to England, but of what this consisted was not made known. The United States Steel Products Co. is said to have sold some pig iron to England but the tonnage was not made public. According to the general gossip of the market several producers have been able to sell small orders of pig iron in that country. But the bulk of the British purchases today do not consist of semifinished material. The orders are declared to comprise sundry articles, the individual being in small quantities but the aggregate bulking large.

England is buying small quantities of pig lead, and some considerable tonnages of billets, bars and plates. While the British inquiries are generally for prices it has been estimated that their requirements of billets today total 10,000 tons. Some of the bars England is buying is for re-exportation to India. American agents are also selling to India.

Both France and Italy have in prospect great needs for ship steel and some American producers are anticipating beng able to get some of this business. According to one house the requirements will exceed 1,000,000 tons, but everything depends upon the financing. At present neither country has the money with which to buy, and a scheme of bond issues is being worked out. Among the French inquiries received by the market here are many for wire rods.

A new schedule of rates from North Atlantic ports to England has been promulgated by the shipping board. A rate of $17 per ton is quoted on steel products. For the moment, however, the shipping situation is causing exporters no little concern. The marine strike spread considerably during the past week and all the agents have been hastening to load the goods that have already been received at the ports.

Charge Pittsburgh Base is Unfair

Western Association of Steel Consumers Files Expected Action With Trade Commission Against Steel Corporation and Chicago District Independents—Declares Western Mills Discriminate in Favor of Certain Buyers by Dropping Pittsburgh Freight

WASHINGTON, July 23.—Discrimination against fabricators and other users of steel in general in the Chicago district in favor of those consumers located nearer to Pittsburgh is the ground which the Western Association of Rolled Steel Consumers takes in its application filed with the federal trade commission for a complaint against the United States Steel Corp., its subsidiaries the Illinois Steel Co. and the Carnegie Steel Co., and the independent producers, the Inland Steel Co., the Interstate Iron & Steel Co. and the Steel & Tube Co. of America, to compel the wiping out of the Pittsburgh base on steel products.

It is contended that the steel rolled in the Chicago district by the defendant companies "is produced at a cost substantially lower than at the Carnegie plant of the United States Steel Corp. at Pittsburgh or at other plants at Pittsburgh or elsewhere" and "that among the reasons for the reduced or favorable cost of producing rolled steel at Gary and Chicago, Joliet, East Chicago and Indiana Harbor as compared with the cost of producing rolled steel at Pittsburgh or elsewhere are the shortness and directness of the all-water transportation of ore from the mines of Minnesota to their mills in the Chicago district and of their proximity to coal." It is pointed out that in 1917 when the last official statistics were available, about 86 per cent of the entire production of iron ore of the country came from the Lake Superior district; 10 per cent from the Birmingham district; 2½ per cent from Pennsylvania, New York and New Jersey; and 1½ per cent from Colorado. It is submitted that the greatest normal growth and increase in iron and steel production under peace conditions will occur naturally in and around Chicago by reason of the cheaper cost of production and the increase in the consumption demand in the Middle West and in the territory tributary to the Chicago district.

"The applicant submits that the normal and reasonable price for rolled steel should be measured by the cost of production, with the addition of a reasonable profit, without the addition of a large and arbitrary increase, which forms no part of the cost of production and is over and above such reasonable profit," says the application.

"The application of the principle of price fixing at cost plus a reasonable profit and of the law of supply and demand, requires that the price of rolled steel in the Chicago district should be as low as and not greater than the price at any other point or in any other district in the United States. The fixing of any higher price for rolled steel produced in that district is arbitrary, artificial, unreasonable and uneconomical, and gives to the respondent producers excessive and unreasonable profits.

"It is submitted that if basing points are economically sound, then in the interest of the trade—of consumers and producers and of the districts or sections to be served and affected—their selection should take into view their situation with respect to cost of production, supply and proximity to existing and growing greater demand under normal and natural conditions. In any proper consideration of the question, the applicant maintains that if a basing point or basing points are to be considered as proper and recognized, Chicago best answers all the conditions and should be a basing point."

In support of its application, the petitioning association sets forth certain facts which it is held violate the law and equitable trade practice. It is charged that the addition of "fictitious freight rates" to the price at Pittsburgh when selling to consumers outside of Pittsburgh, discriminates against the members of the Western Association of Rolled Steel Consumers to the extent of $5.40 a ton and favors their competitors in the Pittsburgh district by this amount.

"And so the applicant charges," says the petition, "that the fact that such Chicago district fabricators of steel are obliged to pay for rolled steel purchased of the respective respondents and produced at their mills in said Chicago district in accordance with this single Pittsburgh base price, i.e., a price equal to the Pittsburgh price of the commodity plus a sum equal to the freight charge per ton from Pittsburgh to the point of destination (although in fact no such freight charge is actually incurred)—deprives such consumers of rolled steel in the Chicago district from enjoying the advantage to which they are entitled of their proximity to the real producing points at Gary, Ind., and elsewhere in the Chicago district, and arbitrarily and unjustly discriminates against such consumers in said Chicago district, in so excluding them from competing for business with those fabricators who are in or tributary to the Pittsburgh district and the east, and in enabling such eastern fabricators, at the same time, to compete on unfairly advantageous terms in trade with the fabricators in the Chicago district, as if the plants of such eastern fabricators were in the Chicago district."

It is held that this disadvantage suffered by the fabricators and consumers of rolled steel in Chicago is not a natural one and is not due to the latter's geographical location or remoteness from adequate mills or supply, and that such increase in the cost of rolled steel increases

"the cost and selling price of everything involving its use, and not only the fabricators in the Chicago district, but their customers and all who consume or use the products of steel in that section of the country are wrongfully and prejudicially affected by this compulsory increase in price."

Furthermore it is charged "that to meet the said Pittsburgh base price, the respondents who have mills in the Chicago district make prices and sell to purchasers in the Pittsburgh district or in territory between the east line of Indiana, and Pittsburgh, who are competitors of the members of applicant, at prices of the Pittsburgh mills and themselves absorb the freight rate from their mills to the purchaser's plant and thus discriminate in price to the amount of several dollars per ton in favor of such competitors and against applicant's members."

A charge that the defendant steel companies do not maintain the Pittsburgh base price but have practices and made other discriminations in favor of certain consumers in the Chicago district. In this direction the application says:

"They have quoted and made and do quote and make, as applicant is informed and charges, to and in favor of all or certain agricultural implement manufacturers, and to certain other consumers and purchasers in order to secure orders,—prices f.o.b. Chicago or f.o.b. mill for such rolled steel, which is less by said addition of $5.40 per ton or thereabouts than the prices exacted from the members of the applicant.

"They have quoted and made and do quote and make prices to railroad companies for rails, angle-bars, splice bars and tie plates f.o.b. Chicago or Pittsburgh or f.o.b. mill. They quote and sell basic pig iron at the same price f.o.b. Chicago and f.o.b. Pittsburgh.

"That the said respective discrimina-

tions in price between purchasers of such commodities are not on account of differences in the grade, quality or quantity of the commodity sold and do not make only due allowance for difference in the cost of selling or transportation, nor are such discriminations made in good faith to meet competition. But they are made by agreement or understanding amounting to agreement between the respondents or between respondents and other producers of steel in order to maintain prices of rolled steel and particularly to maintain such increased and unreasonable prices in and throughout said Chicago district to the members of the applicant and other consumers therein."

The effect of discrimination in price, it is claimed, is to substantially lessen competition and tends to create a monopoly and brings about unfair methods of competition declared to be unlawful by section 5 of the federal trade commission act.

Finally, the "petitioner, respectfully asks that by reason of the foregoing facts disclosing acts and conditions set forth in this application of unlawful discriminations in price, and of unfair methods of competition in commerce, this commission investigate the matter complained of and if, upon such investigation, the commission has reason to believe that there is violation of law over which the commission has jurisdiction, that a complaint be issued against the respondents, and such further proceedings be had as the law requires or contemplates and to the commission shall seem meet."

Filing is Informal

Washington, July 22.—Application of the Western Association of Rolled Steel Consumers for a complaint against the United States Steel Corp. and Chicago independent companies charging that the maintenance of the trade custom of basing prices f.o.b. Pittsburgh, is in violation of law, was filed informally with the commission July 22, and later probably will form the basis of a suit to open up the entire freight equalization question. Victor Murdock, acting chairman of the commission, said the application is being studied by the commissioners to determine the necessary procedure. It is likely the case will be formally entered for filing and taken up somewhat along the lines discussed with Judge Gary and Attorney Miller when they appeared before the commission July 9.

Navy Awards Contracts

Washington, July 22.—Closely following the award by the navy department last week of contracts for an aggregate of 50,000 tons of armor plate to the three leading makers, came the allocation by its bureau of supplies and accounts of approximately 4030 tons of plates, shapes and bars for U. S. Repair Ship No. 1, now being built at Puget sound. From the bids received and opened July 1, the bureau made the following awards: Youngstown Sheet & Tube Co., 2035 tons of plates, $108,028; the Jones & Laughlin Steel Co., 965 tons of plates, $53,373; and the Carnegie Steel Co., 1030 tons of shapes, $50,110; 45 tons of bars, $1907; and 13 tons of plates, $715.

Plans New Extensions of Valley Plants

Youngstown, O., July 22.—Construction of an 18-inch band mill at the McDonald plant of the Carnegie Steel Co. will begin soon, according to an announcement made by officials. Foundations were put in last year but further work was suspended on account of war necessities.

Plans are being developed for the installation of 30 additional sheet mills at the DeForest plant, Niles, O., of the Republic Iron & Steel Co. With the 30 additional units in operation, the Republic company will have a 40-mill plant and will become the largest producer of sheets in the Mahoning valley.

Controlling interest in the American Zinc Products Co., Greencastle, Ind., has been acquired by Wade A. Taylor, president of the Valley Iron Co. of this city. The company operates a smelter at Fort Smith, Ark., and a plant for rolling sheet zinc at Greencastle, Ind. C. W. Martin, formerly associated with the DeForest Sheet & Tin Plate Co., has been elected president of the Zinc company succeeding D. W. Kerr.

Adding Sheet Mills

Two additional sheet mills are being installed at the plant of the Canonsburg Sheet & Tin Plate Co., Canonsburg, Pa. This gives the company eight mills. The new units were built by the Hyde Park Foundry & Machine Co., Hyde Park, Pa., which also built the original 6-mill installation.

Remodeling Stack

The Thomas Iron Co. is remodeling its No. 3 furnace at Hokendauqua, Pa. It is installing an automatic revolving top of the McKee type, and is enlarging the hearth. It expects to blow in this furnace Oct. 1. The Thomas Iron Co. plans also to install a new pig casting machine.

Little Effect

Of Efforts to Unionize Mills Anticipated by Judge Gary

New York, July 22.—Efforts of the American Federation of Labor to unionize the steel mills of the country will have little effect, either in the operation of the mills or in the market generally, in the opinion of Judge E. H. Gary.

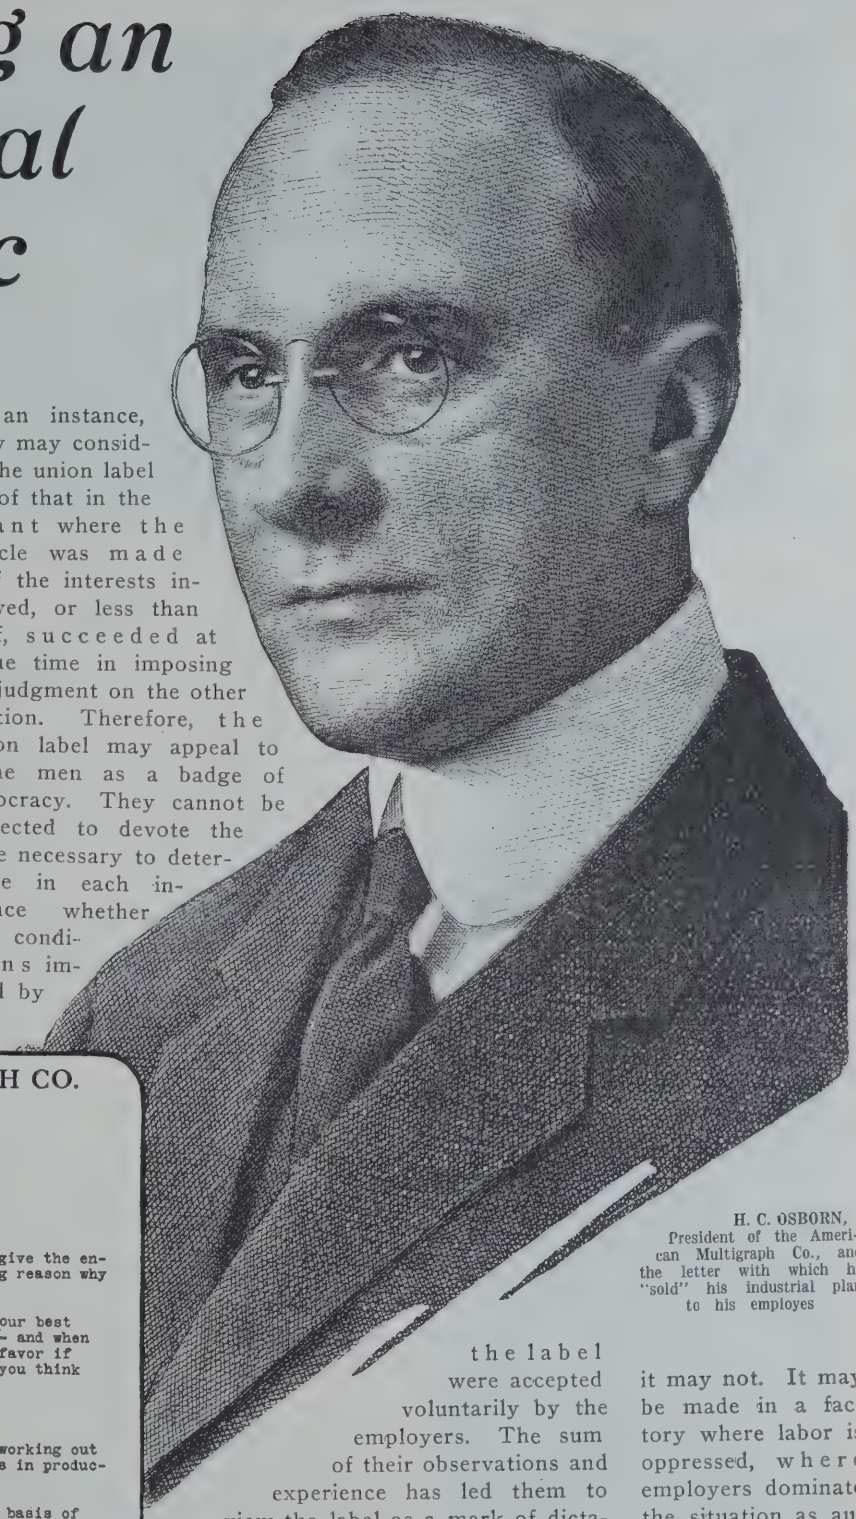
"Do you think the movement now under way to unionize employes of the United States Steel Corp., and bring about a general strike will meet with success?" he was asked in an interview today.

"I do not," he replied, "for the reason that employes have received and will continue to receive better treatment and better conditions of employment from the Steel corporation under its principles and policies pertaining to labor than they could expect through the efforts of the labor unions. The vast majority of workmen are not members of labor unions."

Asked whether the present foreign exchange situation would effect export business, Judge Gary said:

"There is a large foreign business offered, and it will be offered in increasing amounts and quantities. I don't see anything in the way of satisfactory export business during the remainder of the year, and probably for a longer period. I think the natural way of taking care of the foreign exchange question is by the purchase of more foreign commodities, and I believe this country ought to be liberal in buying from foreign countries. We can do it, for we have the necessary money. The masses of the people of this country are well supplied with money and can afford to buy in large volume. Therefore, I expect to see imports increase, and also exports increase more than would be a relative proportion. This country never before has had as great a chance of increasing its business as at present and we are sufficiently skillful to seize upon and utilize opportunities which are offered to us. It is up to us."

Will Rebuild Furnaces



Reconstruction of the No. 1 blast furnace at the Crane works of the Empire Steel & Iron Co., Catasauqua, Pa., is under way. The program includes the erection of a trestle, stock bins, pig machine, one stove, boilers and blowing engines. The rebuilding of this furnace is under the supervision of the Arthur G. McKee & Co., Cleveland. The latter company also is installing a McKee-type stock distributor on the No. 3 Hokensauqua, Pa. stack of the Thomas Iron Co. This furnace will be placed in blast about October 1. Contracts for the rebuilding of the Oxford furnace, Oxford, N. J., of the Empire Steel & Iron Co., have been let to Freyn, Brassert & Co., Chicago.

Organizing an Industrial Republic

BY A. J. HAIN

MANUFACTURERS who have granted their employes representation seem to have overlooked an important possibility of the plan. That is the commercial value in a label or trademark bearing the words "Made in an Industrial Democracy," or a similar phrase to denote that the product originated in a plant where labor is given a voice in its own management.

The union label idea? Well, there are labels and labels, and they symbolize various ideals. The union label is evidence that the article on which it appears was made by members of a labor union in a closed shop. That may be the only certificate necessary to induce some men to select the article in preference to some other, but a great number of buyers may have a different opinion of the same label. As an instance, they may consider the union label proof that in the plant where the article was made half the interests involved, or less than half, succeeded at some time in imposing its judgment on the other portion. Therefore, the union label may appeal to some men as a badge of autocracy. They cannot be expected to devote the time necessary to determine in each instance whether the conditions implied by the label were accepted voluntarily by the employers. The sum of their observations and experience has led them to view the label as a mark of dictatorial authority. And as an argument to them why they should buy, the label has about the same force as if it read: "Made in Germany."

H. C. OSBORN,
President of the American Multigraph Co., and the letter with which he "sold" his industrial plan to his employes

THE AMERICAN MULTIGRAPH CO.
FACTORY AND GENERAL OFFICES
EAST 40TH STREET AND KELLEY AVENUE
CLEVELAND, OHIO, U. S. A.

2-28-19

Frank Heider,
City.

I hope you will find time between now and Monday to give the enclosed booklet a careful reading. That's the one big reason why I'm sending it to your home.

The new idea described in the booklet is worthy of your best thought. Talk about it to your friends and family -- and when you come in Monday morning I will consider it a big favor if you'll come to my office and tell me whether or not you think we're on the right track.

Will you do that?

From now on, you will be urged to use your brain in working out our problems, just as you are asked to use your hands in producing the work.

It means the beginning of Industrial Democracy, as a basis of management, in the American Multigraph Company. Through the representation provided, your thoughts and suggestions will be considered in the laying out of Company policies and regulations.

We expect the plan to produce great things. It will mean progress and benefits to us all. Of course, it is going to add to our responsibilities, too -- especially for the representatives and those who are elected to Congress -- but the honor will be worth the extra effort.

To me it represents an idea that has taken us many years to work out. I hope it will mean that we can work with greater co-operation and added efficiency.

The biggest result to wish for is contentment. If, through the workings of this plan, cheerfulness and good will towards others can be multiplied, then we need have no fears for the success of Industrial Democracy in our Plant.

Just now I want your support. If you think the idea a good one, say so, and then pledge yourself to help it make good!

Sincerely yours,
A. C. Osborn
President.

Why label goods to indicate the conditions under which they were made in the factory? It is quite true that considerably fewer men look for a trade union label than those who do, and that members of trade unions form a large proportion of the number who do not. But consider an article without a label; it may be made in a factory where labor conditions are ideal, and, again, it may not. It may be made in a factory where labor is oppressed, where employers dominate the situation as autocrats. Fortunately, a label is not significant in this sense by reason of its absence; but there is no visible proof for the buyer that the maker is not a despot, nor yet any evidence that he is a prince among his men. The buyer buys blindly, or, as some believe, he does

CONGRESS IS COMPOSED OF EMPLOYES, ELECTED BY EMPLOYES

F. A. WIDOWS
Chairman of the congress

worse—picks the union label to play safe!

If we are to have labels showing that one element in a business establishment has won a victory over the other, why not have them to show that true democracy exists? Our flag is the symbol of our national democracy; why not a symbol of industrial democracy?

A few million men washed their faces and hands this morning with a certain brand of soap. It's a good soap, selling on its merits, with proper advertising; but no picture of pretty face, and no pretty phrase could focus our attention on that soap, make us admire and prefer it so much, quality admitted, as to know that in the factory where that soap was produced an industrial Utopia has been attained, that managers and men work together as brothers, that the soap is the product of an institution permeated with the guild spirit. Of course, in selling soap we must have pictures of pretty faces, but visualizing the spirit of industrial peace and happiness will go a long way to help, to furnish the background, or the solid effects.

"Made in an Industrial Democracy"—the guarantee that employers and employes have upheld the sacred principles of the rights of men, or "Made in a Closed Shop"—which is the most satisfying to the American spirit?

* * *

EMPLOYERS are endeavoring to sell themselves to employes, and eventually we may expect to see them advertise themselves on the point more extensively. But at present the disposition seems to be to regard employe representation, by which they seek to convince employes of their sincerity, in the nature of an experiment. There is no telling when someone may come along, and in those factories where the golden rule has been put in practice convince employes there is something better.

No one wishes to advertise a failure, but a failure frequently occurs through lack of advertising, and if trade unionism supplants employe representation in a shop where the latter has been tried it probably will do so because trade unionism conducted a better selling campaign than was conducted in behalf of equal representation. The challenge of trade unions to those employes who have granted representation is to lay on the table the specifications of the plans they have adopted for the practical application of the golden rule in industry. If they cannot do that with perfect confidence, if the plans cannot stand the searchlight, trade unions have the better of the argument, so far as public opinion is concerned. If the plans are such as to satisfy the average man's sense of justice the days of trade unionism are numbered.

Employers in greater number every day are accepting the challenge. They are drafting plans which if adhered to, they say, will provide a basis for understanding and equitable settlement of every dispute that may arise. They are putting employes to the test, and furthermore they are seeking to train and educate those employes to stand the test; not to convert them to a distorted sense of justice, but to what is just to their employers as well as to themselves.

After American industry has been thoroughly "democratized" the real test as to whether we shall have industrial harmony will remain the same as it is today in every institution, the even balance of commonsense judgment, the personality and

SENATE IS COMPOSED OF THE MANAGERS OF DEPARTMENTS

intelligence of the men. Human nature has not changed; a new dispensation of generosity has not been attained with the overthrow of the kaiser; the dollar has not lost its attractiveness. Every rule and law made is subject to violation, and industrial democracy, while a powerful instrument for good, is no straightjacket. If it accomplishes that which some claim for it, the settlement of every dispute, it will rank with, if not transcend, the league of nations and its ideals. And if it achieves only one purpose, providing a means of "contact" between employers and employes, perpetually indicating to them the direction in which their best interests lie, employers will not have "sold" themselves in vain.

* * *

OF the making of industrial relationship plans it might be said, as once was said of the making of books, "there is no end." And like books, some of the plans smack of fiction and some of fact; some are fair-weather fancies, and others deep-rooted to withstand the stress of time. A number were devised apparently for elementary classes, for easy interpretation; while not a few of them were developed to measure up to men of higher mentality, graded as psychological tests are graded.

So in considering any plan for employe representation, either proposed or in operation, it is important to bear in mind the character of the organization, the work performed, and the number of men who perform it. Some idea of the workmen, their skill and mental capacity may be obtained by what they produce.

At the plant of the American Multigraph Co., Cleveland, a democratic system of government has been in operation since February, 1919, in the shape of an industrial republic.

The plan was not originated in a day, nor was it picked "grab-bag" fashion from a miscellaneous assortment of theoretical systems for allaying industrial unrest. It was developed with much thought and study by the executives of the company, with H. C. Osborn, the president, who has made extensive investigations of industrial problems in this country and abroad, participating as the leading spirit.

Mr. Osborn chose a novel method for submitting the plan to the employes. He did not want their hasty judgment; he wanted them to consider it carefully so that they might understand and appreciate every detail. If there were any flaws in it; any opportunities for injustices he wanted them discovered; he wanted the employes to be convinced before accepting it. An industrial plan "sold" against the better judgment of employes, he believed, could no more stay sold than a machine sold under similar circumstances.

It was typical of the way the company went about the affair that Mr. Osborn decided on a method of introducing the plan to the employes in such a way that it would compel them to "stop, look and listen." He mailed a letter to each employe to reach the employe's home Saturday afternoon. He wanted the worker to have a day or more in the calm atmosphere of home to think it over.

"The new idea described in the booklet," he said, referring to the printed copy of the constitution enclosed with each letter, "is worthy of your best thought. Talk about it to your friends and family and when you come in Monday morning I will consider it a favor if you will come to my office and tell me whether or

R. G. A. PHILLIPS,
Vice president of the American Multigraph Co., and chairman of the senate

Representatives Maintain Contact Between Employes and the Employes' Congress.

not you think we are on the right track."

Thus the one-big-family idea in modern industry was carried directly into the employe's home. He considered it in relation to his employer, to himself and to his family, at a time and place removed from prejudice and suspicion. The company was appealing to him for a closer alliance; it offered him as much independence as any man may reasonably ask for in a free government, a voice in his own management; new responsibilities, and new opportunities.

Came Monday and a majority of the employes told Mr. Osborn that they wanted the plan put in effect. Not a few were enthusiastic about it, while some were skeptical. Several did not favor it.

"Why not?" Mr. Osborn asked one who objected.

The employe had heard of "such plans" tried out, and also that they gave a company an opportunity to trick its employes.

"How long have you worked for the Multigraph company?" he was asked.

"Six months."

"Has the company ever tricked you?"

"No, it never did."

"And it never will," Mr. Osborn assured him, thanking him for his opinion and asking him to give further thought to the plan and how it might work out in the Multigraph plant.

By Wednesday 85 per cent of the employes had approved of the plan and more did so subsequently. Pledge cards were signed by those who favored it, giving their promise to abide by the constitution for one year, the purpose being to keep a record of the signers and the objectors and to ask the latter for their views after the plan received a fair trial.

So an election was held in the plant, with campaign speeches, posters and ballot boxes, and the new government "of the people, for the people and by the people" of the Multigraph company was born.

* * *

THE Multigraph plan provides for a congress composed of 12 members elected by employes and 12 others chosen jointly by the president of the company and the three elected members receiving the highest vote. Also, it provides for a senate, composed of departmental managers, with the vice president of the company serving as its chairman.

Women may vote and may be elected to congress, but as the number of women employed does not exceed one-fourth of the total number of employes, about 1000, that ratio is maintained in their representation. Congress elects one of its members chairman who does not vote except in case of a tie. The manager of industrial relations of the company is secretary of congress.

"Beginning with the second election," the constitution provides "all terms of office shall be for one year, four members being elected and four appointed each year. For the purpose of organization, however, the first congress shall be made up as follows: Of the 12 elected by the employes the four receiving the greatest number of votes shall serve for three years from the day elected; the next four shall serve for two years and the next four for one year. The 12 appointed to office by the president shall be divided and serve for terms similar to the elected 12, the president being required to designate who are the individuals serving the various terms."

Committees are appointed by the chairman to consider such subjects as employment and discharge; education and publications; health, sanitation and safety; wages and rates; economies and suggestions; shop training; sales co-operation; recreation, athletics and entertainments, and others deemed necessary.

Congress maintains contact with employes through representatives, appointing outside of its own personnel a representative in each department "whose duty it shall be to gather material for congress and to interpret rulings of the congress to employes in that department." Representatives may appear before congress and be heard with reference to any proposal, but they cannot vote.

The senate is composed of the production manager, chief engineer, superintendent, advertising manager, sales director, treasurer, chief inventor, chief inspector, manager of industrial relations, purchasing agent, auditor, and vice president, the latter being chairman.

The senate must approve or reject measures passed by congress, and in rejecting measures must give its reasons, and offer suggestions for amendment. All measures approved must be submitted to the president and his cabinet, composed of the officials of the company, for final adoption. Should the senate and congress

be unable to agree it becomes their duty each to appoint three members to serve as a joint committee, this committee to appoint one of its members chairman, who shall not vote except in case of a tie.

Should either party to the dispute wish to dissent from the ruling of this committee it may appeal to the supreme court, the court being composed of three members of congress, three members of the senate and three members of the president's cabinet, the chairman or chief justice being chosen by majority of the court.

Either congress or senate may impeach one of its members and a member impeached must show cause why he should not be dismissed from the company.

"In adopting this plan it is our belief that it will prove of permanent and lasting value to all three partners in our business—employes, management and stockholders," it is stated in the preamble to the constitution. "With this thought in our mind, and with the intention that the plan be given a full and fair trial it is entered into subject to the limitation that it may be terminated Jan. 1, 1920, or upon any anniversary thereof should the parties to the agreement have reason to believe that the mutual benefits expected have not been realized."

* * *

HOW is your industrial plan succeeding?" the vice president of the company and the manager of industrial relations were asked six months after the election.

"Too early to say," they replied. "We consider it still in an experimental stage; only time can tell what the outcome will be."

"From your experience what do you see as the chief difficulty which may arise in the way of the successful operation of industrial democracy?"—this to the manager of industrial relations.

"The possibility of some men regarding it as something on the order of a nickel-in-the-slot-machine. For instance, our company in response to a request from employes has just decided to pay once a week instead of twice a month. That change will cost $6000 extra per year, and when it is made there is no assurance that once a week will prove any more satisfactory or necessary than twice a month. After they have it, the employes may find that they do not care for it any more than the present system. It may work out all right, and again it may be that the company was put to needless expense."

"How do you 'size up' the Multigraph plan?" the writer asked the chairman of the Multigraph congress.

"It will prove a benefit to all of us if we succeed in putting it across; if no one tries to take advantage of it," he said.

And to get another angle on it, the writer put the same question in a casual way to several of the employes.

"We're satisfied," said one.

"It's a fine proposition," said another.

"The boys were a little suspicious of it at first, but it's going along all right, and everybody seems to be happy," a third declared. "Of course, you never can tell ——."

Now while the attitude of conservatism as regards the future of the plan was clearly indicated by executives and employes, the writer sat five hours through a session of congress and again two hours through a session of the senate and received a composite picture of earnest, thoughtful, good-natured men, considering their problems in frankness and sincerity. If congress is representative of the class of employes in the Multigraph plant, perhaps any system providing for discussion of mutual problems would succeed.

It would be difficult to judge, if the plan continued indefinitely, just what proportion of the success was due to the merits of the plan itself and the share which might be ascribed to the type of men, but a superficial survey would suggest Russia and the United States in comparison. Here a predominance of intelligent men make of the mechanism of democracy a smoothly running, helpful machine; in Russia they make of it a buzzsaw off its bearings.

It was significant that in the session of congress very little was said regarding personal relations; there was little evidence that anyone was dissatisfied. The question of an 8-hour day was brought up, as will be referred to presently, but it was suggested and discussed without irritation. It was mentioned that the rest period for some girls had been withdrawn since war work was discontinued. Members said they thought the girls should be allowed to rest five or ten minutes in the morning and afternoon. It developed that some of them had not enjoyed the rest period through a misunderstanding, as some girls go home earlier than others.

By far the greater portion of the session was devoted to suggestions for improving details of operation of the plant, some of them disclosing expert knowledge of machines and mechanical processes.

Was it because they had a congress at this plant that the employes showed such interest in improving their work? A "committee" might have done just as well? Here is a case where the elementary principles of representation have been elaborated upon to stimulate interest. There is something interesting in a congress, a senate, a supreme court, a president and a cabinet. It does not take any more time for a group of men to make or mar an establishment whether you call them a com-

EDUCATIONAL WORK IS AN IMPORTANT FEATURE OF THE MULTIGRAPH COMPANY'S INDUSTRIAL PLAN

mittee or a congress, but there is something in the name and the system to hold attention, to command thought.

* * *

FOR example, the minutes of the meeting of congress, summarizing the reports of committees, and other transactions, will give the reader an idea of the work done once a month:

SALES CO-OPERATION COMMITTEE: Reported on suggestion passed to them by the economy committee. Investigation shows that the field does over-order at times and recommendations were made to adopt a plan to check this. Also, the committee recommends the issuance of a parts catalog.

EMPLOYMENT AND DISCHARGE: Reported that one or two cases have come to their attention but that they were able to settle them outside of congress. Because of the confidential nature of the work of the committee no report was made. Conclusions arrived at were entirely satisfactory all around and decisions had been made according to recommendations made by committees.

EDUCATION AND PUBLICATION: Progress is being made along the lines of preparing for the school of multigraph operating and Mr. Blackie is investigating the matter of free library co-operation, and a list of books recommended.

HEALTH, SANITATION AND SAFETY: Quite a large report was presented * * * and during the discussion it was suggested that the matter of fixing up the front lawn be taken up with the proper persons. Traffic lines for sharp turns. Adopted unanimously. Blower for dry grinders in toolroom. Suggested that they be installed when toolroom is moved. Adopted unanimously.

SUGGESTION COMMITTEE: Was requested to take hold of the present suggestion system and bring it up to date. A system of boxes and posters to be gotten up with the idea of stimulating both the quality and quantity of suggestions turned in. Also recommendations are to be presented on the rearrangement of prizes. Suggestion on storing of finished product before polishing or plating adopted.

SALES CO-OPERATION COMMITTEE: Called attention to previous report on recommendations that inspection department be separated from assembling. It was recommended that for the good of the production the final inspection department be separated entirely from inspection. This will insure greater efficiency in both departments and lessen the chances for passing over things in order to keep up with the rush.

SPOILED WORK COMMITTEE: Presented report on several phases of the spoiled work around the plant. Report was also made on the results of an investigation that resulted in doubled production.

IMPROVEMENTS:—Suggested investigation into the matter of drill grinders and the changing of orders by stores clerk. Several examples were given of how orders were changed from wheels specified to something else. Investigation ordered.

RECREATION: Report on progress of ball team and dance as well as on attendance at gymnasium. It was also suggested that Bill Potter's offer to loan his quoits for use as patterns be accepted and new ones be cast.

MISCELLANEOUS COMPLAINTS: Nothing very big. All matters fixed O. K. Committee appointed to investigate matter of rest periods for girls being withdrawn.

Senate reports approvals on all matters in previous minutes except the matter of weekly pay. This is being investigated and senate will report at a later meeting.

J. Wise reports that production in his department is 31,000 behind on one operation of the Gridleys. Suggests that matter be looked into in order to keep production line straight.

Motion that congress write letter to Mayor Davis telling him that they approve of action of authorities in downing the May day rioters.

Mullen suggested library plan and a plan for employes' insurance. Senate already investigating the subject and will present report.

Question of aliens arose. Information

Educational Work Indispensable

BY R. G. A. PHILLIPS

Vice President of The American Multigraph Co.

OF ALL the movements under way and under discussion with relation to industrial betterment, to my mind the educational program is the most important, and should receive the closest attention from the executives of any business.

It is not the men's fault that the "soap box orator" can so twist facts as to cause unrest. It is the fault of the people who should have presented the facts to the men a long, long while ago. I do not believe and I do not think any employer believes, that the people who work for him are any the less ambitious than he himself is. I do not feel that the common laborer has any right to be less ambitious than the college graduate, and I do feel that the industry that can afford the greatest opportunity to is human element, both in advancement and in training, will be the strongest industry in the end.

It is a shame for employers to have employes who do not know their employers' business. It is a shame to have employes who only know a fraction of what they should know to handlde their jobs properly.

I think the more educational work that can be done along the lines of teaching the men about the materials they use, about things of timely interest, the organization of the business, and how the various departments function, and also a liberal program which will embrace outside subjects, such as current events and the like, will prove of invaluable help.

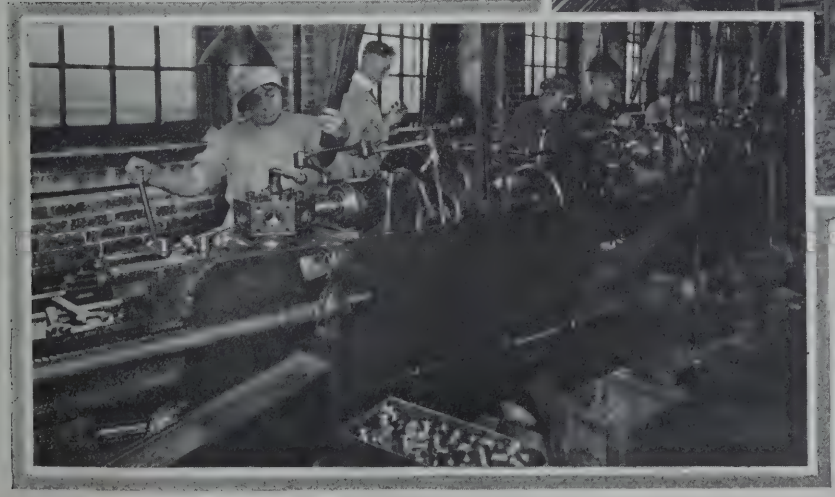
I do not think that employers will find the employes unwilling to co-operate in an educational program that is designed to benefit them. Employers will not have any objections on the ground that such work should be held on company time. I think there will come times when it will be necessary to hold a session or two on company time, in order to demonstrate some particular feature or other that must be demonstrated while the plant is in operation. But on the whole, employers will find that if their course is well balanced and is made so interesting that interest in it can be sustained, they will find men, and plenty of them, willing and anxious to sit two or three hours after 5 o'clock, in order to better fit themselves for the job ahead.

We are entering an era where it is considered better management to advance men from the inside to the the top, than it is to go outside for material to fill the bigger jobs. It is more to the advantage of the management and more to the credit of the force to promote men to bigger jobs rather than to hire from the outside to fill those jobs.

Every employe has ability along two lines. The first is the physical ability, which is the class of labor that quite a number of employers are perfectly content to buy. Second is the labor of his brains which can be just as valuable as an employer is willing to make it.

We, at the Multigraph plant, believe that educational work is almost indispensable. Since our early years of existence we believed in it thoroughly. We are 100 per cent gold on it and are planning year by year to make this work more embracing in the things it will do.

Girls operate many machines at the plant of the American Multigraph Co.



Sensitive drill press operators proved their ability during the war—and since

More than one thousand workers, men, women and girls, find life worth living in this industrial republic

Women also show considerable skill in operating turret lathes

Manufacturing automatics are generally operated by men, tool setting, if done by the operator, requiring skill and muscular exertion

given that only citizens are now employed and that only three noncitizens work here.

Representative Rambo presented motion for 8-hour day. Referred to a special committee.

Representative Kirkham brought up matter of docking for lateness. This was discussed considerably but no action taken.

Representative Koberna brought up matter of picnic.

* * *

GENTLEMEN, you and I know this company wants to do all it can for us," said the chairman of congress in charging the special committee he had named to consider a request from the shop for an 8-hour day. "It is not a question about the company wanting to give us an 8-hour day; it would give us that and more if it were possible. It is a question whether we can produce as much in eight hours and make it possible for the company to keep up wages. If we can't do that, but insist on eight hours, something must give way; wages must come down or the company may be forced out of business. So in considering this proposition it is up to us to first give serious though to the matter and determine if we can arrange the work so that output will not suffer.

"If we can show the company that we can continue to produce as we are producing, then we would be justified in asking for eight hours; but mere promises that we will work harder, and all that, are not sufficient; there must be something more definite. As this committee takes hold of this matter I would like to have it bear in mind that it must not only be considered from the viewpoint of the fellows in the shop. Good will of the management for the men will not pay wages; the management must have the means for paying them and we must provide them."

On the evening this proposition came before congress, May 5, that body was in session from 5:30 to 10 o'clock. All committee reports had been submitted and discussed, 90 per cent of the work being of a constructive character. It was near the close of a session which might have been regarded as a hard grind if spirits had not been buoyed up by keen interest and enthusiasm in the work.

A representative brought in the request from some of the men in his department. Impatience on the part of congress might have provoked a feeling of resentment. So the members put their watches back in their pockets, lighted fresh cigars and proceeded to give the request prompt attention. A member suggested that it merited thorough investigation, and it was agreed that the most expeditious way of accomplishing this was to have the president select a special committee, the members themselves proposing names of those they wished to be chosen.

Employes at the Multigraph plant now receive 11 hours' pay for 10 hours' work, all time over eight hours being paid for at the rate of time-and-a-half. No dissatisfaction with the amount of wages was expressed, the spokesmen for the men saying that now that the company has resumed peacetime production they thought eight hours sufficient.

A situation which in some plants might have developed into a strike was handled in an orderly, commonsense way; the proceeding was a clear-cut expression of confidence in the company's management, and a recognition of the power of co-operation. It was evidence of an aroused sense of responsibility, perhaps the best the operation of the plan thus far has afforded.

June 5, one month later, the special committee was deep in its work, investigating direct production costs, overhead and all the details relating to wages, production and profits. And, in the meantime, the machines in the Multigraph plant hummed merrily along, the workers cheerful and contented, confident that "if it can be done it will be done."

* * *

SENATE was in session. There came for consideration the case of C—— S——. Fellow-employes petitioned for an increase in wages for him, saying that he had worked for the company for 12 years in the same job and that he received but $90 a month. If C. S. was employed 12 years in one job, the petition stated, surely that was proof that he had "made good," and having "made good" he was entitled to more than $90. It seemed to the few who petitioned that it was regrettable there was no greater reward for such faithfulness and service.

But this case was no exception to the rule in having two sides, and the other side presented a different picture. In favor of C. S. was the length of his service, against the increase in wages was this: C. S. had reached his natural limitations, he showed no initiative, no ability to progress. He was too satisfied with his job which he had made no larger than when he came to it, but he was dissatisfied with the wages. In other words, C. S.'s wages had moved ahead while C. S. stood still, and the wages could go no further without co-operation on the part of C. S.

The job was an $80-a-month job; because of its very nature it could never be much more than that unless the man made it more. C. S. preferred to receive $90 for an $80 job than to strive for a $100 job. His superior had a long talk with him a year before when he asked for an increase from $80 to $90 and received it. The manager of the department tried to make the employe understand that his qualifications in that particular line of work were limited; that given a chance in the job higher up while the man who held that job was away, C. S. could not grasp its rudiments and that he was incapable of additional responsibilities.

After that, and here is the crux of the case, C. S. was offered opportunities in other lines of work. The plant was engaged on war contracts and needed men. Others were receiving high wages; there was a chance for C. S. in another department, but he did not seize the opportunity. He did not want to give more; he wanted to receive more. And sympathetic fellow-workers overlooking the fact that if they themselves took more from the enterprise than they produced it would not exist, petitioned in his behalf.

Unfortunately, there was another element entering into the case. The employe had a physical infirmity, which while arousing sympathy did not interfere with his normal activity. The plea for C. S. was not based on this ground and, therefore, this feature of the case was dismissed. It narrowed down to a point of paying an employe considerably more than he earned. The senate considered such a policy would be contrary to the best interest of the organization as a whole, and it ove ruled the petition.

* * *

ONE of the outstanding features of the Multigraph plan as distinguished from some others, notably those in operation at the plants of the Colorado Fuel & Iron Co., and the Bethlehem Steel Co., is that it keeps within the organization th final determination of what is fair to the company and its employes.

In the plan adopted by the two latter companies it is provided that when disputes cannot be settled satisfactorily by committees, in which the management and the employes are equally represented, an appeal may be made by either party to the state mediation board; but it is significant that in the four years of the operation of the Colorado plan it has not been necessary to make such an appeal, and as far as known no appeal has been made from the decisions of committees organized in the Bethlehem plant in the half year of opera-

tion of the employe representation plan.

Results so far strongly suggest that where there is opportunity for frank discussion and arbitration within an organization there is less need for outside interference. A strong plea for just this form of settlement was made by the war labor board in practically all its decisions. Corporations with industrial disputes were urged to provide their employes means for organizing and discussing their problems with the management, and this ruling was hailed as a signal triumph by organized labor, which, however, did not commit itself to abide by the results of this system.

Organized labor frequently found the arrangement was not satisfactory to it and carried its disputes to state or federal institutions. It is possible, therefore, that trade unionism might frown on any arrangement whereby employes pledge themselves to abide by decisions made within the industrial organization itself, but the plan does not consider trade unionism as a dominant factor. It places the unionism of employers and employes above unionism of class and stakes its success on the principle that organization within is superior in all respects to organization without.

* * *

CONFIDENCE between employes and employers in industrial relations will never appeal to some men as a confidence game. The one-big-family idea will always find scoffers. Let any group of employers and their employes write an agreement guaranteeing each other a square deal and let them pledge themselves to its fulfillment, still there will be those who will interpret the action as sinister.

Prejudice opposes the new spirit of fellowship in industry because prejudice has asked itself the question "Where do I come in?" and concluded that in the changed order of affairs there will will be no room for it. But because prejudice exists it must be reckoned with; the employer who would extend his hand to his employes must show that he has nothing up his sleeve; he must demonstrate that he regards treaty with something more than a "scrap of paper," else he will find many interests ready to seize the opportunity to block his efforts and drive in the wedge. Skepticism and suspicion regarding the new agreement exist regardless of how well it may be devised to protect the interests of employers and employes. It is a situation where words cannot synchronize management and men, but where purpose must be proved by action.

Will democracy in industry succeed? What is it? A contract, a bill of rights, self-government, or a more sympathetic feeling between men of all classes in their working relations? Some industrial enterprises have no constitutions and yet have democracy. Others have agreements defining rights, but there is strife. Therefore, it must be more than a written rule of conduct; it must be the golden rule in everyday practice.

Will it succeed? As good government is founded on self-imposed restraint, the answer depends on how well the various interests represented in industrial democracy restrain themselves.

Desires Must be Sincere

It may be assumed that those who propose an agreement of this kind are sincere in their desire for its fulfillment, so from the viewpoint of those employers who offer a plan insuring justice to their employes the proposition narrows down to how well the employes restrain themselves. If the agreement operates in such a way as to give one party an unfair advantage of the other in a difficult situation it is obvious that it will fail.

New opportunities are created with new responsibilities, and there is danger in imposing responsibilities on persons who are not capable of assuming them. Manifestly it is unfair to give a group of men the power to enforce demands when they themselves do not understand the consequences of these demands. If employers are to invite employes to participate in management it would seem that education is the first step in the process, and that unless employes are educated to understand their responsibilities the plan is fraught with possibilities of misunderstanding and dissension.

Organize some men and tell them to make suggestions for their welfare and it is possible that some interests entitled to consideration may be overlooked. Some employers might view such a step as equivalent to arming an enemy. But education proves a stabilizing influence.

Some time ago a trade union leader said that American industrial managers do not want their employes to become educated "because then they cannot exploit them," but even a casual survey of industrial relations today would lead to the conviction that the education of employes is one of the first considerations of employers, and that where principles of democracy are fostered educational work is regarded as the vital factor in their practical and successful application.

Discover Oil in England

A great deal of interest has been aroused by the discovery of oil in the Chesterfield district as the result of the boring operations undertaken about seven months ago by the Marquis of Hartingdon. Fortunately, the old field is only a few miles outside Sheffield, while in Chesterfield itself there are large and important iron and steel works, including blast furnaces, foundries and rolling mills. The district is a great center for the production of cast-iron pipe. If the oil supply proves to be abundant it will be a great boon to the iron and steel trades of the Midlands.

The oil was reached at a depth of just over 3000 feet and it is roughly described as giving off a strong odor of paraffin and benzine. The liquid is almost of the consistency of varnish, opaque and of a brownish green hue. A suspension of drilling took place to enable the rise to be measured as well as to analyze the product and for putting in the necessary connections and fittings. It is hoped that the oil will eventually come to the surface of its own accord as it is rising under obviously fairly strong pressure.

The oil has been discovered at varying depths, but this is the first indication of real volume. Seven wells have been sunk in Derbyshire, namely at Hardstoft Heath, Brimington Common, Ironville, Renishaw and Ridgeway. Hardstoft has been the first to yield oil, but there are hopes that a discovery may be made at Brimington, where a depth of 2500 feet has been reached. In this well the casing was blown in by gas pressure at a depth of 1100 feet. At Ironville slight traces of oil were found at 1000 feet but at a second well in the same neighborhood a drilling of 1800 feet failed to yield any trace of oil but the drilling will be continued possibly to 3600 feet. A considerable amount of gas has been found at Renishaw. At a depth of 1600 feet gas flowed at the rate of between 200,000 and 300,000 cubic feet per day which, on ignition at the top of the hole, produced a flame 15 feet high.

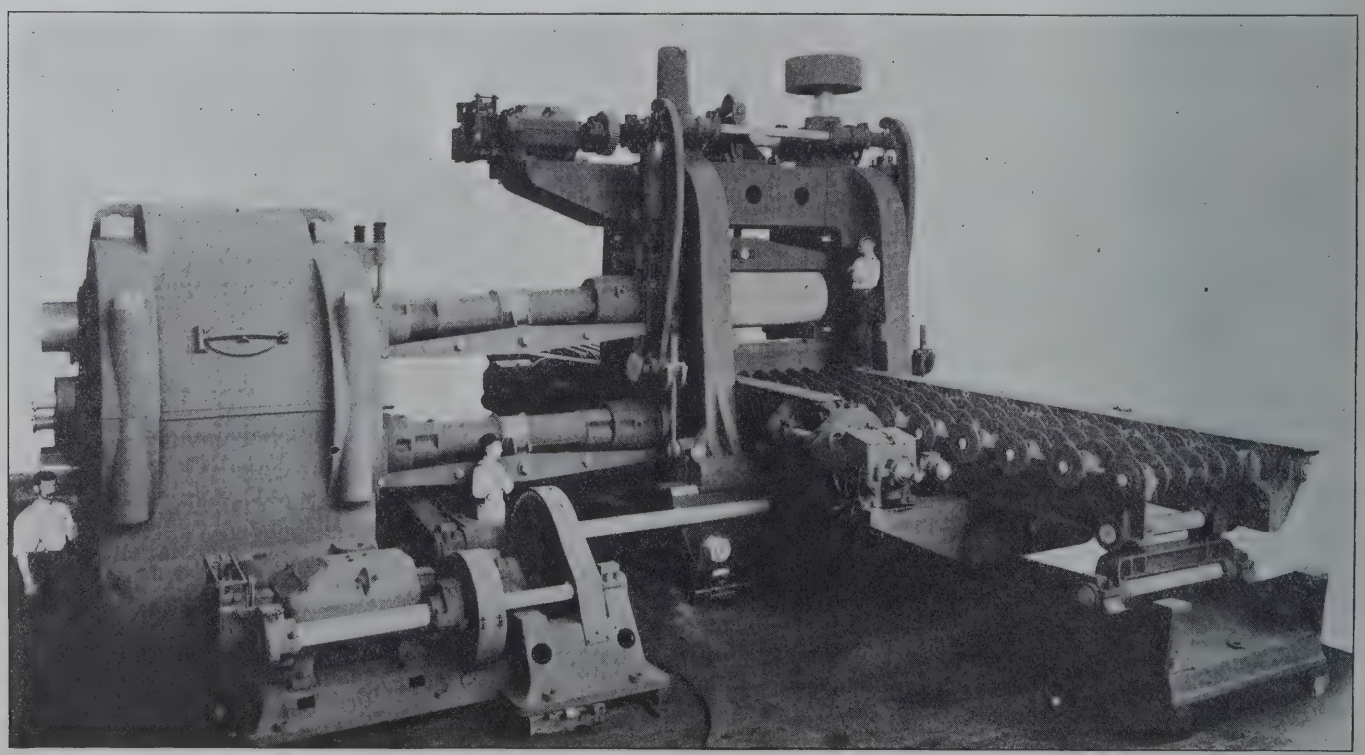
Further drillings are taking place at Stoke-on-Trent, in North Staffordshire, and a start is about to be made in Scotland. Most of the plant is being imported from America. In the preliminary investigations great help has been received from Eugene Z. Ickles, an American geologist of experience in home and foreign oil fields.

Builds Steel Plant in Far East

Japanese Company Will Be Self-Contained Upon Completion of Open-Hearths —Blooming, Plate and Structural Mills Are Now Under Construction in This Country—Built Plate Mill

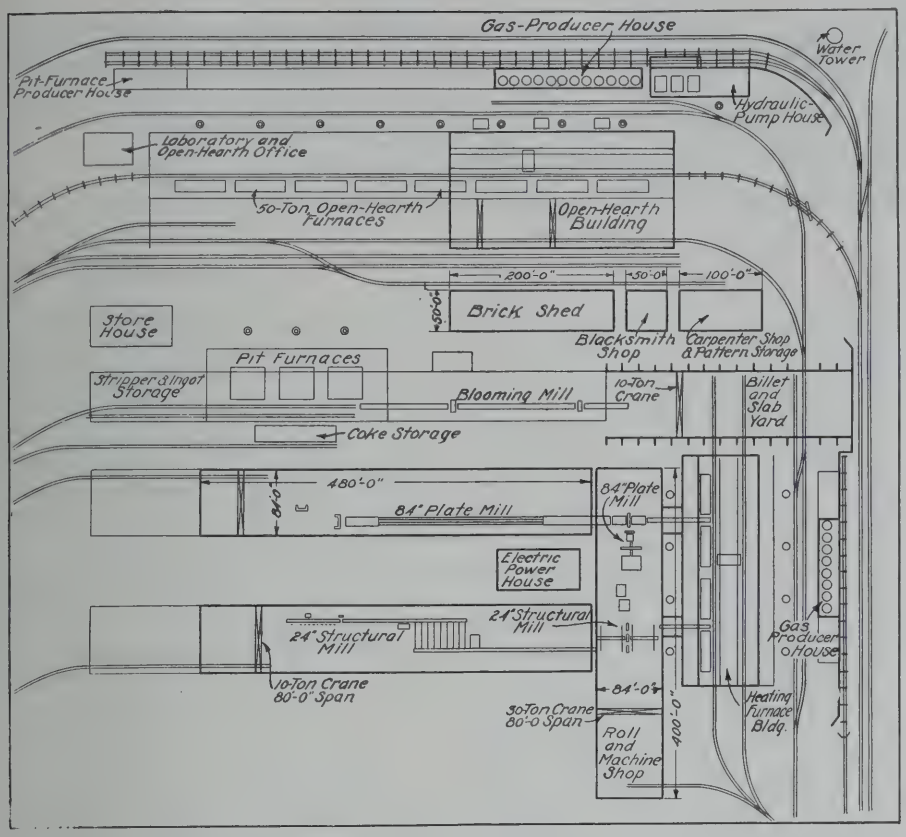
AMERICAN-BUILT rolling mills are gradually coming into the favor of foreign steelmakers. In the last few years several mill installations have been consigned to England, France and Australia. Probably one of the latest orders filled by American rolling-mill builders is one for a plate and structural mill which will be shipped across the Pacific ocean to the Kiushu Steel Works, Yawata, Japan. Plans are formulated already for a complete steel plant, which when completed, will cost approximately $3,000,000. About two-thirds of this sum will be spent in this country for materials.

The initial plant will include three 50-ton basic open-hearth furnaces, a 20-unit producer plant, an 84-inch plate mill, a 24-inch structural mill, a boiler house, four heating furnaces, and several shop buildings. As will be observed from the accompanying plan drawing, provision has been made for five additional open-hearth furnaces, four heating furnaces, three soaking pits and the construction of a blooming mill.



Until the company installs the 35-inch blooming mill, which will be motor-driven, the ingots will be rolled direct into plates, shapes and bars. Upon construction of the blooming mill, top-cast ingots will be produced and bloomed into slabs for both mills. Since the company already has its own blast furnaces, coal mines, iron-ore mines and fire-brick plants in China, the materialization of its present plans will make it one of the most completely self-contained organizations in the Far East. Favored in these respects and also having access to abundant and cheap labor, the time probably is not far off when Japanese shipbuilders will go to foreign countries for supplies of steel.

American Company Designs Plant



The head of the Kiushu Steel Works received his education in this country and was graduated from the University of Pennsylvania, being classmate of H. D. Wilson of the Wilson-Snyder Mfg. Co., Pittsburgh. It was natural, therefore, that when shaping his plans this Japanese manufacturer should seek out Mr. Wilson, whom he appointed resident agent and representative of the company. Through Mr. Wilson, the Kiushu officials entered into a contract early last year with the S. R. Smythe Co., Pittsburgh, to act as consulting and contracting engineers for the proposed plant.

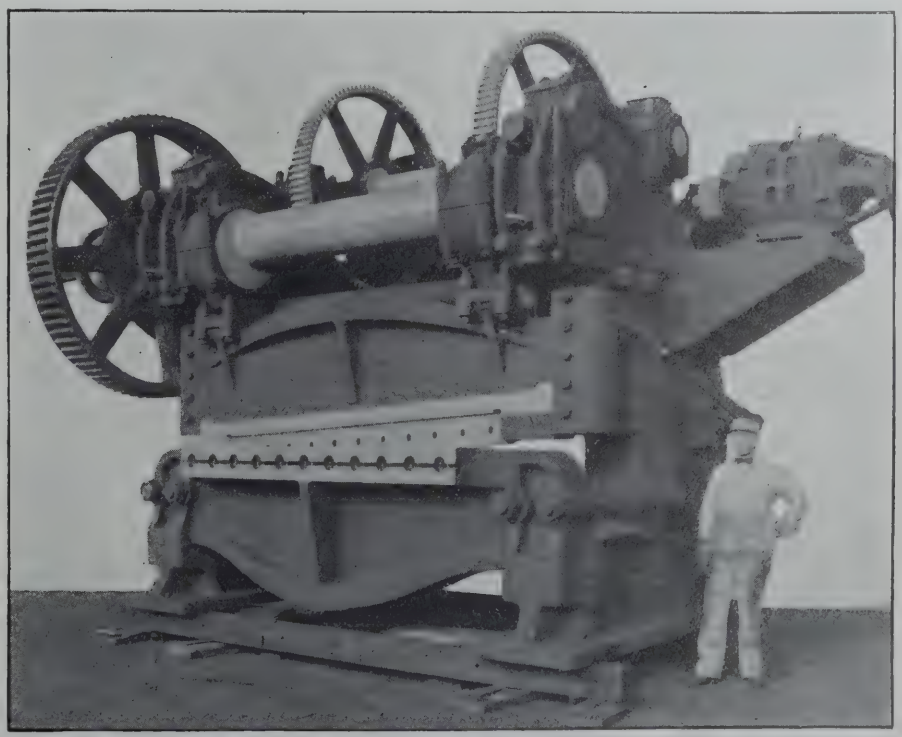
Plans of the entire plant were prepared by the Smythe company, which also contracted for 1500 tons of steel and iron, license for which was secured early this year and the shipment completed by way of Tacoma, Wash., early in April. The three basic open-hearth furnaces from designs of this company, are served by 12 Smythe gas producers. These are equipped with reversing valves of the Schild sliding type, the gas valve being 33 inches and the air valve 36 inches diameter. The stacks are of concrete, lined with fire brick.

Four furnaces serve the plate and structural mills. They are of the four-door, side-charging type and are served by eight Smythe gas producers, also equipped with the Schild sliding type reversing valves, of 27 inches diameter for gas and 30 inches diameter for air. The charging machine which serves the furnaces is of the floor type and was furnished by Wellman-Seaver-Morgan Co., Cleve-

ON THIS 84-INCH, THREE-HIGH PLATE MILL NO WORKING PARTS ARE BUILT BETWEEN THE SHOES, THE MIDDLE-ROLL OPERATING MECHANISM BEING ON THE OUTSIDE OF THE HOUSINGS

LAYOUT OF THE NEW STEEL PLANT OF THE KIUSHU STEEL WORKS, YAWATA, JAPAN

land, which also furnished the charging machine for the open-hearth plant.



Where Contracts Were Placed

The entire plant will be electrically driven, the motors being constructed by the Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa. Contract for the cranes in the plant went to the Alliance Machine Co., Alliance, O., while the Treadwell Construction Co., Midland, Pa., furnished the steel ladles. All of the buildings are of steel construction, designed and detailed by the S. R. Smythe Co., but because of the war regulations at time of shipment, the steel had to leave the country plain for fabrication in Japan.

The Morgan Engineering Co., Alliance, O., has under construction and is about to ship an 84-inch, three-high plate mill to the plant. The entire installation including the mill, front and back-mill tables, slab-delivery tables, runout tables, with plate straightener, plate conveyor, 84-inch cut-off shear and 132-inch slitting shear is being furnished by the Morgan company. The mill is of the Lauth three-high type with cast-steel housings. The top and bottom rolls are 30 inches diameter on the barrel and 84 inches long between necks. The middle roll is 18 inches diameter. The lift of the top roll is 12 inches. The mill is intended to roll from slab ingots into finished plates. The top roll is counterbalanced by means of the usual hydraulic cylinder.

A feature of this mill is that the outside flanges of the housings are dished in order to provide more room for the tables. Another feature is, that no working parts are built beneath the shoes, the middle-roll operating mechanism being on the outside of the housings. The screw-down is operated by two 50-horsepower motors, located on brackets on the sides of the mill housings. A ratchet gear is provided in the mechanism to operate as a slip gear when lowering, and as a ratchet gear when raising the rolls. The mill is driven by a 2000-horsepower motor through herring-bone reducing gears and pinions, thus making a mill speed of 56 revolutions per minute. The motor will operate at 420 revolutions per minute.

The two tilting tables are equipped with 15-inch diameter disk-type rollers. The tilting mechanism is of the motor-driven type located on the drive side of mill. The slab-delivery tables are 74¼ feet long with 15-inch diameter rollers, spaced on 21-inch centers. The front table to plate straightener is 38½ feet long, with rollers spaced on 33-inch centers. The plate straightener for straightening rolled plates is of the nine-roller type, with main rolls of forged steel, 14 inches diameter. The back table to plate straightener is 33 feet long, having rollers spaced on 33-inch centers. Next to this table is a roller-chain conveyor table which is 200 feet long and provided with four strands of roller chain traveling on structural steel framework. An 84-inch, motor-driven, cutting-off shear, with an approach table, 38½ feet long, having rollers spaced on 33-inch centers, is provided. A motor-driven slitting shear with knives 132 inches long for slitting plates 1¼ inches thick, is also provided.

MOTOR-DRIVEN SHEAR WHICH WILL CUT A PLATE 84 INCHES WIDE AND 1¼ INCHES THICK

Finding Organization Expenses

Factors to be Considered in This Branch of Cost Accounting Explained, Together With Their Relation to Management and Inspection—Simple Method Shows Standard of Efficiency

BY M. H. POTTER

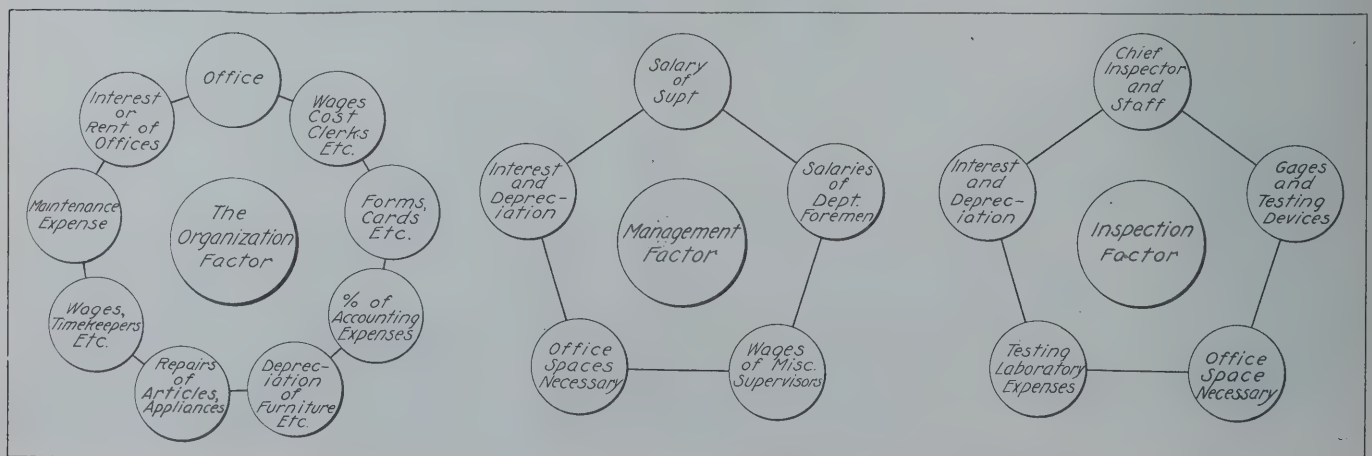
ORGANIZATION factors covering expenses in up-to-date, efficient plants may be determined readily because a definite plan and system of functions is involved. The work is so distributed that each employe may be easily classified.

Scientific management considers the unit value of work which may be done by an individual or a group. From a standpoint of cost accounting this is a valuable feature, inasmuch as a reduction in the force handling organization matters and details does not affect the accounting system. As regards comparison, organization factors offer litle or no value, as no standard can be determined upon which a basis may be established.

The units into which the various factors should be divided, as shown in the chart, will depend on the organization. The following are given as illustrative: Offices necessary for organization details; wages of cost clerks, order clerks, etc.; necessary forms, cards, indexes, etc.; percentage of accounting expenses due to organization details; depreciation of all office furniture, appliances, typewriters and similar machines; repair of such articles; wages of timekeepers and assistants; maintenance expenses involved; interest or rent of offices.

It should be understood that the organization factors here outlined include only such expenditures as are chargeable to production, although these are, of course, indirect costs. As the duty of the organization, or that part of it here dealt with, is to expedite production through system, it can be readily determined where efficient organizations is maintained.

The management or supervision factor is made up of the following elements: Superintendent's salary; department foremen's salaries; wages paid to the various supervisors and shop instructors; offices necessary for the foregoing; interest, depreciation and maintenance of fixtures, furniture, office equipment, etc.



In apportioning the expenses which come under the management factor no great difficulty is encountered, inasmuch as the expense is fixed either proportionately or is confined to one individual department. Where one or a few departments require more than a necessary amount of the general executive's time, much information is available for a study with a view to eliminating the causes. In this manner the method of accounting outlined here is valuable as a means of standardization.

The inspection factor in the majority of industrial works will require careful analysis if it is to be accurately divided into elements for proper apportioning. Here again the value of such a factor is considerable from the viewpoint of comparison and standardization, the idea being to so determine the inspection expenses in each department that percentages can be compared. Obviously, many variables will be found which must be scrutinized so that allowances may be made. Inspection has become an important part of practically every organization, although there are no set laws relating to it by which the accountant may be governed, and therefore the elements will vary largely. Those following are given only as a means of explanation: Chief inspector and working force; gages, devices and all necessary appliances; offices necessary; testing laboratory expenses; interest, depreciation and maintenance.

This is the fifth article in a series by this author on the subject of cost accounting in steel works, written for THE IRON TRADE REVIEW.

To Increase Oil Output

According to the United States geological survey, the petroleum output of the country in 1918 amounted to 345,000,000 barrels. The demand for domestic petroleum in that year was approximately 366,000,000 barrels. The deficiency was made up by imports from Mexico. In all the known oil fields considerable extensions were made. Extensive developments, affecting the future supply of high-grade oil, took place in the central and northern Texas field. About 60 oil wells were completed during 1918, and at the end of the year the new field was credited with a potential capacity of 50,000 barrels of oil a day, though its actual capacity, limited by pipe-line facilities, was only about 18,000 barrels a day. The campaign of drilling over more than 40 counties in northern Texas before the end of 1918 would doubtless result in the opening of other pools of high grade in 1919.

ELEMENTS ENTERING INTO ORGANIZATION, MANAGEMENT AND INSPECTION COSTS

Drafting Room Must be Efficient

Adequate Lighting, Heating, Ventilation and Modern Equipment are Among the Chief Factors Which Promote Satisfactory Production—The Chief Draftsman Must Possess a Broad Training Along Practical Lines

BY F. B. JACOBS

IN the efficient management of the drafting room, sometimes dignified with the title of engineering department, depends the efficiency of many subsequent processes connected with the manufacture of machinery, due to the fact that the drafting board is the first tangible connecting link between an idea and an actuality. To dream of how a machine or special tool should be constructed to yield practicable results is one thing—to put the idea on paper in shape of a drawing that can readily be read and understood is quite another proposition.

Thus, figuratively speaking, the drafting room is a sort of "idea mill" for the practical production of drawings to convey to the workman the plans formulated in the brain of the designer. And to cause the idea mill to run smoothly it should be conducted on a highly efficient basis, otherwise overhead expense is increased while the net results are decreased.

The first factor to consider in drafting room efficiency is the location of the drafting room itself. Time was, and not so many years ago at that, when any place where a few drawing tables could be spread was considered a suitable location and such factors as heat, light, ventilation, etc., were given scant consideration. Congenial surroundings, however, have much to do with efficiency because they tend to keep the morale of the force near the theoretical 100 per cent mark.

An ideal location for the drafting room is over the main office, in cases where this department is housed in a separate building. Such a location for the drafting room offers several advantages. First, it is away from the distracting noises and vibration of machinery. Second, this location permits of excellent natural lighting abilities, as skylights can be located on the roof. This form of direct natural lighting is productive of good results because sharp shadows are eliminated. Thirdly, such a location tends to foster self-respect among the drafting-room employes.

It is impossible to make good drawings under poor light and for this reason adequate lighting is a prime essential. As previously stated, overhead lighting by means of skylights is ideal but in cases where this is not possible the next best method is to arrange the tables near the windows so that the light strikes the table from the left side. The object of this, of course, is to keep the man from working in his own light. Should the draftsman be left handed, his table must be arranged to take light from the right side. Not one draftsman out of a hundred is left handed, but as the individual himself is not to blame for this apparent freak of nature, consideration should be shown him in arranging his working conditions.

Heat and ventilation, as far as they affect the drafting room, should be considered together. It is obvious that a man cannot work in his shirt sleeves, as a draftsman generally does, in a temperature lower than 65 degrees Fahr., and also he must have plenty of fresh air or his brain cells refuse to function properly. Steam is, of course, the ideal heat as it can be economically supplied from the main power plant. This system of heating, however, leaves no provision for ventilation. Thus after the air is heavily charged with carbonic-acid gas thrown off in respiration it is not only unfit to breathe but it also lowers the man's mental efficiency.

Plenty of Fresh Air

The ideal ventilation system consists of means for supplying fresh air, warmed to the correct temperature. This system does away with the make-shift method of attempting to ventilate a room containing from 50 to 200 employes by opening a few windows here and there. This system breeds discontent, due to the fact that your husky Swede, for illustration, who boasts of the fact that he never wears underclothes winter or summer, wants to work by an open window even in the coldest weather. On the other hand, the city-bred American, who is often brought up in a steam-heated apartment, cannot stand such a procedure. These two types of men are, of course, extremes and as it is impossible to accommodate both at the same time, it is evident that a well-regulated ventilation system that supplies fresh air constantly at a comfortable temperature will avoid these personal disputes and tend to promote efficiency.

Good work cannot be produced without adequate equipment. This factor applies to the drafting room as well as the machine shop. No shop superintendent would be expected to maintain production at present-day standards with antiquated machine tools and for the same reason the draftsman should not be depended upon to maintain a satisfactory working pace if he is compelled to work over a board designed along lines that were in vogue some 25 years ago. There are a number of concerns which specialize on drafting-room equipment, especially drawing tables that are designed to enable the draftsman to work to the best advantage.

How often we see a man working at a large drawing, say 36 x 48 inches, leaning over a board that is not equipped for proper adjustment. He cannot work to advantage in this position to say nothing of the fact that constant abdominal pressure brings about internal complications that sooner or later put him on the sick list. There is little excuse for this state of affairs. Modern drawing tables capable of angular adjustment solve this difficulty. A table of this type, together with a small cabinet for storing his tools and reference books, and a reference table for drawings, is all the draftsman needs.

Upon the selection of the man in direct charge of the drafting room, generally termed the chief draftsman, depends the smooth running of the entire department. Such a man must possess a broad mechanical training, he must be a first-class executive and, what is perhaps the most important qualification of all, he must have a thorough knowledge of modern production methods. Thus it is seen that the selection of a chief draftsman is an important step in organizing a drafting department on an efficient basis. If he is not possessed of a broad mechanical

training he is sure, sooner or later, to rely on theory alone which is always a costly experiment. Again, if he is a poor executive, the men under him soon become aware of the fact, with resultant discord where harmony should prevail and, last of all, if he is not thoroughly conversant with production methods he is sure to approve designs, both in tools and machinery, that are too costly to manufacture or operate to enable the concern successfully to meet competition. It is a simple matter to design machinery or special tools, that is for a man who understands what he is doing, but to design tools that will save dollars, day after day, instead of consuming them, or machinery that can be manufactured economically is quite another story.

"But where am I to find such a man?", the manufacturer asks. One answer is: Go steal him from one of your competitors by offering him an attractive salary. This is not good business ethics to be sure, but it is how an organization is sometimes built up. A more satisfactory procedure all around is for the manufacturer to retain the services of a man possessing the necessary qualifications and give him free rein to work out his own salvation, with such guidance as may be necessary for his proper training.

Main Factor is Compensation

Now we all like to hear the truth once in a while. If a concern succeeds in obtaining the services of an efficient chief draftsman it is doubtful if another company can steal him if the man's salary is satisfactory, which factor has as much to do with loyalty as any one other.

Which type of man makes the best chief draftsman, the college-trained mechanical engineer or the man who works himself up from the shop? This question cannot be answered positively. Instances have been known where men who worked up from the shop made excellent drafting-room executives. One point in favor of such a man is that he is practical. He does not pass drawings that involve castings which it is impossible to mold or mechanical monstrosities that cannot be manufactured except at great cost. On the other hand, he lacks the theory gained from a college course and the general broadening influence of a higher education.

The college-trained engineer often makes an excellent chief draftsman, that is if he is shrewd enough to grasp the practical side of manufacturing processes. There is no fixed rule to follow in the selection of the best type of man. It is purely a case of taking a long chance and watching results.

There are, of course, innumerable other points that could be considered while discussing drafting-room efficiency such as the kind of men to hire, whether they should be paid by the week or hour, what hours they should work and so on. These factors are up to the chief draftsman, however. Once installed in his position, it is up to him to run his department efficiently and work out his own salvation.

Welding Tight Joints Electrically

ELECTRIC welding results in an attraction between the molecules at the surfaces of the metal which first renders them mobile through heat and then moves them by pressure into closer proximity, according to Thomas E. Murray Jr., Brooklyn, N. Y., who recently obtained two patents covering electric-welding methods. In the nomenclature of electric welding, surfaces thus treated are said to adhere.

Mr. Murray further states that while temperature of a degree sufficient to make the opposing surfaces adhesive will effect a union, the strength of the union is often of wide variation. In fact the strength of any joint cannot be known except by testing it to a point of destruction. A given joint may be sufficiently strong to meet conditions involving small strain but it may be inadequate to withstand the demands of heavy loads or shocks, or of moving machinery.

The effort to make stronger joints has led to a moderate increase in the strength and duration of the current for the purpose of obtaining greater plasticity or fluidity of the metal, which sometimes leads to burning of the surfaces to be joined. Increase of pressure leads to greater extrusion of metal at the joint which is intensified when the fluidity of the metal is augmented. This results in surface adhesion only and a defective joint.

Another cause of uncertainty in electric welding is the difficulty of insuring a uniform current flow per unit area of the welded surface. If the metal contains elements having low conductability, the current will cause unequal heating of the surface, with the result that one part may be burned before a proper welding condition is brought about elsewhere.

Electrically-welded joints that possess a strength as great as that of the integral mass of the same material of like cross-sectional area are claimed to be produced by subjecting the bodies to be welded to an electrical current of extremely and abnormally high-ampere strength, existing for a short time only.

Where the area is small a current of approximately 5000 amperes to the square inch is used. In case of a surface five square inches, the duration of the current should be about one second and with an area of 19 square inches the current can be left on from two to three seconds.

How a Weld is Made

It is said that a weld is not caused by surface molecular attraction but by a complete disassociation of the molecules for a certain distance inward from the surface of each body, followed by the intermingling of the molecules of one body with those of the other, and their neutral attraction developed within the momentarily gaseous film so that the molecules become united throughout the mass.

Thus, the two bodies cohere. If they are of the same material, after welding there is no solution of continuity and the two bodies simply become integrally one. If the two bodies are of different materials, then while there is still no solution of continuity, a portion of the welded mass is composite and partakes of the nature of both bodies. For illustration, if copper and zinc are the materials welded, a portion of the welded mass will be an alloy or mixture of the two metals. The high temperature developed gasifies the metal or metals of the bodies to be welded instantly; and in the brief time the current is on the molecules mingle and cohere. With high-ampre strengths there is not time for any burning of the metal or for the conduction of heat away through the mass before the metal gasifies or the intermingling of the molecules occurs.

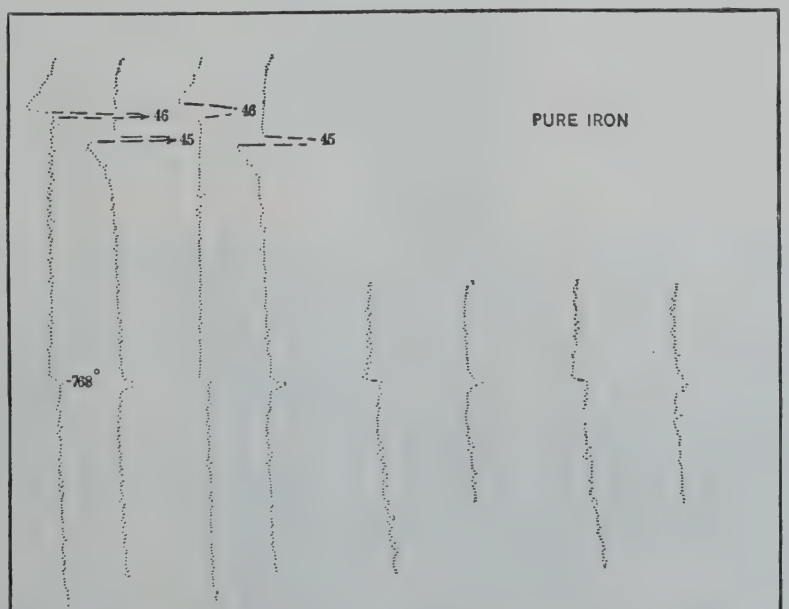
Another advantage claimed by the inventor through the use of abnormally strong currents is the neutralization of the difficulties due to radiation from the heated bodies to the holding electrodes when the area of contact between these bodies and elec-

trodes is increased to any great extent.

For an illustration the inventor assumes that two bars measuring in rectangular cross-sectional area 1 square inch are to be united. The best conditions are attained when each bar is enclosed in a copper electrode in contact with all four sides. If each electrode is 1 inch wide, then the contact area of each electrode with its bar is 4 square inches.

If, however, while keeping the area the same, the form of the area be changed, say to the shape of a parallelogram of ½ x 2 inches, the contact area of the copper electrode holders will then be 5 instead of 4 inches, or 20 per cent greater. This increases the radiation surface of the bar and thus the heat developed will escape to the electrode more rapidly than before. All that is necessary with a given shape to insure a good weld is to continue to increase the strength of the current until a perfect union is produced.

Heat Treating Shells



In the manufacture of shells at the Couzon works near Rive-de-Gier, Loire, France, which were greatly extended when the Germans occupied the Douai works, the thermic treatment is given in a shop built of reinforced concrete 15 meters wide x 63 meters long. Three furnaces are used. The first furnace reheats the shell while the second raises its temperature still further. The shells are then tempered in the third furnace and passed to the cooling apparatus. All the furnaces are heated by producer gas, the consumption of coke for making the gas being respectively 8.2 per cent, 6.5 per cent, and 3.5 per cent of weight of shells treated in the three furnaces. Each shell is gradually raised to a temperature of 900 degrees Cent. during a period of one hour, then moved to the second furnace which is kept at the highest temperature and finally cooled in running water. The Brinell tests for hardness are employed.—*Génie Civil.*

Simplifies Method for Thermal Analysis

ONE of the most useful, and at the same time least commonly used, methods of thermal analysis for the determination of transformations in metals and alloys consists in the recording of the time intervals required for successive increments of temperature change during heating or cooling, the temperature of the furnace containing the specimen being altered at a uniform rate. The curve obtained by plotting these time intervals as a function of the mean temperature of the specimen during the interval is called the inverse-rate curve.

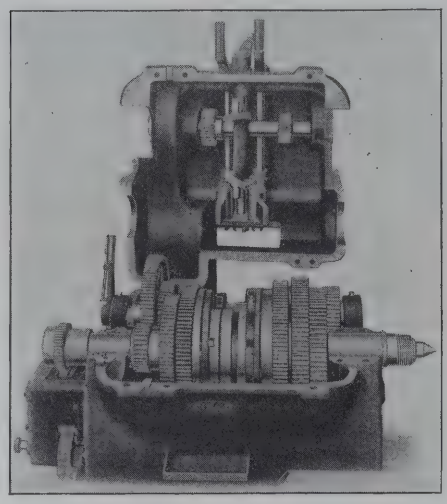
Whenever the inverse-rate method has been used, the intervals have usually been measured with the use of a chronograph. In its operation as practised at the United States bureau of standards, the temperature of the specimen is measured by a thermocouple and a dial potentiometer. The operator sets the potentiometer at successive values of the electromotive force differing by about 0.02 millivolt, and records the exact instant, on the chronograph, by pressing a contact key at which the galvanometer coil passes through its null position. Two-second intervals are also recorded on the chronograph record, and the number of seconds elapsing between successive signals is afterward counted from the record and plotted as a function of the electromotive force or of the temperature. The most minute thermal arrests may be detected by this method but a good chronograph and the time of one operator during the recording and to read the intervals from the record are required.

The method suggested in the following paragraphs is believed to be simple, convenient and accurate, and eliminates the expense of the chronograph and the time of one operator in counting the chronograph record. The remainder of the apparatus, consisting of furnace, thermocouple, and potentiometer, is used exactly as in the former method. Two stop watches are used, which may be mounted in a small frame and held in one hand, a finger being placed on each stem. During the run, the operator sets the potentiometer and marks the instant at which the galvanometer is at zero by pressing the stems of both watches simultaneously, stopping one at the end of the interval it has measured and starting the other upon its measurement of the next. The interval is read and recorded upon a suitable blank sheet, the hand of this watch returned to its zero position and the potentiometer set at the next value. The operation is repeated for each successive interval. The intervals so recorded are afterwards plotted directly as a function of the electromotive force.

INVERSE-RATE HEATING AND COOLING CURVES OF PURE IRON TAKEN WITH CHRONOGRAPH AND WITH STOP WATCHES

The accompanying illustration shows the inverse-rate curves for two complete runs on pure iron including the heating and the cooling curve. Both A_3 and A_2 are indicated on the first set of curves, but only A_2 appears on the second set. In each case, the intervals were recorded both with the stop watches and with the chronograph in the usual manner. The curves marked *C* were taken with chronograph and those marked *W* with stop watches. There is little difference in the smoothness of the two sets of curves

From a paper to be presented at the Chicago meeting of the American Institute of Mining and Metallurgical Engineers, Sept. 22 to 26, 1919. The author, Paul D. Merica, is physicist, United States bureau of standards.



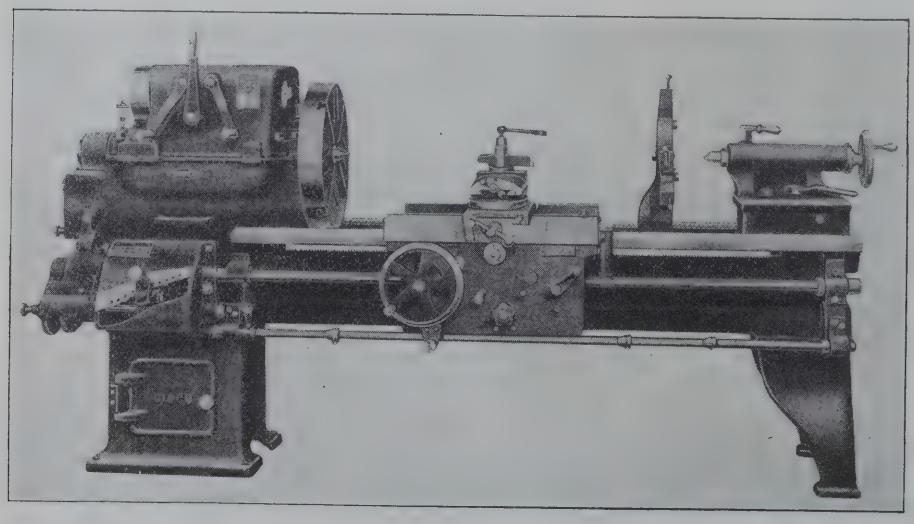
or in the accuracy or precision of the measurement of the time interval.

A general consideration of the accuracy of the stop watch also indicates that the precision of measurement by stop watch is sufficient for the purposes of thermal analysis. It is only rarely, perhaps once in a hundred times, that a stop watch is not accurate to within 1/5 second, and its maximum error is 2/5 second. It is found that the variation of successive intervals of time measured in the inverse-rate method, due to actual non-uniform rate of cooling or heating of the furnace, or to inaccuracy of the operator in signaling the moment when the potentiometer is balanced is approximately 1/5 second. It is therefore not necessary to obtain the greater precision of time measurement which is unquestionably possible by the use of the chronograph.

New Lathe Has Novel Speed Control

Twenty speeds may be obtained with a new geared head lathe, either belt or motor driven, recently developed by the Cisco Machine Tool Co., Cincinnati. The machine is provided with a double friction countershaft which may be run at 300 or 130 revolutions per minute, imparting to the spindle 10 different speeds for each speed of the countershaft.

Another feature of the lathe, as shown in the accompanying illustrations, is that, including the back gear lever, only four levers are required for the entire number of speed changes, thus simplifying the operation of the machine. One handle controls a powerful friction on the spindle and two more control the shifting of four back gears on the eccentric shaft. A pull pin in the face gear makes it possible to run direct from the spindle when the back gears



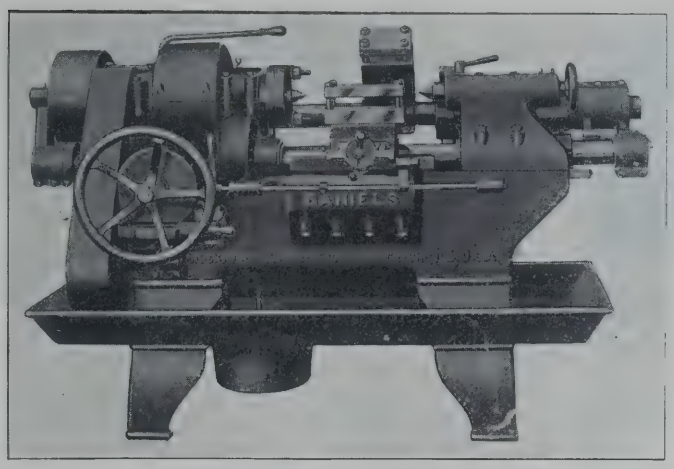
VIEW OF GEARS IN HEAD SHOWING METHOD OF SHIFTING

are disengaged. The eccentric shaft lever or the back gear lever causes the back gears to mesh with spindle gears. Six gears and a friction are mounted on the spindle while there are four gears on the back shaft. With the exception of the drive shaft gears, all gears are made from carbon steel and all geared heads are ball bearing.

The lathe can be fitted for motor drive by attaching a plate with a bracket for an intermediate stud to the top of the regular geared head. An intermediate rawhide gear is mounted on the stud and meshes with a pinion on the motor and a gear on the drive shaft. Both pinion and gear on the drive shaft are of steel. With a motor drive, speeds from 220 to 150 revolutions per minute are obtained. Power for the four sizes in which this lathe is built varies from 2½ horsepower for the 14-inch lathe to 7½ horsepower for the 24-inch size.

A bulletin dealing with the preparation of manganese ore has been issued by the United States bureau of mines. The author, W. R. Crane, explains the expansion of the business of mining and preparing manganese ores brought about by the great demand for manganese during the war, describes the methods employed in dry mining, washing and concentrating manganese ores; and reviews in detail each step in the process of cleaning manganese ores as practiced at several washing plants. Considerable data regarding the size and operation of equipment are given. The various conditions affecting the preparation of the ore are summarized in the conclusion of the booklet.

FRONT VIEW OF GEARED HEAD LATHE SHOWING THE LEVERS WHICH GIVE SPEED CONTROL



Tools Are Cast From High Speed Steel

Recent researches in high-speed steel have resulted, it is said, in the development by the Chrobaltic Steel Co., Chicago, of a material that can be cast directly into cutting tools such as milling cutters, counterbores, die sections, etc., thus saving time ordinarily spent in machining operations. This steel can be hardened in air or oil and it is pointed out that it can be hardened and annealed several times without destroying its inherent properties.

Tools made of this material can be used in cutting all kinds of materials as commonly used in manufacturing. In some tests recently made, a cutter 3 inches in diameter and ⅜-inch face was used on a shell billet 4½ inches square taking a cut ½-inch deep. The feed was $1\frac{5}{16}$ inches per minute to start with and gradually increased until the cutter broke. The cutter speed in this test was 42 revolutions a minute which gave a peripheral speed of 395.8416 inches a minute. After the feed was increased to 6⅛ inches per minute, the cutter milled two lineal inches before breaking.

To enable toolsmiths to work the material properly, the following data are given for hardening and annealing: In hardening, the tools are heated slowly, preferably in a muffle furnace, from 1832 to 1877 degrees Fahr., at which heat they are held until the tools are thoroughly heat soaked. The heat is then dropped from 20 to 50 degrees Fahr., at which heat the steel is withdrawn and quenched in oil. Good results are also said to be obtained through permitting the steel to cool in the air until the red disappears and is invisible in the shade, followed by quenching in oil. It is stated that the slight drop in temperature while the steel is in the furnace is of the utmost importance. On comparatively large tools, milling cutters for instance ,air blast has been effec-

tively employed to hasten cooling before quenching in oil. In annealing, the material is first heated to 1832 degrees Fahr. in a closed muffle and then allowed to cool slowly. On rush jobs, however, rapid annealing can be accomplished by heating the steel slowly to 1202 degrees Fahr. and allowing it to fall to a black heat, after which it can be cooled naturally in air or quenched in boiling water. After annealing the material should show a scleroscope test of approximately 38. It is then in condition to be machined at a speed of from 25 to 30 lineal feet per minute.

AUTOMATIC LATHE FOR RAPID PRODUCTION

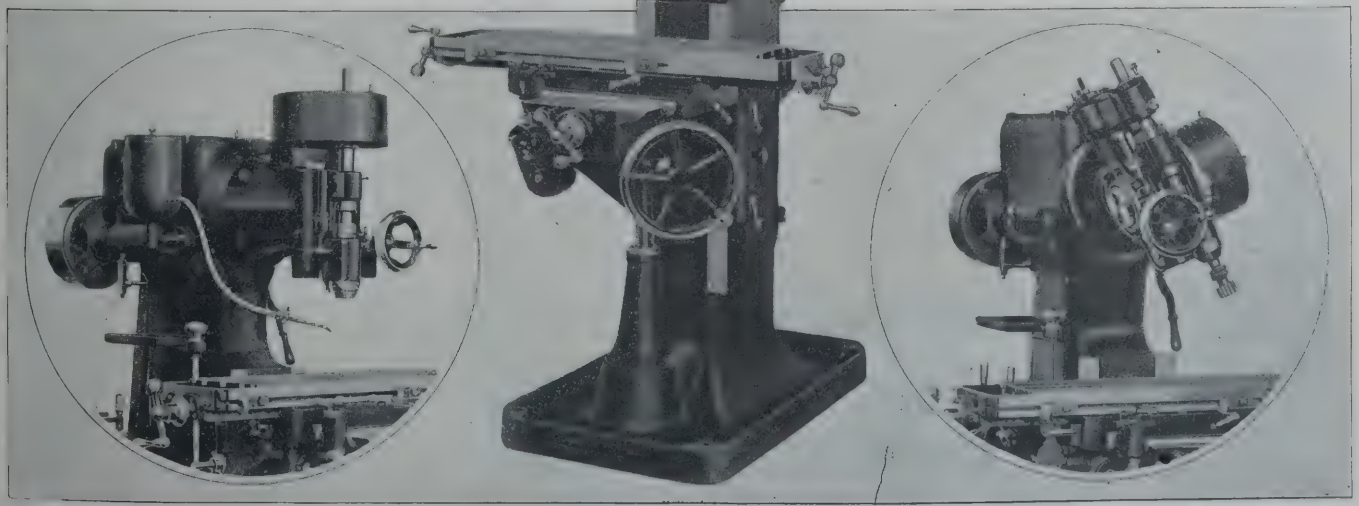
Modifies Universal Milling and Shaping Machine

Several modifications of the duplex universal miller and shaper manufactured by the Cochrane-Bly Co., Rochester, N. Y., recently were announced. The machine now is fitted with single heads only, and is built as a duplex universal vertical miller and shaper, universal vertical miller only, universal vertical shaper only, and a plain vertical miller. The universal head on both duplex and single machines is adjustable right to left, or left to right through the full circle. The shaper and milling heads may be moved independently front and back 40 degrees, and are operative in any position.

The milling spindle, which has an adjustment of 3½ inches with hand feed, is hollow and is furnished with draw bolts for holding milling cutters, split collets, etc. Drilling, milling, boring and slotting operations can be performed readily at any angle. The stroke of the shaper ram is adjustable from 0 to 6 inches. The crank arm or link is of solid steel and compensation is provided in the crank pin box to take up the wear on both crank pin and link. The drive is through a friction clutch pulley and double cone of gears running in a bath of oil. All gears in the machine are of steel, and those in the driving train are hardened.

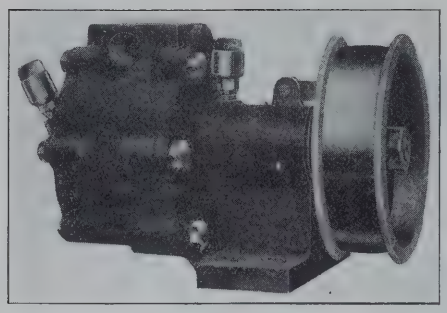
Safety Features

The direction of spindle can be reversed and it also can be disengaged and revolved freely by hand. It may be locked when cutters are being changed. The clutch pulley has an oil reservoir to provide lubrication for long periods. A cone brake opposes the clutch, engaging it when the clutch disengages, bringing the machine to an instant stop. The machine is designed for five changes of speed control by a lever within easy reach of the operator.



A circular table with dividing attachment and a compound circular table are furnished in connection with the machines. The attachments make it possible to drill, bore, slot, plane or mill work with unusual accuracy and to space and layout holes, keyways, etc., according to exacting specifications. The machines are adapted for work on die blocks, jigs, tools, templates and metal molds .

Builds Automatic Lathe on Heavy Lines



An automatic lathe, designed and built for the rapid production of duplicate parts, is being manufactured by the Rockford Machine Tool Co., Rockford, Ill. The machine, which was designed by Lee G. Daniels, is built on the lines of a 22-inch heavy-duty lathe with a view of minimizing vibration.

No mechanical changes are provided, the lathe being a single-purpose machine. Change gears can be used to vary the feed but in order to change the speed the overhead pulley must be changed. The headstock is cast in one piece with the bed. The tool carriages move on heavy steel bars whose ends are supported in the head and tailstocks. The side carriage carries tools for turning different diameters and the right angle carriage is equipped for facing, boring and recessing.

In operating this lathe, the work

FROM LEFT TO RIGHT ARE SHOWN PLAIN VERTICAL MILLER, DUPLEX UNIVERSAL MILLER AND SHAPER AND UNIVERSAL VERTICAL MILLER

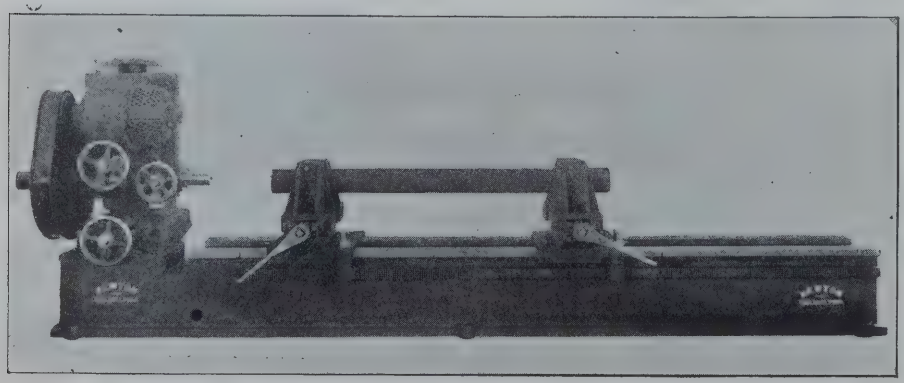
PUMP WHOSE PRINCIPAL WORKING PARTS ARE ROLLERS

is placed between the centers or in the chuck and the feed worm lifted in position. Both feeds continue until the side carriage trips the feed at a predetermined position, when both carriages return to the starting point. The operator removes the finished piece and puts in another one. One man may operate several machines at a time.

Centering Machine Handles Irregular Stock

To facilitate the centering of rough and irregular forgings for machining, the Newton Machine Tool Works, Inc., Philadelphia, has recently developed a new centering machine. As shown in the accompanying illustration, two universal vises of the interlocking type are included in the equipment. Jaw adjustment is by means of a screw which gives capacity for round material from 2 to 12 inches in diameter and of any desired length. A rack and pinion make the two vises adjustable to the bed of the machine.

The spindle is made of forged steel 3 inches in diameter, runs in bronze bushed bearings and has 4 inches of cross and 4 inches of vertical adjustment with 8 inches of hand feed. These cross and vertical adjustments are equally divided from the center line of work. Power for operation is furnished by a motor mounted on the head of the machine and almost directly over the spindle. The drive is accomplished through a bronze driving gear. All movable parts about the equipment are kept in alignment by adjustable taper shoes.



Working Parts of New Pump Are Rollers

A new pump, whose principal working parts consist of two rollers which rotate eccentrically in the pump chamber, has been developed by the Michigan Machine Co., Detroit. It is stated that the rolling motion of the rollers eliminates the wear usually caused by scraping of the working parts against the pump chamber. The pump may be used anywhere within 10 feet above the level of the liquid and is self-priming. Because of the unique design of this pump, no release valves or overflow piping are required. It is claimed that the outlet in the discharged piping may be closed and the pump allowed to run without damaging the pump or pipings. This is accomplished by using a spring placed in a rectangular slot in the inner roller which bears against a squared shaft. The spring operates only when the pressure on the pump is as great as the pressure required to suppress the spring. When the pressure is reached the compression of the spring allows the rollers to come to the center of the pump where they continue to revolve in the liquid without exerting further pressure on it. This feature also guards against destruction of the pump when steel chips or other foreign substances work through the intake pipe and into the chamber. The pump is operated at speeds ranging from 100 to 600 revolutions per minute.

Describes War Effort

An attractive booklet, entitled *Our Bit,* and being a brief account of the work done during the war by the C. & G. Cooper Co., Mt. Vernon, O., recently was published by that company. The booklet contains 24 pages and is of heavily coated stock. Numerous colored illustrations are given. During the war the company organized a munitions department for machining steel shells, which was equipped largely by machinery built in the company's own shops. This department, according to the booklet, machined and fitted with copper firing bands, about 1000 three-inch high explosive shells per day. Fifty forging presses, mainly 1000 and 1500 tons capacity, were built and installed in government arsenals by the company during the war. The company built 69 gas-engine driven gas compressors. Several large batteries of mechanical gas producers were built for American wood pulp interests. The triple expansion marine engines built by the company for the Emergency Fleet corporation helped the government in its shipbuilding plans.

The booklet is dedicated to the men employed by the company, both those who went into the ranks and those who stayed and provided the machinery essential to warfare.

ADJUSTMENTS ON THIS MACHINE SIMPLIFY THE CENTERING OF WORK

Truscon Steel Will Build Plant in Japan

To develop business opportunities in the Far East, the Truscon Steel Co., Youngstown, will establish a plant in Japan, midway between Yokohama and Tokio, according to a recent announcement. The new plant will be equipped to handle all departments of work carried on by the corporation in Youngstown. Construction will be under the supervision of F. W. Shackleton, who was a captain of engineers in France during the war, who recently returned to Youngstown to resume his position with the Truscon company. Prior to entering its employ, he was affiliated with the William Tod plant, Youngstown, now owned and operated by the United Engineering & Foundry Co.

Mr. Shackleton will sail from Vancouver, B. C., for Yokohama early in August to commence the preliminary work on the new plant. Actual construction work is expected to start early in February, 1920.

The Truscon company now is completing a machine and blacksmith shop 50 x 570 feet at its Youngstown plant. All steel for the building was made in its own plant and the steel was erected on concrete bases, also built by its own workmen. The building soon will be ready for the installation of machinery.

Coal Rise Bomb in British Mart

Practically all Quotations Withdrawn While Iron and Steel Makers Prepare to Make Increases — Government Criticized for Putting Handicap on Export Trade— Glasgow Buys American Steel Rails—Domestic Demand Strong

Bureau of The Iron Trade Review,
Prince's Chambers, Corporation St.,
Birmingham, Eng., July 11.

THE iron and steel industries are much perturbed by the heavy increase in the price of coal announced by Sir Eric Geddes in the house of commons two days ago. An advance of 6s ($1.44) will add at least 15s ($3.60) and possibly £1 ($4.80) to the cost of pig iron. By coincidence the announcement was made on the eve of the Birmingham quarterly meeting, and scarcely anything else was discussed at the gathering. All pig iron makers immediately withdrew their quotations although they are protected by a form of contract binding the consumer to pay for the increase in cost of production.

Staffordshire makers a week ago announced an advance of 10s ($2.40) per ton on forge iron, but like the others they withdrew their quotations. Until the precise effect of the advance is determined, furnace interests prefer to refrain from making quotations. Buyers also are not very anxious to make contracts until they know what they are to get for their finished iron and steel.

Some advance in the price of coal was expected as a result of the reduction of one hour in the miners' working day, but the most pessimistic prophet did not anticipate a rise of more than 4s (96c) per ton. Not in years was so little business done as at the quarterly meeting. It is assumed that coke will be about 10s ($2.40) higher and it is already selling about £2 10s ($12) per ton compared with something like 18s ($4.32) before the war.

The general expectation is that pig iron will be advanced about £1 ($4.80) per ton.

The long-suffering consumer appears to be roused at last and nobody would be surprised if the big coal increase should prove the beginning of the end of a government which, while it has served the country well in the war, has disgusted traders by its unlimited concessions to labor. Everybody recognizes that a tremendous handicap has been put upon export trade.

Americans will realize the extreme importance of the increase if, as we are informed here, steam coal can be bought in America as low as 13s 6d ($3.24) per ton, whereas in the important steel center of Barrow-in-Furness the price, before this last addition, was 34s 6d ($8.30) and presumably will now be 40s 6d ($9.72).

There is still plenty of demand for iron, and in the Cleveland districts more attention is being given to export trade licenses. The second half of the year commences with 26 furnaces in blast in the northwest coast, compared with 31 at the beginning of the year. Some idea of the rise in price may be inferred from the fact that while in January bessemer mixed numbers sold at £6 7s 6d ($30.60) per ton, the latest advance brings them to £9 12s 6d ($46.20). This was before the 6s ($1.44) advance in coal, and another increase must, of course, ensue. The advance is chiefly due to the higher cost of raw material, but the position of the makers has been strengthened by the enormous demand for iron.

The east coast iron hematite trade is strong with plenty of orders after the recent advance of 10s ($2.40). Consumers are eager to place orders for delivery even at the end of September on the basis of recent quotations, but sellers will not quote at present. The trade has experienced a slight benefit from a little easing of freights due to the fact that boats are now compelled to return home laden, the price of bringing rubio ore to the Tees now being 57s ($13.68).

The Glasgow tramway department is practically out of rails, and a supply of British-made rails could not be got. The order has been accordingly placed in America, and the department not only saved £10,000 but is promised delivery in July instead of September, the earliest date at which the British rolling mills could undertake to supply. Naturally, the British railmakers are not letting these orders go out of the country without protest; but as they cannot give the most effective reply in early deliveries, their protests are likely to fall on deaf ears.

In the finished iron and steel market the effect of the increase in the price of coal is variable. The iron trade, which is now almost exclusively a home trade, seems for the time being to be able to command any price. South Staffordshire makers are practically in possession of a monopoly. While there has been a great deal of talk of American importations, the actual arrivals are too small to have anything more than a sort of moral influence on the market.

South Staffordshire ironmasters have lately exercised caution under the impression that big consignments of bars were coming from America; but only very small lots have arrived, and the news of a brisk revival in America conveyed by The Iron Trade Review cable service this week is encouraging the hope that America presently will have quite enough to do to look after her customers at home.

Probably the only business done yesterday in the finished department was in iron bars. Some buyers insisted on booking regardless of the price, with the result that a contract was based upon a quotation of no less than £25 ($120) per ton, although the standard is £21 10s ($103.20). A number of makers claim to have been getting £23 ($110.40). This is substantially above the price at which American iron has been sold here, so that there seems ample opening for American competition.

The quantities arriving from America can hardly be described as more than sample lots but a fair range of variety has now reached the Birmingham warehouses and as the wide uses of Birmingham's numerous trades call for an adaptable quality this is a good test. So far no complaints have been received and a leading merchant says it would take a very clever expert to discern any difference between American iron and a good average brand from South Staffordshire.

The trade has decided to consider the whole situation with a view to a general revision of prices. An increase of £2 ($9.60) per ton is expected. Local works are still full of orders, consumers pressing for deliveries without much concern as to price, but manufacturers know the present situation is unhealthy, if only because of the comparative absence of foreign trade.

It is clear from the exports in June that increasing quantities are going abroad, but these are not from the Birmingham district, although Birmingham is getting its share of a certain amount of increase in manufactured goods of which iron is the basic metal. The South Yorkshire Bar association has advanced its prices for bar iron £1 ($4.80) per ton, making the basis price for crown bars £21 10s ($103.20) per ton net, delivered in the association's area. This price was fixed before the coal increase.

Private Aid, Densmore's Hope

Appropriation of $400,000 Allowed By Congress Will Finance But 60 Offices, But Director General Already is Operating 204 "Federal" Agencies, With Outside Help—Still Seeks Larger Sum From Government

WASHINGTON, July 22.—The United States employment service will be able to finance only 60 offices scattered throughout the country as a result of the refusal of congress to vote more than $400,000 for the continuance of the bureau, according to John B. Densmore, director general of the service. But, he points out, already 204 additional employment offices are open and operating as a result of outside support given the service, and after returns have been received from all sources he expects more than 300 federal offices will be open. This condition will last, he says, until congress passes the Nolan-Kenyon bill which would create a permanent national employment system.

These operating and prospective agencies, according to the director general, do not include 2000 emergency bureaus finding jobs for returning soldiers and sailors. Welfare organizations, chambers of commerce and many private citizens contribute to the support of the federal offices, Mr. Densmore declared, while the agencies which have been cooperating in the establishment of soldier-sailor bureaus are handling that phase of the work. He claims the response of the country indicates "a general desire of all to give practical assistance to the soldier and civilian war workers seeking to reestablish himself."

Congress will act upon the proposed bills within the next five months, Mr. Densmore believes. During that period he pleads for continued private support of the federal bureaus.

In his entreaty to congress in behalf of the Nolan-Kenyon bill, Mr. Densmore during the past week had the personal support of Dudley R. Kennedy, an employment expert of Philadelphia, formerly industrial relations manager for the Hog Island shipyard and at one time assistant to the president of the Youngstown Sheet & Tube Co. Others who appeared before the joint congressional committee in behalf of the measure were:

Neal Farnham, employment manager of the Heggeman-Harris Construction Co., New York city; Frank Morrison, secretary of the American Federation of Labor; George W. Kirchwey, director of the federal employment service in New York; Edward C. Lycett, employment manager of the Washington Steel & Ordnance Co., Washington, D. C.; Thomas C. Atkeson, secretary of the National Grange; Henry D. Sayer, of the New York state industrial commission; Don Lescohier, professor of economics, University of Wisconsin; Albert H. White, Taunton, Mass., manufacturer, and George H. Dale, Watertown, Mass., representing the associated industries of Massachusetts.

Mr. Kennedy predicted that "within a year, possibly in less time, there will be a labor shortage in the United States equal, if not greater, to that during the war." He said: "There is not great unemployment in this country now. The coming of a shortage is one of the strongest arguments for the establishment of a permanent federal employment service. It is needed to level the national labor supply. The country needs more than a mere statistical gathering and clearance bureau in Washington—a 'paper' organization."

The testimony of nearly all the others mentioned appearing before the committee was along this line.

Court Enjoins Molders

Judge Albert B. Anderson of the United States district court of Indiana, recently granted the Connersville Foundry Corp., Connersville, Ind., a permanent injunction, restraining 25 members of the International Iron Molders Union of North America, from interfering in any way with employes of the corporation not connected with the union. The defendants were specifically enjoined on 19 separate grounds. The action was brought by Samuel Clay, superintendent of the foundry company.

Will Take Strike Vote

PITTSBURGH, July 22.—Meeting in Labor Temple here Sunday, presidents of 24 international unions of iron and steel workers prepared a strike vote to be placed before employes in the iron and steel plants of the country. This is another step taken by organized labor in its efforts to unionize the iron and steel workers of the country. According to the union leaders, the decision to take a strike vote is based on the disregarding by the United States Steel Corp. of a request by President Samuel Gompers of the American Federation of Labor to define the corporation's attitude concerning the recognition of unions and collective bargaining.

A program of 12 demands was prepared by the union presidents to be placed before members of their respective unions for the strike vote. The demands are:

1—Right of collective bargaining.
2—Reinstatement of men discharged for union activities.
3—An eight-hour day.
4—One day's rest in seven.
5—Abolition of the 24-hour shift.
6—Increase in wage sufficient to guarantee American standard of living.
7—Standard scales of wages in all trades and classifications of workers.
8—Double rate of pay for all overtime, holiday and Sunday work.
9—Check-off system of collecting union dues and assessments.
10—Principles of seniority to apply in maintenance, reduction and increase of working forces.
11—Abolition of company unions.
12—Abolition of physical examination of applicants for employment.

Only members of the unions represented will be asked to vote on the strike, it was stated. The committee in charge of negotiations with Judge Gary consists of John Fitzpatrick, D. J. Davis, of the Amalgamated Association of Iron, Steel and Tin Workers; Edward J. Evans, Chicago, of the Electrical Workers' union; William Hannon, Chicago, of the Machinists' union, and Mr. Foster, Pittsburgh. As a final move before the strike call, the United States government, through President Wilson, will be asked to induce the em-

ployers to permit the unionizing of the iron and steel industry.

According to a statement by union leaders employes of Mahoning valley iron and steel plants affiliated with the American Federation of Labor already have voted to strike. The extent to which the valley mills have been unionized is debatable. As the result of efforts made during the past nine months, numerous local unions of the Amalgamated Association of Iron, Steel and Tin Workers have been formed. Thousands of mill workers have remained indifferent to these efforts at organization. Heads of steel concerns in the valley declare they do not believe their men will strike and that in the event of a general walkout being ordered their employes will remain loyal.

Payrolls Larger Though Fewer Are Employed

Washington, July 21.—An increase of nearly $150,000 in the combined payrolls of 106 identical establishments manufacturing iron and steel is reported by the bureau of labor statistics for April as compared with the same month last year, while at the same time there is shown a decrease of more than 30,000 in the actual number of men employed. These figures represent an increase of 1.4 per cent in the total of wages paid and a decrease of 15 per cent in the number of employes. With the exception of the industry making men's ready-made clothing, of the 13 industries compared no other made such a showing as that attributed to the iron and steel industry.

According to the report, the 106 iron and steel establishments employed 170,592 men last April as against 200,761 in April, 1918, a decrease of 30,169. The wages paid these 170,000 men 10 weeks ago amounted to $10,669,134, which is $146,625 more than the 200,000 drew in the same month last year. In comparison with March, 1919, April shows both a decrease in the number of employes and a decrease in the wages paid. While two companies fewer reported for March and April than did for the two Aprils, still the comparison, at least of percentages, is indicative of the trend of the times.

There was a decrease of $971,016 in the April payroll as compared with March, a decline of 8.6 per cent. The 170,719 employes of the 104 establishments in March were paid $11,326,153, while the 163,584 men employed by these companies in April drew $10,355,137. The decline in the number of employes was 4.2 per cent.

Bethlehem Issues Booklet on First Elections

The Bethlehem Steel Co. has issued an 84-page booklet setting forth the results of the first elections under the employe representation system at its Steelton, Lebanon and Maryland plants. Short personal sketches of the elected representatives together with portraits of their chairmen and secretaries serve to emphasize the importance the company attaches to the system of industrial democracy which it inaugurated last fall. In a letter addressed to the employes and published in the booklet, E. C. Grace, president of the company says:

"The management is extremely gratified with the results of the first elections. The employes have shown excellent judgment in the selection of candidates to represent them, and it is our sincere hope and belief that these men who have been thus honored will co-operate with the management to the mutual good of the company and the employes whom they represent. The plan of employe representation in industry is essentially the same as the theory of popular government. * * * The representation has not been inaugurated alone for the settlement of grievances, but in order to attain a lasting success must be utilized in a constructive manner."

Corporation to Aid More Workers Acquire Homes

Youngstown, O., July 21.—Employes of the United States Steel Corp., in this district will be aided by the corporation in building or purchasing their own homes, according to announcement made at the office of the Carnegie Steel Co. Details of the plan have not been completed, but it is said the work will be done through a land subsidiary and that the interest to be charged will not exceed 5 per cent. During the war the Carnegie company built many houses for employes of the McDonald plant near this city, and finally the industrial settlement was incorporated as a city.

Puddlers Compromise

The disagreement between the Reading Iron Co. and its puddlers over the puddling rate has ended. Effective July 1, the company reduced the rate from $14.37½ to $10.50, but the men refused to accept the new rate and held out for $10.92½. A compromise on $10.75 was finally reached. All of the mill wages are based on the puddling rate. Leon E. Thomas, president of the company, has issued the following statement:

"As a result of several conferences with our own employes a rate of $10.75 per ton for puddling was agreed upon, and the company promised to review the wage situation every 60 days, making such changes as the market conditions at that time warranted, in order to maintain the same relation between the puddling scale and market conditions as exists at the present time. Notices to this effect were posted throughout the works of the company, which has givn rise to the report that an agreement had been signed. The Reading Iron Co. will continue to operate as an open shop."

It is thought likely the $10.75 rate will be adopted by other eastern makers.

Mill Wages Lowered After Examination

Steel and tin mill wages for July and August will be on a reduced basis because of the lower prices developed at the bimonthly examination of sales sheets at Youngstown, O., recently. The reduction will be 4½ per cent for sheet operatives and 5 per cent for tin workers. The average price of Nos. 26, 27 and 28 gage black sheets shipped in May and June was shown to be $4.35 per 100 pounds, and the average shipping price of tin plate per base box during a similar period was $6.90. The averages for the preceding two months were $4.50 and $7.15 respectively.

Sells Stock to Employes

The Dominion Sheet Metal Corp., Hamilton, Ont., has inaugurated a profit-sharing scheme for employes. They will be offered 8 per cent preferred stock at par, the number of shares to be based upon earnings. The employes will pay for the stock at the rate of 2 per cent per month and they will be credited with the 8 per cent dividend at the rate of 2 per cent each quarter and no charge will be made for interest. All employes will receive one week's vacation for which they will be paid.

Insures Employes

A group contract with the Travelers Insurance Co., Hartford, Conn., has been entered into by the Eberhard Mfg. Co., Cleveland, in which all employes of the Eberhard company who have been employed there for more than three months, are insured for $500, and employes who have been with the company five years or more will be insured for $1000.

No Shipment Tax on Exports

Commissioner of Internal Revenue Revises Transportation Regulations, Holding That Goods in Transit in This Country Sold for Foreign Account Must be Exempted—Proof of Validity is Required

WASHINGTON, July 22.—With the minds of exporters and manufacturers turned to opportunities in foreign trade, amendments to the regulations governing the transportation tax provisions of the revenue act have been made by Daniel C. Roper, commissioner of internal revenue, and are being called to the attention of export shippers. The revised regulations, however, not only apply to foreign shipments but also affect domestic movements of freight. The commissioner regards the export regulations of great importance, however, and in addition to promulgating the new rules has prepared a special statement.

The amounts paid for the transportation of property in the course of exportation are held to be exempt from the tax imposed by section 500 of the revenue act of 1918, according to the revised regulations. Property is in course of exportation when it has been started on voyage or delivered to the carrier for transportation to a place beyond the boundaries of the United States. It is also defined that movement must be continuous, without a break, that is, without the shipment being stopped at the instance of the shipper "for a business purpose, private sale, storage, grading, sacking, reshipment or manufacture and not in necessary delay or accommodation to the means of transportation." If there is a break, shipment to the point of the stoppage is regarded as a domestic shipment on which tax must be paid.

Proof Must be Submitted

The regulations point out that to secure exemption from tax on amounts paid for the transportation of property in course of exportation, it is necessary that proof of the continuity of the movement and its export character be submitted. To do this the regulations require that the exporter disclose he had on hand at the time the movement started "a contract, order, proposal of purchase or other written evidence of intention to export." Proof of the continuity of shipment and of the export character of the shipment may be provided in the form of a "temporary exemption certificates" and a "certificate of exportation."

The two instruments are to be obtained from the railroad or transportation agency over which the shipment is to start. The temporary exemption certificate must bear date prior to or of the day the shipment moves, and is to contain the name of the shipper, commodity, point of export, number, date or other identifying feature of foreign requirements certificate, contract, order, proposal of purchase, or other written evidence of intention to export, car number, initial and weight or other measure of the commodidty to be exported, freight charges, and foreign destination in case of isolated or single shipments where the foreign requirements certificate is not used.

The certificate of exportation must contain a statement signed by the master of the vessel receiving the cargo, an authorized agent of the ocean carrier or a customs official at border points, setting forth various details of the shipment.

Add 1125 Tons a Day to Surplus Stocks

WASHINGTON, July 22.—The net accumulation of iron and steel stocks belonging to the war department at manufacturing plants, depots, camps, posts and arsenals has been at the rate of 1125 tons a day, according to a circular just issued by the raw materials and scrap section of the office of the director of sales. From June 1 to July 10 the net increase of materials on hand was 50,222 tons. Actual sales, figures of which are not available, have been considerably lower than the accumulations through liquidation of contracts and other adjustments affecting war materials.

The quantity of iron and steel, from ore to finished products, including scrap on hand July 10 amounted to 846,936 tons as compared with 796,714 tons June 1. This increase was due apparently to the taking over by the department of more than 60,000 tons of shell steel forgings from manufacturers whose claims were settled. This item is the largest increase, while a decrease of more than 11,000 tons of billets practically reduces the net gain to 50,222 tons. There are fluctuations in other items, but as is noted on the circular, "the lists are subject to daily revision."

Listing of the items in the new circular is different from that of the one showing the stocks as of June 1, making comparison more difficult, but in regrouping some of them it may be seen that there has been an increase of 177 tons in raw materials, 114 in ferrosilicon, 54 in ferromanganese, 14 in pig iron, with a net loss of five in iron ore; a gain of 5543 in semifinished material, a decrease of little more than 6000 tons in scrap, and a gain of 62,000 in finished products.

Sales of steel as such have not been reported recently, but in the usual weekly statement of the disposition of various materials of all kinds, the director of sales shows $9,607,769 recovered in sales in the week ending July 11, of which more than $7,500,000 represents disposals of wool. Details as to other items were not stated, but in the week ending July 4, net sales amounted to $8,027,000, $782,825 representing ordnance surplus, $77,166 military railways, $388,841 aircraft, and $100,639 construction materials, with $6,604,823, probably wool, of surplus property in the purchase, storage and traffic division.

In the entire period ending July 4, these materials have brought returns as follow: Wool, $155,998,000; railway rolling stock, $69,000,000; chemicals, acids, etc., $32,000,000; textiles, $19,855,000; subsistence, $11,000,000; clothing and equipage, $4,200,000; animals, $18,500,000; nonferrous metals and scrap, $18,274,886. Under miscellaneous, which item represents a recovery of $14,304,384, probably would be found some iron and steel.

The material the war department

is selling is being disposed of by the respective bureaus, subject to the supervision of the director of sales. The raw materials and scrap section of this office. Munitions building, Washington, can furnish full description and particulars of all the materials on hand. The surplus will be offered for sale from time to time, the general method being through sealed proposals.

Want Iron and Steel Plants in Brazil

Washington, July 22.—Plans for the construction of blast furnaces and iron and steel plants in Brazil by American capital have been laid before a high official of the government by Dr. Epitacio Pessoa, president-elect of that country, who is visiting the United States to cement more closely the commercial relations of the two countries. It is declared by the official that the idea is of a most interesting nature and Dr. Pessoa was advised to submit his plans to Chairman E. H. Gary of the United States Steel Corp., Chairman C. M. Schwab, of the Bethlehem Steel Corp., and other large iron and steel manufacturers of the United States. Brazil is abundant in raw materials, Dr. Pessoa stated, but there are no plants for the manufacture of the finished product. Practically all iron and manganese are at present exported. The fact that these plans are being considered appears to take on added significance by reason of the fact that Mr. Gary and Mr. Schwab are said to have conferred with Dr. Pessoa in New York last week.

It is evident that Dr. Pessoa and the Brazilian people prefer American capital to British financial assistance, as the president-elect does not hesitate to state that he has received a voluntary offer from the British firm of Vickers, Ltd., which is anxious to establish a plant in Brazilian territory. No reply has yet been made Dr. Pessoa declares. Dr. Pessoa was elected on a platform which advocated friendliness toward the United States.

Cabinet officers of the United States government have approved the plans of Dr. Pessoa as a favorable investment for American capital.

Foundries Well Booked

Newark, N. J., July 19.—Some gray iron foundries in this district are operating to capacity. Most of them, however, could take care of a good deal more business than they have on their books, and it may be said that their condition reflects the general situation. The foundries which are exceptionally active are mainly those which are parts of certain machinery manufacturing establishments or which produce castings for certain lines which are unusually active. Prices on castings have reflected no change during the past week. However, the opinion of eastern foundrymen is that the present level is minimum and that any change would be in an upward direction. This opinion is based upon a number of factors. In the first place, pig iron and scrap iron are showing a hardening tendency, and all indications point to an increase in labor wages. Local foundrymen say that there is no doubt but that labor conditions are bound to become critical in this district as industrial activity increases, since there is a great scarcity of men, and employers simply do not know where to get them.

Breaks Loading Record

Duluth, July 21.—All high records for the loading of iron ore in the Duluth-Superior harbor, some of them of years standing, have been broken by the steamer D. G. KERR of the Pittsburgh Steamship line. The vessel took on a cargo of iron ore at the Duluth, Missabe & Northern dock aggregating 12,689 tons in 35 minutes. The best previous record was established by the steamer REAM at the same dock, which loaded a cargo of 11,800 tons of ore in 45 minutes. The D. G. KERR entered the Duluth piers at 11 o'clock in the morning and passed out at 2:05 o'clock in the afternoon of the same day. Only 16 men were required to place the cargo in the hold, which illustrates the efficiency of the dock equipment.

Puts in Open Hearth

An oil-burning open-hearth furnace with a capacity of 15 tons daily is to be built by the McDougall-Duluth Co., Duluth. The plant is expected to be in full operation by the latter part of September or the first week of October, according to announcement made by A. Miller McDougall, general manager of the company. All the equipment now at the McDougall-Duluth Co.'s Polk street plant is to be removed to the newly-constructed machine shop at Riverside, the site of the company's shipbuilding plant. The company also proposes to erect a blacksmtih shop at Riverside to replace the one destroyed by fire recently at an estimated loss of $20,000.

Swedish Trade

Is Seriously Affected by Lack of Communication With Germany

The Swedish iron and steel trade for the first quarter of 1919, as shown by the report of the Swedish Iron Works association reflects the depression which has followed the armistice and attributes as the cause the "wait and see" tendency of the market pending the decisions of the peace conference. At the same time, the blockade and other difficulties in communication with Germany have had a favorable effect on some branches of the trade. Exports of iron ore were 275,000 tons compared to 347,000 tons during the same period in 1918. The export diminished each month until in March were only 77,000 tons. Iron and steel production decreased during the first quarter as follows:

	Jan. 1—March 31 1918	1919
Pig iron (including castings)	206,600	159,700
Blooms and rough bars	28,100	21,200
Bessemer and Thomas ingots	14,300	12,600
Open-hearth ingots	112,300	115,300
Crucible and electro ingots	2,200	2,500
Rolled and hammered iron	84,800	91,200
Total	448,300	402,500

Pig iron production dropped to the level of 1911-12 and only 81 of the 132 blast furnaces were operating. Rolled and hammered products increased due to the decreased imports from Germany and the fact that stocks are depleted. Exports were 19,000 tons less than for the first quarter, the largest loss being in pig iron as a result of the decreased demand from the central powers. Exports of rolling mill products have increased due to the demand from neighboring neutral countries, which have been cut off from supplies in Germany.

Effects of the blockade are shown in the quarterly imports which fell off 15,000 tons, pig iron again netting the largest decrease. Disregarding pig iron which can be supplied at home, the classes of product in great demand are plates and building materials. The report pessimistically sums up the market in the following words:

"It is characterized by a small demand and yielding prices. The Swedish iron trade is working under extremely difficult conditions inasmuch as the high price of production is a great handicap to sales, especially for export. The prospects must also be designated as gloomy seeing that further increase in the cost of production is inevitable owing to the anticipated introduction of the 8-hour day."

Men of the Iron Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

CHARLES L. WARWICK, whose election to the office of secretary-treasurer of the American Society for Testing Materials recently was announced, graduated from the school of civil engineering at the University of Pennsylvania in 1909. After graduation, Mr. Warwick joined the teaching staff of the department of civil engineering, specializing in structural engineering subjects. During the past year he was in charge of the courses in this department with the title of assistant professor of structural engineering. Mr. Warwick's first work with the American Society for Testing Materials was in the capacity of editorial assistant to Dr. Marburg. A year prior to Dr. Marburg's death in June, 1918, Mr. Warwick was given the title of assistant to the secretary, and during the past year has held the position as assistant secretary. He has resigned his assistant professorship at the University of Pennsylvania and hereafter will devote his entire time to the activities of the American Society for Testing Materials.

A. O. Hurxthal, who was a captain in the ordnance department, has become associated with the Philadelphia Textile Machinery Co., Philadelphia.

George Shook has been appointed blast furnace superintendent for Witherbee, Sherman & Co., Port Henry, N. Y.

E. R. Stoughton, resident agent at Detroit for M. A. Hanna & Co., Cleveland, is recovering from an attack of pneumonia.

G. A. Traube, formerly of the Westinghouse Air Brake Co., Pittsburgh, has become associated with Gaston, Williams & Wigmore, New York.

Edward Law, son of the late Ernest Law, recently was admitted as a partner to the firm of Ernest Law & Co., Philadelphia, iron and steel merchants.

W. W. Vesy has been appointed western sales manager for the Bossert Corp., Utica, N. Y., with offices at 611 Citizens building, Cleveland, which were recently opened.

W. L. Dickel, formerly employed by the Keystone Steel & Wire Co., Peoria, Ill., has been made sales manager of the General Steel Co., Milwaukee.

C. M. Weld, consulting mining engineer, has returned from war work at Washington and has resumed his practice with offices at 66 Broadway, New York.

David B. Sutton has become sales manager of the Thatcher Propeller &

CHARLES L. WARWICK

Foundry Corp., Albany, N. Y., which was formerly the George H. Thatcher Co.

Frank G. Wheeler, until recently connected with the Miehle Printing Press & Mfg. Co., Chicago, has become associated with the Chapman Engine Works, Marcellus, Mich.

A. L. Roberts, former designing engineer for the Bethlehem Steel Co., has been elected president of the Roberts Co., Philadelphia, consulting and contracting mechanical engineers.

Cleveland S. Soper recently resigned his position of instructor of machine design at Wentworth institute, Boston, and has accepted a position as engineer with the Kent Machine Co., Kent, O.

George A. Jurey will resign soon as chief clerk of the open-hearth department of the Republic Iron & Steel Co., Youngstown, to became an auditor for the Jones & Laughlin Steel Co., Pittsburgh.

D. C. Schulz Sr. has assumed the duties of sales manager for the Pittsburgh Crane & Equipment Co., Sharpsburg, Pa.

N. S. Thulin has been made special railroad representative for the Chicago Pneumatic Tool Co., Fisher building, Chicago. He will be on the staff of S. C. Sprague, the company's manager of western railroad sales.

H. J. McCann, former purchasing agent for the Dominion Iron & Steel Co., Sydney, N. S., has been appointed assistant to Mark Workman, president of the Dominion Steel Corp., at the Montreal, Que., offices.

N. Palmer, formerly manager of the Worthington nickel mine, Sudbury, Ont., has been appointed general superintendent of the chrome iron properties of the Black Lake Asbestos & Chrome Co., Black Lake, Que.

John W. Barrett, for the past 11 years connected with the Pittsburgh Coal Co., has assumed his duties as an inspector in the fuel department of the Youngstown Sheet & Tube Co. with offices in Pittsburgh.

B. L. Cogshall, formerly connected with the United Alloy Steel Corp., Canton, O., recently resumed his new duties as assistant to President John Bindley of the Pittsburgh Steel Co., Pittsburgh.

F. W. Shumard, supervisor of the machine and small tools branch of the Motor Transport Corps, has left government service and is now superintendent of the Arnold Hellmuth Mfg. Co., Brooklyn.

Earle W. Vinnedge has received his release from military service and has joined the staff of the Worthington Pump & Machinery Corp., Cincinnati, in the capacity of sales engineer.

Albert C. Mann, former purchasing agent of the Illinois Central railroad, has been appointed vice president in charge of purchases for the American International Steel Corp., 120 Broadway, New York.

Men of the Iron Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

WOODWARD WILLIAMS, who has been connected with the A. M. Byers Co. since the latter part of 1913, as general manager of sales and general manager of the company, has resigned and on Aug. 1 becomes general manager of the Reading Iron Co., Reading, Pa. Mr. Williams takes to his new position an experience covering almost 15 years in both the operating and sales divisions of the iron and steel business. Following his graduation from Harvard university in 1904 he entered the employ of the Carnegie Steel Co. and served in various capacities in the mills of that company. He was mill foreman at the Youngstown, O. plant during the famous strike of 1905 and subsequently was transferred to the Duquesne works where he served as an open-hearth furnace helper and later became assistant chief inspector of the plant. He severed his connection with the Carnegie company in 1909 and joined the sales force of the Bourne-Fuller Co., Cleveland, O., being attached to the St. Louis and Pittsburgh offices. In 1911 he was made Pittsburgh district manager for the company succeeding Norris Clark, who recently took over and became president of the Lake Erie Iron Co. After two years in this position he resigned to become sales manager of the A. M. Byers Co. and the building up of the sales organization of that company was one of the achievements of his connection with the company. Mr. Williams is a native of Cleveland, O., where he was born Oct. 21, 1882. He is a member of the Duquesne club, the Oakmont Country club, the Pittsburgh Athletic association, and the Harvard club of western Pennsylvania.

Victor E. Rehr, general manager of the Aetna Foundry & Machine Co., Warren, O., has been elected to the board of directors of the company, to succeed W. W. Ludt, recently resigned.

Randolph Owens, who for 10 years has been connected with the St. Louis office of the American Sheet & Tin Plate Co., Pittsburgh, has been transferred to the Philadelphia office.

H. H. Maxfield, who has been acting works manager of the Pennsylvania railroad lines west, with headquarters at Altoona, Pa., has been appointed works manager in charge of the Altoona shops of the company.

W. C. Tyler, formerly district manager at the New York office of the Poole Engineering & Machine Co., Baltimore, has been appointed general sales manager in charge of all the selling activities of the company. His office will be in New York.

Capt. Leonard A. Bonner, motor transport corps, son of James B. Bonner, Washington representative of the United States Steel Corp., returned to this country recently, after a year's service with the American forces in France.

J. Brewster Pray, formerly affiliated with the New York Shipbuilding Corp., now represents the Montgomery Iron & Steel Co., Philadelphia, in New York, with headquarters in the Candler building, 220 North Forty-second street.

Capt. John T. Jans has joined the engineering forces of Holcroft & Co., Detroit, foundry furnace and oven specialists. Captain Jans was graduated from the University of Michigan in 1912. He was 21 months in France with the 16th engineers.

H. R. Trotter, formerly chief engineer of the S K F Ball Bearing Co., has been appointed chief engineer of the S K F Industries, Inc., New York, which was recently organized to supervise the sales and engineering activities of several companies.

J. H. Van Campen, formerly of the Bethlehem Steel Co., Bethlehem, Pa., and until recently plant engineer for the Timken Roller Bearing Co., Canton, O., has accepted a position in the engineering department of the Midvale Steel & Ordnance Co., at Coatesville, Pa.

James J. Warren, Toronto, Ont., has been appointed president of the Consolidated Mining & Smelting Co. to succeed the late W. D. Matthews. Mr. Warren has been managing director of the company since 1915 and for a year previous to that was a member of the board of directors.

R. C. Garlick has been appointed district manager throughout northern Ohio and Indiana for the Sharon Steel Hoop Co., Sharon, Pa., with offices at 931 Garfield building, Cleveland. For the past year he has been handling direct sales of the company at Sharon, Pa., and for 10 years prior to that was with the company as salesman in the Chicago territory.

Charles G. Guild has been appointed secretary of the Wayne Oil Tank & Pump Co., Ft. Wayne, Ind., to succeed Clayton O. Griffin, resigned. Mr. Guild, formerly was manager of the Burlington Wheel Co., Burlington, Iowa.

W. H. Ginder has been appointed superintendent of the open-hearth blooming mill department of the Eastern Steel Co., Pittsville, Pa., succeeding H. S. Flanagan who resigned recently and now is in California. Mr. Ginder, before joining the Eastern Steel Co., was chief chemist at the Vandergrift, Pa. plant of the American Sheet & Tin Plate Co. and also had been attached to the Schoenberger works of the American Steel & Wire Co., Pittsburgh.

Roy M. Wolvin has been elected a director of the Dominion Steel Corp., Sydney, N. S., to fill a vacancy on the board. He has been identified with lake shipping for a number of years as president and general manager of the Montreal Transportation Co., for several years and later as vice president of the Halifax Shipyards, Ltd., Halifax, N. S. H. J. McCann has been appointed assistant to President Mark Workman at the Montreal office of the Dominion Steel Corp. He commenced his service with the company a number of years ago as telegraph operator.

Roland S. Lebarre, assistant manager of sales of the Carnegie Steel Co. for the Cleveland district, has resigned that connection, effective July 21, and has been made general sales manager of the alloy steel department of the Interstate Iron & Steel Co., Chicago. He has spent his entire business career with the United States Steel Corp., joining the Illinois Steel Co. 20 years ago, and in 1902 entered the sales department. During the past 14 years he has been assistant district manager of the sales for the Carnegie Steel Co. at Cleveland.

Industries Are Wanted

Australia Negotiates With Various Manufacturers—Mineral Lands Await Exploitation—Other Australian News

(Special Correspondence.)

NEWCASTLE, N. S. W., June 30. —The commonwealth government has given careful consideration to means for establishing new industries in Australia. The cabinet is endeavoring to get in touch with manufacturers in various parts of the world. Some form of bonus probably will be offered. As this country virtually is a storehouse of minerals of all kinds there is ample scope for producers, and the government is seeking to convince them that with careful operation great returns are assured. Here are vast iron deposits and precious metals, alkaline earths, copper, tin, lead and antimony in abundance. There are about 5,000,000 persons in this country and its natural resources could easily support 20 times that number. Immense tracts of valuable mineral lands are now used only as sheep runs and cattle stations.

The government statistician has issued a report stating that the total value of products manufactured in the 5333 factories in New South Wales in 1918 was $427,500,000. A total of $70,983,035 was paid in wages to 117,732 employes, 25 per cent of whom were women. The average wage paid men amounted to $825 and that paid women to $285. The value of output per employe was $3755.

In the last few years frequent attempts have been made to smelt the beach magnetic iron ore and the iron ore found around New Plymouth at the base of Mount Egmont. The New Zealand Iron Ore Smelting Co. is constructing a huge breakwater and a blast furnace. The iron sand from the beach is dried and electrically concentrated, then mixed with coal and ground before used in the furnace.

The Newbold Silica Fire Brick Co., Ltd., has started work on a new plant on a four-acre site at Waratah, new Newcastle, close to the property of the Commonwealth Steel Products Co.

Two new steel furnaces for the Lithgow Ironworks Co. are practically completed. An important feature in the construction is a reinforced concrete smoke stack, 160 feet high, the base of which is 20 feet in diameter.

The Broken Hill Proprietary Co. reports a record output at its iron and steel works at Newcastle for the four weeks ending Feb. 5. The coke ovens produced 14,695 tons of coke, 138,787 gallons of tar and 218 tons of sulphate of ammonia. No. 1 blast furnace was under repairs, while No. 2 furnace produced 12,549 tons of pig iron. The foundry produced 1825 tons of steel and the steel works, 16,710 tons of steel. The blooming mill rolled 13,097 tons of billets and shipbuilding plates. The rod mill produced 1748 tons.

Copper Situation Acute

A problem demanding immediate attention of the commonwealth government has been created by the closing down of copper mines in New South Wales and the great difficulties under which this class of metallurgical work are carried out. In Transmania and South Australia the situation is acute, especially as more men are employed in the work of copper mining than in any of the other districts. At present the producers are faced with the reduced value of the metal and the difficulty of shipping. Australia consumes only a small amount of the copper it produces, and therefore the export markets are of the utmost value to her.

At Port Kemba during February, 1919, 70 men were laid off at the Electrolytic Copper Works, and there are now fewer than 150 employed there, whereas about 700 were employed formerly. The cause of the slump is the embargo on the sale of copper outside of Great Britain, and no relief is expected until peace is declared. Another contributing factor to slackness is the scarcity of supplies as the result of the closing of commonwealth mines. The estimated value of copper on these particular works is $4,800,000.

At a meeting of the Primary Producers' association held at Cowra strong comments were made concerning the prices of imported agricultural machinery. A reaper and thrasher before the war cost £122 ($585.60). Now it costs £225 ($1080).

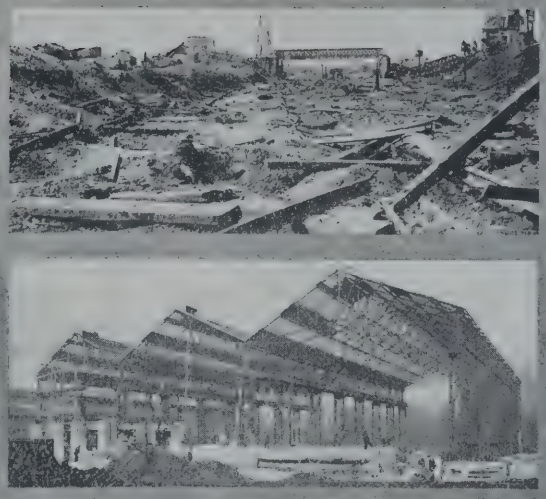
The Tin Mining Co. at Waratale, Tasmania, produced in the last half of 1918 ore totaling 51,000 tons, and sold it for an average price of £333 ($1598.40) per ton.

For the four months ending Oct. 31, 1918, the imports into Australia of machinery, iron and steel were valued at nearly £5,000,000 ($24,000,000).

The American trade commissioner in Australia will take evidence in the case of complaints against American shippers regarding failure of goods to come up to sample, bad packing, etc., and will endeavor to settle matters amicably. American houses are understood to be ready to make reparation, and if any Australian firm refuses to accept their terms the federal trade commissioner has power to compel a settlement.

The Parapara Iron Co., of New Zealand, producing iron ore in New Zealand and selling it in Australia, has asked for government assistance.

An official statement by the government says that the total value of metals and concentrates paid for by the imperial authorities and still in Australia is £7,000,000 ($33,600,000). In the absence of a normal demand several of the large concerns are complaining of serious handicaps brought about by the government selling out cheap.



Galvanized iron is quoted at £65 ($312) a ton and tin plate at 40s ($192). Fourteen-gage barbed wire is £56 ($268.80) and black steel sheets £57 ($273.60).

The Broken Hill Proprietory Co., Ltd., has issued the following report on operations of its iron and steel works in Newcastle, N. S. W., during the four weeks ending April 2: Coke ovens produced 14,580 tons of coke, 149,439 gallons of tar and 232 tons of sulphate of ammonia; No. 2 blast furnace produced 12,566 tons of pig iron; open-hearth furnaces produced 17,779 tons of steel; blooming mill produced 14,802 tons; rail and finishing mill produced 9704 tons of 60 and 80-pound rails; 18-inch mill produced 3596 tons; 12-inch mill, 1738 tons; 8-inch mill, 241 tons and rod mill, 308 tons.

To Honor Schwab

Wednesday, Aug. 20, has been set as the day for the big flag-raising celebration to be held at the summer home of Charles M. Schwab at Loretto, Pa. The event, which promises to be one of the greatest in the history of Cambria county, will be in honor of Mr. Schwab, and some of the most noted men of the country will be present on this occasion. Among them will be Ambassador Jusserand who will confer upon Mr. Schwab distinguished honors awarded him by the French government in recognition of the prominent part his company played in the manufacture of munitions for the allies and as director of shipbuilding for the United States during the war.

France Still in need of 30,000,000 Tons of German Coal

Yesterday Today and Tomorrow in European Industry

BY FRANCIS MILTOUN

Paris Correspondent of The Iron Trade Review

PARIS, July 1.—Monsieur Henri Couriot, a leading technician of the French mining industry, gives some interesting facts and figures concerning coal and its relation to the French iron and steel trade. "France," he says, "cannot enter the industrial arena without 30,000,000 tons of German coal per annum."

Coal imported into France before the war amounted to but 20,000,000 tons per annum, but now there is Lorraine and Alsace requiring something like 11,000,000 tons a year. The coal of the Saar basin is not the best for the iron industry of Lorraine. Indeed, when the Germans were operating the furnaces they brought a good part of their coal from the Ruhr district.

On the eve of war, coal for industrial purposes in France cost 40 per cent more than it did in England and 20 per cent more than in Germany. In reality the cost was even greater, since the 20,000,000 tons which France brought in from outside paid a customs duty of 24 cents a ton. In dollars and cents, industrial coal then cost France 40 cents a ton more than in Belgium, $1 more than in England, and $1.40 more than in Germany. Germany furnished France with 78 per cent of France's imports of coke for metallurgical purposes before the war, and at a price which favored its own industries to the detriment of those of France.

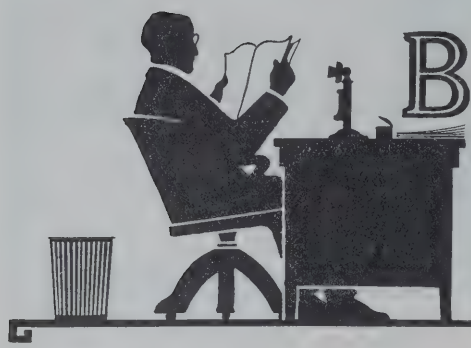
In the department of Meurthe et Moselle, the chief iron and steel producing region of old France, a ton of coke cost $6.80 in 1913, at which time it cost but $4.80 in Belgium, $3.80 in Germany and $3.40 in England. At that time the department was producing 2,190,000 tons of steel per annum in 36 converters and nine open-hearth furnaces, and 3,400,000 tons of pig iron in 78 blast furnaces. Even transportation was far more costly in France. The transportation of 100 tons for a distance of 100 kilometers cost 22 cents more than in Belgium and 54 cents more than in Germany. These are some of the reasons why Belgium and Germany were turning out iron and steel products more cheaply than in France.

The production of pig iron in France required coke to the value of $10.60 per ton; in Belgium $9.40; in Germany but $8.10. Steel from Thomas furnaces cost in France, for combustible alone, $9.40; in Belgium $7.50 and in Germany $5.80.

It is impossible to count upon a sufficient supply of either industrial or domestic coal from the devastated mines of northern France for a period of five years at least. Production will hardly exceed 50 per cent of normal for two years yet. Half of the coal supply of France as it existed before the war is unavailable at this time, and since the armistice importations from England have fallen to a very low ebb.

The coal of the Saar will be absorbed largely by the industries of Alsace and Lorraine, while France has just obligated herself to grant 1,000,000 tons a year to Switzerland to take the place, in part, of what was formerly supplied the mountain republic by Germany.

This is the coal situation in France today, particularly as it affects industry. It should be borne in mind that in March, 1919, less coal was produced by French mines than that which was produced in the month of October, 1918, when the war was on.



A report states that the Paris "electric sector" has a stock of but 27,000 tons on hand, a seven-day supply, whereas its usual stock is for three months. If any such voids occur in supplying the French metallurgical industry with coal and coke during the next year of much needed production, one may well say with Monsieur Couriot that "it is impossible for France to enter the industrial world with dignity and honor unless she obtains by priority 30,000,000 tons of coal from Germany within the next year." In 1913 the French metal industries used 12,545,000 tons, or 19.4 per cent and other industries 19,811,000 tons, or 30.5 per cent of the entire amount of coal consumed in France.

The possibility of a plebiscite in Upper Silesia as to its final partition is something more than mere politics. There is the very important economic aspect as to whether, if Germany is deprived of these coal fields, she will be able to deliver to France 30,000,000 tons a year which French industry requires.

The Ruhr mines of Germany are easily accessible to France, but if their product is to be shipped to other parts of Germany to replace supplies which might otherwise be had from Silesia French blast furnaces of Lorraine will go short. General opinion in France is absolutely fixed on this point, hence the quasiagreement to reconsider the Silesian proposition.

The *Deutschlands Steunkohlenfelder und Steinkohlenvorraunth,* issued in 1912, states that the Silesian fields, which would otherwise pass to Poland, are capable of furnishing Germany 33 per cent of the annual coal supply of normal times. Giving Silesia to Germany will give France a chance to import coal from Westphalia.

Little Stories of Business Life

The Tragedy of An Idea

PERHAPS no one knows better than an inventor that for every idea which develops into a successful invention there are thousands which lead to failure. The late Samuel T. Wellman is known the world over for his open-hearth charging machine and other notable works. Only a few of his closest friends are aware that he always was trying out new ideas with the hope of contributing further to the perfection of manufacturing methods, and that frequently his efforts met with failure, which to a great many men would have proved most discouraging

Mr. Wellman once was convinced that he had hit upon a scheme for eliminating pipes and blow holes from ingots. To test his theory he had erected a jarring machine in the plant of the Wellman-Seaver-Morgan Co., and on it mounted a 3-ton ingot mold. He believed that jarring the hot metal would prevent the formation of pipes and other undesirable irregularities in the ingot.

On the day of the test Mr. Wellman and a few of his most intimate friends grouped themselves around the machine to watch the outcome. The ingot mold was poured and jarred vigorously for 30 minutes. On the following day, the ingot was slit so as to expose the structure of the metal. The interior was entirely free from pipes and blow holes, but in each of the four corners there were countless fissures and gas bubbles giving the steel a most beautiful appearance but, of course, making the ingot absolutely worthless for practical purposes.

This particular incident is typical of many experiments undertaken by Mr. Wellman and illustrates to what lengths that indefatigable engineer was willing to go to test the value of an idea.

Wonders of Niagara

THE electrothermic process used by the Carborundum Co., Niagara Falls, N. Y., is interesting and many thousand visitors inspect the plant annually. Recently an Englishman was taken through the plant. He asked innumerable questions and the guide explained at length how Niagara Falls were utilized to generate the electricity which flowed through the carborundum furnaces. In the furnace room, the visitor noticed a small stream of water which flowed over the electric terminals to cool them.

"Ah, yes!" he exclaimed, "isn't it wonderful. So that's how you utilize the water from Niagara Falls."

The Future Foretold

SOME writers seem gifted for uncanny vision," said Clayton Mark, chairman of the board, Steel & Tube Co. of America, as he turned the pages of a scrap book and referred to some of the successive steps which finally led to the recent merger of his company with the Newport Mining Co. and the Northwestern Iron Co. "Here is a little story printed in a financial publication as far back as 1916 which has appealed to me as being strangely prophetic. The writer did not name all of the companies now in the present merger, which embraces the Mark Mfg. Co. and the Iroquois Iron Co., but he named some of them and forecast the general lines along which expansion would take place, even to giving the location of some of the plants and mines recently acquired. We ourselves, at that time, did not know just how our plans would work out; they were in intangible form. The writer may only have been dreaming at that time, but events have come to pass as he predicted. Sometimes a trade journalist or a financial writer knows more of what he is talking about than readers give him credit for knowing."

Light on a Strike

THE Consolidated Steel Corp. has reason to figure out the value of electrical current. Its big staff is quartered in one of the large modern office buildings on Broadway in New York, but, like many New York office staffs, is dependent upon electric lighting on the brightest of days. Recently there was a spell of rainy days and the dampness caused a short circuit in the lighting arrangement. Three times in one week the staff was thrown into a state of idleness by the lack of sufficient light.

The greatest trouble was caused in the shipping department which was working hard upon the manifests and shipping documents. The eastern ports were threatened with a tieup on account of a marine strike. Ships were being tied up every day because the men refused to work. Every minute counted. Material had to be rushed aboard ship and started out before the strike spread. The Consolidated was but one of the multitude of export organizations anxious over this situation, but it was one of the largest and had much more at

stake. The short circuit in the lighting system in this case proved to be a grave inconvenience.

Want Their Beer

SCARCITY of beer continues to be a great source of grievance among the industrial classes of Great Britain, especially among the iron and steel workers," says the British correspondent of THE IRON TRADE REVIEW. "At one town in the north of England it is said boys follow brewery wagons to see where beer is delivered and then write the names of the public houses on slips of paper which they sell to workers as the latter leave the factories. In the iron and steel districts, scouts are sent out to find what public houses will have beer at night, so that the men can go there without having to make a tour of the streets to find where a drink can be obtained. According to *The Morning Advertiser,* the miners of a Lancashire colliery town arrange for someone to go out on Sunday mornings to an adjoining area, taking with him a couple of homing pigeons. If the prospector finds a supply of beer he releases his pigeons which carry the information to his friends. As a result the next half dozen tramcars from the mining center are crowded with men hurrying to get a drink."

Gary Calls the Turn

JUDGE GARY predicted 20-cent copper several weeks ago, when the market was around 16 cents a pound. The prediction aroused considerable surprise in the copper trade, for while it was expected prices would go higher, no one was looking for better than 18-cent copper in the near future. Little more than a month later copper reached and passed 20 cents. All of which would seem to indicate that a shoemaker can watch other things beside his own last. Incidentally, the government as well as the copper people seem to have been surprised by the action of the copper market. Early in April the copper producers arranged with the government to market some 100,000,000 pounds of government copper. This stock had occasioned some anxiety among the copper producers, as it was feared the amount was large enough if sold in the open market to affect seriously the copper business, which was then on the downgrade. Accordingly the plan was made by which the producers would market this copper for the government over a period of 15 months, with a monthly withdrawal based on the total copper business done. But it did not take 15 months. In fact, business revived so rapidly that the entire 100,000,000 was disposed of in three months.

Genuine Co-operation

NINE American manufacturers in the same line were called the other day to consult with the owner of a plant who wished to install some new machinery. The owner knew exactly what work was to be expected of the new machinery but he did not draw up his specifications as he was in a hurry to get his equipment. To the nine machinery makers he explained in detail what he wanted ending with the simple statement that he wished to get delivery within a few months.

All nine said that undoubtedly they could make a machine which would meet the requirements. Only one of the nine was at the time building a machine which particularly filled the want and this was a patented machine. We will call this man Jones, but it was Smith who made the unusual suggestion.

"Mr. Purchaser," said Smith, "Jones is the only one of us who can fill your order immediately, although all of us could compete. But to permit us to compete you would have to wait until your engineers could figure out specifications which would enable us all to bid. Jones undoubtedly will quote you his lowest price because he is confronted with the potential competition of the rest of us. Our business is to serve our customers and I would suggest that if you want an installation immediately that you purchase what Jones has."

The suggestion was unanimously adopted, and that, the purchaser said later, is the result of war co-operation.

Foundrymen's Convention Plans Maturing

Preparations rapidly are nearing completion for the Inter-Allied Foundrymen's Congress and Exhibition which will be held in Philadelphia during the week of Sept. 29. The committee on papers announces that 34 addresses and papers have been secured to date. These cover every phase of the foundry industry. It is practically assured that the technical material prepared will be sufficient to provide special sessions to consider gray iron, malleable iron and steel problems. The broad questions of management and personnel also will be discussed.

More space already has been reserved for the machinery and equipment exhibition than the total required for any previous convention. Excellent facilities for exhibiting equipment are provided at the Philadelphia Commercial Museum and many manufacturers will avail themselves of the opportunity to demonstrate new and improved machinery.

The committee of the Philadelphia Foundrymen's association is providing an extensive program of entertainment, to include some interesting visits to local manufacturing plants. It is planned that these inspection trips will be scheduled so that they will not conflict with the technical sessions.

President A. O. Backert, who has just returned from an extended trip to England and France, reports a lively interest abroad in the foundry industry of America. The cordial invitation extended by Mr. Backert to the various associations of foundrymen of the allied nations will no doubt result in a large foreign attendance.

Form English Syndicate

A syndicate has been formed at Sheffield, England, known as the Sheffield Steel Products, Ltd., with the object of meeting more vigorously foreign competition in cutlery in the markets of the world. One of the effects of the war was to show Sheffield manufacturers that German cutlery manufacturers slowly but surely were outcompeting the English products. In order to meet the problem, the syndicate was formed. Already several large businesses have been acquired, two of which possess valuable trade marks relating to files, saws, cutlery and tools. The directors are A. H. Wild, J. H. Stewart, R. E. Skipworth and J. T. Wood. The latest step taken by the syndicate has been the acquisition of the plant of the Templeborough National Projectile, Ltd., which was built especially to meet the needs of the war. It occupies 20 acres. The syndicate has agencies in the chief markets of the world.

The Allied Steel Castings Co., Harvey, Ill., will install a 10-ton open-hearth furnace in addition to its Wellman-Seaver-Morgan 5-ton tilting furnace which will be enlarged

A Word With the Editor

Readers of *The Iron Trade Review* Express Themselves on Various Topics of Commercial and Industrial Importance

Folly of Excessive Taxation

Editor, THE IRON TRADE REVIEW:—

The subject of the federal tax law has had a great deal of my attention and thought since the passage of same, regarding the liquidation of the government war debt in a period of but 21 years.

My understanding of this act is that we are to collect $6,000,000,000 in 1919 and $4,000,000,000 each year thereafter for 21 years.

I recently made a trip throughout the Mahoning valley and Pittsburgh district, during which time I heard many steel men express themselves on the inconsistency of our government undertaking to wipe out this enormous war debt in so short a period of time. It is my belief, concurred in by every manufacturer with whom I have talked, that if our government attempts to collect so vast a sum in so short a space of time, it will stifle industry.

I am constrained to ask the question—Can the government, in equity, take such an enormous sum from its partners without handicapping them in their production and taxpaying ability? The policy as set forth by this levy is sure to impair energy and is equally sure to discourage production of any manufacturing concern. It means the confiscation of 50 to 65 per cent of each individual's or industry's earnings.

Being a loyal citizen of the United States government, it is my aim and desire to support and uphold it to the utmost, but the incentive and ambition to build up a successful business or industry, to be a credit to the community as well as our country, is lost when over half of one's earnings are appropriated each year by our government for taxation.

I believe there should be some immediate action taken by every one concerned to have this law repealed, and in its stead, to provide that for raising this vast sum of money, the taxation should cover a period of 80 years, under which arrangement the business of the United States could not suffer, as it is bound to by the enforcement of the present law.

I am a manufacturer, and like many others with whom I have talked, did not fully grasp the burdensome measures imposed on the business of the country at the time this law became effective, but now that we have paid our taxes, we find that should we continue along the same lines, raising $4,000,000,000 per annum, it will prove a great injustice to many industries in the United States.

My discussion with the different steel men throughout the Mahoning valley has caused me to ask this question of myself: Why am I working with all the energy I possess to build up a business that is giving employment to many hundreds of people, from the profits of which I have to pay a tax of from 50 to 65 per cent?

If this is to continue there can be nothing but a disastrous ending, as there is no business in this United States that can prosper year after year under this burden.

I, like many others, can stand it for one or two years, but when you figure that these conditions will remain with us for 20 years, we can see but one result—that of the slowing up of business and the paralyzing of many industries, with its attendant failures.

Very truly,
BOYLE MFG. CO.,
W. J. Boyle, President.
Los Angeles, Cal.

Kelly the Real Inventor

Editor, THE IRON TRADE REVIEW:—

Please refer to page 119 of your issue of July 10 in the article "To Honor Bessemer." This mentions Sir Henry Bessemer as the inventor of the Bessemer process. If you will take the time to investigate the matter you will find that Bessemer was not the inventor of this process but that William Kelly was the inventor.

The writer is a grandson of William Kelly and was named for him. He discovered the pneumatic process for making steel in Lyon county, Kentucky, and was given the patent for same in the United States, although his application was made after Bessemer had applied for a patent on the same thing, William Kelly having proven priority. I think that Andrew Carnegie, the Cambria Steel Co., and a number of other steel men prominent at that time will verify this statement.

The story is that my grandfather had two Englishmen working for him at his furnace and forge in Lyon county and that they left him and went to England and told Bessemer what William Kelly had done and that Bessemer tried it and applied for patents on the process.

Complete details of this matter can be supplied you by W. C. Kelly, president of the Kelly Axle Mfg. Co., Charleston, W. Va., and John G. Kelly, president of the Braddock National bank, Braddock, Pa., both of whom are sons of William Kelly, and uncles of the writer.

My only interest in the matter is to see fair play and to give the credit for this great invention to the proper man. Awaiting your reply, I am,

Yours truly,
W. K. THOMPSON.
Los Angeles, Cal.

Capital Blind, Too?

Editor, THE IRON TRADE REVIEW:—

Your editorial July 3, 1919, "Why is Labor so Blind?" I am afraid has an important link missing. It should read: "Why is Labor and Capital so Blind?"

The advocated policies of both are so radically extreme that there must be something fundamentally wrong in both. Sifted and simmered down, present extreme systems amount to this.

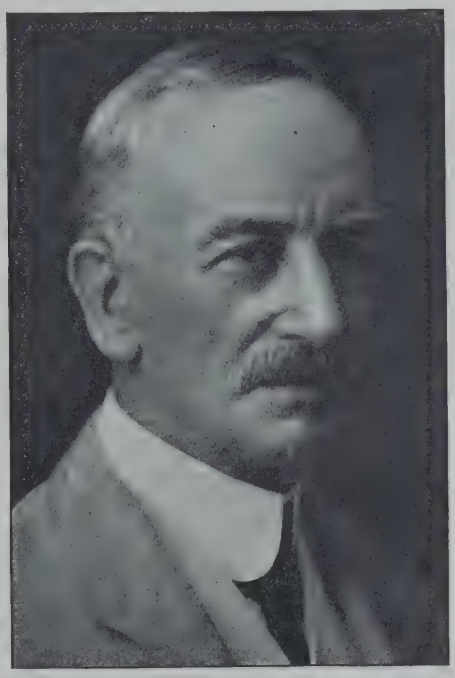
First: The bonus, or piece work system, is staged by the employer for one and only one reason; he figures that he can get good, honest men to do a day's work for a day's pay any time, but by offering a bonus the same honest man will hop in and do two days' work for much less than two days' pay. It may be "practical" but it certainly is not just.

Second: The labor organizations realize that their best men are being mulcted by the so-called just (?) bonus system. In order to combat this, they stage the extreme opposite and advocate that one man's time is as valuable as another's. It is a combative arbitrary principle.

The two sides are matching wits to see which party can get the *most for nothing*. The inevitable result is discord. Whether this discord will increase or diminish will depend entirely upon what both sides are willing to do towards removing the cause. One extreme is as unjust as the other.

Yours truly,
PIONEER MANUFACTURING CO.,
J. M. Schenk, Manager.
Waterloo, Ia.

Discusses High Costs of Southern Iron



Morris W. Bush, mine operator and iron manufacturer at Birmingham, in a long interview recently published by a Birmingham newspaper makes some interesting declarations, regarding the changed conditions competitively that have been established in the production of pig iron in the Birmingham district. "The advantage of the Birmingham district for the production of pig iron over other competitive districts in the United States or abroad which existed 30 to 40 years ago have disappeared. The general belief prevalent in Alabama that these advantages continue and allow the Birmingham district to dictate the price of pig iron to the balance of the United States, is unfortunately baseless, for that condition has passed away never to return," says Mr. Bush.

Thirty years ago the cheap conditions of production in the Birmingham district, according to Mr. Bush, were due to the fact that the ore used was the "soft" red ore from the outside of the Red Mountain seam which was easily accessible, was worked by hand and contained an average of 50 per cent of iron or more. This easily mined ore has been exhausted requiring underground openings by means of slopes, extensive and expensive equipment, etc. Today the ore does not contain more than an average of 36 per cent metallic iron in the best self-fluxing quality. Some of the ore running 38 to 40 per cent is so silicious as to make the smelting more expensive. Limestone suitable for blast furnace use today must be hauled from a greater depth. The Pratt seam of coal, affording the best coke, has been exhausted to a large extent. Instead of 2800 pounds of coke to the ton of pig iron as used 30 years ago, from 3300 to 3800 pounds now is required. The effect of the war was to greatly increase wages and labor cost so that southern plants are paying northern rates today without the northern efficiency. Railroad rates on blast furnace materials in the Alabama district have doubled. The 25 per cent horizontal advance in freight rates operates strongly against southern pig iron in competing at northern destinations where a large part of its product must be distributed.

"Within 20 years there has not been a single new blast furnace built in the Birmingham district," said Mr. Bush, "but within that time two have been pulled down and the sites turned to other purposes. During that time more than $100,000,000 has been expended in competitive plants in such districts as Chicago and others, where Alabama pig iron formerly could always find a market and could afford to sell as a rule at $1 below the cost of local brands. The total blast furnaces of the district amounted to 51 in 1908, of which today only 45 remain, and out of the 45 there are only 27 which have never been in the hands of their creditors—and out of this total number of 45, only 18 are at present in blast."

Obituaries

COL. JAMES KILBOURNE, president of the Kilbourne & Jacobs Mfg. Co., Columbus, O., manufacturer of agricultural and road-building equipment, and known to the iron and steel industry as the founder

COL. JAMES KILBOURNE

and builder of one of the largest steel fabricating plants in the middle west, died at his home in Columbus recently. He was a graduate of Kenyon college and of Harvard university. He served as captain during the Civil war and for gallant and meritorious service was brevetted major, lieutenant-colonel and colonel. Before organizing the Kilbourne & Jacobs Mfg. Co., he practiced law for a time. At the time of his death, he was a director of the Columbus, Hocking Valley & Toledo railway, the Columbus & Cincinnati Midland railway, the Hayden Clinton National bank, the New First National Bank of Columbus and the Midland Mutual Life Insurance Co. In 1892 and 1896 he was a delegate from his home district to the democratic national convention and in 1900 as a delegate at large, was chairman of the Ohio delegation. In 1901 he was nominated for governor of Ohio, but was defeated. He was president of the Ohio Centennial Commission of 1903, a member of the American Society of Political and Social Science of the National Geographic Society, of the National Forestry association, the Ohio Archaeological society, and was former vice president of the Leslie F. Orren Educational society and a member of a number of other societies.

Oscar Otto, general superintendent of the South Philadelphia machine works of the Westinghouse Electric & Mfg. Co., who died recently, as the result of an automobile accident, was born in Manitowoc, Wis., Jan. 2, 1859 He finished an apprentice course as machinist in the shops of the Chicago & Northwestern railway and later accepted a position with the Northern Pacific Railroad Co. at Tacoma, Wash. He went from there to the Oregon Short line at Salt Lake City, Utah, returning in 1898 to the Chicago & Northwestern as superintendent of its Chicago shops. Mr. Otto became general superintendent of the Westinghouse machine works at East Pittsburgh in June, 1909. When the company opened its new plant at Essington, Pa., he supervised the installation of the machinery and in February, 1918, he was transferred to the South Philadelphia works where he remained until his death.

Here and There in Industry

Live Information Which Records the Expansion of Various Lines of Productive Enterprise

SAMUEL S. BUCKLEY and Edgar D. Newkirk, president and secretary-treasurer of the Onondaga Steel Co., Inc., Syracuse, N. Y., who recently returned from a trip abroad, commenting on their trip state there is little likelihood of French competition in the American market. On the other hand they did not think America would make any great inroads into the French market, as it is expected England and Sweden will supply France with most of its imports of tool steel, until that country is rehabilitated. They declare there was a decided feeling of labor unrest throughout France, despite the fact wages in the steel mills and other industries are much higher than in prewar days, and compare favorably with those paid in this country.

From their observations the French steel industry will recover quickly providing coal can be furnished in sufficient quantity, due to the fact the mills are more or less scattered and were not damaged to the extent the ore and coal fields were. One mining engineer told them that it would take three years before conditions in the Lens coal district could become normal.

* * *

ERECTION of a building and purchase of all necessary machinery and equipment has been effected by the Liberty Starter Co., Detroit. The new equipment is now being placed in the building. The company manufactures electric starters.

* * *

IN order to care for its expanding business the Mohegan Tube Co., Brooklyn, N. Y., is building an extension to its plant, 100 x 150 feet, which will be modernly equipped. It is the company's intention to double the plant's capacity, after erection of the addition has been completed.

* * *

CONSTRUCTION of a building, three stories, 66 x 286 feet, is now in progress, for the Benjamin Electric Mfg. Co., Chicago, which when completed will be utilized for warehouse purposes. It will be arranged with large loading platforms for railroad service as well as for truck receipts and shipments. The building will be connected with the plant by means of covered passages and mechanical conveyors which will handle material to storage and for shipment. Frank D. Chase, Inc., Chicago, is engineer in charge of construction.

* * *

THE Heinle Co., Pittsburgh, metal-rolling engineers, is furnishing several Canadian rolling mills with roll designs and self-explanatory charts on large rounds and squares, chain rounds and staybolts. Preparation for the improvements to roll this material was deferred when the war started.

* * *

ORDERS have been received by the Electric Furnace Construction Co., Finance building, Philadelphia, for a 1-ton Greaves-Etchells electric furnace from the Sullivan Machinery Co., Claremont, N. H., and a furnace for the manufacture of coinage bronze from the Imperial Japanese Mint, Osaka, Japan.

* * *

ERECTION of a temporary building is under way for Saiberlich Bros., Appleton, Wis., to enable the company to complete a number of demonstrating tractors. Plans for a permanent plant, to be two stories, 120 x 120 feet, are now being prepared. This plant will be equipped with modern machinery for the manufacture of tractors on a quantity scale.

* * *

THE P. A. Geier Co., Cleveland, is erecting an additional plant which will be entirely occupied by its machinery department. The present building occupied by the machine shop will be taken over by the electrical division. A recent increase in capital from $250,000 to $400,000 has been authorized. P. A. Geier is president of the firm.

* * *

REORGANIZATION of the W. & B. Douglas Co., Middletown, Conn., has been effected by electing Dale D. Butler president. The other officers are: Vice president, William B. Douglas; secretary, F. E. Gibbons, and treasurer, George D. Hastings. The company plans to engage a new factory manufacturer. The firm is engaged in the manufacture of pumps.

* * *

IN order for the firebrick for its second battery of blast furnace stoves has been placed by the American Rolling Mill Co. with the Ashland Fire Brick Co., Ashland, Ky. The latter producer had received a previous order for brick for six stoves. The Mid-Continent Iron Co., Kansas City, Mo., also has placed an order with the Ashland company for blast furnace brick.

* * *

FOR the present the Dayton Steel Co., Dayton, O., will conduct operations in a plant which it recently purchased and to which it is now making small additions and improvements. According to F. C. Worbs, manager, a new plant will be erected as soon as the company's business warrants it. The company will specialize in the fabrication of structural steel. J. A. Burger is president of the firm.

* * *

THE Atlas Engineering Co., Lincoln, N. J., capitalized at $10,000, has purchased all necessary equipment and will engage in the conversion of high speed scrap, the manufacture of high-speed steel and small forgings. The company does not plan to erect a plant at present. Officers are: President, M. F. Wirtz; vice president and general manager, K. G. Walker; treasurer, G. L. Wirtz, and secretary, M. T. Otto.

* * *

THE Oliver Chilled Plow Works, South Bend, Ind., recently purchased four 500-horsepower Connelly boilers, equipped with Green stokers, Foster superheaters and Diamond soot blowers. The Jeffrey Mfg. Co., is equipping the company's plant with coal-handling machinery and water softening equipment is being furnished by the Dodge Mfg. Co. The Advance Pump Co. is supplying the plant with centrifugal boiler feed pumps while the turbines are being supplied by the Steam Motor Co. The Oliver company recently completed the erection of a new boiler house, and the equipment now is being installed.

Here and There in Industry

Live Information Which Records the Expansion of Various Lines of Productive Enterprise

THE L. B. Foster Co., Pittsburgh, recently acquired control of the Light Railway Equipment Co., manufacturers of light rails, frogs, switches, portable and industrial track, turntables, dump cars, flat cars, coal charging cars and industrial cars. A new factory recently was completed by the company at Holmes, near Philadelphia, management of which is in the hands of H. A. Ellis, who has had many years of experience with the industrial car business for a great many years. B. H. Behrens, for 20 years identified with the Orenstein-Arthur-Koppel Co., now the Koppel Industrial Car & Equipment Co., is manager of sales of the company, general offices of which are in the Park building, Pittsburgh, with sales offices in the Commercial Trust building, Philadelphia, and the Tribune building, New York City.

* * *

A RECENT incorporation is that of the Borgeson Mfg. Co., Torrington, Conn., which plans to engage in light machine work and to specialize in manufacture of a universal joint. The company is capitalized at $50,000. Officers are: President, John Kennedy; vice president, James J. Green; treasurer, Richard J. Kennedy; secretary, James L. Green and assistant secretary and treasurer,, Emile J. Lavalette.

* * *

CONTRACTS were recently let by the Belden Mfg. Co., 2300 South Western avenue, Chicago, for the erection of a 4-story factory building, to be built at Kilpatrick avenue and West Congress street, Chicago. This will be the third building erected by the company at this site, and construction of five more are contemnew building, when completed, will plated in the next few years. The be utilized for the expansion of the firm's magnet wire departments.

* * *

DUE to an increasing export trade in its regular line of rolling mill and steel works equipment, the directors of the Treadwell Engineering Co., Easton, Pa., recently authorized the building of an extension to the plant's main erection shop. The building will be 90 x 220 feet and will be equipped with modern tools and a number of cranes. A central heating system will be installed. The company also plans the erection of a steel foundry for the manufacture of heavy steel castings, but this project will not be taken up for some time.

* * *

THE Trieschman Mfg. Co., Hartford, Conn., recently was granted a charter with $50,000 capital, to continue on a broader scale the business conducted by L. H. Trieschman, manufacturer of straps, articles of leather, etc. The reorganized company plans to put on the market several patented articles of metal. No plant enlargements are contemplated at this time. L. H. Trieschman is president of the company.

* * *

INCORPORATION of the Berggren Engineering Corp., 252 Fortieth street, Brooklyn, N. Y., to engage in general engineering, marine work, boilermaking, etc., has been effected. The company which is capitalized at $20,000, has acquired a plant in which it has installed modern equipment, and will specialize in the manufacture of a newly-invented piston ring. The officers of the company are: President, Gustave Berggren; treasurer, John Edwards, and secretary, Reuben M. Cohen. The company maintains a branch office at 277 Broadway, New York.

* * *

PARK & WILLIAMS, Inc., Real Estate Trust building, Philadelphia, have been made the selling agents for merchant pig iron, produced by the Alan Wood Iron & Steel Co., at its Swede furnaces at Swedeland, Pa. The latter company recently completed a large new stack giving it a total of three furnaces. The small furnace is about to be blown in on foundry iron. Due to excess blast furnace capacity, as compared with its steel requirements, the Alan Wood Iron & Steel Co. is expected to be a regular seller of iron in the future.

* * *

THE Carlin Steel Products Co., Philadelphia, has been dissolved as a partnership and organized as a corporation with the following officers: President, S. Worcester Sargent; treasurer, John Lindauer Jr.; secretary, David L. Schwartz. The company will continue in its present quarters in the Commercial Press building. It now acts as sales representative in the Philadelphia district for the American Brake Shoe & Foundry Co., the American Malleable Co., the Laclede Steel Co., Russel, Burdsall & Ward Bolt & Nut Co., the Neely Nut & Bolt Co., the Pittsburgh Rivet Co., LeMoyne Steel Co., and the Endicott Forging & Manufacturing Co.

* * *

BRIGGS & Turivas, Chicago and New York, scrap dealers, purchased the plant of the British Chemical Co., Trenton, Ont., from the imperial munitions board of Canada, and have formed Briggs & Turivas of Canada, capitalized at $1,200,000. The British Chemical Co. was organized during the war, and the plant was built at a cost of $8,000,000. It has a daily capacity of over 100 tons of sulphuric acid, 75 tons of nitric acid. 25 tons of finished smokeless powder and 45 tons of ethyl alcohol. The company may decide to discontinue the manufacture of powder and nitric acid and limit production to sulphuric acid.

* * *

THE first hull of a contract for 12 all-steel 5000-ton ships for the Emergency Fleet corporation, recently was launched at the plant of the Mobile Shipbuilding Co., Mobile, Ala. This is the first all-steel ship built at this port and the company expects to launch on the average of one hull a month at the present time five hulls are in various stages of completion. At a recent meeting of the stockholders several names were added to the board of directors. They are: Henry D. Tudor, president of the Commonwealth Finance Corp., New York; Henry Hall, president of the First National Bank; A. L. Staples, president of the Peoples National Bank and Frank W. Boykin, manufacturer, all of Mobile. Henry L. Brittain was re-elected president; Frank McLaughlin, former general manager, vice president and general manager, and George D. Brittain was re-elected treasurer. The capital stock of the company was increased to 50,000 shares.

Upset Exchange Threatens Trade

Germany Looms as Most Formidable Competitor as Depreciation of Mark Attracts European Trade to Former Enemy—Premium on Dollar Raises Wall Against Buying Here—Republic Report Out

BY JOHN W. HILL, FINANCIAL EDITOR

THE urgent necessity of expediting measures to finance exports to Europe and forestall, if possible, the undermining of American export hopes by German competition especially, was the outstanding lesson of the severe demoralization which overtook the foriegn exchange market last week. The feature of the movement was the sensational decline on one day of sterling to an unprecedented low point of $4.26, a discount for the pound in the United States of 12½ per cent, caused largely by the appearance on the market of a huge volume of sterling bills held by cotton shippers.

With allied and neutral money—depreciated in this country by degrees ranging from the current discount on the pound of 10 per cent and on the franc of 25 per cent, to 26 per cent for the Belgium franc and 40 per cent for the Italian lire, it is impossible to remain blind to the cold economic fact that a rigid wall is being raised against exports from American shores. On the other hand, the German mark is at more than 66 per cent discount in both France and England as well as in America, a situation offering glittering attractions to buy in Germany. Optimists, therefore who have been indulging in the complacent dream of industrial activity and prosperity based upon anticipations of huge requirements to be met in Europe may have to prepare themselves for a rude awakening unless remedial steps are taken soon.

The needs of Europe are so imperative that many have not allowed themselves to be concerned over the movement of the exchanges, feeling that the war-torn nations would be forced to buy at any price. But these very nations are revealing an ominous unconcern over the exchange situation, themselves, which would be peculiar if a great volume of purchases were contemplated here. The uncomfortable fact is, that the Europeans greet the lofty isolation of the dollar joyfully as a convenient tariff wall which will serve to cut down their excess of imports from the United States without the unpleasantness of quarreling with home free traders over high import duties. No one doubts that the European countries will be forced into the American market for many kinds of raw materials, foods and other necessities, but such purchases will be kept down to the strictest minimum. To cover these indispensable requirements long term credits will be arranged in order to carry the buyer through the period of low exchange quotations. As for the remainder of their requirements the allies will either wait or turn to Germany where they may be enabled to buy, because of the depreciation of the mark, on a far more favorable basis than in the United States.

To overcome this attraction of the depreciated German mark already beginning to be felt in the world's commerce, America has two means at hand. She must price her goods reasonably and be ready with long time credits and with funds to invest in foreign securities to the extent necessary to stabilize the exchanges and prevent violent fluctuations which keep both buyer and seller in a state of uncertainty.

The following table showing the parity, the present quotation and the approximate discount of the currencies of 13 European countries in relation to the dollar, presents the problem in a vivid concrete way:

PREMIUM ON DOLLAR

	Parity of Exchange	Quotation July 22	Approximate per cent of discount
English	$4.86	$4.35	10
French	.193	.141	25
Italy	.193	.116	40
German	.238	.085	64
Holland	.402	.377	5
Belgium	.193	.14	28
Roumania	.193	.093	51
Cezko-Slovakia	.203	.057	70
Austria	.203	.042	72
Juga-Slavia	.203	.038	80
Sweden	.268	.247	8
Norway	.268	.237	11
Denmark	.268	.224	16

According to the above table an order of pig iron priced at $10,000 in American money would cost the English buyer a sufficient number of pounds to make $11,000 according to normal exchange valuations, while a German buyer with the mark at one-third its normal valuation, would have to pay a total of marks that would equal $30,000 in times when the mark was accepted at par. The American seller of course would not get any more than the $10,000 in dollars, the difference being absorbed by the evaporation of values caused by the depreciation of the foreign currencies. On the other hand goods bought in Germany in terms of marks can be purchased for many less dollars, or pounds or francs than in normal times. Where European buyers will turn for supplies in the face of this situation is hardly open to question.

Thus the handicap under which American export trade labors is made clear. The most extreme necessity will be required to bring those countries into this market so long as exchange rates remain unstabilized and these buyers are compelled to settle on that basis. Some American exporters have accepted payment for goods in terms of foreign currency which means that they take the exchange risk, but the recent fluctuations are causing sellers to insist on payment in dollars, throwing the exchange risk upon the buyer.

A glance at the export figures of the United States shows why the exchanges are in their present upset state. Since the beginning of the world war the excess of exports to Europe has attained nearly $12,000,000,000. This was offset by $10,000,000,000 in government credits and $2,000,000,000 in private credits, with the result that exchanges were stabilized during the war. On March 20, however, the government credit extensions having practically ceased, the official support was removed from the exchanges. Notwithstanding, heavy exports to Europe have continued. To what extent the following table showing the excess of exports from the United States to seven European countries for May and for the 11 months ending with May, indicates:

	Excess of Exports May	11 Months
France	$ 47,993,668	$ 808,747,616
Italy	34,817,082	435,744,685
Holland	1,677,770	52,041,434
Norway	12,220,136	82,441,270
Spain	2,440,212	64,106,074
Sweden	4,731,420	54,796,742
United Kingdom	159,258,234	1,713,700,447

Not only has Europe a staggering

adverse trade balance to solve but the allied countries are burdened with an annual interest payment of $500,000,000 to this country. Little wonder that they want American buying scaled down. It is realized that until European countries are able to produce sufficiently to pay their debts in exports that their problem will remain a tremendous one.

Germany's advantage in point of the exchanges is undisputed but her ability to supply goods for export has been questioned in some quarters.

On the other hand, keen observers who have just returned from Europe, unhesitatingly maintain that Germany will loom as America's most formidable competitor. England, Belgium and France as well as the neutrals are making preparations to resume trade relations on a broad scale with the late enemy. Belgium is to encourage the importation from Germany of raw materials and to permit the importation of manufactured articles that do not compete with home industries.

At the start Germany is handicapped by her lack of raw materials, high coal prices, and labor troubles, while the impediment of heavy taxes will remain ever with her with the result that her production costs are advanced enormously. Yet she is appearing in neutral countries and even in the devastated regions with aggressive sales campaigns, offering in some cases to replace the machinery in Belgium plants demolished by Hun armies, at price levels with which America and England cannot compete. Possibly she is willing to do business at a loss for a time. While the buyers in Belgium and other countries would prefer to purchase in America, their native thrift and present necessity probably will cause them in the end to overcome their repugnance and trade where they can buy the cheapest. Germany's plants have been unscathed and her genius of organization is said to be accomplishing wonders in re-establishing industrial equilibrium. Once this is achieved and industrial peace created, providing she is able to obtain raw materials on reasonable terms, Germany without doubt will be an important factor in European trade. Her lack of shipping will hamper her exports overseas, however, for a long period.

Respecting Germany's future Barkley's Bank, Ltd., London, made the following interesting comment in a recent bulletin:

"Bargaining with Germany for an indemnity resolves itself into bargaining for a larger share of her export business. Unpalatable as it may seem the allies are now interested in Germany as a business establishment—not as a beaten, disorganized and ill-found nation. The allies have to face the fact that if they are to receive from Germany a great contribution they must first of all help her to become a great industrial nation. The acceptance of the indemnity forces the allies to trade with her."

Republic Earnings Shrink But Orders Gain

The most striking and significant feature of the second quarter report just made public of the Republic Iron & Steel Co. is the gain in unfilled orders on hand June 30. These show an increase from the low total of 114,305 tons on March 31 to 187,361 tons on the latter date, an increase of 73,056 tons. This detail of the report reflects the broadening operations of the steel industry, and serves to counteract the tremendous slump in earnings revealed during the period, because of the promise it gives for the coming months.

After federal taxes and charges surplus for the quarter was $510,916 compared with $1,053,956 for the preceding quarter and $3,005,772 for the corresponding period one year ago. After paying preferred dividends aggregating $437,500 and common dividends of $407,865 a deficit of $334,448 was exhibited. This compared with surpluses of $2,160,407 for the quarter in 1918 and $6,285,037 in 1917.

The slump reflects the paralysis which overtook the industry during the unfortunate price controversy between the industrial board and the railroad administration which held back buying and the recovery of trade conditions until late in May.

The Surplus available for dividends for the six months ended June 30 amounted to $1,564,872, as compared with $6,027,540 for the corresponding period in 1918. Following is the comparative statement of the company's earnings for the second quarter:

	1919	1918
Net earnings*	$ 952,770	$3,675,444
Other income	169,816	178,849
Total income	$1,122,586	$3,854,294
Deprec. and renewals	343,778	573,606
Exhaustion of minerals	89,467	86,364
Bond interest	178,425	188,651
Balance	$ 510,916	$3,005,772
Preferred dividends	437,500	437,500
Common dividends	407,865	407,865
Deficit	$ 334,448	†$2,160,407

* Net earnings from operation after deducting charges for maintenance and repair of plants, amounting to $1,174,246, and provision for federal and excess profits taxes.

† Surplus.

Reduced Price

Brings Out Better Business in Naphthalin—Shortage in Phenol

New York, July 21.—The recent reduction in prices has resulted in considerably better activity in naphthalin. Both the dye industry and drug trade, sellers assert, are buying in larger volume than for several weeks. The market on naphthalin in flakes may be quoted at 6½ cents to 7½ cents and on naphthalin in balls at 8½ cents to 9½ cents.

The shortage of phenol continues most pronounced, with spot shipments very difficult to obtain. Relief is expected, however, as soon as the government releases some 27,000,000 pounds which it has in stock. The market may be regarded as nominal.

Trading in pure and 90 per cent benzol continues brisk, the rubber industry being especially active. This demand in conjunction with the heavy movement of motor benzol, is making for the continued shortage of supplies of the pure product. Pure benzol is holding at 24 to 28 cents for spot and contract shipments. Toluol is also scarce, although quotations on this product, too, are unchanged, the market being at 25 to 35 cents. Solvent naphtha is holding at 22 to 27 cents for either spot or contract shipments.

The long-expected buying of sulphate of ammonia on the part of the fertilizer industry has not yet developed and the domestic market remains dull. Export demand, however, continues in evidence, with orders being taken at around $4.60 in double bags at Atlantic seaboard.

Coke Oven By-Products

Spot

Per Gallon at Producers' Plant

Pure benzol	$0.24 to .28
Toluol	.25 to .35
Solvent naphtha	.22 to .27

Per Pound at Producers' Plants

Phenol	nominal
Naphthalin, flake	0.06½ to .07½
Naphthalin, balls	0.08½ to .09½

Per 100 Pounds at Producers' Plants

Sulphate of ammonia	nominal

Contract

Pure benzol	$0.24 to .28
Toluol	.25 to .35
Solvent naphtha	.22 to .27

Per Pound at Producers' Plant

Phenol	nominal
Naphthalin, flake	0.08½ to .09½
Naphthalin, balls	.10½ to .11½

Per 100 Pounds Producers' Plants

Sulphate of ammonia	nominal

Small Lot Tool Sales Numerous

July Orders Better Than In Previous Years—Large Prospective Buyers Thought to be Withholding Purchases Despite Price Advances—Crane Awards Fairly Numerous in Pittsburgh and New York Districts

ACTIVITIES in the various machine tool selling centers continue to be devoid of important trade developments. Buyers are supplying their immediate wants only and while evidence is not lacking to show that machinery is needed in many directions, prospective purchasers are holding off. Advances of 15 per cent on lathes and 5 per cent on shapers are noted this week and it is claimed these will be followed by others. Dealers continue to declare if the disinclination to close is based upon an expectation of lower prices, waiting will be costly. Deliveries are being pushed further into the future from week to week.

Strikes in Rockford, Ill., have delayed machinery deliveries in Chicago but labor difficulties prevailing in many directions, have so far had little effect upon the machine tool market. In the east some labor troubles have indirectly benefited the machinery industry. Manufacturers who have faced walkouts, etc., are calling for special machinery to do work mechanically which formerly was done by hand.

In Pittsburgh, noteworthy transactions occurred in the crane market only, light machinery and tools meeting only a fair demand. The Falcon Steel Co., Niles, O., bought five cranes from the Morgan Engineering Co., and placed its motor and switch contract with the General Electric Co. The Newton Steel Co., West Newton, O., purchased several cranes from the Alliance Machinery Co. The Cambria Steel Co., Johnstown, Pa., closed for some steam blowing engines. Some heavy machinery inquiries are due for appearance including one from the American Rolling Mill Co., Middletown, O., for equipment for its contemplated new sheet mills. Further east, crane orders to the value of about $2,000,000 were placed with the Morgan Engineering Co., the Cleveland Crane & Engineering Co., and the Shaw Electric Crane Co., by the Charleston, W. Va., ordnance plant. Several other small crane sales were made in the New York district. Bids have been taken on three cranes for France.

Much of the demand for machine tools in the east is coming from brass manufacturers in New Jersey and in Brooklyn, N. Y. It is generally believed in that territory however, that no large amount of buying will be done until the railroads are in a position to close on their equipment requirements. The Bethlehem Steel Co. purchased 10 machines for its plate shop and the A. B. See Elevator Co. bought about $70,000 worth of machinery for its plant in Jersey City, N. J.

Fair sized inquiries are out in Chicago for various plant extensions and the Rock Island arsenal wants 10 machines The ordnance department in Chicago is endeavoring to dispose of 64 lathes. Cleveland dealers are interested in inquiries from the Marion Steam Shovel Co., Marion, O., which desires several used machines in addition to the new tool list issued recently. The Koehring Machine Co., Milwaukee, Wis., will require a number of cranes, lathes, drill presses, milling machines, drills, etc., a little later on. An important contract closed with a Dayton, O., engineering company calls for a very large amount of dies, gigs, gages, fixtures, etc., to equip the unusually heavy list of tools recently placed by the General Motors Co.

Eastern Tool Market Revives Slightly

A REVIVAL in activity in the New England industrial district is having a stimulating effect upon the New York machinery market. Sellers report a number of miscellaneous inquiries coming out from this district, and account for this development in a large measure by the fact that the New England manufacturers have begun to divert at least a portion of their capacity to the production of special equipment, for which there is a steadily increasing demand due to the efforts now being made by manufacturers to overcome labor difficulties by mechanical methods.

The brass trade in northern New Jersey and Brooklyn, manufacturers of valves, fittings, etc., are contributing to the bettered inquiry at this time. No large lists are being issued by these interests, but inquiries for one and two machines are being brought out in increasing volume. The local market, nevertheless, is still far from being active, and sellers generally believe there will be no large amount of buying until the railroads are in a position to act upon their requirements. Lists of second hand tools are being brought out, but these tools are not being readily absorbed.

Among the larger orders placed during the passed week was one for 10 machines for a plate shop for the Bethlehem Steel Co. This business went to the Cleveland Punch & Shear Works. The A. B. See Elevator Co. has purchased about $70,000 worth of equipment for its plant at Jersey City, N. J. A boring machine and a couple of large lathes were included in the order. Lathe manufacturers met in Buffalo last week to discuss trade conditions. The increase in costs was emphasized.

Various new plant projects continue to come up in the east. One of the largest under contemplation is a $1,000,000 refinery at Baltimore for the Mexican Petroleum

Illustrated below is our large Flat and Square Straightener—the latest development in flat straightening.

This machine produces an extremely straight bar, free from short kinks and buckles—a very important thing to be considered where flats are used.

Every piece of equipment used in the production of Ludlum Steel is the best that can be designed for the purpose—for it all helps to maintain "Ludlum" quality.

Prompt shipments from our warehouse stock at Watervliet, N. Y., Detroit, Mich., Chicago, Ill., or Cambridge, Mass., handled through our District Offices.

LUDLUM STEEL COMPANY, General Offices and Works: WATERVLIET, N. Y.

Branch Offices: New York City Philadelphia Chicago Detroit Cleveland Pittsburgh Cambridge, Mass. Cincinnati Buffalo

Co., 20 Broadway, New York. The Hanson-Whitney Mfg. Co., New Haven, Conn., recently incorporated with $100,000 capital, will build a new plant for the manufacture of machinery. James Stewart & Co., 30 Church street, New York City, have been awarded a contract for the erection of a large shipbuilding plant at Hampton Roads, Va., by the recently organized Norfolk-Hampton Roads Dry Dock & Ship Repair Corp. Another shipyard project is that of the Southern Shipbuilding Corp., Newport News, Va. Contracts for six all-steel buildings have been awarded to the Truscon Steel Co., Youngstown, O., and it is expected that the yard will be in operation by Jan. 1.

The award of between $1,500,000 and $2,000,000 worth of cranes for the Charleston, W. Va., ordnance plant constitutes the largest business to be placed of late. The Morgan Engineering Co. received the larger share of this business, with the Cleveland Crane & Engineering Co. and the Shaw Electric Crane Co. figuring in the remainder. The Chicago Pneumatic Tool Co., Chicago, has placed two overhead cranes, one of 15 tons and the other 20 tons capacity, and a 10-ton trolley and 15-ton bridge, this business, according to reports, going to the Champion Engineering Co.

Other orders include a 15-ton handpower crane for the Phoenix Utilities Co., Dallas, Tex., the order being placed with the Electric Bond & Share Co., 71 Broadway, New York City. The Greenwood Brass Foundry Co., Brooklyn, has placed a 10-ton electric crane with the Shaw Electric Crane Co. Hunter & Havens, Bridgeport, Conn., have awarded a 3-ton crane, with a 60-foot span, to the Case Crane & Engineering Co.

New inquiries include a 10-ton and 15-ton crane for the Meade-Morrison Mfg. Co., Boston. Both cranes are to have a span of 68 feet and a 3-ton auxiliary. The United Gas & Electric Co., 61 Broadway, New York, is inquiring for a 5-ton bucket handling crane with an 80-foot span, for the Little Rock Railroad & Electric Co., Little Rock, Ark. Westinghouse, Church, Kerr & Co., New York City, are in the market for two 15-ton cranes, with 62-foot span, and two 5-ton wall cranes, with 20-foot boom, for Pettibone, Mulliken & Co., Chicago. The Treadwell Engineering Co., Easton, Pa., is inquiring for one 35-ton crane, with 57-foot span, for a new erection shop. Another inquiry is that of Banthaw & Frazer, Hoboken, N. J., calling for one 5-ton crane, with 41½-foot span. Abendroth Bros., Portchester, N. Y., are in the market for a 3-ton electric crane, with a 30-foot span.

The equipment trade is much interested in the announcement of an appropriation by New York City for the construction of 11 piers for Staten Island. These will cost about $15,000,000. Of further interest are plans for the erection of a $2,000,000 drydock on Staten Island by the Frazer, Brace & Clark Drydock Corp.

The Bethlehem Steel Co., Bethlehem, Pa., is expected to close very shortly on nine electric cranes. Anthony Gibbs, 61 Broadway, New York, has closed bids on one 30-ton and two 10-ton gantry cranes and two special cranes for shipment to France.

Equipment Contracts Awarded in Pittsburgh

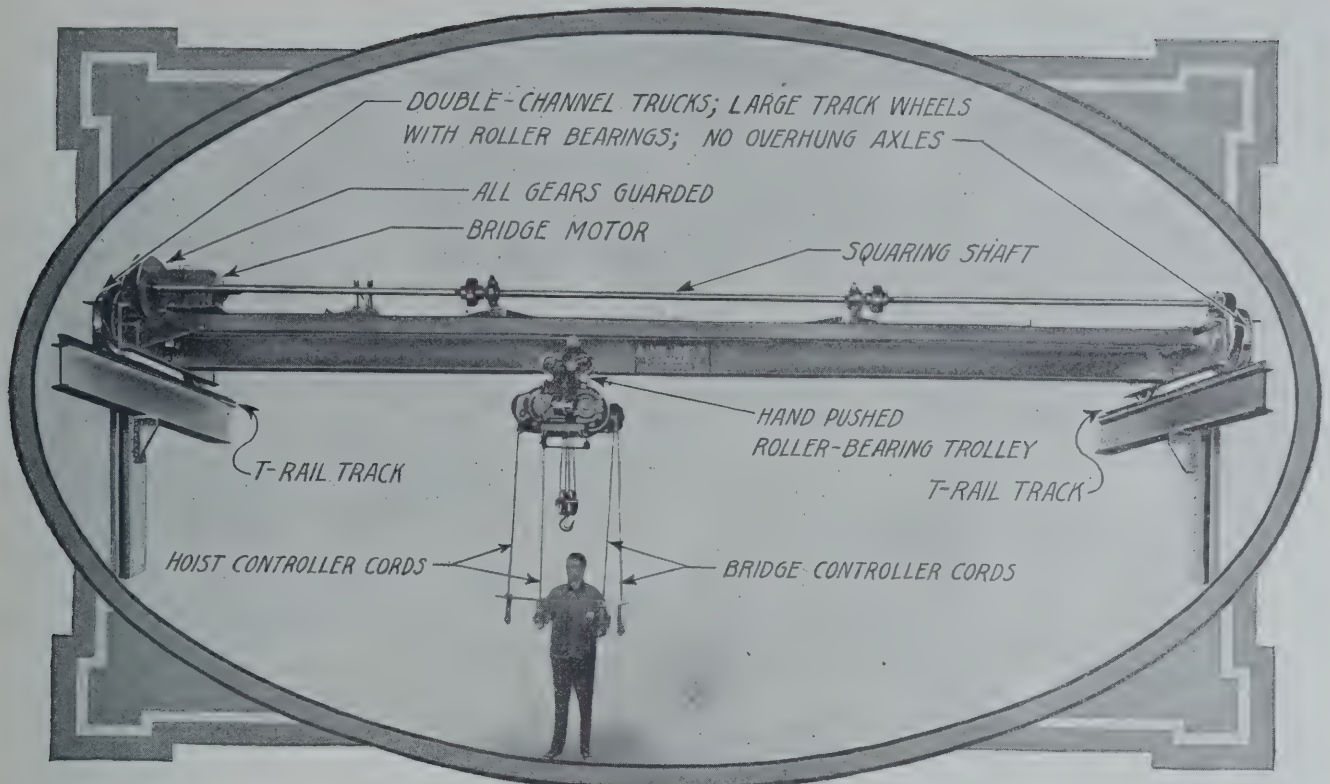
ACTUAL equipment awards are on the increase in the Pittsburgh district. The Falcon Steel Co., Niles, O., recently closed for five cranes, three 10-ton and two 30-ton, to the Morgan Engineering Co., Alliance, O., and also has awarded the contract for motors and switches to the General Electric Co. The Newton Steel Co., West Newton, O., has placed an order for four cranes with the Alliance Machinery Co., Alliance, O., and also has closed with the General Electric Co. for the motors and switches.

The Mesta Machine Co., Pittsburgh, has received an order from the Cambria Steel Co., Johnstown, Pa., for two 48 x 84 x 84 x 84 x 60-inch steam blowing engines, these engines being similar to four other engines installed at this plant by the Mesta Machine Co. some time ago. The Mesta company has received the contract and is building two 24 x 52 x 36-inch Una Flow type blowing engines for the Tata Iron & Steel Co. in India, and a 42 x 84 x 84 x 84 x 60-inch steam blowing engine for the Pittsburgh Crucible Steel Co., Midland, Pa.

Several inquiries for heavy steel plant machinery are up and as builders are beginning to become filled up and less inclined to sacrifice profits for orders, it is more than probable that some of this business will be closed shortly. Business in light machinery and machine tools is steady rather than active, buyers still being inclined to cover actual requirements rather than to anticipate them.

Chicago Transactions Continue Small

BUSINESS in the Chicago machinery market is not so active as it has been during the past three weeks, and owing to a strike of machinists at Rockford, Ill., some deliveries have been held up. Following the lead of a large manufacturer of shapers who recently increased his price 8 per cent others have now increased their prices, but the advance in most instances has been only 5 per cent. The general advance expected in the machinery market has not materialized, and if business continues in small lots, makers and dealers may delay action until a larger buying movement develops.



The Sundstrand Adding Machine Co., Rockford, Ill., is building a new plant and has inquiries out for considerable equipment. The Edwards Valve Mfg. Co., Indiana Harbor, Ind., is extending its plant and will need a half dozen miscellaneous machines. Instead of selling equipment, as generally was expected would be the case, the Rock Island arsenal is reported in the market for about 10 new machines. These are the largest inquiries before the market at present.

While some dealers report they are doing a "phenomenal" business for this season the business consists almost entirely of single machines, and other dealers say that the business in July is not nearly so large as it was last month. The ordnance department of the United States army is offering 64 standard amalgamated shell-turning lathes for sale, which now are at the Chicago storage depot.

Machine Tool Distribution Widespread

SPECTACULAR inquiries and sales continue absent from the Cleveland machine tool market. Equipment needed immediately is being purchased but buyers still decline to anticipate their requirements. Sales sheets record many single tool sales; a drill here, a grinder there, a lathe somewhere else. One of the pleasing features of the market, it is said, is the widespread distribution of sales, dealers claiming that scattered business is the most desirable. Apparently there is a considerable big business under the surface but purchasers are holding back for an unstated reason. Dealers claim that those buyers who are withholding their purchases because they expect prices to drop are doomed to disappointment. Much talk continues to be heard of increases and an advance of 15 per cent on a representative line of lathes was received no earlier than last Monday morning.

Confirming orders are being received in Cleveland in large numbers from the General Motors Corp., Detroit, on its recent huge machinery contract. One of these orders received last week, called for three machines at a cost of approximatly $50,000. The Defiance Machine Works, Defiance, O., which is building the machines for the General Motors Corp., has let a million dollar con-

Here's The Ideal Crane for Side Bays

IT'S just the thing for machine shops, foundries, structural shops, mills, etc. The time it will save in a machine shop by quickly and economically serving machine tools with castings, etc., will soon pay for the crane. After that, the saving is "pure velvet".

Important Advantages

1. Crane always ready for service. Any shop hand can operate it. No need for keeping an operator up in a cage.
2. Pull a cord to operate hoist or crane; let go, and it stops. Simple as A, B, C.
3. All operating cords handy, both controllers mounted on hoist—right where the load is being handled.
4. Load is handled with greater precision and safety, than when operator is carried in a cage near ceiling and must depend on signals.
5. Like our mono-rail electric hoist and other Link-Belt products, this crane embodies Quality, Reliability, Accessibility, and High-Efficiency.

Built in 1, 2 and 3 Ton Capacities. Write for data blank. Let us figure on your requirements.

tract to the Carroll Engineering Co., Dayton, O., for the special jigs, fixtures, dies, gages, etc. The Carroll company has opened a branch office in Defiance, where all the engineering work will be done. Actual construction work will be carried on in Dayton, where tools and fixture manufacturers will be kept busy for the next year.

Some Cleveland dealers report a dearth in inquiries, while those who angle for them with stock lists and attractive prices, report the receipt of large numbers. The demand for used machinery is large, many buyers believing that bargains now are obtainable with war plants becoming reorganized on a peace basis. In addition to its list of new machinery issued recently, the Marion Steam Shovel Co., Marion, O., wants heavy duty drills, 30 to 40-inch lathes and a 28-inch Gisholt turret lathe. The Ideal Electric & Mfg. Co., Mansfield, O., manufacturer of power apparatus, desires to obtain a 10 x 72-inch Norton grinder, a 26-inch turret lathe, a 20-inch x 8-foot heavy duty engine lathe, a 21-inch x 10-foot Leblond lathe, a 76-inch Bullard heavy duty boring mill if it can dispose of its present 72-inch Bickford boring mill, an air compressor, a 18-foot heavy duty boring mill and an open side planer. It also is offering a 20-inch Rockford and a 20-inch Mechanics drill for sale with a Hall steam pump air compressor. The Koehring Machine Co., Milwaukee, will require two 15-ton cranes as well as a number of machine tools later in the season. Included in its list of requirements are several 24-inch turret lathes, 20-inch lathes, a number of drill presses, radial drills, etc., an open end milling machine, a keyseater and a planer. These are wanted to equip a new 74 x 325-foot building which the Koehring company is about to erect.

Small inquiries continue to be received in fair volume. The Schwab Safe Co., Lafayette, Ind., wants a new or used drill press to hold a 1-inch drill with a 12-inch table and a ¼-inch capacity squaring or gap shear. The Eagle Engineering Co., Springfield, O., desires a 22-inch Barnes 4-spindle drill. The Keystone Brass Works, Inc., Erie, Pa., is anxious to locate a 24-inch backgeared drill press with power feed and automatic stop as well as a 28-inch sliding head drill.

Generally speaking, the machine tool business for July this year is much better than it usually is in that midsummer month and a number of building projects continue to be announced and these spell equipment requirements. Deliveries, however, are receding further and further into the future. The largest of these new programs of expansion is the recently announced plan of the American Rolling Mill Co., Middletown, O., to absorb the open-hearth capacity inaugurated during the war. Eight new sheet mills are to be built as a result of the refinancing recently arranged and a list of heavy machinery requirements is expected shortly. The International Motor Co., Allentown, Pa., plans a 300 x 600 foot addition which including equipment will cost approximately $150,000. Several machine shops are to be erected shortly including one for the Modern Machine Works, Slatington, Pa., one for the Youngstown Steel Car Co., Youngstown, O., one for the Will-Burt Co., Orrville, O., and one for the Hooven-Owen-Rentschler Co., Hamilton, O. The Brenneman Tractor Co., Dayton, O., expects to build a factory in the near future.

Construction and Equipment

Concise and Timely Business Building Opportunities from the Field of Industry

Among New England Plants

PORTLAND, ME.—The Job Shipbuilding Corp. has been incorporated with $50,000 capital by R. L. Johnson, H. I. Smith and others.

BOSTON.—The Vermont Hydro-Electric Corp. has been incorporated with $50,000 capital by John F. Moors, Ralph B. Harris, Salem, Mass., and William P. Daniels.

BOSTON.—The Coaler Mfg. Co. has been incorporated to build machinery with $250,000 capital by Ernest F. Koehler, South Berlin, Mass., Ludovic A. Morin, Marlboro, Mass., and Alexander J. Smith, Holliston, Mass.

CAMBRIDGE, MASS.—The F. S. Payne Co., manufacturer of freight elevators, will build a 1-story addition.

HOLYOKE, MASS.—The Holyoke Wire Cloth Co. has been incorporated with $30,000 capital by John Warnock and Alexander H. Warnock, both of Springfield, Mass., George C. Doherty Sr., James Lees and A. Stuart Dunlop.

LAWRENCE, MASS.—The Mills Machine Co. contemplates a machine shop and office building.

NEW BEDFORD, MASS.—The Continental Wood Screw Co. is taking bids for a 2-story addition, 45 x 160 feet, estimated to cost $50,000.

SPRINGFIELD, MASS.—The Package Machinery Co., 182 Bernie avenue, has let a contract for a plant addition, to cost $14,000.

WESTFIELD, MASS.—The Federal corp. has been incorporated to build motor vehicles with $800,000 capital by Herbert P. Linnell and Charles W. Dodson, both of Springfield, Mass., and George H. Sharp.

WORCESTER, MASS.—The M. D. Holmes & Sons Co., heating and ventilating, has let the contract for a brick, mill construction, 4-story and basement, 50 x 100-foot manufacturing plant to cost $50,000.

HILLSGROVE, R. I.—The Rhode Island Malleable Iron Works has awarded a contract for an addition, 25 x 40 feet.

BRIDGEPORT, CONN.—The Perfection Shear Co. recently was incorporated with $500,000 capital, by E. T. Von Wettberg and G. P. Brett Jr.

GROTON, CONN.—The New London Ship & Engine Co. has plans for a 1-story plant addition, 60 x 70 feet, estimated to cost $25,000.

NEW HAVEN, CONN.—The Standard Iron Works has been organized here with capital stock of $3,000. Among the incorporators is Samuel D. Pardell.

NEW HAVEN, CONN.—The Johnson Machine Works has been incorporated with $20,000 capital by F. Godfrey Johnson, Theodore P. Tonne and F. C. Johnson.

NEW HAVEN, CONN.—The Johnson Machine Works has been organized with a $20,000 capital to manufacture machine tool equipment. The incorporators are F. Godfrey Johnson, Theodore P. Tonne and Florence Carmen Johnson, all of this city.

NEW HAVEN, CONN.—The Hanson-Whitney Mfg. Co. has been organized with a capital of $100,000 to manufacture machinery. A plant will be erected although the location has not as yet been announced. Temporary offices of the company will be in the Park street building of Billings & Spencer, now being erected. B. M. W. Hansom who recently resigned as vice president and works manager of the Colts Patent Fire Arms Mfg. Co., is president of the new concern. Clarence E. Whitney also this city, is treasurer, and F. W. Young is secretary.

NORWICH, CONN.—The Irving E. Bogue Co. has been incorporated with a capital stock of $50,000 to manufacture and deal in machine tools and other equipment supplies. William F. Bogue is one of the incorporators.

SOUTHINGTON, CONN.—The Hartford Battery Mfg.

From a photograph of the tractor-testing floor of the Van Dorn Iron Works Co., Cleveland, Ohio, showing Kreodone installation.

Kreodone EVERLASTING Wood Block Floors

Actual Photograph Illustrating Our Prompt and Efficient Service

ABOVE is a view of the plant of the Van Dorn Iron Works Co. at Cleveland, Ohio. The Van Dorn Company had to have a dependable, wear-resisting, permanent floor for its tractor-testing department. It had to have the floor at once.

After considering many kinds of floors, they decided to use Kreodone. The order was given to us on Tuesday night. *The following Friday morning the floor was laid complete and in use.*

Since it was laid it has had, and still is having, the hardest kind of use—testing big "tanks" and caterpillar tractors. It has more than proven everything we say about Kreodone.

When they discontinue making this heavy equipment, this shop will be converted into an assembly room without any further floor expense.

Kreodone floor blocks are of selected long leaf pine, treated with our special, pure Kreodone Oil, which not only preserves the blocks indefinitely, but makes them free from sticky, tarry smudge or other evidences of adulteration.

Write us for full information. Tell us the space you wish to cover and we will give you complete specifications.

REPUBLIC CREOSOTING COMPANY, Indianapolis, Indiana

Announcement
to Buyers and Sellers of Scrap

Whatever your connection in handling Scrap, you expect these things:

Right Price
Quick Action
Courteous Treatment

Established over five years, with a complete and able staff of experienced Scrap men, our organization is ready to serve you.

— The James S. Miller Co
McCormick Building
Chicago

We can give especially efficient service to

— Steel Foundries { Open Hearth and Electric
— Rolling Mills
— Blast Furnaces
— Iron Foundries { Gray and Malleable

New Trade Publications

ELECTRIC ARC WELDING. — The Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa., recently issued a publication covering the process of electric arc welding and the necessary apparatus required. It compares the different processes of welding and points out the good qualities of electric welding.

POWER CHARTS.—Charts giving the relation in any shaft between power, shaft diameter, torsional stress and speed, have been issued by the Wellman-Seaver-Morgan Co., Cleveland, in pamphlet form. This is known as bulletin No. 22. Four practical examples are also included which explain how the charts are used.

CORE OVENS.—The Foundry Equipment Co., Cleveland, is circulating a 44-page illustrated booklet, in which it describes and illustrates core and mold ovens. The information given is general and the illustrations show typical installations. These ovens are built for operation with portable racks, rolling drawers, shelves, cars or combinations of these, and are built to be operated by coke, oil, gas, powdered coal, electricity, etc.

THREAD MILLER.—The Smalley General Co., Inc., Bay City, Mich., is circulating a 4-page pamphlet in which it describes and illustrates a thread miller. It is a single purpose machine designed for three milling speeds. It obtains three changes of speed from the 3-step cone. It is of sturdy construction, occupies little floor space and is easily operated. A time study is given on the back page of the pamphlet.

DRINKING WATER SYSTEM.—The Armstrong Cork & Insulation Co., Pittsburgh, is circulating a 4-page leaflet in which it describes a modern system for the delivery of drinking water to convenient parts of factories, etc. The system consists of water fountains placed at convenient parts of the plant. The company has issued a 48-page booklet, in which the subject of drinking water systems is gone into thoroughly.

TUBE SCRAPING DEVICE.—A scraping device which permits cleaning of lower boiler tubes without shutting down the boiler, keeps the heating surface of the boiler at maximum efficiency and is easily operated, is described and illustrated in a 12-page booklet recently published by the Combustion Engineering Corp., New York. Two of the illustrations are line drawings, showing the front view of a boiler with the scraper in use and a side view with the scraper in operation.

CORKBOARD INSULATION.—A 6-page leaflet is being circulated by the Armstrong Cork & Insulation Co., Pittsburgh, describing cork insulating material for cold storage rooms and freezing tanks. According to the leaflet, this material consists of pure granulated cork compressed in metal molds and baked at a moderate temperature. After baking, each sheet is trimmed and sanded to insure uniformity of size and thickness. It is supplied in standard sheets, 12 x 36 inches, and from one to six inches thick.

PUNCHING AND FORMING PRESSES—The Ferracute Machine Co., Bridgeton, N. J., recently issued an illustrated catalog containing over 400 pages. The equipment listed covers practically all types of presses used in sheet metal work. In all, nearly 1000 separate items are listed and described. A short description of each type of machine is given together with a number of illustrations which show the company's presses in actual use. The large amount of technical information contained makes the catalog of unusual value.

AUTOMATIC LATHE.—A 4-page catalog is being distributed by the Rockford Machine Tool Co., Rockford, Ill., in which an automatic lathe, designed for the rapid production of duplicate parts, is described and illustrated. The machine is built throughout on 22-inch heavy duty lathe lines. It is of the one-speed and one-feed type. Change gears can be used to vary the feed, but according to the leaflet, it is unnecessary to change them unless there is a radical change in the character of the work. The drive is to a friction pulley, through a pair of helical gears to the spindle. The headstock is of cast iron in one piece with a bed. The side carriage is supported on a heavy steel bar and the carriage is solidly and permanently clamped to the bar.

Opportunities Abroad

Information Can be Obtained From the Bureau of Foreign and Domestic Commerce. Requests Should be on Separate Sheets and Should be Accompanied by Opportunity Number

The purchase and agency for the sale of carriage and cart axles, machines for the manufacture of carriage and cart axles, agricultural machinery and light automobiles, are desired by a firm in Belgium. Opportunity No. 29941.

A government in the West Indies desires to purchase a small number of motor trucks. Opportunity No. 29943.

A mechanical engineer will be in America to secure commission or consignment contracts for sale in Belgium of electrical material and supplies, metallurgical appliances, rolling mills, electric furnaces, ores, coal, etc. Opportunity No. 29945.

Descriptive pamphlets and photographs of machinery are desired by a company in Ceylon, which desires to purchase for a complete Portland cement factory. Opportunity No. 29946.

An Italian company wishes to receive offers of machinery, possibly with eventual representation, for cotton spinning, wool carding, washing and combing of wool, cotton and wool waste, and machines for treating waste in general. Opportunity No. 29947.

An electrical dealer in France desires to represent manufacturers of electrical goods in Brittany, particularly electric fans. Correspondence should be in French. Opportunity No. 29921.

Tenders for 36 steel barrage gates and accessories are called for by the chief engineer of the water board of a city in South Africa. Opportunity No. 29922.

Sewing machines, watches and automobiles are required by a firm in Portugal. Correspondence should be in French. Opportunity No. 29926.

A merchant from France who is in this country desires to purchase from manufacturers only, for Roumania, iron and steel, and metal products, electrical goods, automobiles, rubber goods, agricultural machinery, hardware, machinery, electric railway cars and equipment for electric railways, glass and general merchandise. Opportunity No. 29931.

A firm in Belgium desires to purchase or secure washstands, water-closet installations, shower bath installations, heaters for baths, radiators, valves and the agency for the sale of sanitary ware, bathtubs, accessories and vacuum cleaners. Correspondence should be in French. Opportunity No. 29933.

A firm in this country is about to send a representative to Cuba to establish branch offices and desires to secure exclusive agencies from manufacturers of all kinds of hardware, tools, nails, roofing materials, railroad accessories, electrical supplies, etc. Opportunity No. 29934.

A firm in India wishes to purchase and to secure the agency for the sale of hardware. Correspondence may be in English. Opportunity No. 30013.

A man in France desires the representation of manufacturers for the sale of tin in bars, iron in sheets and bars, wire and lead pipe. Correspondence should be in French. Opportunity No. 29988.

A firm of commercial agents in Belgium desires to purchase shoemakers' tools and equipment, buckles of iron, nickel and brass for harness, bits and related equipment. Opportunity No. 29936.

The purchase by a party in Canada of tack manufacturing machinery is desired. Opportunity No. 29938.

A company in this country which is about to send representatives to Finland, desires to purchase or secure an agency for the sale of machinery, electrical supplies and equipment, agricultural machinery, hardware, automobiles, etc. Opportunity No. 29911.

A party in Colombia wishes to obtain the agency for the sale of hardware, chemicals, etc. Correspondence should be in Spanish. Opportunity No. 29913.

The representation of American manufacturers of refrigerating machinery, house heating apparatus, etc., is desired by a party in France. Opportunity No. 29914.

A company of steamship agents and brokers in Spain desires to purchase two sailing vessel hulls, iron or wood, of about 1600 to 2000 tons each. Correspondence should be in Spanish. Opportunity No. 29915.

Machinery for grinding and purifying sea salt, with directions as to refining, is desired by a party in Mexico. Opportunity No. 29920.

The agency for a light motorcycle and a large American automobile is desired by a firm in Sweden. Opportunity No. 29949.

An engineer who leaves early in August for France, desires agencies and connections with manufacturers for the sale of American products, especially building materials and construction supplies. Opportunity No. 29950.

Bowl pressings made of 26-gage pickled and close-annealed steel, suitable for vitreous enameling, 14 inches and 16 inches in diameter, and about 4½ inches deep, are desired by a firm in England. Opportunity No. 29955.

Catalogs and information concerning oil engines and the vacuum tunnel system for river steamers are desired by a company in Colombia. Correspondence should be in Spanish. Opportunity No. 29958.

An agent in Ireland desires to represent American manufacturers of engineering and shipbuilding materials, mechanical and general lines. Opportunity No. 29989.

A company in Switzerland wishes to secure the agency for the sale of machine and other tools, automobile accessories, tin plates and carborundum wheels. Opportunity No. 30015.

THE IRON TRADE REVIEW

Vol. LXV Cleveland, July 31, 1919 No. 5

Consumption Keeps on Growing

All Indications Reflect a Continued Expansion of Underlying Demands for Iron and Steel —Railroad Buying Beginning to Appear—Less Talk of Labor Uncertainties— Prices Incline Upward But Advances Are Held Back

CONSUMPTION of iron and steel is keeping to the upgrade as measured by the new inquiry, outgoing mill tonnage and general operations. Order books have reached the point in most lines where producers are more reluctant to accept additional business than buyers are to place it. This is notably the case in sheets, wire, tubular goods, tin plate and steel bars. The market still lacks uniformly distributed buying due principally to the lagging railroad demand, but even the absence of this factor usually so essential to a prosperous industry, is being offset to a considerable extent by the breadth of both domestic and foreign requirements. Furthermore, negotiations by the railroads are showing an appreciable increase. Likewise, the heavy products such as plates and structural shapes, which have failed to keep step with other finished material, are showing a more positive betterment.

There has been less allusion to labor uncertainties as a market factor and in some quarters at Pittsburgh the situation in the mills is reported more favorable than a few weeks ago. The Carnegie Steel Co.'s operations have been raised to 98 per cent of ingot capacity. A strike of industrial trainmen at Cleveland, however, has interrupted operations at three blast furnaces and at the steel works of the leading wire producer.

Railroads in the Market

Some semblance of railroad buying in the form of car repairs which first appeared a week or so ago, is developing into business. Two builders in the Chicago district have placed 16,000 tons for this purpose. The Pennsylvania railroad has closed tentatively on 8000 tons of a 12,000-ton plate requirement subject to the approval of the railroad administration because of the latter's recent suggestion that all steel purchases be made on a mill instead of a Pittsburgh basis. Quotations to the Pennsylvania railroad were uniformly 2.65c, Pittsburgh. The Philadelphia & Reading also has a round tonnage under negotiation but is holding up the purchase until it is determined whether it may buy on a Pittsburgh basis which it has been quoted.

Delayed financing of European needs is checking export trade somewhat in that direction, but to other markets it remains very satisfactory. Recent Japanese purchases include 3000 tons of plates, 1000 tons of bars, 3000 cases of tin plate and 500 tons of sheets. Holland bought 5000 tons of shipbuilding material. The recent sale of American girder rails to Glasgow amounted to 10,000 tons. Belgium is inquiring for 50,000 tons of foundry coke.

Makers Slow to Advance

While conditions of cost and demand would seem to warrant some marking up of prices in various lines, the conservative attitude of large producers toward making advances at this time, still prevails. Current reports are that steel bars are likely to be the first of the heavy products to break away from this rule, because of the broad market that has developed in this line. Recent advances in wire products for export have failed to check the buying. A Pittsburgh independent now has raised his schedule on foreign business for the second time in two weeks in addition to adopting the $2 to $5 increase on domestic orders announced a week ago by two mills. New advances in the wire schedule for export have been made by other producers.

Iron is Sold $2 Higher

A surprisingly large volume of pig iron buying is being maintained considering the heavy purchases in June. One important Cleveland seller with five or six furnaces has booked this month an even greater tonnage than in June. Sales chiefly are of foundry and malleable grades though a Massillon, O., steel plant has inquired for 25,000 to 40,000 tons of basic and has bought partially. The John A. Roebling's Sons Co. bought 10,000 tons of basic and a round lot of low phosphorus. A New England scale manufacturer who inquired for 20,000 tons of foundry iron is reported to have closed for about half of this amount. Prices are pointing upward but in an irregular fashion. The leading Chicago seller has advanced prices for 1920 delivery $2 and has sold about 15,000 tons on this basis, chiefly malleable. A Mahoning valley maker has sold some foundry iron at $2 advance. The eastern market on basic has been established 25 cents higher.

War Diverts Steel Output

STEEL production in the United States in 1918 fell short of the high record of 1917 by approximately 600,000 tons and totaled 44,462,432 tons, according to the official statistics just announced by the American Iron and Steel institute. It is questionable whether last year would have established a new high record, even had the signing of the armistice been delayed until after Jan. 1, 1919, because while production fell off considerably in November and December, following the cessation of hostilities, the combined totals of these two months was in excess of that for the corresponding period of the record year of 1917. The sharp slump in ingot output in January and February, 1918, due to demoralized transportation conditions started off the year under too great a handicap for this to be overcome subsequently. Had it not been for the abnormal conditions prevailing during these two months, 1918 would have exceeded all other years in gross output. Special steels, however, show up well in the year's figures. The ouput of alloy steel ingots and castings was the greatest in history by a considerable margin. The advance of the electric steel process is shown by the high mark of production reached in 1918 with 511,364 tons compared with 304,543 in 1917, and 168,918 in 1916.

Although the production of steel ingots and castings in 1918 was the second largest in history, the production of rolled finished steel was less not only than that of 1917, but also that of 1916 or by 1,911,946 tons and 1,224,635 tons respectively. This was true in the latter case, notwithstanding the fact that steel ingot output in 1918 exceeded that of 1916 by about 1,650,000 tons. The failure of finished steel to hold its own with its established ratio of the past toward ingot output apparently was due to the changed conditions of demand caused by the war. Manifestly more steel went into forgings direct from the ingots than ever before due to the heavy production of shells, ordnance, ship parts, etc., since the statistics of finished rolled steel include rolled blooms and billets for forging purposes and semi-finished products rolled for export. Of the major finished lines produced, plates is the only material to show an increase over the preceding year. The total output of sheared and universal plates in 1918, was 5,119,908 tons compared with 4,158,238 tons in 1917, an increase due to expanded shipbuilding.

It is certain that the war operated to materially divert iron and steel production from its accustomed channels in 1918. As a consequence that year was an abnormal one in many respects and the influence of an essentially war market is to be seen in the statistics for that period.

Opportunity Knocks at Door of France

IT is a singular fact that the ore fields of Alsace-Lorraine, constituting one of the most abundant and accessible sources of iron in Europe, never have been free from political influence for a sufficient period to allow them to be exploited with unhampered initiative and foresight. Situated on the disputed frontier of two powerful nations, the mineral properties and steel works in this district always have been threatened with invasion.

Considering this serious handicap, it is not surprising that both France and Germany have failed to profit in any but half-hearted manner by the vast stores of mineral wealth at their disposal. In recent years, France has developed 70 concessions in the French portion of the Longwy-Briey fields, but has not been free to extend activities beyond the international boundary of 1871. The extent of French operations is clearly shown in an article appearing on pages 296 and 297 of this issue. During the past 46 years, Germany, under the provisions of the treaty of Frankfort, has had a chance to avail itself of the opportunities presented by the proximity of Lorraine ore and Saar coal to the Moselle and Saar rivers, which as tributaries to the Rhine, constitute an unexcelled means of transportation. Under the terms of the treaty, Germany was to canalize the Moselle and Saar, but although the

improvement would have cost but $65,000,000, the empire only partially carried out its pledge. Other events show that Germany deliberately scorned the advantages to be found west of the Rhine for the purpose of forestalling any infringement upon the already established might of Westphalia as a steel center. The military advisers insisted that the industrial strength of the empire be concentrated east of the Rhine and their influence was sufficient to drown out the voices of those who realized the economic advantages of the southwest.

Now for the first time in recent years, France is sufficiently protected, by the terms of the treaty of Versailles, to develop the territory of the Saar and upper Moselle according to economic principles. The world will watch the efforts of French ironmasters with mingled feelings of confidence and apprehension. It is to be hoped that distressed Europe soon may realize the full potential value of its most productive ore field.

Railroad Buying is Appearing

IN the waves of buying which have followed periods of depression, it always has been customary for railroad requirements to assume an important place. In fact, the iron and steel industry has been accustomed to regard it almost as a rule that the smaller buyers throughout the country refused to buy until the way had been pointed by the railroads. To put it another way, it was not until the railroads started to buy that the periodical era of prosperity got under way.

In view of all precedents, therefore, the exceptional developments of the market, since the armistice, have been a puzzle to a great many individuals who have sought to interpret the present in the light of their past experiences. On all sides, it is agreed that the one thing which still is necessary to put the industry on a full operating basis, is railroad buying. There has been a realization right along that the actual physical needs of the railroads are great. Tremendous quantities of iron and steel are involved not only in the huge improvement programs which in recent years have been adopted by the railroads as part of their policy of development, but to make needed repairs and keep the various systems actually going. In fact, it is known that the restricted buying during the past couple of years has resulted in deterioration of railroad properties. The two factors which have prevented this buying coming to a head, it has been felt, were the disposition of the railroad administration to keep such buying down to a minimum and, second, the difficulty on the part of the government, even if it had favored the necessary purchases, of financing the expenditures involved.

But, despite the attitude of the government, it was evident from the reports in last week's issue of THE IRON TRADE REVIEW that the long-delayed railroad buying wave is on its way and is gathering in volume. These reports told not only of the large amount of essential car repair business which is expected to contribute considerable activity to the equipment market for some time to come, but they told of the new car needs of the various roads as indicated by pending inquiries. Whether these new car needs are placed immediately is not a vital matter as far as the market is concerned, since the improvement from a general standpoint is becoming more apparent every day. But the inquiries which are current, indicate that those who are accustomed to looking for liberal railroad orders as a part of every buying movement will shortly be satisfied in this connection, since, despite the government's attitude, the needs of the railroads actually exist and must be satisfied.

No Trade Without Credits

FAILURE of the American bankers' committee to reach an agreement on any proposed plan for financing the European countries may be interpreted as a threat against the present export trade of the United States. Europe has been buying from this country more than has been purchased from it ever since 1914. At first Europe paid in cash, sending over gold and the millions of securities they held in American enterprises prior to the war. Then the United States government stepped in and financed the transactions by extending credit loans.

Under the war finance act the United States treasury has not much over $700,000,000 more of credits which it can extend our allies. At the rate this is being used up it will not last much longer than two months more. Unless some concerted effort is made on the part of American bankers to extend credits to Europe to take the place of the aid heretofore rendered by the treasury department, European exchange will decline so rapidly as to make further exporting practically prohibitive, since adequate shipments of gold are out of the question.

France presents a deplorable situation. During the first three months of 1919 the French imports were six times as large as exports. Her unfavorable trade balance was $1,000,000,000 greater than during the same period of 1918. The United States now prohibits the importation of French wines and liquors. Today the French are not producing the goods which we can import. If we do not take French goods and do not take French bonds, the French will have nothing with which to pay us for such commodities as we might wish to sell them. American bankers are unwilling to express publicly their real apprehension over the European outlook.

Pig Iron For 1920 Sells $2 Higher

Chicago Producer Markets 15,000 Tons on This Basis—Valley Foundry Also Sold at $2 Advance—Eastern Basic Up—Active Buying Continuing—Ohio Steelmaker Buying 25,000 to 40,000 Tons of Basic

Chicago, July 29.—Books of the leading seller of northern iron have been opened for first half of 1920 at a horizontal advance of $2 per ton over present prices, $28.75 being asked for No. 2 foundry iron, silicon 1.75 to 2.25. Sales have been made at the advanced price to the extent of about 15,000 tons, all but a small portion being malleable. This action was taken to assist melters in covering castings contracts for first half. Business for this delivery is not being solicited as furnace men expect prices to be higher on the bulk of their output for 1920. Options on iron for 1919 delivery are not being given and prices now quoted are for immediate acceptance, indicating an expectation of impending advances. Present buying is in large aggregate volume, though individual inquiries and sales are small, 1000 tons being about the limit in most cases and most being much less. Repetition of purchases is frequent, indicating increased business on books of melters, beyond what had been estimated. A characteristic instance is purchase by one melter of 1000 tons after the latter had contracted for 1500 tons as sufficient for the remainder of the year. Milwaukee malleable users have been active in buying recently and an inquiry for 500 tons of that grade has been put out by a Wisconsin melter. At the Federal furnace plant, South Chicago, a relined stack is being blown in and the other stack is going out for relining. The relined Northwestern furnace at Mayville, Wis., will be blown in in August. The Illinois Steel Co. is selling against the production of its idle stack at Milwaukee and will blow in before Oct. 1. This leaves idle only one merchant stack, one Iroquois at South Chicago, and the small stack leased to ferromanganese producers. The Inland Steel Co. is preparing to blow out one stack at Indiana Harbor, which produces some merchant foundry iron. Southern sellers not only refuse concessions on freight charges, but one important producer which has held stiffly for full schedule now is quoting $28, Birmingham, for 1.75 to 2.25 silicon, $30 for 2.25 to 2.75 silicon and $32 for 2.75 to 3.25 silicon for last half of 1919. An Illinois melter recently took 500 tons of northern and an equal tonnage of southern, the latter being 3.25 to 3.75 silicon, a grade avoided by northern makers, at $31.75, Birmingham. Jackson county silvery makers now are willing to book for last quarter, apparently seeing an end of the strike. A sale of 500 tons was made recently in this territory.

Some Shading on Northern Iron

Boston, July 28.—The weak spot in the pig iron market here has changed from the South to the North during the month. One large southern interest which has been active in New England has sold up its capacity for third quarter and is temporarily out of the market. It has refused business on No. 2 southern (2.25 to 2.75 silicon) at $28 furnace. Other southern furnaces have stiffened their prices until it is thought that little iron is reaching New England from this territory at below $34 delivered for No. 2 southern (2.25 to 2.75 silicon). A northern interest has been shading during the last week on many small orders, particularly in some places in Connecticut. Consumers who were reluctant to buy for third quarter some weeks ago now are coming out freely for that delivery. A Massachusetts foundry bought 1800 tons and a Connecticut foundry 1100, both of 2.25 to 2.75 silicon iron, for delivery before October. Little next year business is being placed although some small orders for last quarter and first quarter combined are reported. Inquiries are more numerous than at any time in several weeks and aggregate about 4000 tons. A Rhode Island consumer is asking for several grades for fourth quarter. A Connecticut consumer wants 500 tons of special analysis iron for third quarter. A Maine foundry is asking for 200 tons for third quarter. Among many of the furnaces usually active in this market, prices have stiffened during the past week. One eastern Pennsylvania maker is quoting from $30 to $32 at furnace for fourth quarter on 1.75 to 3.25 silicon and several small orders have been placed on that basis. The actual sales of the week through Boston agents are reported approximately the same as for the week previous, about 7000 tons. This does not include the business placed against the inquiry of the Crane Co. for 5000 tons which went directly to the furnace. The Sossions Foundry Co., Bristol, Conn., placed 3000 tons and E. & T. Fairbanks & Co., St. Johnsburg, Vt., 1000 tons during the week. Considerable iron is selling in New England above the $28 Buffalo price for 2.25 to 2.75 silicon.

Large Tonnages Sold

New York, July 28.—Much activity was displayed by the pig iron market in this district during the past week. The Crane Co., Bridgeport, Conn., bought 5000 tons of foundry, 500 tons of malleable and 500 tons

of high silicon. The Sessions Foundry Co., Bristol, Conn., bought 1000 tons of foundry for last quarter. The New York Central railroad closed for 1650 tons of spot foundry. A New Jersey interest bought 1000 tons of foundry for last half. A New York state melter also bought 1000 tons for the last quarter. Numerous other lots of 1000 tons each or less, featured the business during the past week. It is understood that the E. & T. Fairbanks & Co., St. Johnsbury, Vt., who inquired for 20,000 tons of foundry for nearby shipment have closed for nearly one-half of this tonnage and may buy more. Numerous new domestic inquiries are in the market. Several involve 1000 and 2000 tons each. A large railroad equipment manufacturer which recently inquired for 3000 tons of foundry for its western plants has not yet closed. A large eastern consumer during the past week bought a round tonnage for domestic use and also closed for a large block for shipment to a foreign plant. In addition, 1500 tons of foundry were closed for export to the Orient and several other good-sized blocks were sold for export. Included in new export inquiries is one for 10,000 tons. The outlook for export buying seems to be improving but high freight rates and unfavorable exchange for European buyers continue important obstacles. The market continues strong, and the direction of prices is upward. One Lehigh valley maker now is asking $30, furnace, as a minimum for 2.25 to 2.75 silicon foundry, and $29, furnace, as the minimum for 1.75 to 2.25 silicon. One Buffalo maker has advanced its price on malleable from $27.25 to $28, furnace. On foundry iron, Buffalo furnaces continue to stick to the regular schedule, namely $26.75 to $28, and $29.75. Eastern New York state makers with a somewhat more favorable freight rate than Buffalo interests have been selling to New England consumers during the week at this schedule at the furnace. The only sale of basic reported in this district during the past week involved 100 tons for export which went at somewhat higher than $25.75, Buffalo.

Last Quarter Iron at $2 Advance

Pittsburgh, July 29.—Proof of the strength of the pig iron market lies in the fact that actual sales of No. 2 foundry (1.75 to 2.25 silicon) have been made for last quarter delivery by a Girard, O., furnace at an advance of $2 a ton or $28.75. Another furnace has advanced its price of No. 2 foundry 50 cents to $27.25 for spot shipment in carload lots and one broker is asking an advance of 50 cents on forge iron for immediate delivery. Most furnace interests are well sold up for the remainder of the year. A number of inquiries are pending for both steelmaking and foundry grades, although basic tonnages are not so numerous as bessemer and foundry. Sales also have been made in fair volume for the last half and in all instances at the regular market quotation. Furnaces are strongly discouraging bookings into next year and so far as known only one lot has been sold in this district for that delivery. It involves 8000 tons of malleable iron recently placed by a maker of railroad malleable castings at $27.25 valley and it is understood the business was distributed among three or four furnaces. A consumer with a plant at Paden City, W. Va., has closed with two nearby furnace interests for 2500 tons each of forge and bessemer iron, to be shipped 500 tons monthly from August to December inclusive. Another furnace in this district sold 3000 tons of gray forge iron to a Connellsville district consumer for the year at $25.75 valley. The same interest sold other lots of No. 2 foundry iron to Pittsburgh district consumers, for the year, one involving 1000 tons and the other 300 tons. Consumers are showing more eagerness to cover for last quarter. One inquiry involves 2000 tons of low phosphorus for last quarter. The market for this grade is strong at $39 to $40, valley furnace, for copper-free iron. An inquiry for first quarter delivery involves 1000 tons of malleable. Additional furnaces continue to be blown in. It is understood that No. 1 furnace of the McKinney Steel Co. at Josephine, Pa., will go into blast within the next two weeks. Blast furnace No. 3 of the Cambria Steel Co., Johnstown, Pa., has been relined and it is understood it will go in tomorrow.

Basic is Sold Higher

Philadelphia, July 29.—Pig iron business has been rather active in this territory the past week. The John A. Roebling & Sons Co. bought nearly 10,000 tons of basic from several makers at prices which establish market at $26.75 to $27.25, delivered. The Roebling company also bought a round lot of copper-free low phosphorus iron and another interest bought a tonnage of this grade. These sales establish this grade at $37, eastern furnace. A brisk selling of foundry has been done although no exceptionally large tonnages are reported. The tendency continues toward higher prices although minimum on No. 2X (2.25 to 2.75 silicon) still is $28, eastern Pennsylvania furnace. A leading Virginia interest offering several thousand tons of high manganese and high silicon foundry based on $27.25, furnace, for No. 2 plain (1.75 to 2.25 silicon). Where the extras fail to make the price $30 or higher the minimum charge will be $30. The Worthington Pump & Machinery Corp. is inquiring for 7000 tons of foundry for last half and first half. An eastern consumer is feeling out the market on basic. The Princess furnace in Virginia blew in last week.

One Virginia maker who recently withdrew from the market has entered additional 4400 tons at $26.50 furnace for No. 2X (2.25 to 2.75 silicon), $27.50 for No. 1X (2.75 to 3.25 silicon) on which it previous had quoted.

Good Business at Buffalo

Buffalo, July 29.—With two furnace interests now out of the market for pig iron, attention is focused on the inquiries in the local field. They have been numerous during the past week, although most of them are considered of a speculative character. The aggregate amount of tonnage inquired for during the past week has been about 50,000, while bookings have probably reached 25,000 tons. Orders are fast reducing the small amount of remaining capacity for the remainder of the year. Furnace interests remain firm in their refusal to quote for 1920. One interest has increased its malleable grade to $28, furnace.

More Basic Is Sought

Cleveland, July 29.—New buying in pig iron is keeping up on a liberal basis. One of the largest selling interest in this district reports that its bookings in July were heavier than in June, although the latter was a very large month in this respect. Other sellers continue to enter considerable tonnage but they are less disposed to sell as freely as they have been and some have taken their traveling men off the road. One Cleveland interest reports sales of 20,000 tons in the week some of which was for delivery after Jan. 1. There is increasing interest among certain classes of consumers in next year's iron and some of the larger melters including malleable foundries, are included. While some sales for next year continue to be made by certain producers where the circumstances are special, it is still the rule that makers are not inclined to sell so far ahead under prevailing uncertainties. Further basic inquiry has been added to that already pending. The Central Steel Co., Massillon, O., is now buying its needs in the open market and has been negotiating for 25,000 to 40,000 tons for last half. This buyer is understood to have made some purchases and reports having obtained some concessions. The 50,000 to 75,000-ton lot of basic for this year for which the Trumbull Steel Co., Warren, O., has been negotiating, still is unplaced as far as known.

Reopen Books at Higher Level

Cincinnati, July 28.—The firm attitude on the price question taken by both the southern and northern furnaces seems to have stimulated inquiry. A few southern furnaces have reopened their books for last quarter business but at a higher level. Some southern iron, in scattered lots, has brought $28, Birmingham, for the shipment named, but not all furnaces are yet on this level. For prompt shipment $26.75 can be done on iron running from 1.75 to 2.25 silicon.

Stream of Small Orders

St. Louis, July 26.—The market for pig iron is steady and satisfactory. There is a continuous stream of small orders for prompt shipment and delivery through the balance of the year. A feature of the demand has been an insistent request for low grade irons by the foundries, and several important selling agencies report they have been sold out of that grade. The stove industry is more active than at any period since the war started, and other specialty makers, notably boiler and tank manufacturers, report unusual activity. The volume of melting by foundries in the district is enormous, and this would be reflected in current sales save for the fact that these interests are already well covered to Dec. 30,

and producers are unwilling to sell further into the future. The leading local furnace interest, which has closed down for relining and repairs, has nearly disposed of its accumulation of between 10,000 and 12,000 tons, and could sell considerably more iron. Prices are strong, and indications point to advances.

Increasing Production in South

Birmingham, Ala., July 29.—Southern pig iron production will be increased as quickly as possible. A number of furnaces have been started up, and preparations are being made to relight two or three others during the next two weeks. A little selling is still in progress, but only a part of the probable make of the fourth quarter has been sold. Inquiries are coming in that warrant the belief that output can be sold. Confident that there will be an increase in price soon, furnace companies are refraining from selling indiscriminately in the open market.

Ore Sales

Show Slight Gain—Shipments 5,000,000 Tons Behind Last Year's

Cleveland, July 28.—Indications of a slight upward trend are discernible in ore market activity. After several weeks of dullness, a half dozen furnace interests have placed orders with one company for more than 100,000 tons, while another ore company has received orders for 50,000 tons. Some of the furnace interests are buying ore for the manufacture of basic iron, while low phos ores also are in greater demand. Some shading of prices has been done in the selling of the latter grade.

The season's arrivals at lower lake ports up to Aug. 1 are 5,000,000 tons in arrears of the shipments up to that date last year, and while the movement for the balance of the year will not make up the deficit, present indications are that the total for the year will not be so far below those of 1918 as was expected during the slack period last spring. Instead of 61,156,732 tons, the total shipments last year, the season of 1919 will probably show about 55,000,000 tons.

Operations, however, are not on a par with those of last year, stocks are being depleted, and already there is talk of a possible increase in the price of ore next spring. Some ore interests claim this is inevitable, unless the new year should start with a period of depression.

Up to July 25, 7,154,793 tons of ore were brought down from the Lake Superior district this month, an indicated daily average placing the month's total movement at 8,670,000, or 690,000 tons more than that in June, and 1,989,203 less than in July, 1918. On this basis the total shipments up to Aug. 1 are 24,700,000 tons as compared with 29,608,933 last year. The loss in May, June and July this year was over 6,000,000 tons, but April shipments showed a gain of more than a million tons and reduced the shortage to approximately 4,908,933 tons.

Belgium in Need of Coke

Has Inquiry in American Market for 50,000 Tons—Connellsville Market Shows Softness

New York, July 28.—An inquiry has come out in this district for 50,000 tons of foundry coke for Belgium for shipment over the next few months. It is understood that some difficulty is being encountered in securing quotations on the entire tonnage although producers are naming figures on a part of the business.

The New England by-product producer is expected to make a decision this week as to the price on foundry coke for 1920. So far this year this maker has not been naming any flat prices but has named a price to apply to shipments each month. The present price of the maker is $5.50, Connellsville. The northern New Jersey by-product producer also is asking this price on foundry coke, which is equivalent to $8.60 delivered Newark and other northern New Jersey points. New Jersey by-product furnace coke continues to be sold at about $1 less than foundry coke. A fair amount of foundry business has been booked in this district lately by western Pennsylvania beehive makers.

New England Demand Active

Boston, July 28.—The activity in industrial coke during the last week has amounted practically to a scramble. This no doubt has been caused in large part by the marine workers' strike, which virtually tied up all shipments of coal to New England. Shipments of foundry coke have been constantly increasing and are now being made in such quantities as to indicate a positive increase in business among the foundries. Many concerns are realizing the possibility of a coke and coal shortage in the fall and are laying in stocks; but a large portion of the shipments represents actual day-to-day consumption. The local by-product producer announces that the price on sliding scale contracts for August will probably be the same as in July, $9.90 delivered. Industrial coke, however, will advance from $7 to $7.50 and domestic coke probably will be raised during the early part of the month from $10.50 to $11.00.

Softness in Coke Market

Pittsburgh, July 29.—Recovery of the Connellsville coke market is slow, and the market for furnace coke, both spot and contract, is soft. While spot furnace fuel continues to be quoted at $4, ovens, and some leading dealers refuse to sell at lower figures, it is understood that tonnages were moved during the past week at $3.90. Moreover, it is probable that small lots might be bought for $3.85. This softness has been due in part to the accumulation of fuel in the Connellsville region, and the fact that furnaces have supplies. Though lacking firmness, the market for contract furnace coke shows signs of increased activity and is quoted at $4.25 to $4.50. One furnace interest in this district has closed a contract for the remainder of the year at $4.25, but sellers insist this level is somewhat under the market, claiming it is more nearly represented at $4.35 for this delivery. Fair-sized lots of both nearby shipment and contract tonnages of furnace coke have been sold on a sliding scale fixed on the basic pig iron price, valley, of 6¼: 1 or $4.12 for the former delivery, and 6: 1 or $4.29 for contract tonnages. The spot market, however, may take a sudden upward turn in view of the fact that tomorrow there will be a car supply of only 50 per cent in the Connellsville region. This will be the first time since the armistice was signed that there has been a shortage of cars and it may develop that shipments will be inadequate to supply requirements and will result in higher prices. Foundry interests are showing more concern and specifications against contracts are being made in greater volume. Contract foundry coke appears to be quotable at $5.25 to $5.50, ovens, while the spot market for this grade seems to call for the same price, although it is reported that some sales have been made at $5.25 ovens. According to *The Connellsville Courier*, production of coke in the Connellsville region for the week ended July 19 totaled 164,220 tons as compared with 157,838 tons the previous week.

New Contracts Absorb Increase

Cincinnati, July 28.—The recent increase in the production of furnace coke in the Connellsville district is said to be quite large. However, reports have reached here that some large contracts for 48-hour coke have been placed recently in that field, and the contracts will more than absorb the increase. This is borne out by quotations, a few interests holding out for $4.50, ovens, on contract business. Some spot furnace coke may be had at $4.25, ovens, but no standard brand below this figure. Pocahontas foundry coke is quoted from $7 to $7.50, ovens, but little business is reported.

Refuse Orders for 1920

St. Louis, July 26.—Contracting for coke over the balance of this year continues on a liberal scale. Melters throughout the district and in the West and Southwest are providing for their needs. Prices of all grades are firm. Dealers report they could do a good business in both furnace and foundry grades for the first half of next year, but oven interests refuse to book such orders. Predictions of a shortage of coal and freight cars have caused apprehension among the larger interests of the district, and there is a disposition to accumulate coke. Improvement in demand and prices for lead and slab zinc during the past two or three weeks is expected to be reflected in heavy purchases of fuel by smelters. This outlet has been a weak spot in the coke market many months.

To Export Steel Scrap

Big Tonnage is Sold in East—No. 1 Cast Sells Above Pig Iron at Chicago—$22 Steel Reported at Pittsburgh

FOR COMPLETE SCRAP PRICES SEE PAGE 332

Philadelphia, July 29.—A heavy tonnage of heavy melting steel involving many thousands of tons has been sold for export and eastern scrap interests have taken a prominent part in this. This is the principal development in the market here during the past week. Domestic business in steel scrap is limited, although another sale of 500 to 1000 tons was made at $20 delivered eastern Pennsylvania. Pittsburgh interests are offering $22 delivered for steel, which is equivalent to around $21 delivered eastern Pennsylvania, but no business has resulted. The largest domestic transaction closed here during the week called for 2000 tons of stove plate to a New Jersey melter at $21 delivered. The trend of the market continued higher and a number of the grades have been further marked up as a result of the week's business.

Dealers Keep up Buying

Boston, July 28.—The buying of iron and steel scrap by consumers fell off during the past week and as many sizable lots were thrown on the market it was thought prices would suffer. The opposite condition, however, was actually the case for in several grades prices advanced. Dealers continue to absorb any lots which appear at almost any price. The competition kept up in this way has raised machine shop turnings until in some cases dealers paid $10.50 delivered. No. 1 machinery scrap has sold for $1.10 per 100 pounds. Steel car axles and rerolling rails have advanced. Some inquiries are out but most of these are from New England consumers. A Connecticut concern wants malleable scrap and is willing to pay $21. A Massachusetts foundry is asking for stove plate. It looks as if the steelmakers were purposely holding off their orders in an attempt to bring prices down.

Steel in Good Demand

New York, July 28.—Continued good demand for heavy melting steel is the outstanding feature of the local scrap market. Pittsburgh consumers are still in the market, and eastern buyers also are covering on sizable tonnages. It has been reported that as high as $21, delivered, has been paid for steel for Pittsburgh, and up to $19.50, delivered, for Coatesville, Pa. Nevertheless, the local market on heavy melting steel continues to hold pretty steadily at around $15.50 to $16, f.o.b. New York.

A fairly good demand is also in evidence for other descriptions, including machine shop turnings and stove plate. A large northern New Jersey consumer continues to be a heavy buyer of this latter material, with the result that dealers are offering from $17 to $18, f.o.b. New York, a slightly higher range than last week. All other prices, however, are unchanged, although the tendency is upward.

Scrap Price Trend Upward

Pittsburgh, July 29.—Prices of iron and steel scrap continue buoyant. It is believed that some dealers have good stocks on hand and are holding them for higher prices. Indications are that they believe it will not be long before heavy melting steel will command $25. While this grade still is quoted at $21 to $21.50, it is reported that light tonnages have been sold for as high as $22. Compressed sheets are in fair demand and the prevailing quotation appears to be from $18.50 to $19. Only occasional inquiries come out for billets and bloom crops, low phosphorus, and $24.50 represents the market. Machine shop turnings continue to be quoted at $14.50 to $15. The Pennsylvania railroad has issued a list, asking for bids by Aug. 4, on 21,125 tons of scrap. Among the heaviest lots included in the list are 4000 tons of No. 1 steel rails, 3000 tons of No. 1 heavy melting steel, 1075 tons of No. 1 wheels, 1027 tons of No. 2 railroad wrought and 1026 tons of miscellaneous steel rails.

Valley Mills Buying in Buffalo

Buffalo, July 29.—There is an active demand for heavy melting steel, mills in the valley districts offering as high as $22.50, delivered, for that grade. The freight rate is about $2.36. There is no record of sales at over $20, dealers' yards, but there have been sales on the basis of $22.50, delivered, Youngstown and Buffalo. Local mills are buying limited quantities, and prices received from outside the district are higher than the local consumers want to pay. Dealers do not care to sell except in small amounts, and are holding for better prices. There is a strong demand for cast iron borings, and stove plate is very scarce. A local consumer is offering as high as $22.50 for the latter grade.

Steel Rises Another $1

Cleveland, July 29.—Scrap iron and steel in Cleveland territory continues to reflect strength, and trading is on the increase. A few days ago melters and dealers were deadlocked, the former claiming the latter had boosted prices without reason. Just now melters are more inclined to meet the price ideas of dealers, and while all scrap iron and steel prices are firm some have advanced. This, dealers say, is the answer to the price question. Heavy melting steel, now more than ever the leader of the market, has advanced $1, now being quoted at $21 to $22. Sales are reported at the $22 mark, but most tonnage is moving at $21. In old steel rails, small drop forge flashings and railroad car wheels, the spread has been narrowed by 50 cents, the minimum moving up that much. Large forge flashings, rerolling rails and railroad malleable also have advanced. Demand for practically all grades is strong.

Cast Above Pig Iron

Chicago, July 29.—Great strength marks the situation in iron and steel scrap in this district and some unusual features have presented themselves. No. 1 cast scrap has sold recently in fairly large tonnages at $28 per gross ton, delivered, which is at least 75 cents per ton higher than the delivered price of pig iron. One sale of 1000 tons calls for delivery at any time within the next four months. This seems to be an attempt to discount the future and to buy against an expected rise in pig iron. Rerolling rails are almost unobtainable and have mounted steadily. The market is practically bare of stove plate. An eastern buyer recently combed this district for this grade and was able to obtain only a few carloads at a high price. The reason for this scarcity is that low prices prevailing several weeks ago prevented gathering of country scrap and cut down shipments from that source, from which most stove plate is derived. Large consumers of heavy melting steel and allied grades are expected to come into the market before long as they have not been buying much recently and must replenish their supplies soon. This is one factor in giving the market strength. Railroad offerings are unusually light. The Grand Trunk offers 1000 tons, the Chicago & Western Indiana three carloads and the Lake Erie & Western a blind list. The ordnance department is asking bids on 180 tons of steel bars and 3126 tons of gothic billets.

Consumers Showing Interest

Cincinnati, July 28.—More activity is reported in the scrap iron and steel market. Heavy melting and cast borings have been advanced slightly, and all other grades are firm. The outlook is said to be encouraging and while there is no scramble on the part of consumers to obtain scrap melters seem more concerned as to future requirements. Not much speculative buying is being done, and some concerns predict a growing scarcity of scrap should the melt increase. No scrap steel stored in this vicinity has been offered in the past few days by the ordnance department, although it is understood some material may be expected from this source soon.

Prices Up; Only Dealers Buying

St. Louis, July 26.—The market for scrap iron and steel continues strong, with rather unusual conditions prevailing. Dealers, who are still bullish in their views, are the principal bidders and buyers. They are throwing down material, and many have large piles in their yards from which they are not disposed to sell at present prices. Rerolling rails have been raised from $24 and $24.50 to $28.50 and $29. The leading interest re-

fuses to buy at these prices. Wrought scrap is in strong demand among dealers, but the only user of this grade in the market is bidding $2 under dealers' quotations, and apparently will not go higher. Steel mills are not purchasing much material, but steel grades are advancing in sympathy with the balance of the market. Business with the rolling mills is somewhat improved. There is a scarcity of stove plates and iron axles. Stove manufacturers are operating their plants on a large scale, and the outlook for fall and winter is good. The St. Louis district ordnance office will open bids Aug. 6 on 153 gross tons of billets for 8-inch common steel shells, and on 444 tons of steel ingots, the material being at the plant of the Curtis & Co. Mfg. Co., St. Louis. On Aug. 7 it will open bids on 1524 tons of billets for 8-inch common steel shells, also at the Curtis plant. The office opened bids recently on 4385 tons of gothic billets at the Curtis plant, the highest bid being $22 on 655 tons and $24.15 on 3730 tons. It will take bids Aug. 5 on 382 tons of 9.5-inch steel shell ingots at the American Steel Foundries plant in East St. Louis. On that date it will also sell miscellaneous material.

Little Selling in South

Birmingham, Ala., July 29.—Southern dealers are selling small tonnages of scrap, but these are not sufficient to warrant any changes in quotations. Activity reported in other sections has not affected the southern market. Country scrap is not being bought in, but railroad scrap is plentiful. Other producers are withholding their material, apparently in expectation of receiving higher prices.

Chicago Warehouses Put up Sheet Prices

Chicago, July 29.—An increase of $5 per ton on black and galvanized sheets from warehouse has been announced. No. 28 gage black are now quoted at 5.62c, Chicago, and No. 28 gage galvanized at 6.97c, Chicago. Other grades of sheets and other steel products from warehouse remain unchanged.

July Business Is Less

New York, July 28.—Business for July, according to some local warehouse interests, will not aggregate the volume transacted last month, although they assert buying of some materials, particularly bars and sheets, has involved a fairly good tonnage. The increasing building activity in the east has not as yet resulted in much demand for shapes, although in some instances, the warehouses are laying additional tonnages against possible higher mill prices and an increased demand early in the fall. The demand for plates also is small.

Cotton Tie Market Quiet

Pittsburgh, July 29.—Specifications for cotton ties are being received in fair volume, but orders are small and few, the season being almost closed.

Sheet Orders Are Heavy

Foreign Buying Adds Liberal Tonnage to Active Domestic Demand —Consumption is More General—Operations at 90 Per Cent

Pittsburgh, July 29.—Both domestic and export orders for sheets continue to be placed with mills in this district. Foreign business is being closed with consumers in England and Holland as well as in Japan, China, India, South Africa, South America and the Scandinavian countries. Business placed in Holland, Norway, Denmark and Sweden comes largely from consumers who previously bought from German mills. In the domestic market makers of sheets report that bookings exceed their capacity and deliveries are being made in four to eight weeks, blue annealed sheets being shipped in the shorter period. The class of buyers has become more general, and, in addition to automobile interests now includes enameled and stamping works, implement makers, manchinery manufacturers and others. Both the Ford Motor Co. and the Willys-Overland Co. have closed for heavy requirements into next year in some lines and for the remainder of the year in others.

Valley Mills Keeping Busy

Youngstown, O., July 26.—Demand for sheets is so strong that some of the mills are out of the market for third quarter delivery, while others are not able to promise deliveries in less than from 75 to 90 days. A steady increase in buying since July 1 has given the mills such a backlog that they are refusing orders for prompt delivery. Galvanized and black sheets are most in demand, a comparatively small portion of recent bookings coming from automobile manufacturers.

Strength is Maintained

Chicago, July 29.—Demand for steel sheets contiues strong and most makers have as much on their books as they desire at this time, with buyers insistent for further tonnage. The leading independent in this district is practically sold for the remainder of this year except a small remaining tonnage of black and blue annealed sheets for delivery late in last quarter. Quotations have been withdrawn entirely on galvanized sheets, due to the advanced price of zinc.

Sheet Bars Few

Users Have Difficulty in Filling Needs—Steelmakers Try to Buy

Pittsburgh, July 29.—Because of the heavy demand coming from makers of sheets and tin plate, prediction is being made that a scarcity of sheet bars is likely to develop in the near future. One large producer is said to have withdrawn from the market, except for its regular customers. The market is firm at $42, Pittsburgh. Fair-size tonnages of billets are moving, although open market inquiry is only moderate. While demand for forging billets is considerably less than normal, improvement in this market has developed and the price appears to be well established at $43.50, Pittsburgh, with some makers out of the market. Inquiry for slabs is quiet, due largely to the inactivity of business from carbuilding plants. The Jones & Laughlin Steel Co. has advanced its price for soft wire rods for export and Canada from $52 to $57, Pittsburgh, leaving the domestic price unchanged at the former figure. The increase in the export price is the same as that made by the United States Steel Products Co. Steel production is increasing. The Carnegie Steel Co. last week operated at 98 per cent of ingot capacity.

Rods Sold to England

Philadelphia, July 29.—A feature of the semifinished market in this district the past week was the sale of 4000 tons of wire rods to England. These rods recently were sold by the government from its stocks. Exporters say that at the present wire rod price they are unable to place any export orders with the mills. An eastern consumer wants 1000 tons of forging billets for future needs as this interest believes the price is going higher.

Steelmakers Seek to Buy

Cleveland, July 29.—Sheet bars have become scarce and various producers now are refusing to accept further orders. Some steel producers have been among those who have been inquiring for sheet bars from other makers. One of these interests, short on steel, is a valley sheet and strip producer. Some of the sheet makers who have been obtaining their supplies from large makers affiliated with sheet and tin plate plants have been notified that they cannot expect to receive further supplies and they have been endeavoring to make purchases in other directions. A local inquiry for 250 tons of sheet bars has been current. Sheet bar prices are very firmly maintained. Slab orders still are slow, though there is a little betterment in this movement.

More Activity in Strip Steel

Pittsburgh, July 29.—Improvement is reflected in the market for hot and cold-rolled strip steel. The automobile, building, and hardware trades and jobbers are showing greater interest in connection with the covering of their requirements. Operations of mills now average between 70 and 80 per cent. As soon as repairs are completed output will be increased. While there were reports that recently small sales of hot-rolled strip steel were being made at 3.05c, Pittsburgh, it is said that this quotation has disappeared and the market is firm at 3.30c, Pittsburgh.

Bar Market Is Broader

Railroads Are the Only Laggards—Specifications Unusually Heavy From Manufacturing Trade—Some Talk of Advances

Chicago, July 29.—Producers are booking practically as much soft steel bar business as they can handle, at least as much as they could expect in the most active market with railroad demand absent. This business is coming from manufacturers of tractors, automobiles, agricultural implements and general lines of industry too numerous to mention. Not only are contracts being made, but specifications are unusually heavy, indicating that the steel is actually going into manufacturing projects. The general situation is increasingly satisfactory and most mills are increasing their operation steadily. With railroads restrained from buying, a heavy demand is thus removed from the market. The only change from this condition recently has been contracting for car repairs by carbuilding companies where railroads are not allowed to do their own work.

Hard steel bars rerolled from rails are in fairly strong demand and heavy specifications are being received from agricultural implement manufacturers, who contracted a few weeks ago. One great difficulty in this department is scarcity of rerolling rails and their high price. It is believed an advance on this product will be made shortly.

Bar iron continues firm at 2.62c, Chicago, and business is said to be as strong as is possible without participation by railroads. General manufacturers and builders of wagons are taking considerable material, and the situation is fairly comfortable.

Japan is Big Buyer

New York, July 28.—Export buying of bars has become active. Japanese interests, particularly, are taking good-sized tonnages, which, in conjunction with the brisk domestic buying recently, has resulted in a greatly strengthened tone. In fact, it now is said that bars will be the first of the heavy finished steel products to be advanced. It further appears to be the opinion of some large makers that it will not be long before there is much less margin between prices on bars and plates, than at present.

England Buys Tonnage

Philadelphia, July 29.—Included in recent steel bar business placed in this district was 6000 tons for export to England. Domestic steel bar business continues active so that mill schedules are being maintained. Although several makers have advanced their price to 2.50c Pittsburgh, bar iron still can be had in east at 2.35c Pittsburgh. An eastern shipyard just has placed heavy order for bolts.

Bar Market is Brisk

Pittsburgh, July 29.—Extreme activity characterizes the market for steel bars, and inquiry is heavy, a fair portion of the requirements being for cold drawing plants. Some makers are entirely sold up for the third quarter and are well booked for the last quarter. Practically no business is coming from car-building plants. The recent buying of a leading automobile interest is understood to have included 85,000 tons of alloy and carbon bars, and a large part of the business is said to have come to mills in this district. Considerable export tonnage also has been booked for merchant bars. Demand for concrete reinforcing bars is heavier and specifications for this grade of material are coming in freely, some makers reporting bookings for the next three months at 2.35c, mill. Export business in this line also is being done. Makers of muck bars say business is brisk and that orders are being booked at 4.50c for puddled material made from pig iron.

New Tonnage Keeping Up

Cleveland, July 29.—Activity in steel bars, both on the side of new contracting and in specifications is keeping up and if anything the volume is on the increase. Deliveries are so extending that on any large assortment, new contracts will call forth quarter shipments. Deliveries now range from two to 10 weeks and in a few cases even beyond. Representatives of prominent steel bar makers report that business now is the largest in volume since the armistice. One manufacturer of automobile accessories has been inquiring for 6000 tons of spring steel for this year and has placed a considerable portion of this business at the regular price of 2.60c Pittsburgh. Rerolled bars are stronger and various sales are being made at 2.45c mill. Some producers are quoting higher than this figure. A new addition to the plant of the Cleveland Automobile Co. will require several hundred tons of reinforcing bars.

Bolt Commitments Heavy

Chicago, July 29.—Orders for bolts and nuts on mill books are unusually heavy and some makers are beginning to take account of their obligations to determine if they have oversold on their production for the remainder of the year. New orders are being received in goodly volume and most plants are operating at present up to the limit of their labor supply. Business is coming from all consumers, especially from manufacturers of tractors and automobiles.

Volume Best in Months

Cleveland, July 29.—Makers of nuts, bolts and rivets are enjoying the best business in nine months. Some few orders are being received but specifications against old contracts constitute the main activity. The recent advance has not acted as a deterrent to nuts and bolts and indications point to an early revision upward in rivet prices. Makers of the latter product are operating 100 per cent of capacity with the demand active. One large maker of nuts and bolts is operating day and night shifts. Some foreign business is being received.

Better Demand at Pittsburgh

Pittsburgh, July 29.—Makers of nuts, bolts and rivets in this district report that conditions, both as to inquiries and orders, are better and that prices remain firm at the advances recently established. Continued improvement in the business outlook is predicted and some makers report that they are operating at 100 per cent. Buying is of a general character. Steel mills are placing fair-size orders in connection with work for the upkeep of their plants and dealers are buying heavily. Deliveries are being made in two to three weeks on normal quantities.

English Ferro

Is Sold Below Domestic Metal—Spiegeleisen Price is Firmer

New York, July 28.—English ferromanganese has been sold for delivery into this country at $105, c.i.f. The tonnages involved, however, were so small as to be practically insignificant. In fact, activity in the ferromanganese market has been at a low ebb during the week. One lot of 150 tons of 80 per cent domestic metal was sold at $115, delivered, and some carload business also was transacted at this price. It is regarded probable that if attractive tonnages were offered, domestic makers would quote a price equivalent to that being asked by the English makers.

Somewhat more activity featured spiegeleisen than ferromanganese during the past week. Sales which were reported aggregated fully 1000 tons and probably were in excess of this quantity. The minimum on 18 to 22 per cent spiegeleisen now is $35, furnace. New export inquiries for 1500 to 2000 tons are in the market. It is reported some tonnage has been sold to Belgium, but this is not confirmed. Italy has been inquiring for spiegeleisen and ferromanganese.

The special steel ferroalloys have shown more life the past week than in months. A large number of small inquiries are in the market. A feature is the number of inquiries for a few pounds each of various alloys from steelmakers who evidently are experimenting on new combinations. Considerable talk continues to be heard of English competition at prices below the American market but the amount of business going to overseas sellers is negligible. Some large users of ferrochorome have been figuring on their requirements. One consumer alone wants 500 tons. The market for this alloy is unchanged at 32 cents per pound contained with 4 to 6 per cent carbon. Ferrotungsten is steady at $1.20 to $1.25 per pound contained. Ferrovanadium is stronger and inquiry is improving. Prices are firm at $6.50 to $7 per pound contained.

A number of sales of comparatively small lots of 50 per cent ferrosilicon have been made. The Bethlehem, Allegheny and Brier Hill Steel companies are among the buyers. Al-

though some makers continue to quote $90, most of the current business is at $78 to $80. The market's tone, however, continues to strengthen with the gradual absorption of resale offerings.

Offer Russian Ore

New York, July 28.—Following the recent arrival of a cargo of Caucasion manganese ore which was sold at about $80 per long ton for ore running amout 80 per cent of manganese oxide, importers announce they are now able to quote on regular shipments of this ore. Italy is inquiring for a cargo of 3000 tons of metallurgical manganese ore for shipment to Genoa and New York dealers are figuring on this business. The general market continues quiet at about 60 to 65 cents per unit, c.i.f. Atlantic port, for Brazilian, Indian and Cuban ores analyzing 45 to 50 per cent manganese.

Arranges to Convert Ore

Philadelphia, July 29.—The Midvale Steel & Ordnance Co. instead of buying 5000 tons of ferromanganese for which it recently inquired has placed a contract for the conversion of 8000 tons of Indian manganese ore which it recently bought. E. J. Lavino & Co. will blow in the Lynchburg, Va., furnace on ferromanganese tomorrow. Domestic metal now again can be had at $110 for 80 per cent and some carload business has been entered at this figure. It is learned that only 76 per cent manganese is guaranteed by English makers who are offering at $105 tidewater. American makers have organized committee which recommends 25 per cent add valorem as necessary adequately to protect the domestic ferromanganese industry.

Alloy Market Quiet

Pittsburgh, July 29.—The recent heavy buying movement of ferromanganese has been followed by quietness in the market for alloys. Makers still are quoting 78 to 82 per cent ferromanganese at $115, delivered Pittsburgh but it is altogether likely that tonnages of this grade could be bought for $110, as compared with the level of $105, c.i.f., Atlantic seaboard, for 76 to 80 per cent English ferromanganese. Inquiries for this alloy are limited and involve only small lots. Light inquiry also prevails for spiegeleisen, comparatively little of which is consumed in this district. The market, however, is reported to have a firmer tone, with 18 to 22 per cent spiegeleisen quoted at $32 to $35, furnace. The strike of workers at the Jackson, O., furnaces continues, but there is not much inquiry for bessemer ferrosilicon, their product. The 10 per cent grade is quoted at $49.75, 11 per cent at $53.05, and 12 per cent at $56.35, Ashland, Ky., Jackson and New Straitsville, O.

Expect English Ferro

Chicago, July 29.—Ferromanganese is rather listless at $115, furnace. The impression has gained ground recently that English ferro will be available soon at about $105, seaboard, equivalent to $110 to $115, Chicago. Spiegeleisen is steady and quiet at $35, eastern furnace.

Railroads Buying Plates

Pennsylvania Places 8000 Tons Subject to Official Approval—Reading Receives Bids—Car Tonnages Closed at Chicago

Philadelphia, July 29.—The Pennsylvania railroad has placed orders for 8000 tons of plates subject to the approval of the regional direct of the railroad administration. All quotations received were on basis 2.65c, Pittsburgh, and uncertainty prevails as to what the regional director will say in view of the recent suggestion of Henry B. Spencer of the railroad administration purchasing department that railroads buy only on mill basis. The Pennsylvania railroad requirements call for about 12,000 tons more. It is understood Philadelphia & Reading took bids on a tonnage but said it could not buy on Pittsburgh basis on which mills quoted. Plate business has improved considerably and eastern operations now around 40 per cent.

May Increase Spread

New York, July 28.—In some quarters here it is thought that the spread now existing between the prices of plates and bars will be decreased in the near future. In other words, it is thought that when prices are advanced, bars will be advanced more proportionately than plates. It is reported here that a Buffalo plate maker is offering plates freely in Canada at 2.50c, Pittsburgh.

Plate Buying Increases

Pittsburgh, July 29.—Increased buying of plates is noted and a considerable portion of the tonnage is for oil-tank construction. While orders from domestic shipyards are not large some fair-size tonnages for vessel construction are being placed and export demand for this purpose is being maintained at a good rate. So far as can be learned by careful inquiry sales are being made at the established price of 2.65c, Pittsburgh. Any cutting of prices that may have been made appears to have disappeared. Operations of plate mills are estimated at about 70 per cent of capacity.

Bookings Better in Valley

Youngstown, O., July 26.—Mahoning valley plate mills have a larger volume of business in hand than at any time since shipbuilding was at its height. Light plate mills are taking orders conditional on delivery six to eight weeks hence, and on heavier plates the producers also are acquiring a backlog. Both narrow and wide plates are in demand. The market is firm at 2.65c, Pittsburgh.

Boiler Steel Is in Good Demand

Cleveland, July 26.—Increased demand for boiler plate features the local market. During the past two weeks orders have been coming in sufficient to keep one of the local mills operating at full capacity, with 30 days business ahead. This business is being taken at 2.65c, with 15c extra for flanging. Some demand also is coming out for plates for storage tanks. An order for 5000 tons of light plates and sheets has been placed with a local interest by the Willys-Overland Co.

Situation is Stronger

Chicago, July 29.—Although steel plates have been in less demand than bars and shapes during recent weeks, orders from various sources have given plate mills a better backlog than had been thought and they are in fairly comfortable position. An independent plate maker in the west has sold practically its entire output for the remainder of the year and finds it does not obtain further business on offers of five to six weeks delivery, indicating that other interests are not so well situated. Japanese inquiries for ship plates continue to be disregarded because of insistence on concessions. A lot of about 150 tons for repair work was placed recently in this market for export to Japan. Word has been received here of the intention of the Emergency Fleet Corp. to release further shipbuilding projects on the Pacific coast, which will bring further plate business to Chicago mills.

Tin Plate Demand

Exceptionally Heavy as Bumper Crops are Harvested—Big Export Orders

Pittsburgh, July 29.—Abnormal crops of fruit and vegetables on the Pacific coast and the unusually large run of salmon have resulted in an exceptionally heavy demand for tin plate. Large orders for export shipment also continue to be placed. Some of them run as high, if not higher, than 100,000 boxes and are coming from such markets as Japan, the Scandinavian countries and South America. The Jones & Laughiln Steel Co. is operating 29 out of its 32 mills while the American Sheet & Tin Plate Co. is operating at about 95 per cent of capacity and is making deliveries in about eight to ten weeks. Some makers of tin plate alreadv have begun to report a scarcity of labor.

Withdraw From Market

Buffalo, July 29.—Orders for tin plate have increased to such an extent that mills that have been selling tin mill sizes of black plate have withdrawn from the market and are reserving the balance of their capacity for tinned plate.

To Argue Steel Suit

New York, July 28.—The reargument of the government's suit for the dissolution of the United States Steel Corp. is expected to take place before the United States Supreme Court at Washington early in October. It is expected that R. V. Lindabury, C. A. Severance and D. A. Reed again will appear at that time as attorneys for the corporation.

New Jobs Are Numerous

Miscellaneous Structural Work Continues Good Though July Tonnage is Probably Less Than in June—Fabricating Prices Vary

New York, July 28.—While it is believed that structural business in the East for July will fall below that of the preceding month, fabricators look for a good showing, despite the usual dullness around this season of the year. Furthermore, a still better showing is expected in August, which also is ordinarily quiet. These expectations are based on the tonnages involved in the various miscellaneous projects now under serious consideration and likely to development within the next few weeks, rather than on any individual construction program as might be carried on by the railroads or other governmental departments. The projects now up for attention pertain especially to apartment houses, theaters, office buildings and other miscellaneous structures, and, in the main, do not involve large individual tonnages. Yet the total tonnage involved is large. One of the largest new requirements in sight at this time calls for 6000 to 7000 tons for a dirigible hangar at Lakehurst, N. J. The bureau of yards and docks is expected to issue specifications within the next couple or three days in order that bids may be in by Aug. 6.

While one mill is reported to be operating at around 70 per cent of capacity, the majority of shape mills in the East are running at nearer 50 per cent.

Eastern Mills Fill Up

Philadelphia, July 29.—Structural shape orders with eastern mills have improved to such an extent that two large makers now are operating to capacity. New lettings in this district, however, are still light. The Belmont Iron Works has taken 350 tons for a sugar mill extension in Cuba and 300 tons for a hangar in Texas.

Activity in Structurals

Pittsburgh, July 29.—Some fabricators report that booking appear to have fallen off recently, following the rush of business from the automobile trade. Others report improvement in orders. Inquiries are coming out in somewhat better volume, and call for both domestic and export tonnages. Some fabrociating shops are operating at only moderate capacity, but are increasing the rate. The largest lot of the week was 5000 tons for an extension to the plant of the American Rolling Mill Co., Middletown, O., and this went to the American Bridge Co. A permit has been granted to the American Steel Hoop Co. for the erection of a two-story steel, brick and tile office building in Pittsburgh. A contract will be let soon for a cold-rolled strip steel mill to be built at Ambridge, Pa.

Recent Bids Show Price Trend

Cleveland, July 26.—Bids on two structural jobs in the Cleveland district afford an interesting basis of comparison. The King Bridge Co. submitted a bid of $111.90 a ton for fabrication and erection for the new Cuyahoga county jail, while the only other bidder on this job submitted a figure of $123. The county architect estimated that 2100 tons would be required, but the fabricators bid on an actual requirement of 1700 tons. Bids were submitted on a tonnage basis, and the lowest bid exceeded the architect's estimated by $1.90 a ton, although the total bid for 1700 tons was $41,000 lower than the architect's estimate of $231,000 for 2100 tons. The matter was referred to the county solicitor for an opinion as to whether the contract could be let under the circumstances. It is reported on reliable authority that the contract for 6000 tons for the Hanna building, which was awarded last week to the American Bridge Co., was let on a tonnage basis of $76, delivered. It is estimated that the cost of erection will average $16 a ton for this job. Fabricators in figuring the county jail job allowed, in one case, $25 a ton for erection, and in another, $28. A bid of $90 a ton delivered was submitted by one of the largest fabricators on another job. Structural lettings are not so numerous as a month ago and fabricating shops are still working at about 50 per cent of capacity. Bids are to be opened Aug. 11 on the general contract for the new Cleveland library, and while the exact tonnage has not been announced, it is estimated that it will amount to more than 1000. A 2000-ton award for a local theater was made.

Strikes Deter Building

Chicago, July 29.—With the building trades still locked out in Chicago, new construction has been stopped and projects well under way are suspended, making a large hole in demand for shapes. Activity, therefore, is much less than was the case in June. The largest award recently made in Chicago is 1454 tons to the Bethlehem Steel Co., for the Chicago Tribune. No information is forthcoming as to the character of the building. A number of projects that promised early maturity are held in abeyance because of labor difficulties. Bids are being taken on about 500 tons for trusses in the Drake hotel, Chicago, the structure being mostly reinforced concrete.

CONTRACTS AWARDED

Garage for Stalwood Realty Co., Lennox avenue, New York, 400 tons to Heddon Iron Construction Co.

Factory for Pick Chocolate Co., Brooklyn, 300 tons to Heddon Iron Construction Co.

Y. M. C. A., Bayonne, N. J., 450 to 500 tons, to Heddon Iron Construction Co.

Addition to the plant of the Pittsburgh Valve & Fittings Co., Barberton, O., about 175 tons; to Jones & Laughlin Steel Co.

Machine shop buildings for the Phoenix Iron Works Co., Meadville, Pa., 300 tons; to the Penn Bridge Company.

Machine shop building for Mesta Machine Co., Pittsburgh, 200 tons; to McClintic-Marshall Co.

Extension to plant of American Rolling Mill Co., Middletown, O., 5000 tons; to American Bridge Co.

Tribune building, Chicago, 1454 tons, to Bethlehem Steel Co.

Grain elevator, South Chicago, Northwestern railroad, 298 tons, to Toledo Bridge & Crane Co.

Additions to machine shop for George B. Limbert & Co., East Chicago, Ind., 178 tons, to Midland Structural Steel Co.

Factory for International Shoe Co., Mount Vernon, Ill., 150 tons, to Christopher & Simpson.

Additions to machine shop of Advance-Rumely Co., Laporte, Ind., 100 tons, to American Bridge Co.

Allan theater and office building, Cleveland, 2000 tons, to Fort Pitt Bridge Works.

Building for Globe-Wernicke Co., Cincinnati, 300 tons, to General Iron Works.

Foundry building for Continental Motors Co., Muskegon, Mich. ,150 tons; to Lackawanna Bridge Co.

CONTRACTS PENDING

Bridge for Baltimore & Ohio, 400 tons, bids being asked.

Government warehouse at Curtis Bay, Md., 250 tons, contract pending.

Shop for American Locomotive Works, Schnectady, N. Y., 650 tons, bids being asked.

Government hangar at Lakehurst, N. J., 6000 to 7000 tons, pending, general contracts awarded.

Two bridges for Rutland railway, 190 tons, to independents.

Warehouse in Jersey City, 700 tons, plans changed to reinforced concrete.

Building for the Tiedke Co., Toledo, O., 350 tons, to the Toledo Bridge & Crane Co.

Foundry for the Toledo Machine & Tool Co., Toledo, O., 1300 tons, bids being taken.

Building for Cleveland Tractor Co., Cleveland, 500 tons; bids being taken.

Public library, Cleveland, 1000 tons or more; bids on general contract to be opened Aug. 11.

Buildings for Timken Roller Bearing Co., Columbus, O., tonnage indefinite, bids being taken.

Orders Refused

By Makers of Tubular Goods—Large Canadian Inquiry is Pending

New York, July 28.—Demand for lapweld pipe contiues entirely beyond the capacity of the mills with the result that big tonnages constantly are being refused. One large interest now has an inquiry out for 75 miles of line, gas pipe and casing, and a Canadian interest has an inquiry for 118 miles of line gas pipe and casing. Most makers now are out of the market on buttweld pipe as far as the solicitation of business is concerned. Orders from the merchant trade have been heavy of late, with the result that all that most of the makers now are trying to do is to take care of their customers. The recent advance of the Wheeling Steel & Iron Co. has not been followed by any of the other makers.

Eastern Prices Unchanged

New York, July 28.—Although western makers have advanced their prices $2 a ton, the eastern market on cast iron pipe continues to hold around $52.70, New York, for 6-inch pipe and over and $55.70 for 4-inch. Manufacturers in the East, however, state that prices are stronger at these levels than for some time. Buying at the present time continues to come almost entirely from private sources,

and this business, sellers assert, aggregates a fair volume. Despite a stronger tone, municipalities hold back. At present, there are virtually no inquiries, and public buying is at a minimum. A fair amount of miscellaneous inquiry is coming out from various export houses, but as has been the case all along, there is little buying.

Sold Up on Lapweld Pipe

Pittsburgh, July 29.—Mills making iron and steel lapweld pipe are so well sold up that it is more general for them not to quote, except for regular customers, and deliveries are being made by some mills in five and six months. The National Tube Co. is shipping lapweld pipe in 18 to 20 weeks. Some makers of iron lapweld pipe are sold up to the first of the year and later. Inquiries for this grade continues to come out in good volume, especially from the oil well interests. Some makers have booked practically twice as much business during the past four or five weeks as they can produce in almost two months. It is understood that the Sun Oil Co., Philadelphia, has not closed on its inquiry for 300 miles of 8-inch line pipe. Another inquiry involves 70 miles of 8-inch line pipe. Some consumers, having been unsuccessful in their attempts to buy direct from mills, have turned to the jobbers, but without any degree of satisfaction. The market for buttweld pipe has shown improvement and makers of this grade are booking sizable tonnages. Jobbers are buying freely. Deliveries of buttweld pipe are being made by the leading interest in three to four weeks. Operations of the pipe mills are estimated at about 90 per cent of capacity and they will be greater when repair work being done is completed. The Riverside plant of the National Tube Co., at Benwood, W. Va., will go into operation some time in August.

Labor Shortage Troubles

Chicago, July 29.—Buying of cast iron pipe has given shops so much tonnage that they are operating at the limit of their labor ability but are unable to keep up with demands because they cannot obtain sufficient men to operate at plant capacity. This results in the necessity of shifting men from one pit to another in the endeavor to meet requirements of various sized pipe. The pipe asked by Denver has been divided, the United States Cast Iron Pipe & Foundry Co. taking 1800 tons of 24 and 36-inch, and the Colorado Fuel & Iron Co. 1200 tons of 6 to 20-inch. The United States Cast Iron Pipe & Foundry Co. has taken 400 tons for St. Cloud, Minn., through a contractor. Ashland, Ky., has rejected all bids on 150 tons and is readvertising, for Aug. 18.

All Kinds of Pipe in Demand

Birmingham, Ala., July 29.—Cast iron pipe makers in the South have many specifications in hand or in sight. Makers of sanitary pipe are having a good demand, and one or two may be forced to withdraw from the market, on orders for delivery during the balance of the year.

Car Repair Steel Bought

Builders in Chicago District Close for 16,000 Tons—Some New Car Inquiry Current—Few Rail Purchases—Small Spikes Active

Chicago, July 29.—With railroads unable to buy material for use in their own shops, it appears to be possible for them to contract with carbuilding concerns for considerable repairs on their equipment. As a result, the Ryan Car Co. has bought 11,000 tons of finished steel, including plates, shapes and bars, and the Liberty Car Co., 5000 tons, both orders going to the leading interest. No action has been taken on inquiry for cars for Poland or for Chile, and several inquiries for cars to be used in this country are also pending. An inquiry for 100 to 200 steel dump cars for export to Europe has been put out by Belasco & Co., of New York. The American Car & Foundry Co. has taken an order from the Lehigh Valley Coal Co. for 100 mine cars and from the Shawmut Mining Co., St. Marys, Pa., for 200 wooden mine cars.

No buying of standard steel rails or fastenings is being done at present and inquiry for light rails is unusually quiet.

Small Spikes Sell Freely

Pittsburgh, July 29.—Producers of small spikes are operating at practically 100 per cent of capacity, orders for this business are being placed freely and some makers are almost sold up. Jobbers are covering requirements and are being given deliveries in from six to eight weeks. Except for infrequent and small orders from the railroads, virtually no business is being done in standard spikes. While there is no inquiry for standard rails for domestic railroads, it is understood that there is some activity in the export trade. The market for light sections is firm at 2.45c, Pittsburgh, and inquiries continue to come from foreign buyers, as well as from coal mining interests in this country.

Higher Price

On Wire Quoted by Pittsburgh Maker —Producers are Sold Up

Pittsburgh, July 29.—Action taken by the Youngstown Sheet & Tube Co., and the Cambria Steel Co., in advancing prices of wire products was followed last week by the Pittsburgh Steel Co. The latter announced a straight increase of $2 a ton on wire products of all kinds and 25c a keg on bright and coated nails for domestic business. It also increased export prices for the second time within two weeks, the levels for which are higher than those applying in the domestic market. The export prices, which include Canada, are understood to be the same as the advanced prices quoted by the United States Steel Products Co. The Pittsburgh Steel Co., on domestic business, now is quoting $3.50 on bright nails, $3.10 on coated nails, and $3.10 on plain wire, 3.50c on painted barbed wire, and 4.20c on galvanized barbed wire, Pittsburgh. This company is well sold up on wire products and is accepting no orders unless they are first submitted to the home office. The Jones & Laughlin Steel Co. also sold up on wire products, has not increased prices on nails and drawn wire. The American Steel & Wire Co. continues to quote the old rates, but is taking business only from regular customers.

Advances Not Followed

New York, July 28.—Although most of the independent wire makers have advanced their prices, their example has not been followed by the American Steel & Wire Co. This interest apparently has made no decision which would involve any change in prices in the near future. Due to the large unfilled tonnages on their books, the wire makers are making no effort to book any further business.

Strike Affects Operations

Cleveland, July 29.—Wire producers are so heavily filled with business that they are accepting new orders with great caution. Sales representatives are being required to submit all inquiries to mill headquarters. Inquiry is active. Strike troubles on the Newburgh & South Shore railroad and at the Central furnace group of the American Steel & Wire Co., are interfering with the operations of the Newburgh steel works. Finishing mill operations are being kept up by cold steel from stock. Three of the four Central furnaces are idle. If the trouble continues, steel may be shipped in from outside plants. An inquiry for 600 to 700 tons of wire for Holland has been current locally.

Leading Maker Stands Pat

Chicago, July 29.—Although many manufacturers of wire and wire products have advanced prices recently, the leading interest is holding to the former schedule and has not yet followed its competitors. As a result its position is peculiar and it is being given an unusual volume of inquiry from which to sift out such regular customers as it is willing to give contracts. Under these circumstances it is also limiting the tonnages it will accept.

Hammond Steel Improves

At a cost of approximately $250,000, the Hammond Steel Co., Syracuse, N. Y., which recently increased its capital from $1,000,000 to $1,700,000, will erect plant extensions including a new rolling mill. The building will be 80 x 260 feet, with an addition of 40 x 60 feet. The addition of several electric furnaces of the 12 and 15-ton type is contemplated at this time as well as the erection of a central power plant.

Temporary Check in Export Trade

Big Japanese Buyers Depart—Will Appear Again in Market Next September or October—England Withdraws Prices at Buenos Aires—British Continue to Buy Heavily Here—South American Sales Good

NEW YORK, July 28.—One prominent steel man declares that exports today are normal, whereas another big agency reports that they are above normal. At the present rate of business the United States will export 7,000,000 tons of steel this calendar year, whereas prior to the war America's iron and steel exports amounted to less than 3,500,000 tons. It is confidently believed in the trade that with more stable conditions which should come within the next six months or so, our exports easily should reach 10,000,000 tons during the year 1920. These figures are adding confidence to the previous expectations of exporters that the war would awaken the foreign trade instincts of American producers and be the means of introducing our goods to permanent customers in the markets of the world.

Temporarily, however, there is said to be a slump in both inquiries and orders, but this is due, it is felt, more to the summer period than to any lessening of the actual demands abroad. Slumps such as these occur periodically. It merely means that a flood of inquiries have been cleaned up and the agencies are awaiting the development of further business. The large Japanese buyers, for instance, have left for home and the more important of the Japanese business has for the time being been closed. It is expected that these purchasing interests will come into the market again about September or October.

Japan, however, still is buying wire rods, tin plate and light sheets. It is still about the best market for this country today. Among the recent sales to Japan were 1000 tons of bars, 3000 tons of plates, 500 tons of sheets, and 3000 cases of tin plate. The big Japanese inquiries for shipbuilding material were but partly closed. This business is believed to be temporarily out of the market, and the inquiries will not be repeated again until next fall. Current shipments to Japan are keeping a large fleet of ships busy. One line declared that it is able to send a ship a week into this trade, but were it not for the iron and steel tonnages to be moved two ships a month would be adequate to take care of the business going to the Orient. Among recent sales made in the Orient is one which consists of 1500 tons of foundry iron.

The Chinese boycott of Japanese ships will hurt business with China, it is feared. Merchants are said to be unwilling to send their goods on Japanese boats for fear that the Chinese will refuse to accept delivery. This boycott is particularly vigorous at Shanghai, Chefoo and Canton. China has been buying wire products, nails and light rails. Some new inquiries have come into the market for flat cars and locomotives for the Chinese government. A new Australian inquiry for tin wire has appeared in the market.

Miscellaneous Sales to Latin America

Many of the export companies hold that the Latin-American business is about the best today although the orders from that secion run in extremely small tonnages. The fear of British competition in South America has been largely dissipated. According to a recent report received here the British have withdrawn their prices at Buenos Ayres. American sales made in these markets embrace wire, pipe, tin plate, sheets and bars. The individual orders vary from 50 to 100 tons each. South America also has been purchasing galvanized wire.

The steamship strike interfered greatly with the outward movement of business but that did not cause any stoppage to the inquiries or the orders. At no time was the strike considered so serious as to make exporters disinclined to give c.i.f. quotations to their foreign customers.

English business predominates in European orders. England has been buying iron bars heavily. One house alone has sold 2000 tons. Recent sales of bars to England probably would total 10,000 tons or more. England also has been buying products largely because the prices asked by the English producers are said to be approximately $30 a ton higher than those quoted by the American producers. An order for 2000 tons of wire was closed and some screw stock has been disposed of to the British. English tin plate prices, however, continue lower than those of this country. As a consequence, England dominates the markets of Portugal and Spain.

England and France are believed to be obtaining raw material and semi-finished products from the Saar valley. This is a trend of trade which was common prior to the war. The new source of supply for the British mills, nevertheless, has not stopped all sales of American raw materials to England. An order for billets, to be shipped through a southern port in a cotton ship, has been noted. An inquiry for 10,000 tons of foundry iron, presumably for English account, has appeared in the market. The reputed sale of tram rails to the city of Glasgow is said to have totaled 10,000 tons, although the official confirmation of this sale by the U. S. Steel Products Co. still is lacking. Among the recent English inquiries are noted 500 tons of structural steel and 200 tons of mild steel sheets.

England has been trying to buy coal in this country without much success. It is understood that orders have been placed by Norway, Sweden, Switzerland and other countries through the London market. Due to strikes and the resultant scarcity of coal in England the London agents are striving to keep their trade by buying up stocks in the United States.

French inquiries continue to come in, but there is little optimism regarding them. French wants include nails, wire and sheets. One of the inquiries noted was for 2000 tons of thin black sheets. Italy has come into the market for a considerable quantity of shipbuilding material and these inquiries are now in the process of negotiation. Italy is said to have purchased ferromanganese, spiegeleisen and coke. The coke purchases are a new development as heretofore Italy's fuel wants appear to have been concentrated on coal. Belgium is trying to buy 50,000 tons of foundry coke.

A sale of 5000 tons of shipbuilding material to Holland is noted. There have been some interesting inquiries and sales to Baltic ports which are believed to be intended for Germany. The Germans are said to be obtaining their supplies by purchases made through Holland and the Scandinavian countries. As a matter of fact it is now common gossip that the Germans obtained their supplies of iron and steel in this manner even before the allies lifted the commercial blockade. Germany, as well as Austria and Belgium are in the market for spiegeleisen. Canada is inquiring for 118 miles of line gas pipe and casing.

Mills to Reply in Basing Case

Federal Trade Commission Decides to Receive Complaints Against Pittsburgh Price Base and Asks Steelmakers to Submit Statements by Sept. 1—Will Consolidate Claims From Other Cities With Chicago Hearing

WASHINGTON, July 29.—Decision of the federal trade commission to investigate the trade custom of basing prices at Pittsburgh was announced publicly last Saturday with a letter from Victor Murdock, acting chairman of the commission, to E. H. Gary, president of the American Iron and Steel institute. This action followed receipt on July 22 of the application of the Western Association of Rolled Steel Consumers for issuance of a formal complaint against the United States Steel Corp., its subsidiaries, the Illinois Steel Co. and the Carnegie Steel Co., and three independent producers, the Inland Steel Co., the Interstate Iron & Steel Co. and the Steel & Tube Co. of America, to eliminate Pittsburgh as the basing point on steel products.

Judge Gary was asked, in the letter, to inform the members of the institute of the pending action so that all iron and steel producers and consumers may determine whether they are interested in the question because, as Judge Gary told the commission in a preliminary conference on July 9 and as Mr. Murdock points out in his letter, the point involved is more than merely whether shall Chicago be made a basing point. As was suggested at that conference, it is likely the custom as practiced in other trades, nonferrous metals, foodstuffs, etc., may be taken up at the same time. It was said today the chamber of commerce of the United States may notify other industries of the pending case and call upon them to present their views.

Prior to the filing of the Western association's application, complaint had been made to the commission by the board of trade of Superior, Wis., and by the chamber of commerce of Birmingham. These complaints will be consolidated with that of the association and it is likely other communities through their civic organizations will take part in the case. The commissioners have come to the view expressed by Judge Gary early this month that it will probably be the biggest lawsuit ever heard by the commission, if not in this country, and more far-reaching because of the almost universal application of the trade practice.

Judge Gary is to notify members of the institute so they may state their positions on the question. In the meanwhile the commission has notified the shipping board, the railroad administration, the war department, the navy department, the post office department, the interstate commerce commission, the American Federation of Labor and other departments of the government and other organizations. As was stated in the commission's announcement of its intention to investigate the question of freight equalization, "the nominal respondents are the Steel corporation and the others, but every maker and consumer of steel products is interested in the outcome."

The course being followed is that substantially outlined at the conference here July 9 when, in addition to Judge Gary, John S. Miller, counsel for the Western association, was in attendance. Mr. Murdock's letter to Judge Gary follows:

Violations Are Charged

"An application has been received from the Western Association of Rolled Steel Consumers for the issuance of a complaint by the federal trade commission against the United States Steel Corp. and others which alleges that the practice of selling rolled steel on a Pittsburgh basing point basis is repugnant to the federal trade commission act and to the Clayton act.

"The commission is advising you of this matter in order that you may inform members of your organization so that each may determine if he is interested therein.

"Additional copies of the application will be sent on request to such members of your organization or other parties as may request it.

"It is suggested that you also advise them directly of this matter in order that each may prepare written statemens of his position with regard thereto for submission to this commission. Such statements should be submitted to the commission before Sept. 1, 1919.

"The subsequent procedure in this matter will be as follows: After due opportunity has been given for all interested parties to submit statements to the commission regarding their positions, and other information deemed necessary by the commission has been obtained, public hearings will be held by the commission, which interested parties are invited to attend, in order to determine whether the application should be granted, or other action taken according to the facts so developed.

"The question raised by the applicant may not be the only question involved in this matter and the remedy suggested by the applicant, namely, to make Chicago a basing point may not be the only remedy, or the appropriate remedy, even in the event that the applicant's contention is found to be valid. In other words, the whole question of the practice of having basing points for making rolled steel prices may be involved, as well as the question whether Pittsburgh, or some other place should be the sole basing point, or whether there should be more than one basing point.

"Will you, then, aid the commission's effort to bring notice to all interested parties, by informing your members as above suggested?"

The commission also has noted the following:

"The board of trade of Superior, Wis., has raised the same question with the federal trade commission and several other complaints have been received. The chamber of commerce of Birmingham has notified the commission that it desires to be heard. All these complaints will be consolidated into the single proceeding.

"A copy of the letter of notification has been sent to many government departments including the shipping board, the railroad administration, the post office department, the navy department, the war department, the interstate commerce commission, and others. It will also go through the American Federation of Labor to all central labor unions throughout the country."

Judge Gary's letter to Commissioner Murdock carried the following paragraph explanatory of the original adoption of Pittsburgh base:

"The iron and steel industry in this country really started at Pittsburgh many years ago. That was probably the cheapest point of production, largely because the fuel was there in immediate proximity and the iron ore was brought on the lakes to Conneaut, north of Pittsburgh, and brought by a short railroad to the furnaces and the limestone was in that vicinity. It was the cheapest point for the assembling of the raw materials and consequently the cheapest place for producing iron and steel.

"That being so, of course, iron and steel products which were made were sold at a price f.o.b. mill, which meant f.o.b. Pittsburgh. Then later works were started in other places—Youngstown, not very far from there; Johnstown in the other direction, not very far from Pittsburgh—and the manufactured products were sold then f.o.b. Pittsburgh."

Turning Tide

In Steel Trade Shown by Steel Report —June High Mark

Convincing evidence of the turning of the tide in the iron and steel industry is to be found in the second quarter report of the United States Steel Corp., which shows June with earnings of $12,371,349, the peak point reached during the six months of the current year. Total earnings for the three months' period after federal taxes of $34,331,301 exceeded those for the March quarter by nearly $1,000,000. With the first and second quarter reports now public, a picture of the iron and steel industry's fluctuations during the reconstruction period following the armistice may be seen. This shows that January before complete cancellation of war orders netted earnings of $12,240,167. February dropped to $11,883,027, while the low point for the six months was reached in March when earnings were $9,390,190. The Steel corporation suffered with the rest of the industry during the industrial board price controversy and the resulting trade paralysis. When activity began to appear in the spring the corporation profited because of its diversified output.

It is interesting to note that while during the six months preceding the war ending with June 30, 1914, the company showed a deficit of $11,448,881, the half year of 1919 following the war resulted in a surplus of $10,130,903 after paying dividends and excess profits taxes.

Following the custom inaugurated in its March report the corporation withheld the estimated federal taxes. They were estimated in some quarters at $35,000,000 for that quarter and probably were no less in the June period.

The comparative income account follows:

	1919	1918
April	$11,027,393	$20,644,982
May	10,932,559	21,494,204
June	12,371,349	20,418,205
Total quarter earnings after operating expenses and federal taxes	34,331,301	62,557,391
Deprec. and sinking funds	11,007,195	10,157,908
Net income	23,324,106	52,399,483
Interest and bond premium	5,356,819	5,474,333
Balance	17,967,287	46,925,150
Dividends:		
Preferred	6,304,919	6,304,919
Common	6,353,781	21,602,856
Bal. of surp. for quarter	5,308,587	19,017,375

In an informal review of the trade Chairman E. H. Gary spoke hopefully of the future, although emphasizing the fact that export movement thus far is only moderate. The recent collapse of foreign exchange has proved a disturbing element but that situation, he declared is now in process of correction. He was optimistic regarding general domestic trade conditions applicable to the iron and steel industry.

Receives Mill Contract

The Youngstown Foundry & Machine Co., Youngstown, O., has secured the contract for furnishing the new 18-inch mill to be installed by the Carnegie Steel Co. at its McDonald plant, Youngstown. This contract will take about three months to complete. The Youngstown Foundry & Machine Co. built all the mills that so far have been installed at the McDonald plant.

In addition to this contract, this company recently has secured other large orders, among which are several large shears. Recently this company made shipment to South America of two of its enclosed headstock typ of roll lathes.

More Furnaces in Blast

The Carnegie Steel Co. now is operating 46 of its 59 furnaces, as compared with 40 one week ago. Furnaces of this company which were blown in included one at Farrell, Pa., two at the Edgar Thomson works, two at the Columbus, O., plant, one at New Castle, Pa., and one at Mingo Junction, O., while one furnace at the Edgar Thomson works was blown out for repairs.

The McKinney Steel Co. now is operating all of its four furnaces at Cleveland.

Expect Warehouse Rise

Philadelphia, July 29.—New and higher prices on iron and steel stocks from warehouse are expected to be announced in all districts before the end of the present week, according to information current in this territory.

The Nonferrous Metals

	Copper	Future Straits N. Y.*	‡Lead, New York basis	Zinc St. Louis basis	Aluminum	Spot antimony
July 23	23.50	51.75	5.75	8.00	33.00	9.37½
July 24	23.75	51.75	6.00	8.00	33.00	9.37½
July 25	24.00	52.75	6.00	8.00	33.00	9.50
July 28	23.75	54.00	6.00	7.90	33.00	9.50
July 29	23.75	54.50	6.00	7.75	33.00	9.25

‡American Smelting & Refining Co.'s price.
*July shipment from Singapore, c.i.f. New York.

NEW YORK, July 29.—The nonferrous metal markets have quietd down somewhat following a period of trading, which probably has been more active than any since those of early in the war. Sales of copper, lead and zinc have far exceeded production, preparatory to a season of increased manufacturing consumption to provide for the lack of commodities the world over. Japan has been in the market almost steadily, buying large quantities of all three metals. Purchases of copper for Japanese account last week approximated 2000 tons, bringing her estimated total purchases in recent months to more than 20,000 tons. Prices continued to rise last week, despite the tendency of dealers to take profits in some cases.

Large producers of copper increased their quotation on electrolytic to 23.75c to 24c for July, August and September deliveries, while 24.25c was asked by the only large sellers willing to quote on October. Production of copper now is said to be only about 50 per cent of capacity and in the past three months sales have far exceeded output. Water scarcity in Montana now is proving an added handicap, labor shortage long having held up output.

The zinc market softened somewhat after it reached the 8-cent level a few weeks ago. This was due principally to offerings by dealers, producers showing no great inclination to press sales, especially of futures. The price of ore has advanced to around $55 a ton, or to a point at which slab zinc cannot be smelted at a profit at 8c. Without such an ore price supplies of ore it is thought would fall short, so the position of the zinc market is considered comparatively strong. High grade zinc is quoted 8.87½c, New York.

The lead market advanced sharply last week, the leading producer increasing its price $5 a ton more on Thursday to 6c, New York, 5.75c, East St. Louis basis. A large amount of buying of lead was done in July. The lead situation is regarded as particularly strong. There is some anxiety over labor at the smelters and the margin between demand and supplies is small as it is. A shutdown of a smelter or so would quickly be reflected in the market. Japan and Canada have been inquiring for lead.

The tin market has advanced the past week, due to sharp rise at London and Singapore. The supply of spot tin at London is small. On sales of 50 tons Monday at London the market advanced £8. July shipment Straits advanced to 54c, c.i.f. New York; August shipment, 53.50c; July shipment, Lamb & Flagg, from England, 54c; early August shipment Straits, from England, 54.50c. There is not an oversupply of tin in this country, as indicated by the holding of the spot tin price at 69c to 70c, while even such prices fail to tempt consumers holding supplies to resell, although they could cover with tin for delivery a few months from now at almost 20c a pound lower.

The antimony market has been very strong, due to sales for shipment from here to Copenhagen and Rotterdam, for German account. About 500 tons have been sold and large inquiries remain unfilled.

High Achievement in Australia

Marine Construction and Engineering Works at Castlemaine, Australia Presents Interesting Features — Country Awakening to Manufacturing Possibilities—American Machinery Used—Government Work Handled

BY THOMAS J. SWAIN
(Special Correspondence to The Iron Trade Review)

FOUNDED in 1874, just after the great gold rush to Forest Creek, now Castlemaine, Australia, the engineering works of Thompson & Co., has grown steadily until it now generally is conceded to be the largest works of its kind south of the equator. Australians point with pride to this enterprise as proof of their claim that in engineering skill, as in many other directions, they can hold their own in competition with the best in the world. Certainly there is no engineering firm in this quarter of the globe so widely known and so representative of modern thought and practice.

The company manufactures mining and metallurgical equipment, steam engines, covering the whole field of reciprocating types up to units of 3000 horsepower, air compressors and blowing engines, condensers, steam boilers, pumping engines, dredging plants and locomotives. A large proportion of the plant's resources are devoted to federal and state government work, and to production for the Australian navy.

War Brought an Awakening

In the development of the Thompson works can be observed the awakening of Australia to its own possibilities in the field of engineering and manufacturing. Until the war fanned the latent spark of industry Australia overlooked many opportunities, and production in many lines suffered from the tendency to look elsewhere in the world for finished products. Australians now realize that this blighting influence was the result of unwise prejudice and are more inclined to appreciate manufacturing ability in this country.

System, courage and enterprise have combined to make the Thompson works a model for Australian manufacturers. While the plant is among the oldest in the country the equipment is of the most modern type, and methods adopted are similar in many respects to those in use in the largest British and American manufacturing establishments. The firm originated through the activities of David and James S. Thompson, who did well at mining and then launched out as contractors for erecting mining plants. The original works, employing six hands and occupying less than a quarter of an acre of ground, has increased until it now employs about 600 and covers 8¼ acres.

After the death of the late David

These shops at Castlemaine are considered a model for Australian engineering works.

Railway tire, automatic machine and engine repair shops of Thompson & Co.

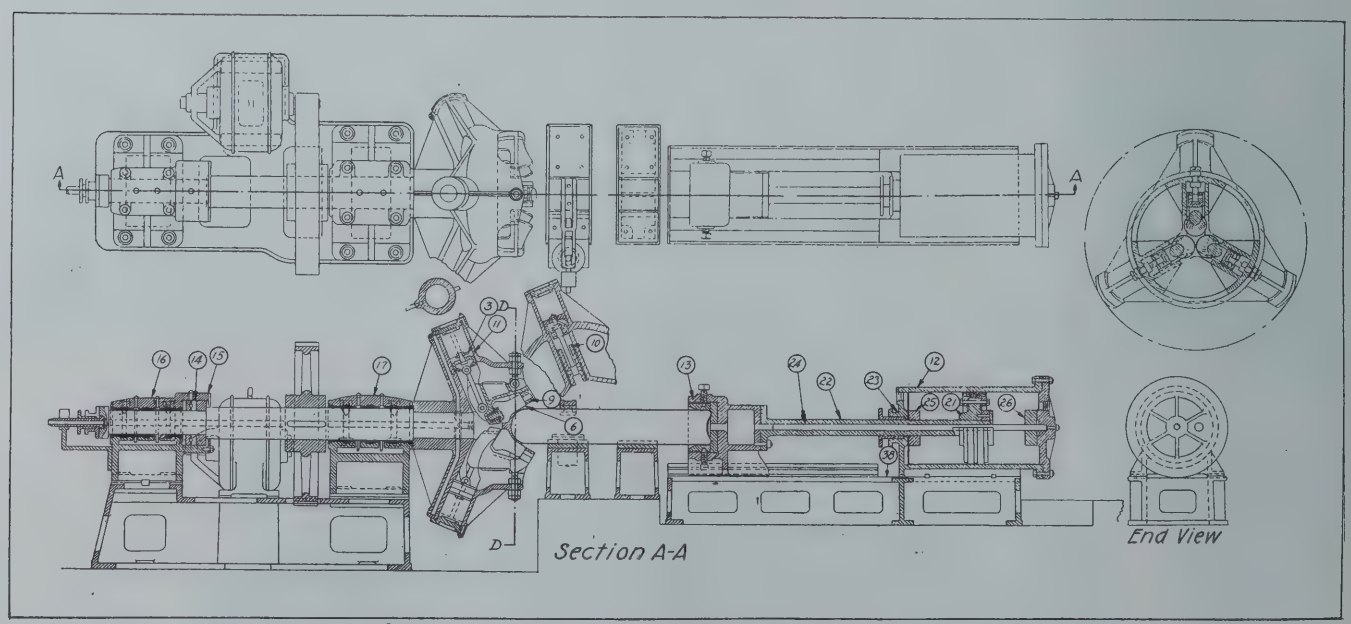
Thompson Sr., the business was carried on by his widow and brother, with David Thompson Jr. as director of technical operations. In 1913 the present company was formed to take up the manufacture of locomotives. Many of the men holding important positions now originally were apprentices in the engineering shop; likewise many other men in other successful plants learned their work here. When the new company was formed much equipment was purchased for the construction of locomotives and tenders for the Victorian government and today this work is an important department of the company's enterprise.

Entering the works one observes a modern two-story office building. Then the visitor passes through the shop used for the construction of railway switch points and crossings, for which the firm has large contracts. The rail-planing and machinery department is equipped with nine planing machines, shapers, cold saws, forges and bending apparatus. To curtail the handling expense of rails this department is equipped with several motor-driven back saws. Trucks bring in new material to the traveling cranes. One of these cranes can move a 15-ton section to another department in a few minutes.

Steam is supplied by the power plant at a pressure of 150 pounds to two independent sets of triple-expansion, high-speed, enclosed-type engines, each of 300 horsepower, coupled to two 250-kilowatt, 230-volt direct-current generators.

Equipment in the testing shop is sufficient to test steam engines, generators up to 500-kilowatt capacity, and pumps with a capacity up to 10,000 gallons per minute. The general machine shop is equipped with up-to-date machines, such as six horizontal boring and turning mills, and one 6-foot vertical boring and turning mill. A special machine has been fitted with a milling and gear-cutting attachment and is capable of cutting the teeth in spur wheels up to 20 feet in diameter. The equipment also includes vertical and horizontal milling machines, high-speed lathes and grinding and slotting machines.

The engineers' department has a 7-foot Hendy-Norton toolmakers' lathe, a Cincinnati milling machine and universal grinder, an integral grinder, and a Gisholt tool grinder.



Rapid Forming of Steel Tank Noses

FORMING various shapes of noses on steel cylinders, tubes and tanks suitable for transporting explosive gases and liquids, has been a comparatively expensive process, contrasted with the manufacture of the article proper. This is due to the many operations that have to be performed. In order to facilitate production, Walter Ferrier, general superintendent of the Elyria Iron & Steel Co., Elyria, O., and Cleveland, conceived the plan of spinning the work while applied against three rolls, 120 degrees apart.

The machine is shown in the accompanying illustration. It operates the rolls on the surface of the partly formed nose so that by skin friction the top surface of the wall will not be elongated or pulled relative to the inside surface, but rather form the nose. In this way, the tank will neither increase or decrease in length and the area of any transverse cross section of the nose will be equal to that of the tank or tube itself. This gives sufficient metal at the neck to permit of drilling and tapping out.

These results are obtained by pivoting the roll containers on one end and operating the other end pneumatically by the direct expansion process. Three air cylinders are cast in one piece with the housing 120 degrees equidistant apart and at equal angles with center lines converging at the same point in the center. When the rolls, *6*, are closed or in the position shown in the illustration they make an angle of 30 degrees with the horizontal and are always acting in planes radially equidistant apart. Their tendency is to always approach the horizontal or open up by virtue of the centrifugal force induced by the revolving housing. This force is counteracted, of course, by the air pressure in the cylinders immediately upon application. This housing, with its nest of rolls, is revolved by means of a hollow shaft at about 130 revolutions per minute, driven by a 10 horsepower motor through gears.

A cored hole through the shaft is provided to admit the air by means of a stationary gland connection at

MACHINE EQUIPPED WITH PNEUMATICALLY OPERATED ROLLS FOR SPINNING THE ENDS OF HEAVY STEEL TANKS

the outer end to the three pneumatic cylinders, *3*, operating the rolls. The air ports leading from the annular groove in the hub and the three radial holes emanating from the center core of the shaft are illustrated. The rolls are equipped with roller bearings, *9*, and brass wearing plates on the roll containers, *10*, as shown in section *DD*. All pneumatic pistons have leather cupped packing rings, *11*.

The tank is forced against the action of the rolls by means of a high pressure pneumatic cylinder, *12*, through the medium of a sliding chuck, *13*. This thrust is counteracted by means of a ball thrust bearing, *14*, and with the gasket, *15*, in place forms an oil reservoir for proper lubrication.

A sliding chuck is directly connected to the main piston, *21*, with a hollow steel rod, *22*, flanged on the chuck end, and sliding through a packed gland, *23*. This piston rod slides back and forth over a smaller stationary push-out rod, *24*. The liners, *25* and *26*, are for adjusting the stroke to a minimum to avoid the waste of air unnecessarily. A liner is provided in the housing roll cylinders to govern the length of stroke to accommodate the small diameter of neck required. The main cylinder, *12*, being double acting, is controlled by means of a 4-way valve, and the air inlet through the main shaft to the roller cylinders is controlled by a 3-way air valve since they are only single acting. The sliding chuck, *13*, is mounted on a common bed plate, *38*, with the main cylinder, *12*, to insure alignment. The main air cylinder, *12*, is also doweled on its bed plate, *38*, by means of a key which can be shifted forward to a second keyway placed to suit the best stroke for a given piece of work.

With the rolling machine described, one tank can be nosed in one heat. This is partly due to the effect of the action of the rolls on the work. The time required is said to be less than one minute. One man can operate the whole controlling mechanism which is simple, one 4-way valve, two 3-way valves and one motor controller, which does not have to be operated for each tank, but only for starting and stopping the machine. When running at full capacity the machine requires an air supply of about 10 cubic feet per minute at a pressure of 100 to 120 pounds per square inch.

Book Review

Storage, by H. B. Twyford, Otis Elevator Co.; cloth, 200 pp., 6 x 9 inches; published by D. Van Nostrand Co., New York; furnished by THE IRON TRADE REVIEW.

Storing of raw material and manufactured articles forms a line of economic endeavor which has not been appreciated to its fullest extent. Lack of proper storing constitutes a handicap to any business, and more especially to a manufacturing enterprise. Last winter's transportation difficulties focused attention upon the danger of limited capacity for storing. Post-armistice cancellations emphasized the folly of unlimited hoarding of supplies and manufactured articles. These two extreme instances serve to demonstrate the problem as one worthy of study by the executive. The first portion of this book is devoted to a discussion of the economic aspects of the storage problem. Stored material is considered as a source of wealth, capable of appreciation in value only through a raise in price; but subject to loss through storing cost, and depreciation factors. Details relating to the best modern storage practice occupy the remaining portions of the book. Emphasis is placed upon the correct description, records and inventory as essential to economical storing. Location, equipment and storeroom appliances as factors in decreasing cost occupy a number of chapters which are well illustrated from photographs. Inspection, receiving and delivery are discussed. Ledger card and memoranda forms are suggested for these details of storing. The author handles the entire question as a problem in business procedure and his discussion is in the character of a summation of modern experience.

German Industrial Plans

German manufacturing companies are losing no time in converting munition works into factories for the manufacture of machinery for industrial use. The Westphalia & Anhalt Explosives Co. has sold the Adolph Bruckmann, Chemische Fabrik Oscherleben, which it purchased only a year ago, to the firm of Meyer & Riemann Chemische Fabrik & Co. at Linden-Hannover, and is reorganizing its factories, with headquarters at Magdeburg.

Large Locomotive Requires Much Steel

Baron Shimpei Goto, former president of the Manchurian and Imperial government railways, former minister of home affairs and later minister of foreign affairs of Japan, and who is now devoting considerable effort to clearing away American misunderstanding with respect to Japan, recently visited the Schenectady plant of the American Locomotive Co. The accompanying illustration shows Baron Goto's party, with officials of the company, beside one of the huge locomotives built lately for the railroad administration. This locomotive is the heaviest standardized unit of the Mallet type. Its construction including the tender required 64 tons of plates, 4¼ tons of shapes, 64 tons of bars and forgings, 20 tons of tubes, 84 tons of steel castings and 4 tons of springs.

370-TON LOCOMOTIVE BUILT FOR THE RAILROAD ADMINISTRATION

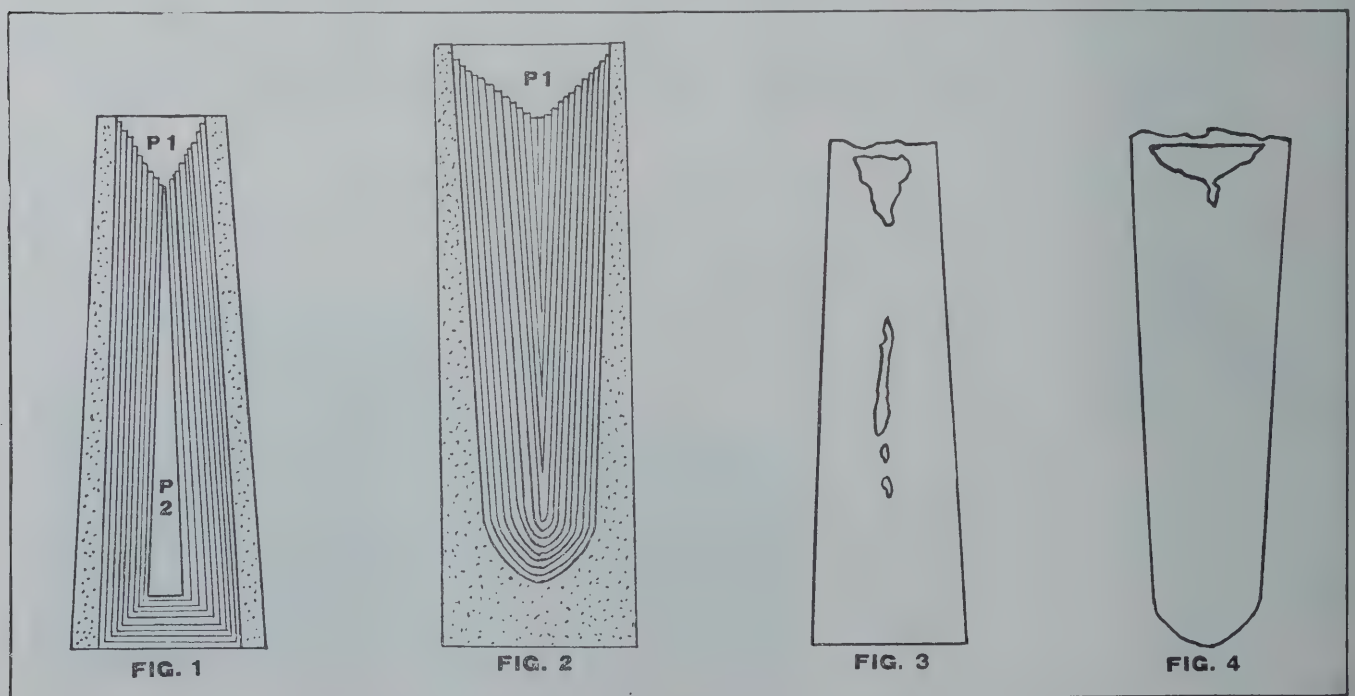
Imperfect Steel, or Heat Treating?

Relation Between Defects in Manufacture and Subsequent Treatment of Steel is Receiving Co-operative Attention — Sources of Trouble in Both Producers' and Consumers' Plants are Pointed Out

BY A. F. MacFARLAND

THE relation between steel-mill practices and heat treatment of fabricated steel parts is such a broad subject that it is impossible, in a paper of this nature, to deal with it in a thoroughly comprehensive and exhaustive manner. It is hoped, however, that certain lines of profitable and interesting investigation may be suggested that will help to solve many difficulties.

Arguments between steel mills and the metal working industries are continually occurring as to which party is responsible for the failure of steel parts. The question arises as to whether the trouble was caused by steel of inferior quality or by improper heat treating. The trend at present is toward co-operation of the producer and consumer to work out their problems on a mutually advantageous basis. Steel mill men visit consumers' plants to familiarize themselves with requirements their steels must meet. Metal-working industries send their metallurgists to the mills to study the processes of steel manufacture and rely upon their advice to a great extent as to the best sources of steel supply. The days of trade secrets are slowly but surely passing, and an "open door" policy is being adopted by the more progressive concerns. This trend should be encouraged.



The heat treatment of steel may be considered as beginning with the melting operation at the producer's plant and as including all the subsequent heat applications. Keeping this definition in mind, it will be readily understood even by those having only a fundamental knowledge of steel manufacture what tremendous influence mill practice may exert upon the result obtained in heat-treating products of the metal-working industries.

Controlling Factors in Heat Treating

In a broad analysis, time, temperature and concentration of elements involved are the controlling factors of all heat treating. Consider what means are utilized in commercial practice to control these factors. Temperature, for example, leads to a consideration of the method of heat generation, its proper application and suitability of the method for attaining the degree of temperature required. In the bessemer converter, heat is generated by chemical reaction in the metal. Open-hearth furnaces are fired with oil, gas or tar, the hot products of combustion coming into direct contact with the bath. Crucible furnaces are heated by the combustion of oil, gas or coke, and the products of combustion do not come in contact with the steel.

The object in calling attention to the differences in methods of generating and applying heat is to raise the question as to what affect they have, if any, one the intermolecular structure of the steel produced that will influence its properties during the subsequent operations. To be more definite, what advantage has the heat of the crucible furnace, whose temperature exceeds the melting point of the steel by only a working margin, over the more intense heat of the bessemer process? What influence does the superheated steel directly under the electrodes in the electric furnace exert upon the finished product? A great amount of scientific

From a paper presented at a recent meeting of the Cleveland chapter of the American Steel Treaters' society. The author, A. F. MacFarland, is a metallurgist with the Vanadium-Alloys Steel Co., Latrobe, Pa.

FIGS. 1, 2, 3 AND 4—HOW A PIPE IN A STEEL INGOT IS CAUSED AND HOW IT MAY BE MINIMIZED BY USING THE PROPER TYPE OF MOLD

research along these lines is necessary to provide reliable answers to these questions.

Many consumers have experienced trouble due to "dirty" steel. There are many causes for this difficulty and most of them can be traced to the melting department, although the rolling mill has been at fault frequently. Careless handling and working of heats, together with a lack of appreciation of the deleterious effects of nonmetallic inclusions may be said to be the usual causes of dirt in steel. Dirt, meant to include everything that is not metal, comes from slag, improperly prepared tapping holes and spouts, ladles, gases, aluminum additions to the ladle, etc.

The first commercial electric furnaces for making steel were operated in much the same manner as open-hearth furnaces, so far as refining, tapping, etc., were concerned. The furnaces were, and are still, equipped with a tapping spout, over which metal and slag were poured into a ladle. Many operators failed to consider that open-hearth furnaces have their tapping hole below the slag line, and that on tapping, clean metal is obtained, the slag following the steel, flowing into the ladle last, and acting as a blanket to the metal below, keeping it hot and preventing skulls.

Later Developments of Tap Holes

After serious troubles were experienced by some companies, an open-hearth melter operating an electric furnace, bricked up the tap-out door on his furnace, leaving a hollow tile or sleeve brick for the metal to flow out. This was filled with dolomite and the furnace tilted when the heat was ready. The pressure of the metal behind the dolomite stopper dislodged it and a clean tap-out was obtained. Improvements have been made upon this scheme for holding the slag back and in one device that has been found satisfactory the hollow tile through which the hot metal is to pass is stuffed with waste, holding the metal and slag back until the spout is full and then burning out. A further advantage is provided by a visible spout enabling the man tilting the furnace to gage the "head" of the metal. In this manner a perfectly clean tap can be obtained if the furnace is handled carefully.

Clean brick-lined ladles are more conducive to clean steel than ladles lined with ganister or brick with coating of fireclay. Also, holding hot steel in the ladle to allow the gaseous and other impurities to rise to the surface is another point that is often neglected and is important in obtaining clean metal. All precautions of this nature, however, are superfluous unless the steel has been properly deoxidized in the furnace.

Much of the prejudice against electric steel that existed only a short time ago was probably due in many cases to dirt. When electric steel failed the consumer blamed the process. War activities did much to overcome this prejudice. Many of our best gun steels, high-speed tool steels, and other high-grade products have been produced successfully in the electric furnace.

Detecting Impurities in Steel

How can impurities in steel be detected? Microscopic examination has proven to be extremely valuable in this matter, but, like all of our methods of testing it has serious handicaps. A relatively large number of samples from each heat should be examined before condemning the steel. This requires time and sometimes the production department will not wait. On the other hand, the small consumer has no facilities for this kind of testing and must rely to a great extent upon the steel mills to supply him with high-grade material.

Steel used for wearing parts, such as ball bearings, rapidly goes to pieces unless it is dense and free from impurities. Tool steel gives poor service if it is not pure and often the tool hardener gets the blame unjustly. Dirt in gun steel causes rapid erosion of the bore, and, consequently, shortens the life of the gun. When any steel to be heat treated contains occluded slag and gas it is liable to check or crack when it is quenched.

Steelmakers have been reluctant to admit that impurities are an almost unavoidable component of all commercial steels, but it is believed that the problem should be faced squarely with an earnest endeavor toward improvement rather than by trying to camouflage its true nature. Dirt in steel exerts a far more important influence upon physical properties of the steel than is commonly recognized.

The passage of steel from a liquid to a solid state in actual practice presents some of the knottiest problems steel mills have to deal with. How to make good ingots is as much of an art as it is a science. Besides the inherited influence from the melting and refining process, the temperature of teeming, methods of casting, and the design and proper use of ingot molds have a direct bearing upon the soundness of the ingot and its suitability for subsequent forging.

Perhaps one of the best-known sources of trouble in consumer's heat-treating departments is the cavity at the top of the ingot commonly called pipe. Some of the modern alloy steels weld with difficulty, but even if the weld is complete the central part of the rolled or forged bar will not be the same as it would had there been no pipe. Steel exhibiting a hard center often have been encountered and have given trouble. Abnormal hardness may be due directly to segregation and indirectly to pipe.

The shape and general design of ingot molds have a great deal to do with the piped steel. Figs. 1 and 2 illustrate two types of molds in general use. It will be assumed both molds are filled with molten steel. As the steel cools and freezes it shrinks, the metal nearest the wall of the mold freezing first. The continuance of this freezing and shrinking may be illustrated by the parallel line shown in the illustrations. In Fig. 5 the primary pipe P_1 will be completely formed, theoretically, and frozen at the bottom of the cavity before the metal in the area P_2 has solidified. This metal in turn will form a cavity on cooling which is known as the secondary pipe. In Fig. 6 the pipe is shown in the upper portion of the ingot, as the steel at the top in this type of mold is the last to freeze.

Other Important Factors

Figs. 3 and 4 illustrate further the advantages derived by the use of the "big and up" tapered mold. The pouring or teeming temperature of molten steel, together with its rate of flow into the mold, however, are more important considerations than the shape of the mold in making sound ingots.

The examination of split and broken ingots is instructive. It may reveal the bad effects of casting steel at a temperature too high or too low. Scorched ingots are found most often in the tool-steel mills, perhaps on account of the small size of the ingots cast. It has been found that by casting slowly enough, or by increasing the size of the mold, retarding the rate of cooling, the scorched effect may be eliminated irrespective of how high the temperature of casting may be. Scorched ingots are fragile and often cause much trouble in cogging, forming cracks on the corners of the bar which are caused by weakness due to the well-developed crystal line structure characteristic of scorched ingots.

Many tons of electric furnace steel

billets have been scrapped because of cracks that developed in the cogging operation. There is little doubt that much of this loss was occasioned by the excessive temperature of the steel at the time of casting. In the open-hearth and crucible process the margin of temperature attainable above that necessary to get the steel out of the furnace and into the molds is probably not more than 100 degrees Cent.

Cold cast ingots exhibit badly pitted surfaces which must be chipped and ground smooth before working. Such surfaces cause troublesome seams and cracks in the finished bar. Also, cold cast ingots often exhibit blowholes and segregations. The bottom portion of a cold cast ingot is usually lower in carbon content than the remainder of the ingot. This is due to the formation of individual crystals and crystal groups of more pure iron in the molten steel, which sink to the bottom due to their greater weight.

Blowholes in finished steel parts are a never-ending source of aggravation to consumers of steel and their heat-treating departments. A blowhole causes checking and warping and many other troubles. Their origin may be traced to a variety of sources, as there is no one factor responsible for all blowholes.

Steel may be thoroughly deoxidized in the furnace, but, when it is poured into the ladle or teemed into molds it reacts energetically with the oxygen of the atmosphere through which it passes. Therefore, the stream of metal should be kept solid, and minimum splashing should occur in order to keep the surface exposed to the atmosphere as small as possible. Oxygen acting with steel forms iron oxide which in turn reacts with carbon in the steel, liberating gas. Some of this gas is trapped and forms blowholes as the steel rapidly solidifies in the molds. Rusty molds also cause blowholes by means of a similar reaction.

Split molds offer many advantages over solid molds for inspection and cleaning and are being adopted where size and weight permit of their economical use.

The formation of blowholes by the action of iron oxide and carbon in steel is usually accompanied by troublesome ferrite segregations. Blowholes may be closed up during cogging and rolling but the ferrite segregations remain to mark the places where blowholes existed. Ferrite segregations are spots of carbonless iron, representing soft, weak areas in the steel. They are more easily identified in the higher carbon steels on account of the correspondingly less amount of free ferrite present. If steel, in casting, splashes on the side of the mold above the level of the steel, it immediately solidifies and oxidizes, causing ferrite segregations when the mold is filled.

Minor surface defects in bars of finished material cause no end of trouble in hardening, tempering and annealing operations. "Hair seams," not visible to the naked eye, often pass inspection in the mill and get to the consumer who does not detect them until the machined parts reach his heat-treating department. Seams are usually caused by bad ingot surfaces, blowholes just below the surface of the ingot, insufficient chipping and grinding, and dirt from the hearth of the heating furnace sticking to the surface of the billet. Careful inspection together with plenty of chipping and grinding will eliminate most of these difficulties.

In the rolling mill, faults having a little different origin than seams, but often appearing as such, may be developed, such as roaks, overfills, laps, etc. A roak is caused by rolling scale into depressions of a billet. This scale causes decarbonization of the surrounding metal giving rise to defective areas which manifest themselves as soft spots, checks or cracks in the finished parts.

The degree of reduction from the ingot to the billet and from billet to bar to give maximum physical properties is another influencing factor of importance. There is no rule in general usage for percentage reduction as it depends to some extent upon the chemical analysis and properties of the steel being worked. In all cases, however, the ingot should be worked sufficiently to obliterate all traces of ingot structure. When ingot structure is inherited by the finished bar it is known as "ingotism."

Heating temperatures, soaking periods, and finishing temperatures should be under careful control in forging and rolling steel in order to impart as near the desired physical properties to the finished steel as is practicable without resorting to further heat treatment. Tool steels require more careful handling than the ordinary grades, and it has been found advantageous to anneal the ingot before placing it in the heating furnace preliminary to cogging down.

Sinter Gains On Ignition

Dwight E. Woodbridge, mining engineer, Duluth, Minn., who has been active in the development of eastern Mesabi magnetite ores, calls attention to a recent report in THE IRON TRADE REVIEW of an analysis of eastern Mesabi sinter showing a loss of 1.83 per cent by ignition. Mr. Woodbridge says that the actual analysis shows a gain on ignition of 1.83 per cent, instead of a loss, due to the oxidation of magnetite into hematite. While the ore originally is a magnetite, the sintering process changes a slightly varying but still large proportion of it into a hematite. Any heat treatment not in a reducing atmosphere is said to have the same effect, the result being a gain on ignition rather than a loss, as in the case of hematites containing volatiles.

Recovering Aluminum from a Norway Substitute

Bauxite, the usual source of aluminum, is not found in Norway, but labradorite, a form of felspar, containing 30 per cent of aluminum oxide exists in large quantities.

It dissolves readily in weak nitric acid to nitrate of aluminum containing small quantities of nitrate of lime and nitrate of soda. This solution is evaporated to dryness and the salts heated to a definite temperature at which they split into oxide of aluminum or basic hydroxide of aluminum and nitric acid. The latter is recovered in a concentrated form.

The Air Nitrate Cos. have large quantities of weak nitric acid, which they concentrate at considerable expense, and one has entered into an agreement with a company working the labradorite deposits for the double purpose of acid concentration and production of oxide of aluminum.

The small quantities of nitrate of lime and nitrate of soda are easily separated, and have a commercial value as chemical manures. The oxide of aluminum is treated in the electric furnace in the same way as oxide from bauxite. The company has secured all the most profitable deposits in Norway at a low price without competition.—*Teknisk Ukeblad.*

Suggests Cost Keeping

To assist owners of small metal mines to keep accurate cost records, the United States bureau of mines, department of the interior, has published a 46-page pamphlet compiled by J. C. Pickering. This pamphlet, known as technical paper No. 223, offers a number of suggestions and illustrates them with reproductions of many cost forms, some of which are now in use in several mines. Much stress is laid on the necessity for properly systematizing accounts and costs during the development and equipment stages of mining properties.

Welds Sternpost on Transport

Repairs Large Steel Casting on U.S.S. "Northern Pacific" without Removing it from Position

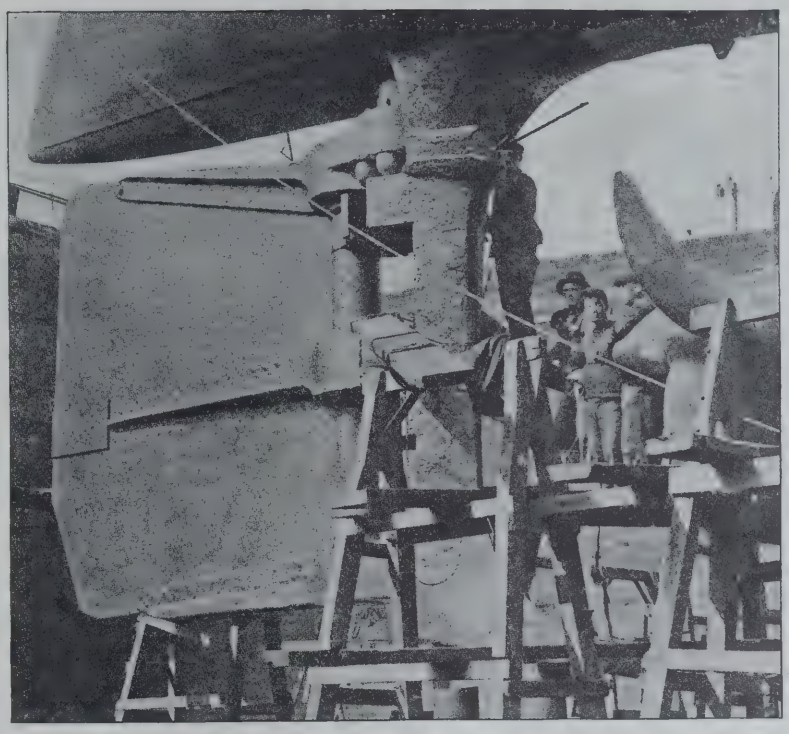


FIG. 1—VIEW OF COMPLETED WELD WITH THE RUDDER SHIPPED AND THE VESSEL PRACTICALLY READY FOR FLOATING

READERS of this article will recall the grounding of the United States army transport NORTHERN PACIFIC off Fire Island, Long Island, N. Y., on Jan. 2, 1919. It will be remembered that the 3000 passengers were rescued with difficulty and that not until two weeks after the mishap was a fleet of tugboats able to ease the steamship off the sand shoal and tow it into drydock at New York.

Included in the damage sustained by the ship was a crack in the cast steel sternpost just above the uppermost gudgeon. The cross section of the break formed a rough triangle, each side of which was about 2 feet in length. At the point of break the casting is hollow, and has walls about 3 inches in thickness.

It was decided to repair the sternpost by means of a thermit weld. First it was necessary to construct a substantial scaffolding, to provide a steady support for a mold box. This scaffolding consisted of a 16 x 16-foot wooden platform erected about 20 feet above the floor of the drydock. The next step was to cut out a 3-inch gap at the break of the sternpost with an oxyacetylene torch. Careful measurements had indicated that the two parts already had separated a sufficient amount to make up for the contraction of the weld as closely as that contraction could be estimated in advance. A view of the sternpost, after the fracture had been cut out, is shown in Fig. 2.

In order to reach the hollow interior of the casting for the purpose of supplying wax for the inside part of the pattern and for building up the inside of the mold, it was necessary to cut out a section of the ship's plate with a cutting torch. This enabled the workmen to haul wax, tools and molding materials up through this hole by means of ropes and pails, thus avoiding the inconvenience of having to carry them down the series of hatchways inside the ship. A pipe connecting the inside and outside workers served as a useful speaking tube. After supplying yellow wax to the hollow inside of the broken section and placing a layer of wax on the floor of the casting, molding material was deposited inside the casting and rammed up to a depth of 24 inches. Five-eighth-inch gaggers were used to help support the mold. A wooden cylindrical riser pattern was vertically connected with the wax on the floor of the casting. Wax was also applied to the outside of the cut out gap. A pattern was formed varying from about 1½ to 2 feet in width and bowed upward on each side of the triangular casting at points where contact with risers was to be made later. Sixty-seven pounds of wax were required for making the wax pattern, which is shown in Fig. 3.

A mold box next was constructed by

From an article appearing in *Reactions*, published by the Metal & Thermit Corp., New York.

FIG. 2—FRACTURE CUT OUT, LEAVING PLACE FOR WELDING STEEL TO ENTER. FIG. 3—WAX PATTERN APPLIED PREVIOUS TO BUILDING UP MOLD
FIG. 4—ANOTHER VIEW OF THE FINISHED WELD

cutting out the desired sizes of sheet iron with an oxyacetylene flame and bolting them into position. The finished box with its base resting on the platform had a rectangular through-like shape and measured 48 inches high, 51 inches on the side parallel with the ship, 54 inches wide at the base and 10 feet wide on top. Forty barrels of backing material and six barrels of facing material were required for the mold. Patterns for feeding gates, risers, and pouring gates were prepared. These patterns, which were of wood and pipe, were removed before preheating.

Two No. 10 automatic crucibles were suspended 10 feet above the mold box by chain hoists. They were held steadily in place by lashing them against the hull by means of steel wire cable. Approximately 700 pounds of thermit were placed in each crucible. Asbestos was wrapped around the chains holding the crucibles and asbestos sheets were placed between each crucible and the hull of the ship. Molding sand was scattered liberally over the platform to prevent its catching fire.

How the Mold Was Heated

Preheating of the mold was started at 8:15 a. m. on the day of the reaction. Two gasoline and compressed air preheating torches were directed through the side of the mold box and a third down through the riser opening in the interior of the casting. The preheating continued steadily for seven hours. At 3:15 p. m., the broken sections had developed a very bright heat. Pressure was then turned off and the heating gates on the sides of the mold plugged up with clay.

Both crucible reactions were set off simultaneously by men stationed on ladders near the crucibles. At 3:30 p. m., on signal, each man ignited with a red-hot rod the teaspoonful of ignition powder which lay on top of the thermit. As the reaction started, the men jumped down and retired to a safe distance. About 45 seconds was allowed for the liquid thermit steel to form from the reaction, after which time the two assistants tapped the crucibles by knocking up the tapping pins with long iron rods, thus allowing the molten steel to flow into the mold.

The weld was allowed to anneal itself by cooling slowly, the mold box not being dismantled until the following day. When the molding material was finally cleared away the risers and gates were cut off with an oxyacetylene torch and the weld examined by chipping off pieces of metal. The weld proved satisfactory in every way and was accepted by the representatives of the navy yard.

Machine Guns Wonder Product of War

IN no war previous to the one concluded in 1918 has the machine gun taken such a prominent place in the armaments of the contending forces," says the United States war department in its historical review of its activities in the war. "The popularity of the earlier machine guns was retarded by their great weight. Some of them were so heavy that it took several men to lift them. All through the history of the development of machine guns the tendency has been toward lighter weapons, but it was not until the great war that serviceable machine guns were made light enough to give them great effectiveness and popularity.

"Such intense heat is developed by the rapid fire of a machine gun that unless the barrel can be kept cool the gun will soon refuse to function. The water jacket which keeps the gun cool proved to be the principal handicap to the inventors who were trying to remove weight from the device. The earliest air-cooled guns were generally unsuccessful, since the firing of a few rounds would make the barrel so hot that the cartridges would explode voluntarily in the chamber, thus rendering the weapon unsafe. The Benet-Mercie partly overcame this difficulty by having interchangeable barrels.

"These conditions led to the development of machine guns along two separate lines, the heavy type machine gun, which must be capable of long sustained fire, and the automatic rifle, whose primary requisite is extreme lightness. These requirements led to the ultimate elimination in France and in the United States of guns of the so-called intermediate weight from ground use.

Lewis Gun Great Aid to Allies

"The machine gun produced by the American inventor, Col. I. N. Lewis, was a revelation when it came to the aid of the allies early in the great war. This was an air-cooled gun which could be fired for a considerable time without excessive heating, and it weighed only 25 pounds, a slight burden for a soldier. The Lewis machine gun was hailed by many as the greatest invention brought into prominence by the war.

"We had at the outbreak of the war only two factories in the United States which were actually producing machine guns in any quantity. These were the Savage Arms Corp., which in its factory at Utica, N. Y., was nearing the completion of an order for about 12,500 Lewis guns for the British and Canadian governments, and the Marlin-Rockwell Corp., which manufactured a large number of Colt machine guns of the old lever type for the Russian government. The Colt factory in the spring of 1917 was equipping itself with machinery to produce Vickers guns, an order for 4000 of which had been placed the previous December by the war department on recommendation of the machine gun board. None of these guns, however, had been completed when the United States entered the war. The Colt company also held a contract for Vickers guns for the Russian government about this time.

"It was evident that we would have to build up in the United States almost a completely new capacity for the production of machine guns. Nevertheless, we took advantage of what facilities were at hand; and at once, in fact within a week after the declaration of war, were placing orders for machine guns. The first of these orders came on April 12, when we placed a contract with the Savage Arms Corp. for 1300 Lewis guns. This order was subsequently heavily increased. On June 2 we placed an order with the Marlin-Rockwell Corp. for 2500 Colt guns, these weapons to be used in the training of our machine-gun units.

Browning Guns Won Favor

"After tests by the machine gun board the board pronounced two newly developed Browning machine guns the most effective guns of their type known to the members. The Browning heavy gun with its water jacket filled weighs 36.75 pounds, whereas the Browning automatic rifle weighs only 15.5 pounds. The tests also proved the Lewis machine gun to be highly efficient. The board recommended the production of large numbers of all three weapons; the two Brownings and the Lewis. The board also approved the Vickers gun, which weighs 37.50 pounds, and we accordingly continued it in manufacture.

"The first act of the ordnance department after this report had been received was to increase greatly the

orders for Lewis machine guns with the Savage Arms Corp., and the second to make preparation for an enormous manufacture of Browning machine guns and Browning automatic rifles.

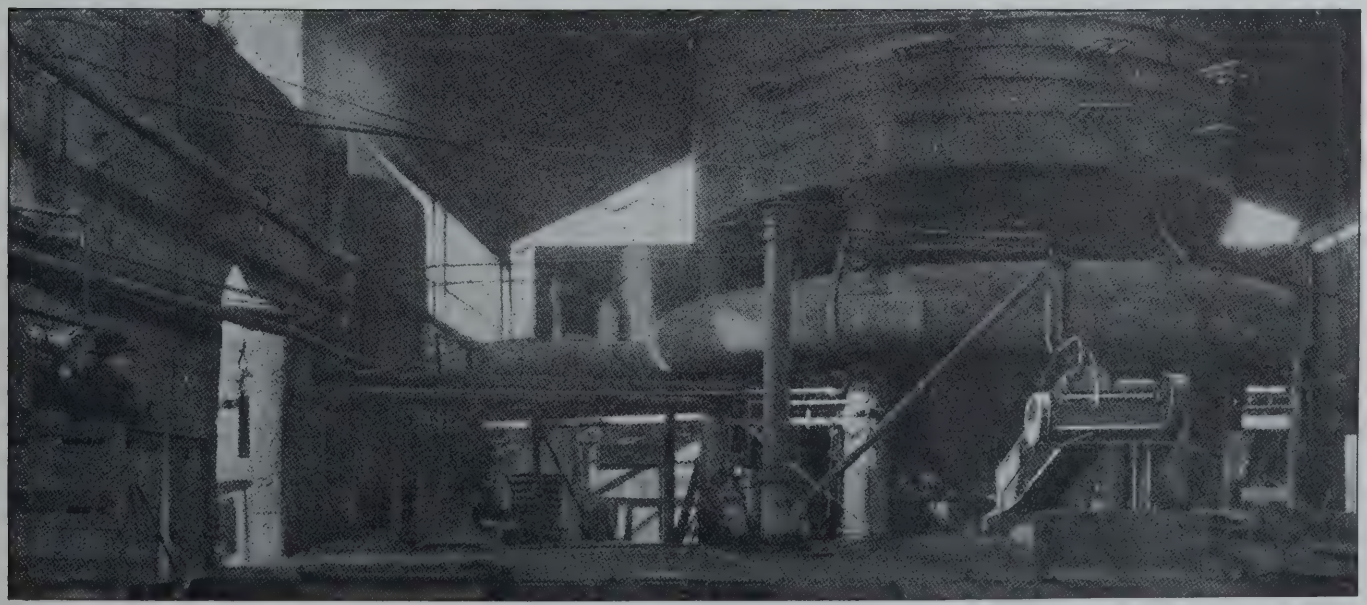
"When it was proposed to adapt the Marlin gun for synchronized use in firing through propellers on airplanes, the ordnance department detailed officers to co-operate with the Marlin company in their efforts. For technical reasons of design the original gun apparently had little or no adaptability to such use. Many new models were built only to have them knocked to pieces by the failure of some feature to perform properly the work for which it was designed. Nevertheless the enthusiasm of the company for its project could not be chilled and it continued the development until the gun finally became the triumph in gas-operated aircraft ordnance.

Iron Notch Is Drilled By A Single Workman

Although the drilling of the tap hole of blast furnaces is performed four or five times each day without injury to the operators, there are few plants which have not had at some time a severe accident. The Mullen-type blast furnace tapping machine, which is shown in the accompanying illulstration, has been designed to reduce the possibility of these accidents to a minimum by eliminating the presence of a gang of men in front of the tap hole at casting time. It is built by the Southwark Foundry & Machine Co., Philadelphia.

The machine consists of an air cylinder which imparts a reciprocating motion to the drill. At each stroke the drill is also given about one-eighth of a turn. The cylinder and drill are fed forward by means of a 1-horsepower reversing-type motor through a train of gears operating a feed screw. The operator, who is stationed 50 feet from the furnace, opens the throttle on the air line and the machine starts to drill. He then starts the feed by closing a switch. To enable the operator to regulate the feed of the machine to suit the varying degrees of hardness in different sections of the hole, a dial is placed on the machine which indicates the amount of feed required. This dial is installed in plain view of the operator.

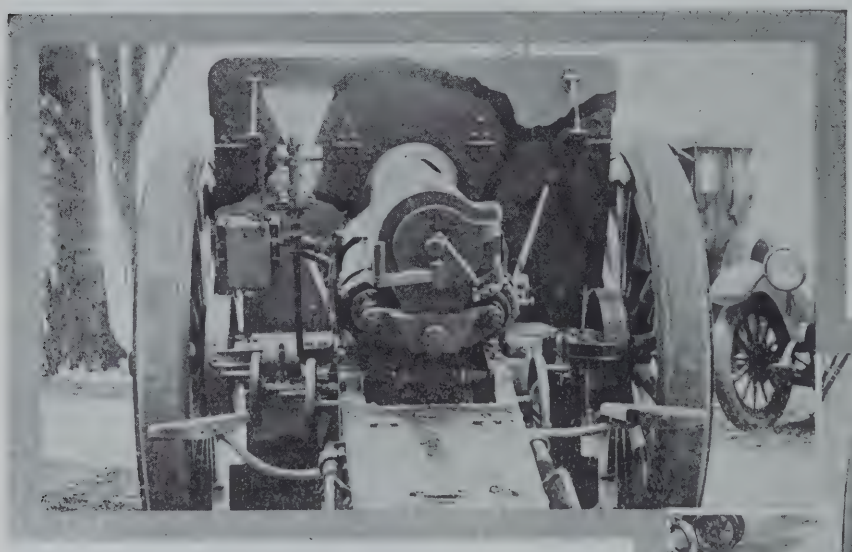
How Drill is Withdrawn



When the hole is opened, he reverses the switch, which engages the high-speed return feed. The drill is removed in about five seconds from the deepest holes. The machine is so balanced that when the drill is removed it automatically assumes a horizontal position. It may be removed either by the working force or by the use of a wench at a safe distance from the furnace, but it is preferable to use an air cylinder about 6 inches diameter located at some point convenient to the operator so that the entire operation is performed by one man.

The machine is placed in front of the furnace as soon as the troughs are cleaned and dried after the cast. In case of an emergency such as breakouts, heavy slips, etc., the machine can be started instantly, by simply throwing a switch. The drill used and the motion given to it by the machine are the same as in the old method and no tapping bar is required. The machine will tap a furnace in three to four minutes under ordinary conditions.

Reduces Flue-Gas Heat To Aid Combustion



Tests on a new form of gas-heated recuperative furnace designed by the Davis Furnace Co., Luten, Eng., are said to have shown good results in the reducing to a minimum heat losses by way of the flue. The heat thus saved has been utilized for the purposes of the furnace thereby increasing its thermal efficiency. Suitably proportioned double recuperators were placed under the oven floor and arranged so that the heat absorbing materials are alternately heated by the escaping products of combustion and made to give up their accumulated heat to the air passing into the combustion chamber.

As a result of this arrangement, it is stated, that with an oven furnace 4½ x 3 feet, consuming 370 cubic feet of gas per hour and maintaining a temperature of 1050 degrees Cent., the flue gases have been found to have a temperature not exceeding 65 degrees Cent., thus containing only 2 to 2½ per cent of the heat generated by the gas. In addition to saving the heat, which would have otherwise been lost in the flue gas, the preheating of the combustion air resulted in the production of a higher flame temperature, with an accompanying increase of efficiency within the furnace. It is believed that temperatures beyond 2000 degrees Cent. are obtainable.

Lorraine Ore Future For Iron and

FRENCH holdings in the Longwy-Briey iron ore basin are divided among 60 or 70 companies or individuals including among them virtually all the prominent names of the iron and steel industry of the country. Many of these proprietary concessions, as they are known, have been in possession of the present holders for many years, and as the result of prolonged effort and the application of modern methods had brought the region up to its high productivity just preceding the war.

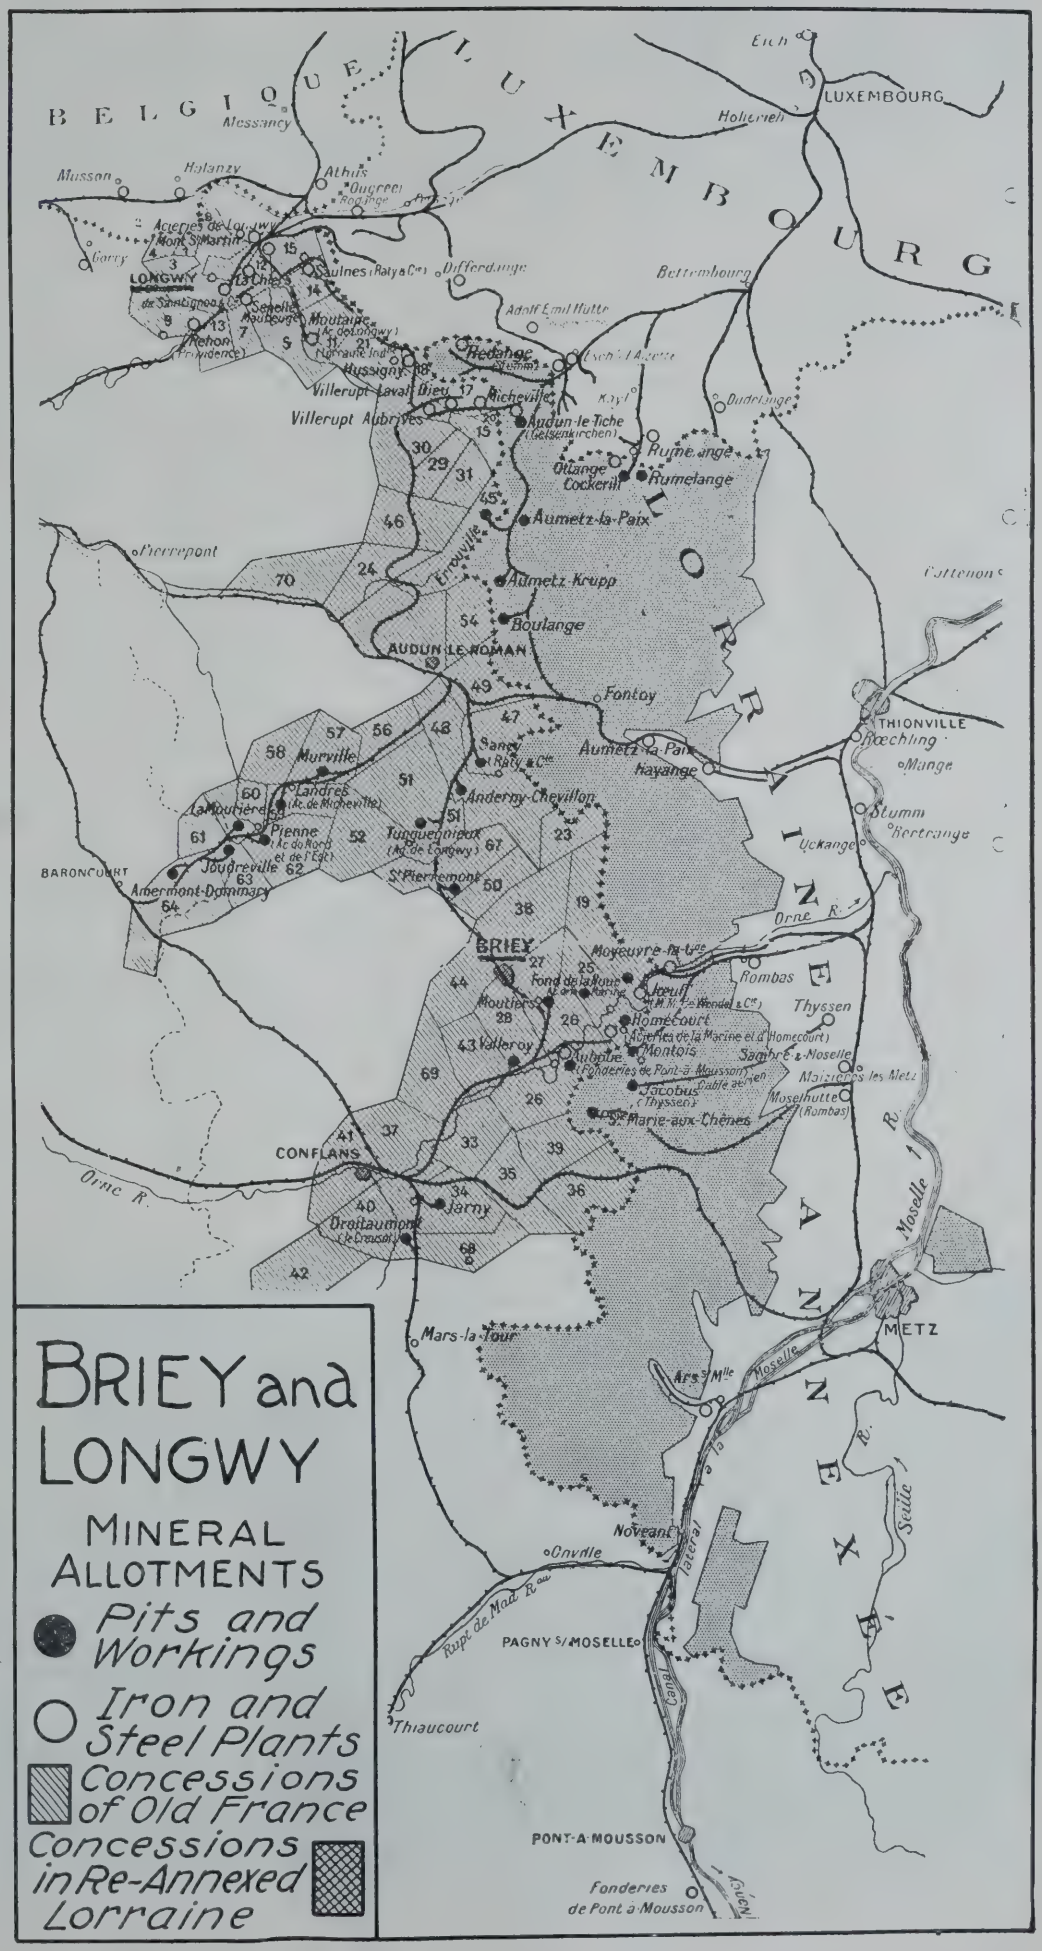
In the accompanying map and list are shown the names, locations and extent of the various workings in the Longwy-Briey basin under direct control. All these operations are on the French side of the old frontier. Other references on the map explain various German possessions hitherto operated for German account, the disposition of which is still a matter of arrangement, as a result of the peace treaty.

The treaty of Frankfort had cut in two this rich region of mineral resources. Actually at that time the portion which remained French was in but an early state of development. This, of itself, as is now known, caused the Germans to disregard its possibilities. In 40 years or more France had made a considerable development and has accomplished many really remarkable extractions to the chagrin of the German ironmasters who were working their deposits just over the line of the frontier. In the Briey region the 20 odd principal exploitations were carried down from 500 to 700 feet only. The cost on an average was $2,000,000 in equivalent francs for each exploitation shaft.

The development of the ore extraction of the department of the Meurthe et Moselle, the portion of Lorraine which remained French after the treaty of Frankfort, is as follows:

1870–74	984,000 tons
1890	2,832,000 tons
1900	4,730,000 tons
1905	8,430,000 tons
1910	13,210,000 tons
1913	19,814,000 tons

In 1913 the Meurthe et Moselle



Insures French Steel

had 25 iron and steel plants possessing among them 78 blast furnaces, 36 converters and 9 open-hearth furnaces. The production of pig iron was 3,400,000 tons, and of steel 2,190,000 tons.

Farther to the south is the Nancy-Frouard-Pont a Mousson group which were preserved to France by the defense of the Grand Couronne de Nancy in September, 1914. The various plants of that region never once ceased production, although they were often under bombardment at long range and by aeroplane.

A sidelight has developed during the last days of the peace congress which may have a far-reaching effect, in an iron and steel way. Upper Silesia is, for a time at least, to remain Germany. If the words of the treaty in any way differ from this statement the fact is obvious.

The resources of the region should mean much to those who can read between the lines. The fact is if France is to receive all the coal she desires from the Saar, and coke from Westphalia and the valley of the Rhur, Germany must be allowed to serve her widely distributed industries of the center and west of what was once the German empire from the Upper Silesian resources, rather than by the long haul necessary from the western deposits. This is the economic problem as it was put up to the allies, with the result that the region was withheld from Poland, although manifestly it is an integral part of the ancient nation and should be incorporated with it.

Britain Has Iron-Steel Exchange

Supported By Metal and Allied Industries, Birmingham Institution Affords Convenient Meeting Place for Buying and Selling—Has Technical Library in Connection — Growth Extends Back Over Half Century

BY JOSEPH HORTON

British Correspondent of The Iron Trade Review

ONE of the most useful institutions in the Midland iron and steel trade of Great Britain is the Birmingham exchange, situated in Stephenson place, Birmingham, England, in the center of the city. For many years representatives of the iron, steel and coal trades have been in the habit of meeting there every Thursday afternoon. The central meeting hall, shown in the accompanying illustration, has an area of about 90 x 70 feet. The supporting pillars are numbered, as a convenience for visitors making a first meeting and generally for prearranged interviews.

The popularity of the institution is evident from the large membership, comprising about 2200 ticket holders, each paying a subscription of three guineas per year. The membership is steadily increasing. Two years ago the subscription was increased from two to three guineas but this had no influence whatever in arresting the membership. Apart from its use as a weekly rendezvous, the exchange serves as a kind of business club, open to members every day from 9 a. m. to 6 p. m.

In addition to the central hall there is an excellent reading room, equipped with a commercial and technical library. The daily supply of newspapers and telegrams, giving particulars of metal prices and a full service of trade and general news, greatly adds to the utility of the exchange.

Practically everybody in the iron, steel and coal trades is represented in one way or another on the exchange, and it is quite possible that at no distant date a larger establishment will be necessary. Surrounding the exchange with frontages to New street and Stephenson place, is a suite of offices on three upper floors mostly occupied by iron, coal and metal firms, which contribute a substantial income to the Exchange Building Co.

There can be no question about the great utility of the institution even in these days of telegraphs and telephones. Apart from the question of individual negotiation, a weekly opportunity is furnished for consultations between the heads of the trade on general questions of wages, prices of materials, trading conditions, railway regulations, etc., as these arise.

It is a rather remarkable fact that Birmingham, though a large consumer of iron and steel as a raw material for its innumerable industries, has no large iron or steel works of its own with the single exception of one open-hearth plant most in the heart of the city which turns out steel for the making of hammers, dye blocks, and tools of various descriptions. But Birmingham is only 12 miles away from Wolverhampton and Dudley, both important iron and steel manufacturing centers, while North Staffordshire, with its most important group of iron works is about 30 miles away. The city is within easy reach of the smelting and iron and steel making areas of Northamptonshire, Derbyshire, Shropshire and North Wales. A useful regulation of the exchange permits the supplying of a visitor's ticket to Englishmen and foreigners visiting the city on temporary business, the only formality necessary being the introduction by a recognized member. At the quarterly meetings held on the second Thursday of January, April, July and October, the building is thrown open to all and sundry, a most convenient arrangement for the numerous visitors from South Wales, Sheffield, Middlesborough, Glasgow and the principal shipping ports. On all such occasions the building usually is crowded to its full capacity.

The origin and development of the exchange is interesting. Its founder,

CENTRAL MEETING HALL OF BIRMINGHAM EXCHANGE, WHERE IRON, STEEL AND ALLIED TRADES HOLD MEETINGS EACH THURSDAY. NOTE NUMBERED PILLARS FOR CONVENIENCE IN ARRANGING INTERVIEWS

Edwin Lander, in June, 1861, sent out a circular asking support for a scheme to establish an exchange. His efforts were backed by Mayor Arthur Ryland, one of the heads of the prominent firm of Archibald Kenrick. His object was explained to be that "Persons engaged in business might have the opportunity of meeting each other at a particular time on each day with a far less waste of time than going to each other's offices at the risk of not finding the person whom they wanted to see." The scheme was taken up with some heartiness but the original program was modest, consisting merely of the utilization of an existing building. It is much to the credit of the Midland institute, a well known educational institution to which the city owes a good deal, that one of its largest rooms was placed at the disposal of the exchange promoters for an hour each day without charge. It was soon found that one hour per week was insufficient while the subscription of half a guinea, with a guinea for firms of not more than two partners, was hardly worthy of the object in view. It was, however, a useful beginning and for the quarterly meetings the spacious town hall was placed at the disposal of the trades. Eventually a building scheme was evolved and the present exchange was opened in January, 1865, by William Scholefield, M. P., one of the Birmingham members of the parliament. Mr. Gladstone and Lord Stanley were both invited to perform the ceremony but were unable to attend. The venture was an immediate success and eventually the place became so overcrowded that the present building became necessary and was completed in 1876. Four years later the institution was incorporated. The quarterly meetings have been continuously held in the exchange since 1876 instead of, as formerly, in the town hall.

A remarkable fact is that, though the exchange originated with a managing committee representing, in addition to banking interests, corn dealers, miscellaneous factory operators, general manufacturers and merchants, iron, gun, and metal traders and general drapers, the present membership almost wholly is comprised of men engaged in the iron, steel and coal trade in its various branches, or of those who purchase iron and steel. Naturally the miscellaneous membership, though not relatively numerous, is of a fairly widespread character, including accountants, analysts, asbestos manufacturers, belting manufacturers, chemical makers, cement makers, canal companies, electrical engineers, lamp manufacturers, timber importers, etc. In all cases, it may be said, the membership is related to the iron, steel and coal trades by some kind of link of utility. The invested funds amount to £10,000 and a scheme of extension is under consideration which will greatly add to the utility of the exchange and increase the service rendered to its members.

Plan Equipment Exhibit

A permanent exhibition of machinery and appliances used in the mining industries will be established in the Grand Central Palace, New York, under the auspices of the Merchant and Manufacturers Exchange of New York. The latter organization in taking over the Grand Central Palace, has arranged to accommodate permanent exhibits pertaining to various lines of industry. An entire floor with approximately 50,000 square feet of space is to be devoted to machinery and supplies used in the development and exploitation of metal mines, nonmetal mines, coal mines, oil wells, etc., and the handling and marketing of these products.

Examines Torpedoed Steel

At a recent joint meeting of the Birmingham Metallurgical society and the Staffordshire Iron and Steel institute, Prof. H. C. H. Carpenter, Royal School of Mines, South Kensington, presented a paper entitled "The Rolling Temperature of Steels." The author stated that more than a year ago he had been asked by a distinguished naval architect why it is that a steel shipplate which proved to be a ductile material at the time of working, should break up as a perfectly brittle material when subjected to sudden impact. Professor Carpenter exhibited a number of micrographs showing the structure of steel plates in ships which had been torpedoed. He stated that in general there are five factors which affect the quality of the steel. These factors are the temperature at which the steel is cast, the soundness of the ingot, the chemical composition of the metal, the method of working the metal, and finally the temperature or temperature range at which the metal is worked.

Professor Carpenter investigated a number of steel plates taken from torpedoed ships. The first specimen examined undoubtedly had been taken from a plate that had been worked at too high a temperature. Upon being subjected to the impact of a torpedo, the steel had been shattered into bits, indicating extreme brittleness. The other specimens were quite different in that they had been deformed considerably by the explosion. The author believes that the material rolled at a lower temperature was able, even in this most severe impact test, to retain to some extent its quality of ductility. His investigations seem to show that other things being equal, the greater the size of the crystals, whether of steel or of other material, the greater is the tendency under impact to break as a brittle material.

The paper was discussed by G. Carrington, president of the Staffordshire Iron and Steel institute and A. O. Backert, president of the American Foundrymen's association. Mr. Carrington said that from his experience it seems likely that a great many cases of defective structure in plates is due to excessive temperatures caused by piling together a number of hot plates instead of allowing each plate to cool separately at its natural rate of cooling.

Safety Men Graduated

One hundred and thirty men, comprising this first Ohio class of safety supervisors, were graduated recently from the school operated under the auspices of the northeastern division of the national safety council. C. W. Price, general manager, national safety council, addressed the graduates on the necessity of industrial safety and S. W. Tener, American Steel & Wire Co., president of the northeastern division awarded diplomas. The graduates are safety men employed by the Aluminum Castings Co., American Shipbuilding Co., American Steel & Wire Co., Brown Hoisting Machine Co., Cleveland Metal Products Co., Cleveland Tractor Co., Hydraulic Pressed Steel Co., McKinney Steel Co., National Malleable Castings Co., Upson Nut Co., Van Dorn Electric Tool Co., and other large manufacturing plants in the Cleveland district.

Makes Testing Apparatus

The Durkee Mfg. Co., Grasmere, borough of Richmond, New York City, recently has increased its manufacturing facilities and now is prepared to build on order magnetic testing apparatus of any design. This expansion of the Durkee company is a result of the growing importance attached to the application of magnetic analysis to the examination of steel products. Dr. Charles W. Burrows, who presented a paper on the

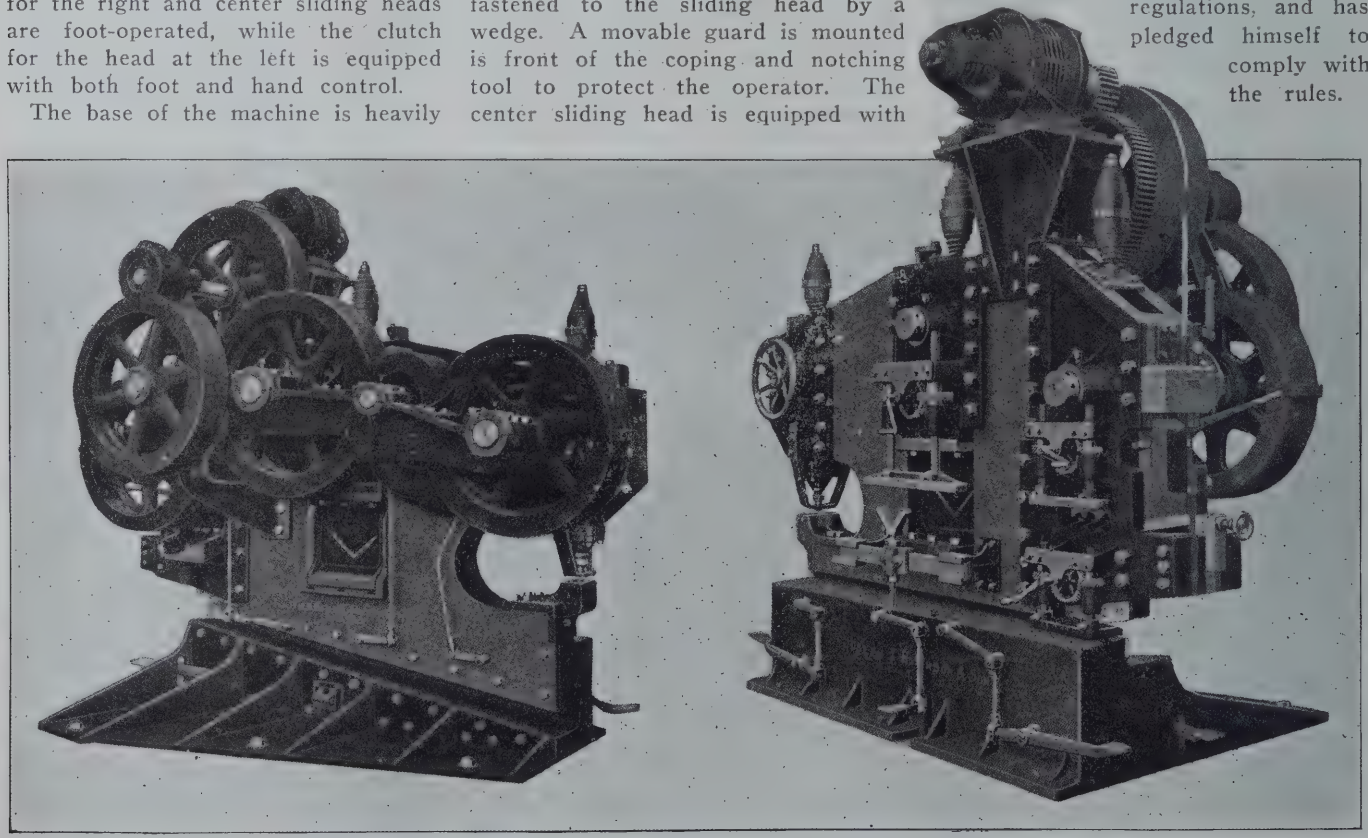
application of magnetic analysis at the recent convention of the American Society for Testing Materials and who has been instrumental in laying the foundation upon which the science of magnetic testing is based, has been retained by the company as consulting engineer on instruments. Dr. Burrows will keep in close touch with the design, manufacturing and test departments engaged in making apparatus for magnetic testing.

New Plate Machine Does Work of Five

A combination punch and shear, embodying the functions of five or more single machines, has just been developed by Joseph Ryerson & Son, Chicago. Shearing, bar and section cutting, coping, notching, and punching may be done on this machine without changing tools or attachments.

As shown in the accompanying illustration, the machine consists chiefly of a heavily ribbed base upon which are mounted the bearings for a train of gears transmitting power to three sliding heads by means of automatic clutches. The head at the left carries the dies for punching; the center head is equipped for cutting sections; and the head at the right is provided with dies for shearing and splitting, cutting bars and coping and notching. The clutches for the right and center sliding heads are foot-operated, while the clutch for the head at the left is equipped with both foot and hand control.

The base of the machine is heavily ribbed and properly balanced to insure a rigid foundation. The operating side of the machine, as shown at the left of the accompanying illustration, is free from all overhanging machine parts. The driving mechanism, including gears, clutches, flywheels, etc., are on the opposite side. This feature of design is considered important from the standpoint of safety. Ample space around each unit of the machine is provided so that operators will not interfere with each other while handling different kinds of work at the same time.



The main frame of the machine consists of a skeleton offset shear body, reinforced by heavy steel plates. Plates of any length and width in thickness up to the capacity of the machine may be split on the shear, which is equipped with an adjustable hold-down. The punch is fitted with architectural jaws, permitting the punching of I beams, channels and sections in either flange or web. The sliding head of the plate shear carries a shear for cutting round and square bars. This shear blade has three or four notches for cutting bars of different sizes without excessive distortion.

The coping and notching machine consists of two crucible steel cover plates and brackets rigidly jointed to form a jaw, in which lower coping and notching blades are mounted. The coping and notching blocks are fastened to the sliding head by a wedge. A movable guard is mounted is front of the coping and notching tool to protect the operator. The center sliding head is equipped with a specially designed blade holder which permits the quick change of blades for cutting angles, channels, tees and other sections.

The sliding heads are of crucible steel. The plungers are operated by pitmans and counterbalanced by heavy coil springs. The machine may be driven by belt or by motor. With the exception of the motor gear, all gears and pinions of the machine are of cast steel, having teeth cut from solid metal.

Booklet Promotes Safety

A small booklet prepared by the Kempsmith Mfg. Co., Milwaukee, and supplied to every workman in the employ of the company, has for its purpose the promotion of efficiency and safety. The forepart of the booklet deals with working hours, shop regulations and what is to be expected from the workman. It is interesting to note that the company urges all its employes, who are not already American citizens, to become such and states that promotions of new employes who are citizens will be given first consideration. The latter part of the book deals with safety rules, including a series of resolutions and pledges which the employe agrees to follow to protect himself and fellow workmen. A detachable receipt is bound into the booklet and is signed by the new employe to show that he has received a copy of the regulations, and has pledged himself to comply with the rules.

FRONT AND REAR VIEWS OF NEW PLATE MACHINE WHICH DOES SEVERAL KINDS OF WORK SIMULTANEOUSLY

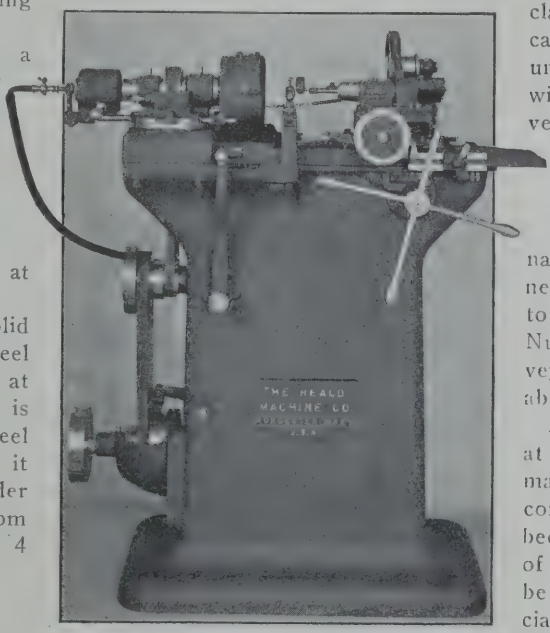
Builds Internal Grinder for Small Work

Extensive tests have just been completed by the Heald Machine Co., Worcester, Mass., on a new internal grinder designed for small work. As indicated in the accompanying illustration, the work head is driven by a cross belt through the base from a four-step cone pulley. The flow of water and the revolving of the work head automatically stop when the grinding wheel is withdrawn from the work. This is accomplished by a friction clutch in the base of the machine operated by a lever which is tripped by a small dog on the table. When the operator desires to resume work he simply pushes the lever to the vertical position, thereby starting the work head and water.

The machine is equipped with a collet chuck having a capacity for material from ⅜ to 3 inches in diameter. The feed to the cross slide is calibrated to 0.00025 inch. The feed lever controlling the movement of the slide is at the operator's left, while the pilot wheel actuating the movement of the table is at the right.

The grinding wheel head has a solid adjustable taper bearing at the wheel end and revolves in ball bearings at the pulley end. The machine is equipped with an automatic wheel guard which covers the wheel as it is drawn from work. The grinder is designed for work ranging from ¼ to 2 inches in diameter and 4 inches long.

American Competition Stirs British House



(*Special Correspondence*)

Birmingham, Eng., July 11.—In the house of commons the president of the board of trade was asked whether the Union of South Africa government had recently placed in the United States orders for 44,000 tons of rails, 1000 cars, 250 trucks, and in the United States and Canada orders for 70 large locomotives; also whether he could state the reason for the placing of those important orders in America instead of in Great Britain. Lieutenant Colonel Amery, replying, explained that some of the orders were placed in the United States prior to the armistice at a time when it was impossible to supply railway material in Great Britain. The 70 locomotives, however, were ordered after the armistice and this was explained by the fact that British offers in respect to price and date of delivery were so unfavorable that the South African authorities were obliged to go further afield. Forty locomotives were ordered from Canada.

News has been received of the importation of American nuts and bolts, and the nut and bolt manufacturers in the Black country state that their only chance of meeting this competition is to purchase American bars. They are endeavoring to place orders for this material.

To Use Electric Furnaces

Hamilton & Hansell, Inc., have sold one 1000-pound, 400-kilovolt-ampere electric furnace of the Rennerfelt type to the Steel Alloys Co. of America, to be erected at the latter's plant in Bayway, N. J., for the reduction of tungsten-acid to metallic tungsten. The company also has sold one 1000-pound, 200-kilovolt-ampere Rennerfelt furnace to the British American Nickel Co., Ottawa, Can., to be erected at its Deschene plant in Quebec for melting nickel. It has booked an order for one 150-kilovolt-ampere, single-phase pot furnace with complete equipment to the Netherlands government, colonial department, to be erected at the experimental station at Batavia, Java, Dutch East Indies.

GRINDER EQUIPPED WITH AUTOMATIC WATER AND WORK HEAD STOPS

The Lundie Engineering Corp. has taken over the manufacture and sale of Lundie tie plates, formerly handled by John Lundie, 52 Broadway, New York. The Chicago office at 30 North LaSalle street is in charge of C. Z. Moore, manager of sales.

Italy May Import Iron Ore Supply

A discussion of Italy's demand for ore and pig iron by the Italian Metallurgical association admits that the needs of the metallurgical industry of Italy cannot be definitely satisfied by the limited supplies of iron ore existing in the country. From this statement it is taken that Italy must depend on foreign sources for the necessary raw and semimanufactured materials.

Of the 706,246 tons of ore mined in Italy in 1914, at least 649,561 tons came from the island of Elba and during the years of the war, the greater part of increased ore outputs were of Elban origin. It is now claimed that large quantities of ore cannot be mined from this source under convenient conditions as it will now be necessary to exploit the veins under the sea at resulting greater cost. At the same time, however, the war has stimulated the research for other ore deposits in Italy and only recently were electric blast furnaces installed in the Val di Cogne near the French frontier and estimated to contain 6,000,000 tons. In the Nurra district of Sardinia recent surveys have revealed the existence of about 6,000,000 tons of good iron ore.

If pig iron production is maintained at 400,000 tons annually, it is estimated that 700,000 tons of ore will be consumed. To remedy this it has been suggested that greater quantities of scrap iron and steel will have to be imported, the Metallurgical association says 420,000 tons a year. In other quarters, it is believed a better policy to bring the ore from abroad and make the pig iron locally. From the industrial program which Italy is drawing up it seems that larger quantities of pig iron will be needed than before or during the war.

Byers Plant Resumes

Operations have been resumed in all departments with the exception of the blast furnace and plate mill at the plant of the A. M. Byers Co., Girard, O., as the result of the signing of a scale presented by representatives of the Amalgamated Association of Iron, Steel and Tin Workers. The blast furnace is expected to be relighted within a few days. Operations at the plant ceased July 1, at which time the company declined to sign the scale as presented to them. The Byers company is the first of the valley open shop companies to sign the scale.

Price Control Bobbing Up Again

Birmingham Representative Starts With Resolution For Investigation of "Coal Profiteers" and Winds Up With Demand For "Thoroughgoing System of Price Fixing" of All Raw Materials and Living Essentials

WASHINGTON, July 29.—Price fixing, more or less successful during the war but failing as an after-the-war experiment, is again advocated, this time by George Huddleston, representative of the Birmingham district in congress. Arguing in behalf of his resolution authorizing an investigation into alleged profiteering in coal, he told the rules committee of the house that "a thoroughgoing system of price fixing which would include not merely raw materials but all of the common necessities of life" is necessary to avoid serious conditions.

The rules committee, of which Philip P. Campbell, of Kansas, is chairman, has not made a report on the resolution or indicated whether Mr. Huddleston's proposition would be considered favorably, but observors, noted the fact the committee gave the Alabamam considerable time to state his case. The congressman's plan recalls the fate of the industrial board which, organized by Secretary Redfield, of the department of commerce, failed to reduce prices, other than those on steel products, through failure of the railroad administration, the navy department and other government bureaus to agree to buy at the suggested levels.

Mr. Huddleston's chief grievance, as he expressed it, was against the coal operators of his district, but he complained against the entire industry. He urged Attorney General Palmer to investigate the operators' efforts to get the public to buy coal now at what he termed "quite extortionate prices." He particularly desired an investigation of the National Coal association, members of which, he said, appear to have an express or implied combination to maintain prices. As a result of his request, Mr. Palmer instructed the district attorney at Birmingham to look into the matter in that district, but Mr. Huddleson and some members of the committee feel the scope of the investigation should be wider.

Says Industries Are Deadlocked

"The industries of the United States are deadlocked against themselves on account of extortionate, quite extortionate, prices," Mr. Huddleston declared. "Extortionate prices are being demanded for raw materials, coal, iron, cotton, wheat, lumber, etc. The people who produce them have made large profits. They have made a pocketful of money during the war and they are not willing to go back to prewar profits. They are holding the prices up and the result is we are not doing business in this country.

"You must bring down the price of the materials of living just as you should bring down the cost of steel. Do you expect a man who is making nails out of steel at present prices to sell his nails at the 1914 prices? He cannot do it. No more can a workingman paying present prices for the necessities of life reduce the cost of his labor. Therefore, you must strike first at the great basic commodities and in that way control prices. There is a disposition on the part of these profiteers to lay it all on the workingman."

After declaring he made an investigation of the cost of labor and found the average increase in wages of all kinds to be only 34½ per cent over 1914 wage scales, Mr. Huddleston said:

"What I am saying is addressed to the general propaganda sent throughout the whole country, appearing in various forms and coming from various organizations. It is coming from men who have made millions out of the war and who want to keep on making millions in times of peace. The suggestion coming from these sources is that the workingman ought to be punished and that there should be first a reduction in the cost of labor."

Blames Independent Consumers

Before he launched into the discussion of the high cost of living and advocated price fixing, the Birmingham congressman said the United States Steel Corp. is not to blame for the conditions in his district. He said:

"The largest users of coal in my district are the iron-producing concerns. Out of 45 iron blast furnaces only 18 are now in operation."

"I understood you to say that the United States Steel Corp. produced most of the coal it uses," commented B. H. Snell, of New York.

"Yes."

"Then it does not make much difference what the price is if they produce it and use it."

"It would make quite a difference to them if the price represented the cost of production, for it would go into the cost of producing their iron and steel. I am not after the Tennessee company (Tennessee Coal, Iron & Railroad Co.) which is the local branch of the Steel corporation, about coal prices, because they do not produce coal to sell to others. I am after the men who produce coal for commercial purposes, and put such a big price on it that the people cannot buy it for domestic use or for steam purposes. I want them to run their mines so as to give men work and so there will be no suffering for coal next winter."

Mr. Huddleston is the author of a bill now in the house which would continue in effect the fuel control provision of the war-time Lever bill and force the operators to run their mines for the double purpose of preventing a coal shortage next winter and to provide work for their employes. The act would remain in effect five years after the peace with Germany has been proclaimed.

Government Sells Scrap At Big Profit

WASHINGTON, July 29.—Sales department in the week ending of surplus material by the war July 18 netted only $1,675,000, one of the smallest weekly reports on record, but included disposal of small tonnages of steel and brass on which the government might be accused of profiteering. A quantity of sheet steel and scrap which originally cost $313.13 was sold for $2196.97, or at 702 per cent of the original cost. A small lot of brass for which the war department paid $113.63 was sold for $555.50, or 491 per cent of the cost price. Both sales were negotiated by the signal corps and, with the week's total sales, brought the total realized from surplus material since Jan. 1 to $354,470,000, which is 78 per cent of the original cost of the material.

Contract liquidation, which of course is preliminary to turning over the material involved to the sales division, in the week ending July 5 effected a saving of $50,622,000 to the war department, this amount being nearly 86 per cent of the value of the uncompleted portions

of the contracts. This sum, added to previous similar savings, made a total of $1,331,139,000 saved out of contracts calling for expenditures amounting to $1,544,248,000. This total value of suspended contracts is, however, only 42.8 per cent of all commitments which, at that time, were $3,609,013,000 and which later, with cancellations not yet reported, will be considerably greater.

The war department last week announced that of more than $11,000,000,000 appropriated for the fiscal year ending June 30, $3,653,000,000 represents the unused balance. Ordnance appropriations of $4,499,000,000 were used to the extent of only $2,210,000,000. It is pointed out that the unexpended balance may be smaller after settlements have been made on canceled contracts. Engaged in contract liquidation now are 518 officers of emergency rank. It is expected this work will not be completed until Sept. 30 when regular army officers supplant the reserves.

To Transfer Surplus Stocks

Report was made to the senate last week by the department of agriculture that, according to the provisions of the federal aid road act of July 11, 1916, and as amended Feb. 28 last, the sales division of the war department has the following materials and equipment which are to be turned over for distribution by the department of agriculture to the various state highway bureaus for the development and construction of road ways:

Structural steel, 1186 tons; reinforcing steel, 10,000 tons; sheet-metal roofing, 16,000 tons; nails, 50 tons; spikes, 35 tons; blank nuts, 10 tons; threaded nuts, 10 tons; drill steel, 100 tons; hollow drill steel, 10 tons; solid drill steel, 10 tons; horse and mule shoes, 20 tons; horseshoe nails, one ton; axle steel, three tons; tire steel, three tons; steel or iron pipe, with fittings, 150 miles; cast iron culvert pipe, 56,025 lineal feet; corrugated metal culvert, 120 carloads; telephone wire, 2000 miles; steel forms for concrete road construction, 40,000 lineal feet.

Shipping directions have already been given for 12 kegs of spikes and 37,921 lineal feet of cast iron culvert pipe. This material—and the plan is applicable to the entire quantity to be transferred from the war to the agriculture department—is allotted to the several state highway departments in accord with the terms of the federal aid road act. In addition to the iron and steel articles enumerated the surplus material to be used in highway expansion and maintenance are the following:

Four hundred road rollers, 700 concrete mixers, 600 road graders, 400 elevating graders, 200 sprinkling wagons, 200 road oilers, 125 derricks of from 30 to 60 feet boom, 100 pile drivers, 200 air-drill outfits, 700 road and railroad plows, 300 rooter plows, 160 automotive cranes, 3600 tractor trailers, 200 steam shovels, 6500 dump wagons, 250 conveyors, 100 boilers, 14,500 scrapers, 4000 wheelbarrows, 10 dredges, 20 ditching and trenching machines, 100,000 feet hoisting cable, 1000 miles industrial railway tracks, 200 industrial railway locomotives, 3500 industrial railway dump cars, and large quantities of axes, adzes, crowbars, cant hooks, hammers, riveters, hatches, shovels, spades, trowels, saws, wrenches, sledges, picks, mattocks, drills and drill bits.

The list also contains machine tools, woodworking tools and miscellaneous outfits, as follows: Fifteen complete machine shop outfits, including lathes, drills, planers, fittings, etc.; three swing lathe engines, 14 to 20 inches; three end milling machines, three planers, four power punches, three shapers, four power shears, three shop-screw presses of 25 tons capacity each; 12 boring machines; complete sets carpenters tools, wheelwrights' outfits, farriers' outfits, blacksmith outfits, etc.

Report Coke Haulage

Washington, July 29.—Reports from 14 of the principal coal and coke carrying railroads, as compiled by the department of commerce, show that in first four months of 1919 6,705,000 tons of coke were hauled as compared with 8,608,000 tons last year. Shipments of bituminous coal were 54,500,000 tons as compared with 77,700,000 tons in the period in 1918, while anthracite hauls in 1919 were 6,400,000 tons, as against 7,550,000 in 1918.

To Build Strip Mill

Pittsburgh, July 29.—Work is to begin at once on the erection of a cold rolled strip steel plant at Ambridge, Pa., adjoining the plant of the Standard Seamless Tube Co. Those interested in the cold rolled strip plant are J. S. Hammond, H. F. Devens, Frank R. Schneider and others. The size of the new plant has not been definitely determined upon. It will be situated on a site of 40 acres on Buss avenue.

Chicago Foundries Buying Scrap Collectively

Chicago, July 28.—Collective buying of scrap iron and steel has been decided on by the Chicago Foundrymen's association. Hereafter, it is understood, members of the association will make their requirements known at the headquarters of the association, and purchases will be made through that office. It is hoped that the minimum prices may be obtained by buying in larger quantities and also that the members will be freed from constant soliciting by scrap dealers. A circular letter sent to members of the association says:

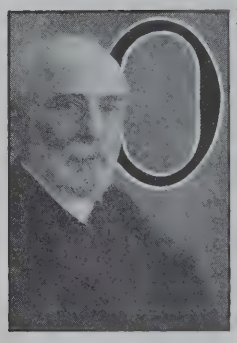
A careful canvas of the membership reveals the fact that they are all now well supplied with scrap iron for some time. Nevertheless, scrap dealers are daily attempting to inveigle our members to purchase at present high prices, using the argument that scrap is "going up." Don't buy—there's no reason why you should and a great many reasons why you should not. This office and many of the members have had numerous letters from which it is very evident that there is no very strong market otherwise the dealers would have fixed the selling price and not ask us to."

Urge Greater Output

Co-operation of the press, the pulpit and other educational institutions is urged by the National Association of Manufacturers in a campaign to show that high prices are largely due "to the growth of tendencies among our labor elements to restrict individual and collective production," and to emphasize the fact that lower price levels may be brought about only through an increase in output. Resolutions adopted at a recent meeting of the association in New York point out that certain interests are fostering the belief that manufacturers are mainly responsible for abnormal prices, whereas it is "the dangerously unsound make-work doctrine" which is the underlying cause. Attention also is called to the fact that heavy war debt taxation has contributed to high prices, and the shortening of the duration of such taxes is urged.

Issues Export Guide

Issued by the Export Manufacturers of the United States, Inc., 149 Broadway, New York, the Export Register is designed to aid manufacturers who desire to develop foreign trade. It lists over 800 exporting houses in the United States and following the general index a page is devoted to each, giving financial rating, mail and cable addresses with codes used, kind of business and when established, buyer's name, markets reached and classes of merchandise handled, as well as lines specialized in.



In view of the fact that fully 75 per cent of United States exports of manufactured products are handled through commission houses, the value of this medium to manufacturers is readily ascertained. By reference to it they are able to determine which exporting house is best fitted to handle a particular line of goods in a given foreign market.

Liberty or Death, Bell's Defiance

Famous British Ironmaster Demands Right to Manage Own Works, "Even if I am Shot for It"—Cheered as He Challenges Union's Claim That He Cannot Discharge His Men—Steel Exports Gain Slowly

BY JOSEPH HORTON

Bureau of The Iron Trade Review,
Prince's Chambers, Corporation St.,
Birmingham, Eng., July 10.

SIR HUGH BELL

ONE of the most important witnesses who has appeared before the coal commission during its long sitting was Sir Hugh Bell. Sir Hugh is the distinguished son of Sir Lothian Bell, whose researches in blast furnace work gave great impetus to the iron and steel industry. He was once president of the Iron and Steel institute, and for some years past he has been prominently known as an avowed opponent of everything calculated to restrict the freedom of manufacturers to control their industry. He has been especially prominent as a free trader.

Sir Hugh Bell gave evidence in behalf of the National Federation of Iron and Steel Manufacturers on the question of the nationalization of coal mines generally, and particularly with reference to the effect of such nationalization on the iron and steel industry. He explained that the federation was thoroughly representative of the iron and steel industry of the country. The approximate wages bill of the 253 members is £21,000,000 ($100,800,000 and of the total production of nearly 10,000,000 tons of steel in the United Kingdom, the federation produces 8,694,000.

Sir Hugh is managing director of Bell Bros., Ltd., a director of Dorman, Long & Co., Ltd., and of the North Eastern Steel Co., chairman of the Horden Collieries, Ltd., of the North Eastern Railway Co., and other companies.

He said he views with great apprehension the growing tendency to replace the action of economic law by government interference. He believes coal nationalization would be against the best interests of the commercial progress of the country and would materially retard further improvement in the general condition of the workers, an improvement which he sincerely desires. He pointed out that coal mining calls for constant speculation in the sinking of new shafts, whereas a highly centralized government service does not lend itself to the taking of such risks. He expressed the belief that under government direction it would be impossible to maintain the efficiency and elasticity of the arrangements for obtaining foreign orders which have been gained by the experience of private owners and merchants in many years of foreign trading.

Sir Hugh proceeded to give particulars of steel trade extension, remarking that the development of British steel works during the war would, when completed, give an annual capacity of 12,000,000 tons of steel, compared with an output of 7,500,000 tons before the war. He said that fact alone increases the interest of the trade in a larger coal supply. Further, iron ore mines abroad provided material for nearly 40 per cent of the British production and transportation has been affected seriously by the shortage and high price of British coal. Unless the country can secure imports of iron ore in quantities exceeding pre-war deliveries, there is not the smallest prospect of their being able to produce sufficient pig iron to supply the full capacity of greatly enlarged steel plants.

Practically the whole of this iron ore is at present obtained from Spain, Algeria, Tunis and Scandinavia, Sir Hugh continued, nearly all ships from these countries bringing iron ore to England return with coal cargoes, either direct to the exporting ore country or to an adjoining country, from which a short voyage in ballast is easy. In 1913 British fuel exports to Spain alone amounted to 2,823,961 tons. Unless this export is maintained Spanish ore can be imported only at greatly increased prices and higher freight rates. He said the early revival of the export of coal is of vital importance to the iron and steel trade.

According to Sir Hugh American prewar production of iron and steel was about 31,000,000 tons a year, whereas her present capacity is about 48,000,000. Prior to the war the United Kingdom exported about 5,000,000 tons of iron and steel and the United States only about 2,700,000 tons. In his opinion America's increased output will give her an enormous exportable surplus whenever the home demand falls off. America also had an advantage in regard to cost. He predicted that unless exports of coal, iron and steel from the United Kingdom are maintained, a large amount of unemployment in the British iron and steel trade is a certainty. In view of the large number of iron and steel works owning collieries he expressed apprehension regarding the proposal to remove his collieries from his own management and place them in other hands.

On cross-examination, replying to Sir Leo Money, Sir Hugh admitted that there was a dangerous shortage of iron and steel at the outbreak of the war, but he would not admit that the reason was to be found in the fact that many British blast furnaces made only hundreds of tons, whereas the Continental furnaces made thousands of tons.

"Until a few years ago you could not put up the latest type of furnace in this country without going to Germany for some parts?" asked Sir Leo.

"Why slur the British ironmaster? The Germans found out how to do something that I could not do and I bought my machinery from Germany. As soon as I am allowed I will do so again," replied Sir Hugh.

There followed a sharp discussion between Mr. Smillie, a representative of the miners, and Sir Hugh Bell, in the course of which Sir Hugh said that if he were a workman he would not give up the right to strike. He added:

"As an employer of men, the one thing I will not give up under any condition, unless parliament compels me—and then I may stand against the wall and be shot—is the right to discharge my men. I demand that right."

"And we deny your right to dis-

charge your men unless for a just cause," said Mr. Smillie.

"I hope I will not discharge them for any other."

Sir Hugh was applauded by the spectators as he left the stand.

* * *

Coal Production Declining

Lord Aberconway, presiding at the annual meeting of the Tredegar Iron & Coal Co., Ltd., July 8, commented severely on the Sankey report of the coal commission, describing that commission as grotesque in its proceedings, in its personnel and in its report. It was a curious fact, he said, that the "cranks and fanatics" who were so largely represented during the proceedings were men who, at the last general election would show, had no influence whatever in the country. Not one of them obtained a seat in parliament. He declared the country, if it had an opportunity, would condemn the action taken by the "wire-pullers" in the miners' federation. He pointed out that the prewar output of coal was 287,000,000 tons, while the country may now produce only 214,000,000 tons. Since the Sankey award, the output per man has been declining, in spite of a considerable increase in the number of workmen. Absenteeism was greater in May than in any other similar period. Instead of the industry making a profit of between £15,000,000 and £20,000,000 ($72,000,000 and $96,000,000) there probably will be a deficiency in the current year of not less than £45,000,000 ($216,000,000), or a loss of 4s 3d ($1.02) per ton on the estimated reduced output. He said the loss will be made up out of the pockets of the consumer.

This extraordinary agitation if persisted in, he declared, will drive the country into commercial ruin. England is the busiest manufacturing nation in the world, but it cannot carry on its industries without coal, and without cheap coal industry will be handicapped. Dealing with nationalization, Lord Aberconway said it never was a success, because state administration could never compete successfully with private administration. He referred to the postal service, the telephone service and the railroads.

* * *

Exports Recovering Slowly

Exports of British iron and steel which declined during the war to the point of stagnation are now making a slow recovery. The total value of exports during June was £64,562,346 ($309,899,261) an increase of 43.38 per cent. For the six months ending with June the total was £334,755,257 ($1,606,825,234), an increase of 35.62 per cent. The June imports totaled £122,945,655 ($590,139,144) or an increase of 21.06 per cent. For the six months the value of imports was £717,034,479 ($3,441,761,200), an increase of 9.93 per cent.

The quantity of iron and steel manufactures there exported during June was 193,743 tons, compared with 153,655 tons in June of last year. For the six months the quantity was 1,005,976 tons as compared with $18,208 tons.

Pig iron exports show a decided falling off, from 51,834 tons in June, 1918, to 27,816 this year. In the first six months of 1918 exports amounted to 249,704 tons, and in the same period this year to 154,579. The total exports of wrought iron bars, angles, etc., was 3963 tons, as compared with 3219 last year. The first half compares badly, as last year the exports were 25,229 tons and this year 17,875.

Galvanized sheets are again making a respectable showing. This trade was almost annihilated by the war. In June of last year, the total exports were only 634 tons, whereas this year they have mounted to 10,201. For the first six months last year the total was 4820 tons, this year, 47,495.

There have been substantial increases in exports of black sheets, black plates, hoops and strips, cast iron, steel bars and tinned plates and sheets. Of these the most striking figures relate to steel bars, of which the values increased from £271,103 ($1,301,294) to £710,526 ($3,410,525), while for the six months the figures last year were £2,338,786 ($11,216,173) and this year £3,511,076 ($16,853,165). For tinned plates and sheets, last year's values in June were £778,460 ($3,736,608) and this year £867,823 ($4,153,550). For the six months, the increase was from £3,648,107 ($17,510,913) to £4,407,958 ($21,158,198).

* * *

How Some Plants are Faring

Bell Bros., Ltd., of which Sir Hugh Bell is the moving spirit, has had another good year. The directors report a divisible amount of £15,723 ($75,470) under which they recommend a dividend on the ordinary shares of 10 per cent, carrying forward £20,037 ($96,177). This, after payment of interest on 4 per cent debenture stock and 6 per cent preferred shares for the half year. They carry to reserve fund £16,942 ($81,321), and to reserve for general purposes, £40,000 ($192,000).

The Millon & Askam Co. has a large plan of reorganization under which it proposes to have an authorized capital of £2,000,000 ($9,600,000), divided into 500,000 7 per cent cumulative and participating shares of £1 ($4.80) each and 1,500,000 ordinary shares of £1 ($4.80) each. The participating preference shares will be entitled to an additional 2 per cent dividend in each year when a dividend with or without bonus, equal to 10 per cent, free of income tax, is paid on the ordinary shares.

The central tinplate selling agency now embraces about 15 per cent of the Welsh tinplate output, all its sales being made through the central office in London. There is no prospect that the whole of the tinplate trade will join the organization, as various groups of manufacturers are making arrangements to establish selling agencies of their own, one object being to dispense with the service of the metal merchants.

Important steel works in Sheffield the services of the metal merchants. sisted by electricity they have been able to obtain at low cost from the Rotherham electrical supply station. The town council has just decided to reduce the basic rate for the supply of current for traction purposes from 1¼d (2½c) to 1d (2c) per unit. The council is making extensions which will provide a capacity of 70,500 kilowatts and it is claimed the new station will contain the largest electrical installation of any plant in the British Isles.

The District Iron & Steel Co., Ltd., which is one of the most important rerollers of steel in the country and whose works are situated near Birmingham, is enlarging its plant to increase production.

* * *

Steel Products Exhibited

The British scientific products exhibition at Central Hall, Westminster, has a number of interesting exhibits all more or less connected with the successful prosecution of the war. Among these are some fine exhibits of steel. Messrs. Hadfields have a large display which includes a specimen of the largest shell ever fired from a gun. It is a naval shell of 18-inch caliber, weighing a ton and a half. Next to this is a 6-inch heavy trench mortar of the kind which in France or Flanders flung what Tommy Atkins humorously called "toffee-apples" into no man's land. Messrs. Vickers show pictures of a Vickers-Vimy Atlantic airplane and a battleship under full steam, also a model steam launch, with drop forgings, and alloy and tool steels. The metallurgical section includes a great range of various alloys.

Vacant Jobs Exceed Idle Men

Employment Service's Figures Show Employers' Needs Could Not be Filled When It Claimed There Was a Great Surplus of Labor—Claims to Have Placed 5,000,000 Workers at Average Cost of $1.34

WASHINGTON, July 29.—The United States employment service in the 18 months ending June 30 placed nearly 5,000,000 workers at a total expense to the country of approximately $6,640,000, according to an accounting made by the department of labor. This was at an average cost of $1.34 per placement and covered every phase of the bringing together of men and jobs, the report declares.

In the year and a half the service was in operation, the department states 7,108,655 workers applied for employment. Of these 6,446,294 were referred to employers, and the placement of 4,955,159 workers was accounted for in return reports. During the 11 war months of 1918 3,675,658 persons were registered for jobs while references reached 3,444,093 and placements 2,698,887. In the subsequent seven months of the readjustment period registrations totalled 3,432,997, references 3,002,201 and placements 2,256,272. Employers' requests for help in the 18 months were for 12,079,514 workers, of whom 7,904,675 were sought during the war.

Contrary to the impression given in the weekly unemployment reports sent out by the employment service, the figures showing jobs wanted and help wanted in the seven readjustment months disclose the fact that in all except February there were more vacant positions reported to the service than there were workers seeking employment. In the seven months employers asked for 4,174,839 workers, there being 741,842 more vacancies than there were registrants. In February "jobs wanted" exceeded "help wanted" by 8824.

It was but natural that during the war months, when the drain on the nation's man power was heaviest, employers' requests for help should have outweighed those of the unemployed workers—the excess was 4,229,017—but to account for continuance of this condition the department says it "was not because there were more jobs than men but because in many instances workers of particular qualifications were sought."

In discussing the present labor surplus the department says the peak "appears to have been reached about the middle of May and the labor market is now becoming more equalized with indications of a shortage within the next year."

Women constituted 20 per cent of the total workers placed, the statement says. Common labor placements were 23 per cent. The other 77 per cent "constituted skilled labor and other workers engaged in specific occupations."

In the seven months ending June 30 placements included 314,137 returned soldiers and sailors and in that period registrations by this class of workers reached 513,604. It is said the returns on soldiers' placements are incomplete.

"The beginning of industrial and military demobilization caused little change in the number of persons registering for employment," the report states, "but it did result in a tremendous drop in the requisitions from employers for workers. The extent of the great labor shortage that existed during the war and was emphasized during the late summer and fall of 1918 when war production so greatly increased is indicated in the figures of employers' requisitions. These figures also indicate the extent to which employers throughout the country have used the United States employment service not only during the war when labor was so sorely needed but from the signing of the armistice and the reversal of the situation to one of labor surplus."

Efforts in behalf of the Nolan-Kenyon bill to create a federal system of employment bureaus are being continued by the executives of the present service. Among the witnesses before the joint committee considering the measure last week was William E. Hall, vice president of the Duriron Steel Castings Co., Dayton, O., who is assistant director general of the service. Mr. Hall said that the majority of employers in the United States are in favor of a national system but that many have been misled into opposition by false propaganda conducted by small groups of reactionary employers.

Announcement was made by the department of labor last week that the number of federal agencies being operated with the limited funds now available from the government and through the support of outside organizations had reached 303. The number of emergency bureaus handling soldiers and sailors seeking employment now total 2294.

Secretary Wilson Urges Housing Study

Washington, July 29.—Another war-born bureau of the department of labor will be permanently established if congress passes the Tinkham bill. This measure would create a bureau of housing and living conditions, not merely for the convenience of the government, as was the case during the war, but for the public generally. William B. Wilson, secretary of labor, is strongly in favor of the proposal and has written John W. Langley, chairman of the house committee on public buildings and grounds, in response to that official's request for the secretary's recommendations. Mr. Wilson's letter in part is as follows:

"Investigations made by the housing corporation and by other branches of this department show that bad housing conditions reduce productive capacity and materially increase labor turnover, and that good housing conditions increase productive capacity.

"Such a bureau of housing as is outlined by Mr. Tinkham's bill should, in my opinion, investigate housing and living conditions in communities which request such investigation, and should conduct extensive research in the field of housing, in order to discover and bring to public attention every available means for reducing the cost of good housing for the industrial population, and for the promotion of home building throughout the industrial communities of America.

"Records of this department show that the housing shortage is acute in practically every industrial city of America, and every day letters are received requesting assistance in meeting this shortage.

"There is no doubt that the housing shortage in America will be more acute in the coming winter than it has been at any other time in the history of this nation, and every effort should be applied to stimulate the building of homes during the summer and fall, and to assist communities in making available housing facilities in order that the hardships may be reduced to a minimum."

Wilson Backs Densmore in Mooney Case

Secretary of Labor Wilson has sent to the house a statement, as requested, explaining the connection of John B. Densmore, director general of the employment service, with the Mooney case. Mr. Wilson says he did not permit Densmore to go to San Francisco and testify before the grand jury, although the jury, a judge, and the public requested such action, because: "The grand jury had been in continuous session for about six months with District Attorney Fickert as its legal adviser.

Fickert was reflected upon in the Densmore report, and some of the members of the grand jury were referred to in the report as having had improper relations with certain alleged jury fixers who were mentioned."

At the same time Densmore made a statement to the joint committee on labor of the house and senate, saying that this action was misconstrued by those persons who interpreted the refusal as evidence of the desire of certain officials at Washington to aid Mooney.

Densmore was sent West to investigate immigration cases and also the Mooney case when he was solicitor of the department of labor. It is claimed that he did not investigate the Mooney case, but other representatives who went with him did. Later they submitted their report to him and that is how he became connected with the insinuations against the district attorney and jurors.

Workers Endorse Thrift Bond Saving Plan

A system providing for "automatic thrift" was adopted at a recent meeting of the general shop committee representing employes of the Sprague electric works of the General Electric Co., at Bloomfield, N. J. Having decided to promote thrift among employes, the committee considered various methods of saving, and finally endorsed a plan as worked out by the National Thrift Bond Corp., of New York, composed of a group of nationally known public-spirited men seeking to foster the saving habit among all wage earners in the country.

According to this plan an employe signs a subscription form promising to save a certain amount regularly, and thrift receipts to that amount are inserted in his pay envelope instead of cash. Saving is thus made automatic, and requires no further initiative on the part of the worker. Ten dollars worth of thrift receipts may be exchanged for a $10 thrift bond which bears interest paid through coupons attached. Ten thrift bonds may be exchanged for a $100 registered thrift bond.

Labor Shortage Growing More Pronounced

New York, July 26.—While there is not so much uneasiness over the strike vote which unionized steelworkers are taking, there is considerable concern on the part of iron and steel plant executives over the labor shortage. This is becoming more acute rapidly, and while it is not so noticeable in some parts of the country as in others, apparently there is not one important industrial district where there is an abundance of workers. Even in districts where industrial establishments are few and where it always was possible in the past to secure enough help by drawing upon the farmers in the district, men now are not to be had.

Virginia pig iron makers say that they are confronted with new demands made possible by the labor shortage. Newark, N. J., foundrymen admit that despite the present high level of wages, they probably will have to pay still more before the end of the year, to compete against other industries.

An Alabama maker of pig iron has a full order book and is anxious to blow in another furnace, but is prevented from doing so by the lack of men. For the same reason a turnbuckle plant in the West is prevented from operating double turn. Steel mills throughout the country are handicapped by the labor shortage. This has been apparent in wire and sheets, especially. The situation threatens to become worse instead of better. Iron and steel plant executives say that adoption of 8-hour shifts would require a constantly growing number of men, and there seems to be no prospect of obtaining them.

Pay For French Labor is Increased 25 Per Cent

Employes in the French metallurgical and mining industries, building and electrical, and allied trades are now working eight hours a day and receiving the same wages they received for working 10 hours a day prior to June 1. Payments for piece work have been so graded that pieceworkers receive as much for eight hours as they formerly did for 10. The French figure that while the working time has been reduced 20 per cent, wages have been increased 25 per cent, in practically all of the principal industries and trades.

The agreement between employes and employers does not take into consideration wage increases made during the war, present wage scales being the same as they were when the agreement was signed, June 1. It provides, however, that bonuses which were granted employes during the war and which were intended to be temporary, must be made continuous. If an employer put into operation a system for paying extra money for extra production he must continue such a system. The new agreement provides that the employes make every effort to produce as much in eight hours as they formerly produced in 10 hours, but failure on their part does not entail a penalty.

With respect to the reoccupied regions, it is provided that a supplementary agreement may be entered into permitting employes to work from one to two hours a day to accomplish special tasks, where time is an imperative factor. Another exception permits of extra labor in steel mills, foundries and at blast furnaces, when the success of an 8-hour day's work depends on extra attention for an hour or two. The agreement gives the workers the right to decide for themselves when such extra time is essential.

Strikers Get Increase

About 400 employes of the Republic Iron & Steel Co.'s nut and bolt works at Muncie, Ind., have agreed to return to work, accepting a 15 per cent increase in day wages, 7½ per cent increase for piece work and an 8-hour working day. The men asked for a 20 per cent increase in day wages, a 10 per cent increase for piece work and an 8-hour day instead of a 10-hour day.

LABOR NOTES

An increase of 10 per cent in wages voluntarily has been granted employes by the Andrew Terry Co., Terryville, Conn., manufacturer of malleable iron castings.

The child labor section of the war labor bill, which places prohibitive tax on products of child labor entering interstate commerce, has been declared unconstitutional by federal judge at Greensboro, N. C.

While the hospital recently opened by the Clark Equipment Co., Buchanan, Mich., manufacturer of drills and precision tools, was primarily intended for the use of its employes, it is open to the citizens of the community at cost.

The General Electric Co. put into effect on June 23 a reduction in working hours at its Schenectady, N. Y., plant, from 50 to 48 hours per week. The decrease in working time has been accompanied by an increase in hourly pay in order to allow the men to receive the same weekly wages as before. The increase to hour-basis men is approximately 4 per cent. The night workers, principally firemen and plant maintenance men, will work 50 hours for the present.

Here and There in Industry

Live Information Which Records the Expansion of Various Lines of Productive Enterprise

THE CORRUGATED BAR CO., INC., New York, recently announced it had taken over the entire assets and liabilities of the Corrugated Bar Co., a Missouri corporation, and is continuing the business of the latter, which is in the process of dissolution. The taking over of the Missouri company means the retirement of the Garrison interests, which held the majority of stock since the company's inception in 1891. The company now passes into the control of A. L. Johnson, who has been connected with the enterprise since July, 1895. The officers of the new corporation are: President, A. L. Johnson; vice president and treasurer, W. H. Kennedy; secretary, Ralph McCarty, and general manager of sales, A. E. Lindau.

* * *

BLAST furnace lining for its Covington, Va., furnace has been ordered by the Low Moor Iron Co., Low Moor, Va., from the Ashland Fire Brick Co., Ashland, Ky. The Ashland company also is shipping a lining for the Federal furnace of the By-Products Coke Corp., South Chicago, Ind.

* * *

THE Phoenix Iron Works Co., Meadville, Pa., has recently contracted for a two-story brick and steel constructed machine shop building, 64 x 240 feet. The general contract was let to W. W. Lindsay & Co. and the structural work involving 300 tons., was sublet to the Penn Bridge Co. The erection of a new machine shop building completes the program of new construction and improvements initiated by the Phoenix Iron Works Co. four years ago in order to modernize and place all departments, including its foundry and plate fabricating shops, on a highly efficient mechanical basis.

* * *

SPECIFICATIONS for the third unit of the new tractor plant established at Janesville, Wis., by the General Motors Corp., and known as the Samson Tractor Co., are expected to come before the structural trade within 10 days. The third unit will be a foundry, 300 x 500 feet, and involve 800 to 850 tons of steel. Upon the completion of this job, a fourth unit, consisting of a steam generating plant and boiler house, estimated to take 700 to 750 tons of structural shapes, will be undertaken. The project is in charge of Frank D. Chase, Inc., consulting engineer, Chicago. The Worden-Allen Co., Milwaukee, which erected the first unit of the Samson plant, is rushing work on the second unit.

* * *

THE Open Hearth Steel Products Co., 140 South Dearborn street, Chicago, has been formed to manufacture and market slag line cooling devices for open-hearth furnaces. It has taken out a Delaware charter and is capitalized for $100,000. The company has acquired all rights under the Naismith patents and will manufacture and make installations. This device is now in actual use and all open-hearth furnaces at the plant of a large steel company at Chicago are thus equipped. D. C. Bennett, a capitalist and automobile manufacturer, is president, A. J. Coleman, president of the Feature Products Corp., Chicago, is vice president, and Ralph N. Ballou, cashier of the National Produce Bank of Chicago, is treasurer.

* * *

PROPERTY formerly known as the West Side Foundry Co., Troy, N. Y., has been purchased by the Thomas C. Perkins, Inc., investment bankers, Hartford, Conn., and will be conducted in the future as the Troy Foundry & Machine Co., Inc., a new company incorporated under the laws of Massachusetts. Extensions are contemplated as is an increase in capital. The management will continue as at present with the addition of Thomas C. Perkins, Hartford, as treasurer. Other officers are Charles A. Sleicher, Troy, president and general manager; John T. Starkweather, Troy, vice president and chief engineer; Robert A. Stevens, secretary and assistant treasurer. In addition to Messrs. Perkins, Sleicher and Starkweather, Philip S. Ripley, Hartford, and Reginald W. Millard, president of the Foster Merriam Co., Meriden, Conn., are directors. Along with the foundry, the company operates an extensive machine department. Automobile accessories, transmissions and engine-driven tire pumps are manufactured.

* * *

PLANT expansion on a large scale in the sheet, tin and jobbing mill industries is indicated by a large number of orders for furnaces and other equipment, now on the books of the George J. Hagan Co., Pittsburgh, furnace and combustion engineer. The company has a contract from the Eastern Rolling Mill Co., Baltimore, for furnishing 12 Hagan-Allis continuous pair heating furnaces, 12 double-type stoker fired sheet furnaces; six standard stoker-fired, double-length battery annealing furnaces, as well as all material and labor needed for the construction of the plant, erection of which is to be started the latter part of August. The company has also received a contract from the American Sheet & Tin Plate Co., Pittsburgh, for 24 sheet and pair furnaces for Gary, Ind. All are stoker-fired and are of heavy construction. At this plant six double-length, stoker-fired annealing furnaces are also being installed. The LaBelle Iron Works, Steubenville, O., has contracted for the installation of four Hagan-Allis continuous pair furnaces; four Hagan-Bailey combination furnaces and eight double compartment sheet furnaces, all of the stoker-fired type. The Canton Sheet Steel Co., Canton, O., will install one Hagan-Costello open annealing furnace. Contracts have been received from the Otis Steel Co., Cleveland, for a bar heating furnace. The Whitaker-Glessner Co., Wheeling, W. Va., has contracted for the installation of seven Hagan-Allis continuous pair furnaces at its Portsmouth, O. plant, and the Newport Rolling Mill Co., Newport, Ky., for four Hagan-Allis continuous pair furnaces; four Hagan-Bailey combination furnaces; two Hagan-Costello open annealing furnaces; eight standard double-compartment sheet furnaces and three standard double-compartment, double-length annealing furnaces.

The Hagan company recently sold to a French interest its entire foreign rights on devices for sheet and tin mill furnaces.

Here and There in Industry

Live Information Which Records the Expansion of Various Lines of Productive Enterprise

WHILE new purchases of gas producing equipment for open-hearth furnaces have been few since last summer, recent contracts closed by the Morgan Construction Co., Worcester, Mass., include one from the Cambria Steel Co. for 51 producers for service at its Franklin, Pa., furnaces. The Weirton Steel Co., Weirton, W. Va., is building an entirely new open-hearth and blooming mill plant containing 27 producers furnished by the Morgan company. In addition to this new business the same selection of producers has been made by four leading British steel plants this year and this means that about 400 of these machines are in operation or have been contracted for.

* * *

MACHINERY and equipment for the proposed extension to the plant of the Lancaster Steel Products Co., Lancaster, Pa., has either been purchased or shortly will be closed up. This addition will triple the company's capacity for cold drawn alloy and screw stock bars in sizes up to 5-inch round.

* * *

ARRANGEMENTS are being made by the Lycoming Foundry & Machine Co., Williamsport, Pa., manufacturer of automobile motors, practically to double its capacity. A considerable quantity of machine tools, power transmission and electrical equipment will be required. No additions to foundry or factory equipment are contemplated at this time.

* * *

CONTRACTS for an extension to its steam shovel manufacturing building have been let by the Ball Engine Co., Erie, Pa.. The extension will be 185 x 116 feet and the company hopes to have it completed inside of three months. While many of the orders for machine tools and equipment have been placed, additional lots will be required in all probability.

* * *

THE Ohio Valley Metal Products Co., Wheeling, W. Va., recently organized to manufacture patented metal products, has selected a site and building. It has voted a capital stock of $30,000 which has been subscribed and it is understood that none of the stock will be offered for public subscription except in limited amounts. The plant is modernly equipped and will do a jobbing business exclusively.

* * *

THE Pittsburgh Rolls Corp., Forty-first street and Allegheny Valley railroad, Pittsburgh, has begun construction work on a 12-ton open-hearth furnace, two core ovens and a double annealing furnace. The foundations for the new units have been laid. The open-hearth and the double annealing furnace are being built by the S. R. Smythe Co., Inc., Pittsburgh, while the Pittsburgh Rolls Corp. itself is building the core ovens.

* * *

AFTER being out of blast for several months, during which time it was overhauled, the Reusens, Va., blast furnace of the Lavino Furnace Co., Lavino, Va., will be blown in early in August. Superintendent Joseph J. Becker stated recently that at first the furnace will not be operated at full capacity, due to the market price of pig iron, which will be the output for several weeks. Later it will return to the production of ferromanganese, on which it was engaged when closed down.

* * *

CONTEMPLATED additions by the Koehring Machine Co., Milwaukee, include a building of reinforced concrete construction, 74 x 325 feet, for an erecting floor. For it two 15-ton cranes will be required. The company's machine room is to be enlarged a little later and several 24-inch turret lathes, some 20-inch lathes, a number of drill presses and radial drills as well as an open-end milling machine, a key-seating machine and a planer will be purchased. It will likewise erect an addition to its structural shop. It will be of reinforced concrete, 70 x 118 feet.

* * *

THE Page Steel & Wire Co., 30 Church street, New York, has opened a branch office in Chicago, at 29 South La Salle street, to handle its products, including welding rods, twisted pairs, plain and galvanized strand, bond wires, and barbed wire as well as the brands of fence manufactured by the Page company. It has another new branch office in the Book building, Detroit. Distribution in Canada is in the hands of Taylor & Arnold, Ltd., Montreal, Toronto, and Winnipeg. The sales of the iron department are under the supervision of W. T. Kyle, sales manager, 30 Church street, New York.

* * *

BY a joint manufacturing arrangement completed at Seattle, the Vulcan Mfg. Co.'s plant will manufacture large cranes for the Colby Steel & Engineering Co. The latter company some time ago purchased the West Coast Steel Co., and the Auto Marine Engine Works both of Tacoma and is manufacturing the cranes in both shops. The Vulcan and the two Tacoma plants will handle all the Colby orders in the United States. Under an arrangement just completed the Canadian Northwest Steel Co.'s Vancouver plant will manufacture the Colby company's British Columbia orders. These cranes are used extensively in the shipyards of the northwest and by lumber mills. The Colby company has its headquarters in Seattle.

* * *

JOHN TOD and others of the Bessemer Limestone Co., with quarries at Bessemer, Pa., have incorporated the Bessemer Limestone & Cement Co., with a capital of $3,000,000. The incorporation of the company follows reports that an extensive development was contemplated in the affairs of the company. Inclusion of the word "cement' 'in the title of the company, indicates, it is believed that the company plans to engage on a large scale in the cement industry, but as yet the officials have not given out a definite statement. Officers are: President, John Tod; vice president, R. C. Steese; vice president and general manager, F. R. Kanengeiser; treasurer, J. R. Rowland and G. G. Treat. The general offices of the company are in Youngstown, O.

Production of Steel and Finished

Steel Ingot Output Increases While That of Castings Decreases—Electric Process Makes Gain While Crucible Shows Loss

PRODUCTION of steel in the United States in 1918 was the second largest in the history, being exceeded only by the 1917 output. According to the figures compiled by the American Iron and Steel institute, the 1918 output was 44,462,432 gross tons of steel ingots and castings, 598,175 tons less than the 1917 total of 45,060,607 tons. Of the 1918 total, 43,051,022 tons consisted of steel ingots and 1,411,410 tons of steel castings. In 1918, 212 works in 25 states and the District of Columbia made steel ingots, against 202 works in 26 states and District of Columbia in 1917. In 1918, 280 works in 30 states, the District of Columbia and the Panama canal zone made steel castings against 242 works in 27 states, the District of Columbia and the canal zone in 1917. Electric production has more than tripled itself since 1916 while crucible production has declined very rapidly and bessemer only slightly.

Of the 32,476,571 tons of basic open open-hearth steel ingots and castings produced, 3,870,017 tons were duplex steel ingots and castings made from metal partly purified in bessemer converters and finally purified in basic open-hearth steel furnaces, against 3,791,830 tons in 1917, an increase of 78,187 tons or 2.06 per cent. In 1916 the production was 3,436,457 tons and in 1915 it was 1,781,491 tons. In 1918 duplexing was done by 10 works in 6 states against 10 works in 6 states in 1917, 9 works in 5 states in 1916, 6 works in 4 states in 1915 and 5 works in 4 states in 1914. In 1918 there were 133 works in 22 states and the District of Columbia which made alloy steel ingots or castings.

The production of all kinds of iron and steel rolled into finished forms in 1918 shows a decrease of 1,911,946 tons or 5.78 per cent as compared with 1917. The total of 31,155,754 tons was made up of 1,573,976 tons of iron products and 29,581,778 tons of steel. Universal plates made up 1,234,782 tons of which 919,448 tons were under 30 inches wide,171,468 tons were between 30 and 48 inches and 143,866 tons were over 48 inches wide. Sheared plates amounted to 3,885,126 tons, black sheets to 2,073,639 tons and black plates rolled on tin mills to 1,605,588 tons, making a grand total for sheets and plates of 8,799,135 tons.

Structural shapes totaled 2,849,969 tons compared to 3,110,000 tons in 1917. Of the 1918 output, 2,438,126 tons were heavy and 411,843 tons were light shapes. Angle splice bar production was 137,264 tons, that of tie plates, 161,881 tons, of fish plates 10,787 tons, and of other rail joints 51,292 tons, making a total of 361,224 tons. Forged iron and steel by the rolling mills and steel works totaled 1,295,566 tons, an increase of 216,801 tons over 1917. Production of galvanized sheets fell from 1,388,880,976 pounds in 1917 to 1,280,889,074 pounds in 1918. Cut nail production totaled 418,811 tons in 1918 compared to 461,674 tons in 1917. In the production of pipes and tubes, in 1918 there were 25 active works, of which 19 made black, 15 made galvanized, 14 made oil country goods, 10 made O. D. and miscellaneous pipe and 12 made boiler tubes.

In 1918, 18,310 tons of iron and steel nail plate were made, a decrease of 4554 tons over 1917. Six plants in five states rolled iron or steel nail or spike plate in 1918 against seven plants in five states in 1917.

Men of the Iron Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

B. L. COGSHALL, who has been appointed assistant to the president of the Pittsburgh Steel Co., Pittsburgh, with headquarters in Pittsburgh, effective July 1, comes to that company from Canton, O., where for a year he was manager of production of the United Alloys Steel Corp. Previously he was with the Illinois Steel Co. for 11 years as secretary to the general superintendent of the Gary works. Mr. Cogshall was graduated from the University of Michigan in 1906 with the degree of M. E.

E. O. Floyd has been made general sales manager of the Rossendale-Reddaway Belting & Hose Co., Newark, N. J., effective Aug. 1.

Charles A. Swan has become associated with the Crucible Steel Forge Co., Cleveland, in the capacity of general superintendent.

C. A. Ducharme has been transferred from the Philadelphia to the Boston sales office of the Republic Iron & Steel Co.

Carl W. Gage, who has been in the St. Louis office of the Jones & Laughlin Steel Co., Pittsburgh, for some time, has been transferred to New York.

George Stich, formerly with the Huntington Steel Foundry Co., Huntington, Ind., has accepted a position with the Union Sanitary Mfg. Co., Noblesville, Ind.

Arthur J. Coldwell has been made assistant general superintendent for the Klaxon Co., Newark, N. J. On Aug. 15, 1918, Mr. Coldwell severed his connection with the Coldwell Lawnmower Co., Newburgh, N. Y., after an association of 15 years to become production engineer for the ordnance department in the plant facilities section, New York district. In January of this year he secured his release from the service and entered the employ of the Klaxon Co. as efficiency engineer.

George W. Pope has returned to the Minneapolis Steel & Machinery Co., Minneapolis, as structural sales manager, after two years' service at the Hog Island shipyards of the American International Shipbuilding Corp. He had been affiliated with the Minneapolis company for 14 years prior to taking up war work in the east.

Q. S. Snyder, of Chicago, has been made vice president and treasurer of the Pittsburgh Rolls Corp., Pittsburgh, succeeding H. R. Warfield, resigned.

W. WOODWARD WILLIAMS

Who as announced in THE IRON TRADE REVIEW of July 24, becomes general manager of the Reading Iron Co., Reading, Pa., on Aug. 1.

M. B. Summers who has been connected with the Stalmaker Steel Co., Frick building, Pittsburgh, for several years, has been made secretary to succeed F. S. Easterly, who recently resigned.

N. B. Folsom, who has been acting treasurer of the Brier Hill Steel Co., Youngstown, O., since the retirement of John Stambaugh several months ago, has been elected treasurer of the company's board of directors. Herbert J. Weeb, former cashier, has been chosen assistant treasurer.

J. J. Brown, formerly vice president and general manager of the Wheeler Condenser & Engineering Co., Carteret, N. J., has been elected president of that company, succeeding Charles W. Wheeler, who died recently. H. S. Brown, who was elected vice president at the same time, formerly was New England manager for the Power Specialty Co. and also is president of the Brown-Ferries Co., Philadelphia.

Charles S. Hogan and Ray E. Lawlor now are salesmen in the Chicago and Detroit offices respectively of the Youngstown Sheet & Tube Co., Youngstown, O., having been transferred from the home office.

W. F. Reulman has been appointed manager of the Detroit office and warehouse at 660 West Fort street, recently established by Edgar T. Ward's Sons Co., 646 Washington boulevard, Chicago.

Malcolm E. Gregg, who for several years has been Buffalo district sales manager of the Republic Iron & Steel Co., has resigned to become affiliated with the general sales office of the Lackawanna Steel Co., Buffalo.

Wilford L. Stork, metallurgist for the Michigan Motor Casting Co., division of the Buick Motor Co., has resigned to become associated with the Detroit Valve & Fitting Co., Wyandotte, Mich., as foundry superintendent.

J. Earl Myers, manager of the Pittsburgh office of the Whitney-Kemmerer Co., has resigned that position, effective Aug. 1, to become sales manager of the Westmoreland Fuel Co., First National Bank building, Pittsburgh.

Frank R. Colville, who formerly was connected with the Reno-Kaetker Electric Co., Cincinnati, as sales manager, now is affiliated with the sales department of Eaton, Rhodes & Co., that city, pig iron and coke merchants.

W. C. Greer, who recently accepted a position with the McKenna Brass & Mfg. Co., Pittsburgh, formerly was superintendent of the Seward Foundry, following his service as foreman for the Verona Steel Castings Co., and the Pittsburgh Brass Mfg. Co., Pittsburgh.

Men of the Machinery Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

GEORGE R. WOODS has resigned from the Allied Machinery Co. of America, New York, effective July 31, to accept another position in the same field. On Aug. 2, he will sail for Europe to study industrial conditions and upon his return in November, will announce his new connection. His European address will be in care of Morgan, Harjes & Co., 14 Place Vendome, Paris, France.
